Notes of the Week.

Yugoslav-Bulgarian Relations.

The situation on the frontier between Yugoslavia and Bulgaria still remains unsatisfactory, and it is difficult to see how it can be otherwise until the Yugoslav Government takes some definite step to clear away what may be only misunderstandings, which, however, are considered by each side as deliberate provocation on the part of the other. It is obvious that the initiative for any settlement of the frontier disputes must come from Belgrade. A few months ago when a joint conference was proposed by the Yugoslav Government and met at Pirot, it seemed as if common sense and good will were at last going to prevail in the Balkans; but for some reason that has not yet been divulged the Yugoslav Government quickly wearied of well doing and has refrained from ratifying the findings of the Conference. To obviate frontier incidents the Conference recommended the setting up of a Mixed Commission to supervise the frontier, and to establish where responsibility lies when any incident occurs. As a result of the delay in giving effect to this proposal, a whole series of incidents has taken place, contradictory reports regarding them are circulated, and Serbs and Bulgarians through the Press of each country are lashing themselves into a state of fury against each other. As almost invariably is the case, the actual course of events is immaterial. Each party accuses the other of having started the trouble, and it is probably too late now to establish which of the two is right. When such a situation arises, responsibility is shifted from the frontier where the shooting takes place to the seat of Government. If the Dictatorship in Yugoslavia made up its mind that frontier incidents ought to be stopped and to this end invited the Bulgarian Government to a joint conference, then it incurs a grave responsibility in delaying to give effect to the findings of that Conference. No doubt Yugoslav opinion has been exasperated by the culpable negligence of the Bulgarian Government in allowing two Croats to demonstrate on

Bulgarian territory against the Dictatorship; but it is the duty of the Belgrade authorities to rise superior to the pin-pricks which may annoy the rank and file, and to insist that, whatever mistakes are committed on the Bulgarian side of the frontier, Yugoslav conduct shall be above reproach. *Noblesse oblige* is an axiom that has not yet, apparently, circulated widely in the Balkans.

The Afghan Tug-of-War.

With the gradual elimination of other factors, the struggle in Afghanistan has now resolved itself into a trial of strength between the Amir Habibullah and General Nadir Khan. The latter still protests that neither he nor any of his brothers will accept the throne, even if it be offered by a united country, but he has not indicated that he would accept the verdict of a *jirgah*, if it went in favour of the Amir Habibullah. Nadir Khan's position, it might be thought, would be stronger if he were to name the claimant who has his support. It must be disheartening for some of his followers to realise that they may prove to have couched a lance in favour of a ruler to whom they might take strong exception. In view of the fact that Afghanistan's obvious need is a strong ruler, it would hardly constitute a satisfactory settlement of the present trouble that the next occupant of the throne should be content to remain in the background, while others snatch the chestnuts out of the fire for him. The Amir Habibullah owes his position to the fact that he struck a shrewd blow for it and that the reigning Sovereign ingloriously turned tail and fled the country. Nadir Khan would be carrying his disinterestedness to a logical conclusion, if he contemplated the possibility of the Amir Habibullah's proving a suitable ruler, despite his humble antecedents. It cannot be regarded as a service to the country to keep it plunged in civil war for the rather vague object that Nadir Khan has in view. He would himself, presumably, be acclaimed as a suitable Sovereign, and no one could deny him the right to appear as a claimant before the country, but the negative attitude that he has adopted is not in keeping

with Afghan tradition. In the meantime the struggle between the two forces continues with varying success. Nadir Khan and his brothers gained what was represented as a victory near Gardez, but were unable to follow up their advantage, and now this town has passed into the possession of tribes supporting the Amir Habibullah. For the moment, therefore, the latter's star is in the ascendant, while the ex-King Amanullah is on his way to Italy.

INDIAN NOTES.

The Princes and the Report.

The Standing Committee of the Chamber of Princes discussed the Report of the Butler Committee with the Viceroy and Lord Goschen—who is now acting for Lord Irwin—at Bombay on June 28. The proceedings were informal, but the Princes' views, it is understood, were communicated to Lord Irwin by means of a series of resolutions, a detailed summary of which is given on another page. These expressed satisfaction at the acceptance by the Committee of the contention of the Princes that their relationship with the Crown; and that the Viceroy, and not the Governor-General in Council, should be the agent for the Crown in all its dealings with the States. The resolutions also welcomed the recommendation of the Committee that the relationship in question ought not to be transferred to a third party without the consent of the Princes. For the latter recognise that, by this recommendation, a door is left open for negotiations between themselves and British India with a view to an equitable arrangement on honourable terms. Further, the resolutions approved of the recognition by the Committee of the claim which some of the States make, for relief in respect of existing financial arrangements. And they likewise expressed a hope that the *personnel* and procedure of the proposed independent expert Committee to examine fiscal and financial questions should be decided upon in consultation with all concerned. While the Princes thus expressed their satisfaction with some of the recommendations made by the Committee they apparently did not hesitate to criticise certain others. We anticipated that such would be their attitude, as they clearly could not be satisfied with the position taken up by the Committee on the question of Paramountcy. And we notice that in one of the Bombay resolutions they expressed their disappointment at the failure of the Committee—after admitting that sovereignty is divided—to draw a dividing line which

would place the rights of the Crown regarding the States upon a definite, as opposed to a discretionary basis. The Princes are also disappointed with the assertion of the Committee that intervention by the Paramount Power which is not justified by the spirit and letter of subsisting engagements may be justified on the score of Imperial necessity and the shifting circumstances of the time. Likewise they regret that the Committee should have failed to recommend that the existing machinery should be made satisfactory and effective for the adjudication of matters affecting the treaties and other engagements including disputes between the States and the British Government, or British India, or between the States themselves. Other matters of less importance were also dealt with in the resolutions, as was the question of future procedure. Regarding this latter the Princes agreed that the various points at issue could best be solved in personal discussion with the Viceroy, and by recourse to frank and friendly negotiations. In coming to this wise resolve the Princes were, we think, entirely right, and it is greatly to be hoped that substantial progress will have been made with the negotiations before the Chamber of Princes meets again in February next.

Corruption in Sind.

In a recent article in an Indian daily paper, Mr. A. V. Thakkar, a member of the Servants of India Society, draws attention to the petty exactions extorted from the Sind Zamindars by the subordinate Revenue Officials, and particularly by the Tapadar, or village Revenue accountant. Mr. Thakkar seems to be occasionally misled by the application to Sind of conditions prevailing in his own Presidency of Bombay. He speaks, for example, of the Patel; but the village headman known by that name belongs to Bombay, and is practically unknown in Sind. When Mr. Thakkar, again, refers to a Revenue official of real importance as "one of the Collector's confidants known as the Mukhtyarkar," he is probably merely trying to be nasty. Mr. Thakkar must know perfectly well that he corresponds to the Mamlatdar of the Presidency, an official with whose status Mr. Thakkar is doubtless well acquainted. There can, however, be no doubt as to the existence and wide extent of the evil to which Mr. Thakkar refers. Where he is wrong is in his exaggeration of its universality, and his ignoring of the efforts to stop the evil, which have certainly reduced, though they have equally certainly failed to eradicate it. Probably the comparative resignation with which it is accepted is due partly to historical causes. "Lapo," as the system is called, was originally a charge levied by the big Zamindar, or overlord, as an admission of his suzerainty, and to some extent as a return for his protection. It has naturally been adopted by the petty officials, who represent, however unworthily, that protection or overlordship. But, as Mr. Thakkar himself admits, two Commissions have been appointed to examine into the abuse; and, what he does not state, stringent orders have been issued as a result of these Commissions, which have reduced the evil in a large part of the Province. The real remedy is a growth of independent spirit among the small Zamindars, and an increase of education among the rural classes, which will teach them that the demands of the petty subordinate need not be fulfilled. Another remedy, to which Mr. Thakkar does not refer, is a wider and better selection of these subordinates, and thus recruitment from the people at large, and particularly from among the Muhammadans. Mr. Thakkar's article shows that he has been working principally in Thar Parkar, the most backward part of Sind. In other parts, and particularly in the north of the province, there is more independence, and a better educated class of Zamindars. There, it is believed, considerable improvement as regards "Lapo" and "Rasai" has taken place. If Mr. Thakkar can suggest better methods for stopping the evil than those ordered by Government, we feel sure that the Commissioner in Sind will be grateful. But only the co-operation of the people can really stop the evil.

THURSDAY, JULY 4, 1929.

STOCK-TAKING IN TURKEY.

Since the lead given by Ghazi Mustapha Kemal in devoting the greater part of a week to a speech reviewing the history of Turkey, national stock-taking has become a frequent indulgence on the part of Turkish statesmen and others. A recent occasion for one of these summaries of the political situation was provided for the Prime Minister by the close of a session of the Grand National Assembly, which had extended over seven months. History is being made these days in Turkey, and there must be a strong temptation for those who are responsible for the destinies of the country to linger on the contemplation of their handiwork. It remains true, however, that the onlooker generally sees most of the game, and the more sincere Turkey's rulers are in carrying out their important task, the more anxious they must be to check their own views by the impressions formed by those who are able to examine the country's achievement from outside. Quite rightly Ismet Pasha laid stress on the evidence that the Turkish Republic has given of its devotion to the cause of peace. An aggressive Turkey at the present time would be an international nuisance of the first order. There can be no doubt that the Ghazi and his Government have made up their minds that Turkey needs a period of external peace for her internal organisation. That this conviction does not make the Turks pleasanter or more accommodating negotiators is well shown by the history of their relations with France and Greece. In the art of exasperation and dilatoriness they remain supreme, and the concessions that they succeed finally in extracting are more prejudicial than advantageous to Turkey, as they are given for the most part in a contemptuous spirit and tend to confirm the other contracting party in the opinion that it has to do with a people who are still low down in the scale of civilisation or international comity. Another point on which the Prime Minister could congratulate himself and the country was the degree of public security that now prevails. Here again, however, the lack of any breadth of vision is manifested, and the Angora Government contrives to stultify its own achievement by conveying the impression that Turkey is honey-combed with dissatisfaction against the existing régime, through its tendency to discover a plot in every personal grievance. For a year now the Government has been at pains to read a conspiracy into a woman's action in seeking redress at the Ghazi's hands for a supposed private wrong. The first Court exonerated her from all criminal intent; but Angora would seem to be unhappy with no plot to expose, and for six months the woman has been under arrest to enable the authorities to carry out a persecution to which the judiciary would not lend itself.

In passing to internal affairs, Ismet Pasha showed still more plainly to what an extent "Couéism" has become a recognised factor in the Government's policy. The Turkish Republic, he declared, gains every day in strength and power, and makes incessant progress. The State finances enter upon the new fiscal year "full of confidence and with redoubled strength;" each of the last few years "had registered an improvement and had been marked by a success on the credit side of the financial situation." Whether this official assurance, in the

absence of any statement of revenue and expenditure for a completed year, which the Government withholds, will console the Deputies and the people at large for the heavy burden of taxation and the high cost of living, remains to be seen. If it does it will be because Turkey lacks the requisite knowledge for an appreciation of sound finance as well as for the adjustment of her finances on really sound lines. In no direction does she appear more to suffer from the lack of expert knowledge than in regard to her fiscal policy. To take one small illustration. The conviction of both the Grand National Assembly and the Government was probably reflected in the statement made two months ago by a newspaper in close touch with official circles that "great rejoicings will mark, during the first week of August, the important date of Turkey's taking possession of her own Customs, free from all fetters." As the date of "economic independence" approaches, however, Turkish exchange has been subjected to a heavy fall; it is discovered that the new tariff, which was to be the subject of national rejoicing, cannot be introduced during the first week of August; yet it has already had the effect of seriously embarrassing the Government's finances. Again, at the beginning of last year it was confidently announced and these announcements invariably emanate from official sources in Turkey—that the Government had arranged to establish at an early date a State Bank. This Bank has not yet materialized, and it has to be inferred from the silence on the subject of the German expert called in to advise the Government, and from his insistence upon the agricultural character of Turkey, that there are still serious obstacles in the way of realisation of the project. Accordingly, in regard to finance as in the sphere of economic development Turkey continues to live from hand to mouth.

There are some countries in the world whose material progress is a matter of comparative indifference to all except themselves. Turkey, however, has such resources and potentialities that it is cause for regret if she should lag behind when a little more expert knowledge might launch her on the flowing tide of prosperity. The achievements of those who have brought the Republic into existence are fully appreciated, and are, indeed striking enough to suggest how easy it would be to add to them just what is still lacking. Turkey presents the spectacle of a country eager to forge ahead, but ignorant of the road that it should take and repeatedly making false starts in different directions. Thus, the Government is conscious of the need of education, but it sets out to multiply primary schools before it has sufficient teachers to staff them. The whole nation has been put to school to learn the Latin characters, and the daily routine of the country has been disorganized in the process. It is discovered, however, that as soon as a perfunctory and compulsory acquaintance with the new alphabet has been acquired, the thirst for and inculcation of knowledge abruptly cease. Newspapers have had their circulations cut down by half, books printed in Arabic script have had to be scrapped. Yet a nation does not become educated by merely learning the alphabet, and the value of the educational spasm remains problematical. If freedom of speech were allowed in the country, the more intelligent section of the population must have pointed out that the disadvantages of an immediate change over to the new alphabet would inevitably outweigh the advantages that it was hoped to derive from the writing of Turkish in Latin script. From the earliest days of the Republic official emphasis has been laid on the need for the improvement of agricultural methods. Some sort of policy to this end has been introduced, but the stress that the German financial expert has been constrained to put upon the necessity of fostering Turkish agriculture suggests that little has been achieved compared with what might have been done, if foreign experts had been engaged to draw up and direct an agricultural policy suited to the country's requirements and limitations. Thus Turkey continues to pay dearly for experience that she might acquire more cheaply and more effectually from abroad.

*The Near and Middle East

From Our Own Correspondents.

Jidda, June 8.

Relations with Persia.

The satisfactory settlement of outstanding disputes with Iraq and the recognition of the Iraq Government by the Government of Persia have now been followed by the dispatch of a Persian mission to conduct negotiations with the Wahhabi King. The Persian plenipotentiary, who arrived at Jidda on June 6, is no stranger to this country, as he is the same Ain al-Mulk, formerly Persian Consul-General at Damascus, who came to the Hijaz in the autumn of 1925, during the Wahhabi invasion of the country, together with Ghaffar Khan Jalal al Saltana, then and still Persian Minister in Egypt, to discuss with Ibn Saoud certain questions in connexion with the alleged destruction of certain historic buildings at Mecca and Madina. He will find conditions in the Hijaz greatly changed for the better since his last visit, and it is to be hoped that his mission will result in the clearing away of all difficulties which have until now militated against the formal recognition of this country by the Shah's Government. It is understood that Ain ul-Mulk has recently been in Teheran to discuss the scope of his mission with his own Government.

Soviet Russia and the Yaman.

Another interesting event in the local political world is the recent passage through Jidda of Karim Khan Hakimoff, formerly Consul-General and representative of the Soviet Union here, *en route* for the Yaman, to take up the post of Manager of a Russian trading venture (a branch of the Sovtorgflot) recently launched in that country. His post, though not official in the technical sense, doubtless envisages his semi-official representation of his country at the Court of the Imam, who has not yet yielded to the temptation of encouraging the establishment of European Agencies or Consulates at his capital. News from the Yaman is scanty and not altogether satisfactory. There is room for an attempt to place Anglo-Yamani relations on a proper basis; the settlement of any conflict of interests between the two countries should not prove very difficult.

The King's Complaint Box.

The King is still at Mecca, and it is not known when he will be visiting Jidda again. Meanwhile he appears to be very busy overhauling the administration of the country. In the last issue of the Mecca paper appears a proclamation calling upon all persons with genuine grievances to make their complaints to His Majesty personally through the medium of a complaint-box, which has been installed in the Palace, and of which His Majesty personally keeps the key. At the same time people are warned against the abuse of the privilege of personal appeal, and anonymous complaints are ruled out.

A representative committee of eight persons, presided over by the Amir Faisal, has also been set up to overhaul

and examine all branches of the administration and to report any reforms likely to conduce to better government.

Miscellaneous News.

It is a matter of satisfaction to his many friends here that the services of Mr. H. Stonehewer Bird as British Agent and Consul at Jidda have been recognised in the Birthday Honours list.

The health of the French Consul, M. Maigret, has somewhat improved, but he will be leaving Jidda about the middle of this month with the idea of returning in August.

The postal department announces that letters for the Air Mail to all destinations *via* Egypt will henceforth be accepted at a surcharge of 4 Qarsh Miri (about 8d.).

The death is announced of the Amir Mishari ibn Jiluwi, Governor of Buraida, after a long spell of illness. The deceased Amir was a cousin of the King and of the same branch of the royal family as Abdullah ibn Jiluwi, the well-known Governor of the Hasa, whose eldest son, Fahad, recently lost his life in the operations leading up to the death of Dhaidan ibn Hithlain, the Ajman chief.

Much interest has been evinced here in the parliamentary election in Great Britain, the King and his Government having been kept informed of the results, as they became known, by special telegrams from London.

Motor Traffic.

With regard to the interesting article on motor traffic in Arabia in your issue of May 23, it should be said that the number of automotive units in the Hijaz and Najd must be well over 1,000 already, and it does not seem that the recent rapid rate of increase is likely to be checked. There are about 25 units or more in the Hasa and all Palace supplies for Riyadh are conveyed from the east coast ports by camel over the sand-dunes to Hufuf, thence by car to the edge of the Dahna, thence across the sands again by camel, and finally from the western edge of the Dahna by car to Riyadh itself. Roughly speaking, there may be 50 cars in the Hasa area altogether, and the King's fleet cannot number much less than 100 cars, while the Government, transport companies, and private owners of the Hijaz have between them certainly not less than 1,000 cars in more or less serviceable condition. Most of the transport companies have made good profits this year out of the pilgrim traffic, and the coming year is likely to see a steady development in the import of motor-cars.

Cairo, June 22.

Lord Lloyd's Tour.

The High Commissioner left yesterday for a short tour in Syria, in the course of which he will visit Beyrout, where he will be the guest for one night of the French High Commissioner, M. Ponsot, Homs, Hama, Aleppo and Damascus. Lord Lloyd returned earlier in the week from the Western Desert, where he made a tour of some seven days. The journey was made by train to Dabaa, which is now the railhead of the Mariut line, thence by

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

car via Mersa-Matruh to Siwa and back to Sollum, Barrani and Dabaa, whence the return journey to Cairo was made by railway.

At Mersa-Matruh Lord Lloyd was received by the cousin of the Grand Senussi, El Sayed Seifeddin. At Siwa, where the principal stop was made, the population turned out in full force to greet him on arrival. The first evening the local Zigaga gave a display of their characteristic dances. Next morning before breakfast the party rode over to Ain Tamusi, one of the natural wells of the Oasis, where Siwan brides bathe on the eve of their marriage. An inspection of a section of the Camel Corps followed, and then came a reception of the principal notables and Sheikhs, who appeared with all their followers and their religious banners. Lord Lloyd paid a short visit to the garden of Sheikh Mishri, situated in the eastern section of the town, where he partook of a light meal and then, so that no jealousy should be aroused by his visit, he went to the western end of the city to call on the Gabboum family, which for years has been in feud with the Mishri family.

After lunch and an inspection of the new hospital, which is being run by a graduate from Kasr El Aini, the party drove to Aghourmi, where the Sheikh gave them tea, and a visit was paid to the temple of Ammon, the sunset being viewed from the top of the Hill of the Thousand Dead, which is the old burial place of the Siwan population. After dinner the Siwans and the inhabitants of the Oasis of Kufra gave a fantasia and torchlight dance.

On the return journey the High Commissioner held a reception of the Sheikhs and notables and merchants at Sollum, where he also received the Italian Consular representative and dined on the Egyptian cruiser Abdel Moneim. Next day, after a reception at the Officers' Mess of the 8th Egyptian Army Battalion, the party left for Barrani, where the local Arab horsemen turned out and gave them an enthusiastic reception. Mersa-Matruh was reached in time for lunch, and the night was spent at Dabaa. Next morning the train proceeded on its return journey to Cairo. On the way a stop was made at Burg El Arab, converted, thanks to the ingenuity, energy and persistence of Mr. Jennings Bramley, into an Arab townlet of attractive medieval appearance, which it is hoped will some day be used as a place of conference for the desert tribes. Cairo was reached on the seventh evening and thus was concluded a most interesting and enjoyable trip which, contrary to predictions, was carried out in quite cool weather and over quite good roads.

Nile Waters.

An earnest of the good will of the Egyptian Government and of its desire for the efficient working of the recent Nile Waters Agreement is afforded by a decision of the Ministry of Public Works appointing Mr. Arthur Deane Butcher to direct the special office which will implement that agreement. Mr. Butcher's official title will be Director-General of Egyptian Irrigation in the Sudan and on the upper reaches of the Nile, to control the distribution of the waters of the river in accordance with the agreement and to supervise the execution of the Egyptian Irrigation Projects in the Sudan. Mr. Butcher,

who is at present Director of the Hydraulic Section of the Ministry of Public Works, has seen long service in Egyptian irrigation and has had a great deal to do with the elaboration of the various schemes and the investigations on which the distribution of the water as between Egypt and the Sudan has been based.

The Special Agricultural Reserve.

The decision of the Egyptian Government to detach the sum of £E4,000,000 from the General Reserve and create therewith a special agricultural reserve has more in it than meets the eye. Its immediate object is to ensure the existence of a fund for assisting cultivators and the local market in time of crises. But its ultimate end is to collect sufficient capital to found all over the country agricultural banks which will assist the agricultural element, not only in the matter of cotton, but also in regard to all the other crops. As a matter of fact, in making its decision, the Council of Ministers laid down that the money should be available for cultivators of other crops, viz., rice, maize, wheat, barley, etc., and not be restricted to the growers of cotton. The capital will be procured by crediting every year to the Fund the proceeds, about £E1,300,000, of the ginned cotton tax, which it is proposed to maintain for another ten years.

Bank Misr.

The Board of the Bank Misr were entertained last week at the San Stefano Casino to a dinner organised in their honour by leading Alexandria notables to celebrate the opening of the bank's new premises in Alexandria. Under the direction of Midhat Yeghen Pasha, its Chairman, and Talaat Bey Harb and Dr. Fuad Bey Sultan, its Managing-Directors, Bank Misr has made great strides and now counts among the banking institutions of the country. It has amongst its deposits about a million and a quarter belonging to the municipalities, while the Government has placed at its disposal at low interest some quarter of a million to be utilised in advances to deserving industrial enterprises and co-operative agricultural societies, of which some £E182,000 has been utilised. It has opened a branch in Paris, where it transacts business for a large number of the Egyptians who visit Europe annually and for the Egyptian Government, while it has founded companies for ginning, paper-making, and river transport, also cinema, fishing and weaving companies, some of which are already giving good results. Latterly the Chairman and Managing-Directors visited Syria and Palestine with a view to ascertaining whether it would be possible to start business in those countries, which are in many ways, and particularly economically, so closely connected with Egypt. It is understood that they have arranged to create a subsidiary company in each country.

GREECE.

Athens, June 24.

The Shipping Strike.

The quarrel between shipowners and stevedores, which led to a strike of the latter on Wednesday, June 12, and passed through an acute phase on Friday, June 14, during

18, OLD BROAD ST., LONDON, E.C.2

which day troops had to be called out and several strikers and a few police were wounded), was brought to an end on Wednesday, June 19, when an agreement between the parties was reached. By the agreement the strikers obtain a slight increase in wages and a re-adjustment of the hours of work. The settlement is generally regarded as provisional only. Good will come out of evil, if the decision of the Government to regulate once for all the questions of the Port of Piræus, by the creation of an autonomous organization, becomes effective. The organization of the port has not kept pace with its rapid growth; the cupidity of the shipowners on the one hand and of the dockers, boatmen, etc., on the other, owing to inadequate control, have reduced the place to chaos at the expense of the ordinary citizen.

As a result of the formation of the new Shipping Combine, which now issues a weekly list of sailings, it may well be that greater regularity and punctuality will be secured. But that is not enough. Seeing that the sea is the principal means of communication in Greece, a state of things should not be tolerated which would not be tolerated on railways. Passenger coaches on trains are not utilized for goods, and the passenger decks on ships should not be monopolized for cargo, to the discomfort and danger of the passengers. The personnel on Greek railways are noticeably smart-looking and civil. The crews on Greek coasting steamers are usually dressed in rags, and have a particularly slovenly appearance; the captain seldom wears a uniform and generally has his family and friends on the bridge with him.

It should not be impossible, even though it might require a State subvention, to run a service of fast, exclusively passenger boats to the larger islands and places of importance during some seasons. In this respect the example of Jadranska Plovidba, with its admirable service of passenger boats along the Dalmatian coast, might be imitated. Considering the high merits of Greek seamen, it is a pity that the standard in the shipping world (in spite of individual exceptions) has not kept pace with the enormous improvement of recent years in the railways.

The Death of M. Benachi.

The death of M. Emmanuel Benachi has removed one of the most remarkable among many remarkable Greeks who have used their wealth for the benefit of their country. The benefactions of Syngros, of Averoff, of Zappas were great: those of Benachi surpassed them all. A list of those made within the last four years is imposing. To the Greek Red Cross, £20,000; to the Academy of Athens, £20,000; to the Greek-Armenian College, £42,000; to the Evangelismos Hospital, £4,000; to the Refugees, 30 million drachmæ; to the Library of the Chamber, 4 million drachmæ; to the Orphanage at Kephissia, 2½ million drachmæ are among his principal gifts but are far from exhausting the list. All this too is apart from the numerous charitable foundations which he made in Egypt before removing to Athens. The special honours accorded at his funeral, at which the President of the Republic, the Prime Minister, and the members of the Cabinet, the heads of political parties, the chief military and civil authorities were present were no more than the due of a man who understood so thoroughly the responsibilities of great wealth, and to whom the wise distribution of that wealth was a joy.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

The Reopening of the Old Feud.

The inclusion of MM. Gonatas and Carapaniotis in the new Government has provoked a protest from the Monarchist party, an exchange of letters between their leader, M. Tsaldaris and the Prime Minister, as well as a long discussion in the Chamber. One can sympathise to a certain extent with the feelings of the Monarchists, and it seems a pity that old wounds, thought to be closed, should be reopened by the appointment of two prominent members of the Revolutionary Government of 1922. The policy of abstention from the Chamber, however, which has been adopted by the Monarchists, obtains little sympathy in the country and must, in the end, injure only those who adopt it.

Foreign Doctors in Greece.

Among Bills that either have been or will shortly be laid before the Chamber are; one to prevent foreign doctors from practising in Greece, a modification of the Law by which they have been hitherto permitted to practise under certain conditions; another (also emanating from the Ministry of Health), by which it is proposed to create a Sanitary Centre for Athens. The former Bill appears to an outsider to be hardly worth the trouble of bringing forward, since the number of foreign doctors practising in Greece must be, owing to the regulations already in existence, negligible. The latter, which is the immediate result of the Sanitary Programme elaborated by the Committee which at the request of the Greek Government was sent by the League of Nations to study conditions after the dengue epidemic, is very welcome. For the first year a credit of 21 million drachmæ will be granted.

The Greco-Turk Negotiations.

The apparent failure of the long drawn-out Greco-Turk negotiations, with reference to the position of the 180,000 Greeks still left in Constantinople, has created doubts in some quarters as to the ability of the Greek representatives who are conducting the negotiations. The Prime Minister has, therefore, consented to make a statement to the Special Commission of Foreign Affairs (a body composed of former Prime Ministers, Party leaders and others). The desire to exchange the 180,000 Greeks of Constantinople for the 100,000 Turks of Western Thrace, which lies at the back of the Turkish attitude, is naturally resisted by the Greeks, to whom such an exchange would be a disaster. Greece is quite incapable of assimilating a large increase of her urban population, already excessive, where in Turkey room could easily be found and to spare for the 100,000 agriculturists of Western Thrace.

ROUMANIA.

Bucharest, June 25.

The Agricultural Congress.

During the last fortnight a series of congresses have been held in Bucharest, among them the Anti-Alcohol Congress and the International Agricultural Congress, both of which still continue their meetings.

After a long series of meetings, at which very interesting papers were read, the delegates of the Agricultural Congress started on a tour of Roumania; they visited the agricultural, industrial and mining centres, and were able to convince themselves of the immense natural wealth of this country and of the tranquil nature, intelligence and industry of the peasant population.

Work in Parliament.

In spite of the intolerable heat and of the unusually long duration of the summer session, Parliament is getting through an immense amount of work. Both Chambers have discussed carefully the Police Law, the Bill on Judicial Instances and the Bill on Administrative Reform. The Senate passed the Law introducing the *Concordat Préventif Commercial*—a form of moratorium, which is

intended to assist merchants over the present period of trade depression by facilitating credits and establishing their foreign commercial relations. Both Houses have passed the Law relative to the dyking and draining of the lakes and marshes along the Danube, and also the Agrarian Law introduced by M. Mihalache, Minister of Agriculture, in a very illuminating speech.

At the end of last week Parliament in solemn session discussed and criticised the campaign of the Hungarian Government for the revision of the Peace Treaties and the recent speech of the Hungarian Prime Minister, Count Bethlen. M. Duca, one of the principal leaders of the Liberal Party, and M. Goga, a prominent member of the Averescu Party, made important interpellations and requested the Government to take certain measures in regard to the Optants question, pending the reply of the Hungarian Government to the Note to the Little Entente. M. Iorga expressed the hope that the conciliatory spirit of the Hungarian people would lead to an understanding on all those delicate questions and held out the olive branch to the Magyar Government. M. Mironescu, Minister of Foreign Affairs, replying for the Government, stated that the measures to be taken would be most carefully considered, but the reply of the Hungarian Government to the Note of the Little Entente would be awaited before proceeding further with the Optants question. He added that he was glad to see by the present attitude of the House that all parties were united on the question of foreign policy, and the only controversy to be anticipated was in regard to matters of form.

A Financial Crisis.

One of the secondary banks in Bucharest, the Banca Franco-Romana, was obliged to cease payments last week, it is hoped temporarily, owing to the reduction of discount facilities by the Banca Nationala. The Banca Franco-Romana made small advances of capital to agriculturists and, owing to the agricultural depression resulting from last year's bad harvests, found itself without sufficient free cash to continue business, pending the gathering in of this year's crops. The Bank, therefore, applied for a moratorium. The large banks of Bucharest offered their assistance and proposed to cover the deficit by a loan from the National Bank guaranteed by their securities. But the National Bank refused to carry out this operation, as being contrary to the terms of its new statutes. Other measures were then adopted to enable the Banca Franco-Romana to continue its operations; but the Press and financial circles have expressed their dissatisfaction, and with a view to preventing a similar occurrence in the future the ten large banks of Bucharest have formed a Union to protect their common interests and to guard against such manifestations of a money crisis, in order to ensure the stability of the market.

That a financial crisis exists there is no doubt, and the Government is taking further economic measures to meet the situation. Its economic policy is still governed by the desire to balance the Budget without having recourse to fresh taxation. It is hoped to effect an economy of three milliard lei, which would cover the present deficit, by a series of restrictions in the staff of Government Departments and by ensuring returns on a commercial basis from some of the State properties—by letting out the State fisheries, for example, and by the sale of the petroleum royalties.

With the same end in view the Ministry of Foreign Affairs has temporarily recalled some diplomatic officers from their foreign posts, thus effecting an economy of 60 million lei up to the end of the year. This is only a temporary measure, however.

Free Zones.

The Minister of Industry and Commerce, M. Madgearu, is introducing a new industrial and commercial policy by radical modifications in the administration of the Danube ports of Giurgiu, Galatz, Braila, and also of Constantza. In these ports free zones are to be established, by which it is hoped to intensify the activities of the docks and quays,

which the policy of recent Governments had completely paralysed.

Agriculture.

So far the harvest prospects are very good, and the crops are reported to be abundant and in good condition. Sufficient rains, alternating with great heat, have favoured their growth, and a cheerful optimism reigns among agriculturists, which, if it proves to be justified, will go a long way towards re-establishing the financial situation of the country.

Teheran, June 16.

The Summer Migration.

The first fortnight in June sees the annual move of the greater part of the inhabitants of Teheran to the small country villages, going about 600 feet high and to the north of Teheran. Practically the whole town moves up—the Court, headed by the Shah, the Legations, the Government officials, the cafés, shops—all who can possibly do so leave the heat (102 degrees Fahrenheit in the shade at the moment) and dust of Teheran for the cooler regions nearer the mountains.

This year the difficulties of moving every single article in the house to the up-country house ten miles away have been accentuated by the unexpected commandeering of all lorries and motor trucks to convey troops from Teheran to the neighbourhood of Shiraz, where the Kashgai tribe is in open revolt.

The Kashgai Revolt.

The cause of the trouble is due to the imposition of new taxes, to the passing of the law for compulsory military service for all Persians, and to the order to wear the famous Pahlavi hat.

The road to Shiraz has been closed for three weeks; the city is invested by the Kashgais and the trouble is serious; for, as a result of the closing of the road, owing to attacks on and robbery of travellers, and to the confiscation of lorry loads of merchandise on the way up to Teheran, no goods are reaching this city by the Bushire-Teheran route.

Rumour is rife; but it is difficult to obtain accurate news, as the telegraph lines are cut.

Should the Bakhtiari tribes, who have the same reason for discontent, join their neighbours, the Kashgais, then the Government will indeed be confronted with a difficult task; for the restoration of order amongst these hardy mountaineers in their own mountain fastnesses is no easy task.

Muharram.

All devout Muhammadans of the Shiah sect are celebrating the anniversary of the martyrdom of Imam Hussain of Karbala. For two months all must wear mourning of unrelieved black. Processions are organised of 200 to 300 men with bare backs and in their hands heavy chains, with which they vigorously belabour their backs by throwing the chains first over the left and then the right shoulder. In the bazaars, a large chair or throne is installed high above the people's heads, and from this seat a favourite Mullah recites the story of the agony and death of Hussain, whilst cries of bitterest agony and sorrow are heard and tears stream from the eyes of the faithful gathered to hear the tale. Even the prisoners

in the prisons are allowed to gather in an inner court and with chains and groans and tears of sorrow, take part in the universal mourning.

An Anglo-Persian Marriage.

The cause of good relations between the English and the Persians has been furthered, it will be hoped, by the marriage of the Teheran accountant of the Anglo-Persian Oil Company, Mr. R. C. Parrett, in Teheran, to a Persian lady. The happy couple have gone on leave to England, accompanied by the good wishes of all, and they are expected back in the autumn.

Teheran, June 23.

The Kashgais' Revolt.

The revolt of the Kashgais still continues, and the road from Teheran to the South is still closed. Newspapers comment on the fact that the Kashgais are well supplied with rifles and machine guns, reported to be of British manufacture and of the latest pattern, and Persians generally in Teheran believe the rebellion to be fomented and helped by England—which does not tend towards English popularity at the moment. What is certain is that, whether the backing power be English or Russian or Persian, the Kashgais are well supplied with arms and ammunition.

Three lorry loads of young recruits sent to Shiraz were ambushed by the tribesmen, and only ten survived. Rocks were placed across the roads and when the lorries had perforce to stop, the troops were subject to machine gun fire. The road, so carefully built by Messrs. Lynch Bros., will take both time and money to put in order again, for trenches have been dug across it, bridges destroyed, and parts of the road blown up.

Arrest of the Minister of Finance.

Prince Firuz, Minister of Finance, has been arrested by order of the Shah. His father, Prince Farmin Farma, and his brother, the Governor of Shiraz, are also reported to be detained. Whether these facts have any direct bearing on the situation in the South is unknown, for no reason has been assigned for the arrest.

One thing is certain, however: the present Shah is to some extent unpopular. This is because he is a severe disciplinarian and a reformer, and all reformers are heartily disliked. He suppressed one-third of the annual Persian holidays last year; he has introduced compulsory military service to his country; he insists on officials being in their offices for certain regular hours each day; he has prescribed the wearing by all Persians of the famous *Pahlavi* hat. These reforms, with new taxation for roads, the army, education and the rebuilding of cities, have created a feeling of unrest and dislike for one who changes the old habits.

There are always reactionaries who long for "the good old days" of sloth, indifference, and *laissez aller*, and these turn their thoughts to the ex-Shah.

Whether the revolt in the South is the beginning of an attempt to foment a general revolution remains to be proved.

Certainly the family of Prince Firuz is one of the richest and most powerful of Persian families, and he is credited with boundless ambition.

The danger lies in the possible union of the Kashgais with the Lurs and the Bahktiari; then anything may happen. At the moment guerilla warfare continues, to the detriment of trade and prosperity, and it is to be hoped that the troops of the Shah will succeed in swiftly putting an end to the present situation and that peace may once more enable travellers and merchants to continue on their way.

SYRIA.

Damascus, June 21.

Summer Days.

We are more than half-way through June. The calendar tells us that summer is only just begun, but the fellahin and the market-gardeners (for most of them raise their

own supply of wheat to be ground by the local water-mills) are finishing harvesting operations. The apricots are fully ripe. Those who own an orchard are crushing them and spreading out a huge line of red paste on wooden planks to make the *Qamar al-din*, sweet to the Egyptian palate and perhaps the improper source, in certain brands at least, of what, with strawberry, used to be the English schoolboys' favourite jam. The calendar says it is the end of spring, but one's own feelings, the thermometer in sympathy, point rather to midsummer.

The Lebanese Elections.

The Lebanese elections are over. They took place on June 16. The Opposition candidates fared ill. The new Parliament meets, I believe, in July. There was some liveliness at Baabda, once the capital, near Beyrouth, but precautions had been taken. At Tripoli the villagers came down from the mountains in armed support of their candidate, since their votes were not numerous enough to turn the scale. Three were killed in the ensuing affray, and perhaps twice that number wounded, but the authorities were strong enough to prevent anything worse. The excitement is over now. Some of the more independent Opposition candidates will be missed. Among them Shaikh Ibrahim al-Mundhir, a celebrated Arabic scholar, and the Druze Amir, Fuad Arslan, whose seat is taken by his brother. Like the Jacobite families of the Highlands years ago, the great Druze families do not always hold the same political views.

Egyptian Visitors.

Damascus has had two more Egyptian visits. The Banque Misr officials have been succeeded, first by the well-known theatrical troupe presided over by Yusuf Bey Wahba, next by the equally well-known poets, one a Christian, Khalil Bey Mutran, styled the "poet of the two lands" (for he was born in this country, not in Egypt), the other an Egyptian Muslim, Hafiz Bey Ibrahim, the "poet of the Nile." They came to Beyrouth to deliver odes at the invitation of the American University. Naturally they were invited to Damascus, where, after attending in state a school prize-giving, they were honoured with a public welcome at the Majmaa al-Ilmy. Naturally too there were private banquets. It is curious what influence a poet may still have—and Hafiz is undoubtedly a poet—with an Arabic-speaking audience. Hafiz has the power of melting into tears himself and causing his hearers to melt into tears with him. The Director of the theatrical company was struck with the warmth of national feeling at Damascus. This was expressed emphatically during the performance of a stirring drama, "The Maharaja's Revenge."

The Jabal Druze.

Politics have been dull, but the independence of the Jabal Druze is now assured, its independence of the rest of Syria. A Decree was issued lately giving the Jabal an independent judicature under the presidency of a Frenchman assisted by a French inspector. This week another Decree has been published ordering the institution of a National Ministry. The Ministry of the Interior is entrusted to a *watany* (whether a nationalist or a native is not quite clear). The Ministries of Education, Public Works, Health, and Justice are to be presided over by Frenchmen. The Jabal Druze has now an independence of its own. Such is the information published in the *Shaab* of June 21.

The action of the Mandatory Power, which is also constructing, it is said, an important road from Bosra Eski Sham through Sueida to Shuhba between Jabal Druze and the desert, arouses some indignant comment in the Damascus Press. But politics are dull. The politicians wonder what may happen at Geneva, and what the Labour Party may think fit to do. The weather is hot, but their hopes are cold.

Lord Lloyd, British High Commissioner for Egypt, has returned to Cairo from his visit to Syria and Palestine.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 13.

The Boycott of the Legislatures.

Considerable dissatisfaction continues to be expressed, more especially in the United Provinces, with the All-India Congress Committee's resolution calling upon all Congress members of the Legislative Assembly and the Provincial Councils to attend no more meetings, as a protest against the acts of the Viceroy, and those Governors who followed his lead, in not dissolving the Assembly or Council. Pandit Motilal Nehru has now issued the following: "The Congress resolution demanding abstention from legislatures is not an isolated move; it is in pursuance of the Madras and Calcutta resolutions on independence and non-co-operation from 1930 and a corollary to Gandhi's resolution for re-organising the Congress. The Government decision is intended to check normal developments and is the first step of a scheme to defeat the Congress. But the worst that can happen will prove the best for the Congress, bringing the inevitable conflict nearer. Now that things have reached a crisis and time for action arrived, all available forces have to be directed to the main goal, for which Councils are of no use."

The Pandit's Argument.

Besides the above, which appeared in the newspapers over the Pandit's signature, a long statement has been published. Of it I propose not to quote more than this: "The extension of the lives of the present legislatures beyond the normal span allotted to them is evidently the first step of a carefully thought out scheme to defeat the activities of the Congress." One would say first that, if the Government of India does want to defeat the activities of the Congress, it has taken a very long time to think out the first step. Next one would say that no one can know better than Pandit Motilal Nehru that to extend the lives of a few legislative bodies, bodies that sooner or later must be dissolved, cannot make the least difference in the world to the Congress, it being a body that meets as often and where it pleases, mostly to talk in the air. The fact is that very many of the non-official members of the Assembly, including all or nearly all the Muslim members, did not desire an early dissolution, one that should precede the publication of the Statutory Commission's Report by a bare few months, and the Viceroy yielded to them. He cares not a straw for the activities of the Congress, except in so far as they may tend to foment sedition and bloodshed (not that the leaders of the Congress will any such thing): the Viceroy cares not a straw, nor does anyone else in India with any depth of sense in him, unless it be those politicians whose chance of getting the power under the new Constitution will depend on the backing of the Congress. The two things that are of moment in the immediate field of Indian politics are not the activities of the Congress, but the Statutory Commission's Report on the one hand, and on the other those efforts that are proceeding behind the scenes to bring Indian leaders and the British Cabinet together to discuss the Nehru Report, or a substitute that would command still more support. The Muslim opposition to the Nehru Report has not been smoothed away, and does not seem likely to be.

Race Feeling and Unreason.

There is a great deal of unreason in the public utterances of Indians (not in their private), due to race feeling, and account should be taken of it. An example was given the other day in a document, the work of two Indians, appointed with a third, a Scotsman, to inquire into and report on jail administration in one of the Provinces. The Scotsman, discussing the question of differentiation in matters of diet, etc., between Indian and European convicts, said that it was "justified by the fact that the diet of an Indian prisoner would disagree with the health of a European and that a diminution below a certain point in the amenities of life granted to him will operate too harshly

on him." Indian public opinion expects Indians not to say "yes" to such things as that; accordingly, what we got from the two Indian members of this Jail Committee was: "If they are equally morally degraded, then why should one get only *chapatis* and *dal* and the other get sugar, tea, butter, cutlets and potatoes?" Now those of us who are familiar with the ways of living of wealthy Indians know that, given their choice between Indian dishes and European, they prefer the Indian; they prefer *chapatis* and *dal*. I frequently sit at table with Indians. They begin with a dish or two prepared in the English way, and then pass to Indian dishes; they quite obviously prefer the last. I bring this matter up only for its value as an illustration. Those who follow Indian public affairs from your side must be prepared to find Indians often saying in public, because Indian public opinion expects it of them, what their private talk would contradict. I have known many instances of it. An Indian, a Judge of the Calcutta High Court, once volunteered an opinion to me about Indians generally and the running of joint stock companies. Shortly afterwards he said exactly the opposite as a witness before some Commission. His private opinion, expressed to me, was his true opinion.

The Indian States.

In a letter that deals with the current affairs of the whole of India not much space can be devoted to those of the Indian States. To those specially interested in their affairs one would recommend the perusal in its entirety of the letter which the Chancellor of the Chamber of Princes has this week addressed to his brother-Princes as a preparation for the meeting of the Viceroy and a deputation of the Princes in Bombay. All the really important outstanding points are raised in this letter. There is, for instance, the "definition and limitation of paramountcy within its proper legal orbit," to use the wording of the Chancellor's letter. The Butler Committee, it is pointed out, "have failed to define this relationship, but they remark that it depends on the treaties, engagements, and *sanads*, supplemented by usage or sufferance and 'by the decisions of the Government of India and the Secretary of State' embodied in political practice. The words quoted are a novel addition to the sources of paramountcy, and I am advised that it is not supported by the Privy Council ruling which the Committee cite as an authority for this new enunciation." The letter, I may add, will bring little comfort to those British Indian politicians who want the whole of India to form one political unit. The Princes seem determined to have none of that.

Medical Research in India.

The Report of the Fletcher Committee, appointed in December, 1927, to consider the organisation of medical research in India, is now before the public. The recommendations include the establishment of an Imperial Medical Research Institute at Dehra Dun, the abolition of the existing Central Institute at Kasauli, the enlargement of the provincial institutes, and the strengthening of the Medical Research Department. Already there has been a protest against the choice of Dehra Dun for the location of the Imperial Institute. The existing Central Institute, it may be argued, should never have been located at Kasauli, and that it was so was very largely the work of one man, its first Director, who at the time that it was proposed that he should be the Director was in charge of the Pasteur Institute at Kasauli. I have said that the Fletcher Committee's Report is before the public. As extracts from it have appeared in the Press, it must be to some extent; but a letter of protest, addressed to the Government of India from Bombay, has this:—"My Committee regret that though the Fletcher Committee signed their Report in March, 1928, and that though the All-India Medical Congress held at Calcutta urged the circulation of this Report last December, . . . Government have not yet published this Report and the evidence collected by the Fletcher Committee. Such an attitude on the part of the Government can only serve to increase the suspicion which the independent medical profession is

driven to entertain as to the reasons why the medical advisers of Government are pressing for locating the Central Medical Research Institute at Dehra Dun and rushing this plan through." Perhaps this protest from Bombay and the Report, on its way to the public, crossed each other, to put it so. Certainly the doctors are entitled to ask for the Report to read.

The Bombay Stock Exchange.

A very grave situation having arisen in the Bombay stock and share market owing to the frequent strikes in the textile industry having given a great advantage to those operating for a fall, the authorities have been compelled to suspend dealings. That was part of last week's news. The news this week has been of meetings between a committee of the Stock Exchange and the mill owners, not very fruitful meetings apparently, and that the Girni Kamgar Union, in accordance with its declared policy of not allowing a third party to mediate in the dispute, has declined an invitation made by the Stock and Share-brokers' Association to attend a conference with a view to ending the strike. Bombay seems over-full of stiff-necked folk. What I would add as a last word has nothing to do with the share market of Bombay. It is that I saw the other day a commercial letter, dated Calcutta, headed: "Exceptional Stagnation in General Trade." Another word is that the Government of India are receiving praises for appointing a large and "thoroughly representative" committee to conduct the banking inquiry. What was wanted was an inquiry by three or four men who understand that most difficult subject, no matter whom they represented or what. India is mad about representative committees.

THE INDIAN PRINCES AND THE BUTLER REPORT.

As foreshadowed in last week's issue of THE NEAR EAST AND INDIA, the Standing Committee of the Chamber of Princes met the Viceroy on June 28 at Poona and communicated to Lord Irwin the text of the resolutions adopted at the Bombay Conference, outlining the Princes' preliminary impressions of the Butler Committee's report. The Conference, which was held in Bombay earlier in the week, authorised the Committee to convey to the Viceroy, without prejudice to any future action, the provisional conclusions of the Princes respecting the Butler report, which, as the resolutions given below make clear, are both favourable and unfavourable, and also to indicate to the Viceroy the remedial measures which the Princes intend to adopt with reference to the other findings in the Report.

The proceedings were private and informal. Lord Irwin was accompanied by Lord Goschen, who is Viceroy and Acting-Governor-General during Lord Irwin's absence on leave. In the absence of the Maharaja of Patiala, Chancellor, and the Maharaja of Kashmir, pro-Chancellor, the duties of Chancellor were performed by the Maharaja of Bikaner. Other members of the Standing Committee present were the Nawab of Bhopal, the Maharao of Cutch, the Maharaja Rana of Dholpur, the Maharaja Rana Sahib of Porbandar, the Rajah of Sitamamau and the Chief of Sangli.

The resolutions submitted on behalf of the Princes recorded the satisfaction of the Indian States at the Butler Committee's recognition in certain important respects of the correct position of the States, notably that of the direct relationship of the States with the Crown and that the Viceroy and not the Governor-General in Council should be the agent for the Crown in all its dealings with the Indian States. While welcoming the admission of British India to its due place among the British Dominions, the Princes expressed gratification at the Butler Committee's recommendation that the relationship between the Paramount Power and the Princes should not be transferred without the agreement of the Princes to a third party. This recognition left the door

open for negotiations between the States and British India, with a view to arriving at an equitable and satisfactory arrangement on fair and honourable terms. The Princes also expressed their appreciation of the recognition of the claims of some of the States to be relieved of the existing financial arrangements which adversely affected the States, and expressed the hope that the *personnel* and procedure of the independent expert committee, which it is proposed should explore the financial and fiscal problems, should be settled in consultation with all the parties concerned.

The fourth resolution expressed the disappointment of the conference at certain unsatisfactory aspects of the Butler Committee's report which were prejudicial to the interests of the States of India and of the Empire. These aspects included the failure of the Committee, after the admission that sovereignty was divided between the Crown and the States, to draw a dividing line which would place the rights of the Crown in regard to the States upon a definite as opposed to a discretionary basis. Disappointment was also expressed with the assertion of the Committee that intervention by the Paramount Power which was not justified by the spirit and letter of subsisting engagements might be justified on the score of Imperial necessities and the shifting circumstances of time. The Princes regret the omission of the Committee to recommend that the existing machinery should be made satisfactory and effective for the purposes of adjudicating upon matters affecting subsisting engagements, such as the internal autonomy of the States and disputes between the States and the British Government or British India or between the States themselves. Disappointment was also expressed at the failure of the Committee to distinguish between *sanads* [charters or grants] in the nature of agreements and those that were imposed upon the States, at the implied opinion of the Committee that usage based upon cases of individual States is the source of Paramountcy applicable to the States as a whole, in spite of the admission that the treaties cannot be read as a whole, and at the failure of the Committee to provide an effective means of securing to the States their rights in matters of common concern to India as a whole.

The fifth resolution states:—

"This conference believes that these and other questions now at issue between the British authorities and the States and between the States and British India can, at the present stage, best be solved in personal discussion with his Excellency the Viceroy and by recourse to frank and friendly negotiations, and authorizes the Standing Committee of the Chamber of Princes to take such necessary action between the present day and the meeting of the Chamber of Princes in February, 1930, as would facilitate this task."

The final resolutions reaffirm the Princes' previous decision to devote to the moral and material progress of the subjects of the States the advantages resulting from the removal of the inequitable financial burdens under which the States at present labour, and, while appreciating the response already made in certain directions, invites the attention of States Governments to the resolution regarding essential reforms passed by the Chamber of Princes in February, 1928, and emphasizes once again the supreme importance of giving full effect to it.

It is understood that Lord Irwin promised careful consideration of the resolutions and said that a communiqué would be issued by the Political Secretary of the Government of India on the important points raised by the resolutions.

Mr. Arthur Joseph Cargenven, I.C.S., has been appointed Puisne Judge of the High Court of Judicature at Madras in the vacancy which will be created by the retirement of Sir William Watkin Phillips.

Major-General Reginald Henry Mahon, C.B., C.S.I., R.A., of Barton Holt, Kintbury, Berks, chairman of Research Engineers, Ltd., and deputy chairman of the Calcutta Electric Supply Corporation, who died on February 22, aged 60, left estate of the gross value of £20,755, with net personality £18,796.

INDIAN RAILWAY PROGRESS.

The history and future of Indian railway development was the subject of an interesting and instructive lecture delivered by Sir Clement Hindley, late Chief Commissioner of Railways in India, before the East India Association on June 24.

Lord Reading, who presided, said that everyone who had lived in India or who had interests there was interested in a record of which we had every reason to be proud. After describing the events leading up to the appointment of the lecturer as Chief Commissioner in the reorganised Railway Board, he paid a notable tribute to Sir Clement Hindley's work, an outstanding feature of which was the effect which they were able to give to the proposal, which had been made some years before, for the separation of the railway budget from the general finances of the country. The scheme, which had been accepted by the Legislative Assembly with some minor alterations at a time when rejection of Government proposals by that body was by no means unknown, had been in operation now for nearly five years and had worked for the benefit of the country.

Sir Clement Hindley said that the present railway system, which comprised over 41,000 miles, represented a capital value of some £687,000,000 and carried more than 600,000,000 passengers and nearly 90,000,000 tons of goods yearly, was one of the greatest monuments to the British connexion with India. The lecturer also described its early history, since the first line was opened 75 years ago, the construction of the trunk lines, the practical consequences of the separation of railways from general finance, and the progress made since the War, including the workshop reorganisation, the reduction of rates and fares, the improvement in amenities provided and the work of the publicity department.

Concluding his address, Sir Clement proceeded: "What is going to happen to this great national asset of India? Among the countries of the world India occupies the third place in respect of railway mileage. Nearly 9 per cent. of it is State property and necessarily under Government financial control, while nearly half, both as regards mileage and personnel, is already under direct State management. The present Government is committed to a policy of transfer of management to India as the companies' contracts fall in, and present national sentiment, in so far as it is articulate, is in favour of complete nationalisation.

"The old controversy of State versus company management in India is as dead as the Great Moghul, and the main argument of the opponents to State management—namely, that it spells inefficiency and insolvency—has been exploded by the obvious, visible and tangible success of the experiment in India.

"Let it be granted that the circumstances were exceptional, that a Government in a permanent minority in the elected Legislature has to have exceptional powers, such as are not found in other countries where nationalisation of railways has been tried. Admit, further, that the Railway Department of the Government of India has been protected against political intrigue and the pressure of vested interests. But give the Legislature its due, and remember that its adherence was secured to each succeeding step of reorganisation of the railways and to the grants of funds by which that reorganisation was effected, even if it chose, for the annual exigencies of party politics and as a demonstration against an alien form of government, to refuse the grant for the Railway Board itself.

"How is the organisation to function in the future? In formulating the coming constitutional changes will any consideration be paid to the difficulty that must inevitably arise from the growth of a Department of Government to dimensions of financial and administrative importance rivalling those of the Central Government itself? There are parallels in other countries where solutions have been

found to the problem of nationalisation which appear to be free from objection.

"In Canada, Germany and Belgium State railway administration has been commercialised and made a separate authority subordinated by statute to Parliament. But whether such a solution is likely to be found by the makers of India's future constitution remains to be seen. From all appearance neither the Statutory Commission nor the political parties in India have recognised the importance of the problem."

Sir Basil Blackett, the Maharaja of Burdwan, Sir Campbell Rhodes, Colonel J. B. Crawford, Sir Philip Sheridan, Sir Walter Willson, and Mr. J. M. Chartres also spoke. A vote of thanks was proposed by Sir Harcourt Butler.

INDIAN CENTRAL COMMITTEE.

His Majesty's Government entertained at dinner at the Carlton Hotel on June 27 the members of the Indian Central Committee, who are collaborating with the Indian Statutory Commission.

The Prime Minister, Mr. Ramsay MacDonald, presided, and proposed the toast of the Committee, the chairman of which, Sir Sankaran Nair, responded.

Sir John Simon replied to the toast of the Indian Statutory Commission, which was proposed by the Secretary of State for India, Mr. W. Wedgwood Benn. It is understood that the speeches were of a complimentary character and no statements of political significance or importance were made.

The company, which numbered over 80, included the following:—

The Marquis of Reading, Nawab Sir Zulfikar Ali Khan, Mr. A. V. Alexander, M.P., Dr. A. Suhrawardy, the Earl of Lytton, General Sir Havelock Hudson, the Marquis of Zetland, Lord Strathcona, Mr. W. Adamson, M.P., Sardar Bahadur Shivdev Singh Uberoi, Mr. F. C. Goodenough, Raja Nawab Ali Khan, Mr. Philip Snowden, M.P., Viscount Burnham, the Marquis of Linlithgow, Sir William Vincent, Sir Amherst Selby-Bigge, K.C.B., Sir Hari Singh Gour, Mr. Tom Shaw, M.P., Col. G. R. Lane-Fox, M.P., Sir Reginald Mant, Mr. W. T. Layton, Lord Thomson, Lord Olivier, Mr. S. N. Mallik, Sir Harcourt Butler, Lieut.-Col. G. F. Stanley, Mr. Kikabhai Premchand, Dr. R. P. Paranjpye, Major the Hon. E. Cadogan, Sir C. P. Trevelyan, M.P., Sir Arthur Froom, Lord Sankey, Lieut.-Col. Sir Leslie Wilson, Lord Passfield, Sir Robert Holland, Earl Winterton, M.P., Major C. R. Attlee, M.P., Mr. J. R. Clynes, M.P., Sir Arthur Hirtzel, Mr. Arthur Greenwood, M.P., the High Commissioner for India, Dr. Drummond Shiels, M.P., Rao Bahadur, M.C., Raja, Mr. S. F. Stewart, Col. Sir Umar Hayat Khan, Mr. R. H. A. Carter, Mr. H. H. F. M. Tyler, Mr. Rama Rau, Sir Malcolm Seton, Major E. N. S. Crankshaw, Mr. J. W. Bhole, Esq., Mr. D. T. Monteath, Captain R. A. R. Neville, R.M., and Sir Campbell Rhodes.

THE EAST INDIA ASSOCIATION.

In the absence of the President, Lord Lamington, who has undergone an operation, Sir Louis Dane, Chairman of Council, presided at the 62nd annual meeting of the East India Association on June 25. He said the association had lived up to its leading object of promoting by all legitimate means the public interest and the welfare of the inhabitants of India. The widening of the scope of their lectures in the past two years so as to include present pressing Indian questions had been wholly good. Lady Procter expressed her gratification that the problems of women's education and welfare were now receiving some attention in the lecture programme, and asked that more should be done in this connexion.

A telegram from the Government of India, Education, Health and Lands Department, to the Secretary of State for India, dated June 27, 1929, states:—"Rainfall, week ending June 26.—Excess: Punjab (East and North), Kashmir, Rajputana (East), Hyderabad, Madras (South-East) and Madras Coast (North). Normal: Bay Islands, Burma, Punjab (South-West), North-West Frontier Province, Baluchistan and Bombay Deccan. Fair: Orissa, United Provinces (West), Pajputana (West), Gujarat, Central India (West), Berar, Central Provinces (East), Konkan and Malabar. Scanty elsewhere. Monsoon strengthening central parts of country, weak elsewhere.

Book Reviews

AN AMAZING CHRONICLE.

"**THE AGRA DOUBLE MURDER.**" By Sir Cecil Walsh. (London: Benn. 7s. 6d.)

The interest which we feel in reading a detective story is of quite a different kind from that which we feel in reading a story of real crime. In the first case we deliberately enter a world of unreality. We do not go to it, as to most novels, for a reflexion of some aspect of intelligible human experience, but with a desire to forget reality. For a detective story to succeed, while the plot must be well knit and coherent and the characters credible in their conversation, it is essential that there should be an air of detachment from real life. In a story of real crime we are also concerned with the motive and plotting of the criminal and with the ingenuity and the coincidences which lead to detection, but in it the interest lies in the fact that we know, and keep reminding ourselves, that these things did really happen and in the consequent astonishment and horror which we feel.

The Agra double murder really took place in 1911 and 1912, and the details of it are so amazing that, if they made up the plot of a work of detective fiction, we should dismiss them as being too far-fetched.

Mrs. Fulham slowly poisoned her husband with poisons sent to her by post by her Eurasian lover, Clark, who belonged to the Indian Subordinate Medical Department. Clark, after some unsuccessful attempts to poison his wife, finally had her murdered by hired assassins. The murders were carried out, although several people, including the unfortunate victims themselves, realised that some attempt was being made on their lives. Afterwards, when suspicions were thoroughly aroused, proof was forthcoming in the shape of a box containing four hundred letters from Mrs. Fulham to Clark, which was found under Mrs. Fulham's bed. In these letters details of the plot were fully discussed.

It is the strangeness of the personality revealed through them which have chiefly made it worth while for Sir Cecil Walsh to retell the story, which he does very cleverly and clearly. When one reads these documents with their impatient complaints that the arsenic, which Clark was sending, was doing her "hubby" more good than harm, with their pious exhortations to Heaven, their chatty descriptions of society amongst the subordinate officials of an Indian Plains station, their passionate endearments combined with a kind of coy flirtatiousness, one can only remain lost in wonder at this fresh revelation of the inexhaustible variations of human nature.

J. B. A.

BY THE DEAD SEA.

"**EXPLORATIONS AT SODOM.**" By Melvyn Grove Kyle. (London: The Religious Tract Society. 5s.)

Dr. Kyle, who offered to Biblical scholarship works on "The Problem of the Pentateuch," "Moses and the Monuments" describes in his "Explorations at Sodom" his travels from New York to the Dead Sea. We follow him to Bible Lands, visit with him the Latin Parish House, Kerak and Moab and stay with him in various places of Moab and in the shade of the thorn tree, at

Sodom, on the Dead Sea, till we arrive at the Port of Jericho. Dr. Kyle gives a charming account in eleven letters of his travels, which are full of interest and information.

Apart from keen observations on the present conditions of the country traversed, the chief aim of the book, and also of the archeological mission, is to establish that the great catastrophe of Sodom, as described in the Bible, did actually take place. Dr. Kyle achieved much. He is happy in, and must be congratulated on, his great success, in having been able to confirm the account of Genesis, and to depict the civilisation of the Days of Abraham as represented by the Biblical narrative. The plain was "like the Garden of God before the Lord destroyed Sodom and Gomorrah." Will the old curse resting on these cities ever be removed, and the ground produce its long hidden treasures?

THE DESERT AND LOVE.

"**THE TIN SHAWL.**" By Marion McClelland. (London: Hurst and Blackett. 7s. 6d.)

A large part of the action in this novel takes place in Paris. There the heroine, having contracted leprosy, through wearing a dirty but beautiful shawl which she had bought in Cairo from an Arab, lives for three years, until she is cured, in a house built for her on her husband's roof. This, however, is really a novel of Egypt, with the descriptions of Cairo and the desert which one expects, and which are, in this case, graphic and competent. The heroine is married to a French artist, to whom his art is more important than she is. In the first chapter she meets in the desert an English Colonel, a strong, silent hero. By the last chapter the artist is dead and they are back in the desert, married and ready to live happily ever after.

PERSONAL AND GENERAL

TO-DAY

July 4, 1929 (New Style).

June 21, 1929 (Old Style).

Muharram 26, 1348 A.H., of the Muslim Calendar.

Sivan, 20, 5689, of the Jewish Calendar.

Mazloun Pasha, Director-General of Posts and Telegraphs in Egypt, left London on June 29 for Paris.

Prince Ali Khan, who has been staying at the Ritz Hotel, left London last week for the country.

The Viceroy of India, Lord Irwin, left Bombay on June 29 for England on four months' leave.

Sir Robert and Lady Waley Cohen sailed for New York on June 27. They will be away from London for a month.

Madame Hadji-Mischew had the honour of being received by the Queen at Buckingham Palace on June 26.

Lieutenant-General Sir Peter Strickland returned to the Old Hall, Snettisham, Norfolk, from Gezira, Cairo, on July 1.

The Viscounty conferred on Lord Plumer is gazetted by the title of Viscount Plumer of Messines and of Bilton in the County of York.

The Rev. E. A. B. Royds, recently Civil Chaplain in Baghdad, has been appointed clerical Assistant-Secretary of the Church Pastoral-Aid Society.

Sir John Chancellor, High Commissioner for Palestine, with Lady Chancellor and Miss Rosemary Chancellor, arrived in London last week from Palestine, and are staying at 19, Portman Square.

Dr. Harry Reginald Holland Hall, M.A., D.Litt., F.S.A., Keeper of Egyptian and Assyrian Antiquities in the British Museum and formerly Scholar of St. John's College, Oxford, has been elected to an honorary Fellowship at the College.

The Prince of Wales received at St. James's Palace on June 26, on behalf of the King, Sir Reginald Glancy (upon relinquishing his appointment as Agent to the Governor-General in Central India). His Royal Highness subsequently received the Maharaja of Rajpipla.

It was announced in the *London Gazette* that the King has conferred the dignities of Viscount and Earl of the United Kingdom on James Lyle, Viscount Inchcape, G.C.S.I., G.C.M.G., K.C.I.E., and the heirs male of his body lawfully begotten, by the names, styles and titles of Viscount Glenapp, of Strathnaver in the County of Sutherland, and Earl of Inchcape.

H. E. Shaikh Hafidh Wahba, Minister for Education to the King of the Hijaz, will deliver a lecture on "Wahhabism in Arabia," on Friday, July 5, at 5 p.m., at 74, Grosvenor Street, W.1. (by kind permission of the Royal Asiatic Society). Field-Marshal Viscount Allenby will be in the Chair. The lecture will be delivered in Arabic, but it will be translated and followed by a discussion.

At the University College, Gower Street, W.C., tomorrow afternoon (Friday), at 2.45 p.m., the Petrie Medal for Distinguished Work in Archaeology will be presented by the Vice-Chancellor of the University of London, on behalf of the Senate, to Sir Aurel Stein, K.C.I.E., (Indian Archaeological Survey), in recognition of his work in Central Asia and Western China. After the presentation, guests will be invited to visit the annual exhibition of the British School of Archaeology in Egypt, showing the antiquities of the Hyksos and Philistine Ages recently discovered by Sir Flinders Petrie and his students at Beth-Pelet, Palestine.

The fourth annual Anglo-Egyptian Students' conference will be opened at 4.30 p.m., on July 5, at Digswell Park, Welwyn North, Hertfordshire. The opening address will be delivered by Abdel Malek Hamza Bey, who succeeds Sesostris Sidarouss Bey as Egyptian Chargé d'Affaires.

Nagadeas Makonnen, Minister of Commerce in the Abyssinian Government, has left Addis Ababa for London, where he will act temporarily as Abyssinian Minister. He is accompanied by a Secretary, M. Hirni, who has recently been studying at Cambridge University.

Prior to the Court held by the Queen at Buckingham Palace on June 27, her Majesty received his Highness the Maharaja of Rewa and Colonel his Highness the Maharaja of Kapurthala. Lieutenant-Colonel Stewart Patterson, Political Aide-de-Camp to the Secretary of State for India, was in attendance.

At the Honorary and Higher Degrees Graduation Ceremony at the University of Glasgow on June 19, the Degree of Doctor of Philosophy (Ph.D.) in the Faculty of Engineering was conferred upon Mr. William Hannah McLean, A.R.T.C., M.Inst.C.E., Drimard, Dunoon, Argyllshire, for a Thesis on "The Wider Applications of the Principles of Town Planning (Regional, National and International Development Planning)." Mr. McLean is the late Engineer-in-Chief of the Alexandria Municipality, Egypt.

MEDITERRANEAN CRUISE.

The Mediterranean Fleet left Malta on June 26 for its summer cruise in the Levant, which will last until August 21. As is customary, according to *The Times*, whenever the Fleet puts to sea nowadays, exercises will be held, and while one half of the ships will form the "Red" Fleet under the Commander-in-Chief, Admiral Sir Frederick Field, the others will constitute a "Blue" Fleet under the Second-in-Command, Vice-Admiral W. A. Howard Kelly. The Fleet will afterwards go to the Gulf of Patras until Monday next, when it proceeds to Dragonesti Bay for a week. It will afterwards divide up for visits to various places, and will reassemble off Argostoli from August 10 to 19, where the regattas will be held.

The vessels to take part include Queen Elizabeth, Revenge, Barham, Warspite, Malaya, Royal Oak, Royal Sovereign, and Resolution; the cruisers London, Frobisher, Sussex, Cardiff, Calliope, and Cairo; the aircraft-carrier Courageous, attended by the destroyers Whitehall and Worcester; the Second, Third, and Fourth Destroyer Flotillas; the First Submarine Flotilla; the depot-ship Sandhurst and repair ship Assistance; the Admiral's yacht Bryony, and the hospital ship Maine. The aircraft-carrier Eagle, after refit and recommissioning, is at Gibraltar, and will not leave until July 20 to join in the cruise.

Where to stay in the East

(Summer resort; altitude 6,400 ft)

Offer excellent accommodation at reasonable tariffs.

These four prominent hotels are owned and operated by:

NAJEM HOURY & SONS, LIMASSOL, CYPRUS.

Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

ADEN FIELD FORCE.

The eleventh annual dinner of the Aden Field Force was held at the Trocadero Restaurant on June 15. Major-General Sir James Stewart presided, and others present were:—

Vice-Admiral W. D. Boyle, Vice-Admiral P. H. Hall-Thompson, Rear-Admiral L. R. Oliphant, Brigadier-General L. N. Beatty, Brigadier-General W. C. Walton, Captain R. Fitzmaurice, R.N., Captain K. A. F. Guy, R.N., Captain A. W. Lewis, R.N., Colonel W. B. Douglas, Colonel A. P. Drayson, Colonel C. V. Ommanney, Colonel A. E. Scott, Colonel R. de Verdon Williams, Paymaster-Commander T. A. Woolf, R.N., Lieutenant-Colonel A. S. Arnold, Lieutenant-Colonel W. B. Chambers, Lieutenant-Colonel E. P. Cudlip, Lieutenant-Colonel A. E. Hills, Lieutenant-Colonel J. F. Parkin, Lieutenant-Colonel C. H. Sealy, Lieutenant-Colonel A. Le F. Smith, Lieutenant-Colonel H. S. Strong, Lieutenant-Colonel W. M. P. Wood, Major J. B. Andras, Major B. F. Beatson, Major H. Berridge, Major P. T. Blanford, Major J. K. Douglas, Major F. Golding, Major A. W. Nias, Major G. C. Pullman, Major D. T. Richardson, Major W. L. Sandover, Major F. E. Wood, Squadron-Leader C. H. Moore, Captain C. Blamey, Captain G. F. Elmslie, Captain P. B. Hambrow, Captain A. B. Joyce, Lieutenant G. H. Landon, R.N.V.R., Captain P. Lyle, Captain A. G. Matthey, Captain L. C. Pearson, Captain J. Pike, Captain J. A. Prescott, Captain R. V. Proudlock, Captain H. D. Taylor, Captain E. G. Venning, Lieutenant H. A. de Bourcier, Lieutenant F. S. A. Dobson, Lieutenant D. S. Grainger, Lieutenant A. V. Golding, Mr. R. W. C. Dobson, and Mr. G. A. Wright.

TRADITIONAL GAMES OF THE TURKS.

On May 28, Professor J. L. Myres presided over a meeting of the Anthropological Society, at which Mrs. Hasluck read a paper entitled "Traditional Games of the Turks."

The Turks in question are all peasants, and have lived in Asia Minor since the agreement for the Exchange of Populations between Greece and Turkey came into force in 1924 as a sequel to the Treaty of Lausanne in 1923, but previously their home was in Western Macedonia. Descended from Asiatic Turks who were imported into Macedonia, with their wives and children, in the early years of the Turkish conquest, they formed an isolated, compact, and homogeneous group of Turkish-speaking peasants whose characteristics could be trusted to be fundamentally Turkish.

Whereas their Christian neighbours were true Continentals in their preference for café life, these agricultural Turks were rather English in their tastes. Cafés, indeed, did not exist in any of their villages until some were built by the Greek refugees who came there in the autumn of 1922. When the Turks were prevented by the rigours of winter from working in their fields, they betook themselves to the village green and engaged in manly sports and amusing games. Of these Mrs. Hasluck had observed thirty-three varieties, which she now classified as athletic, amusing, athletic-cum-amusing, parlour, and children's games. They included wrestling, the long jump (but not the high jump), putting the stone, the "sweir-tree" of Scotland, leap-frog, saddle-my-nag, French-and-English, drop the handkerchief, and various ball games. Wrestling was the prime favourite among the Turks, but the athletic-cum-amusing games also appealed strongly to them by requiring both skill and strength, leaving room for ridiculous accidents, and giving scope for pranks.

Acknowledged *pehlivan*s (champions) wrestled naked except for a pair of breeches specially made from the hide of the humped buffalo and decoratively set with brass nails with large round heads to prevent gripping. Perhaps only a professional wrestler could describe the various twists and turns employed in a match, but nobody English could fail to be struck by the immense amount of time spent by wrestlers on the ground. This was due to the fact that the laws of Turkish wrestling (like those of our own Devon, as Lady Gomme subsequently remarked) require both shoulders to be touched down for a throw. Time and again the under Turk will break away and renew the struggle after an English champion would have been defeated. The Turkish spectators took a breathless interest in matches, but never betted on the result, for Turks of the old school like these ex-Macedonians are faithful to the Prophet's command to abstain from betting.

In conclusion, Mrs. Hasluck recalled the peasant origin of the cricket, hockey, tennis, and baseball on which the English and

American base their claims to be the great sporting nations of the world, and then asked whether the unspoiled Turks whose games she had described were not as truly a sporting people as the English or the Americans.

THE SALONIKA ARMY.

The eighth annual dinner of the Salonika Army and Black Sea Forces was held on June 21 at the Hotel Cecil. Field-Marshal Sir George Milne, Chief of the Imperial General Staff, presided. Among the officers present were:—

Vice-Admiral C. M. Staveley, Lieutenant-General Sir Henry Wilson, Lieutenant-General Sir Webb Gillman, Lieutenant-General Sir Charles Briggs, Major-General Sir Henry Croker, Major-General Sir John Duncan, Major-General Sir Henry Everett, Major-General Sir George Forestier-Walker, Major-General Sir Maurice Holt, Major-General Sir Charles Mathew, Major-General W. H. S. Nickerson, V.C., Major-General G. Walker, Major-General G. A. Weir; Brigadier-Generals: Thomas Bruce, R. H. Hare, T. N. Howard, C. G. Hunter, E. M. Paul, R. E. Solly-Flood, and B. F. Widdrington; Brigadiers: W. A. Blake and J. L. Furney; Commander H. W. Adams, R.N.; Colonels: W. H. Barrell, R. E. Bickerton, E. T. Birrell, R. W. Bourchier, A. Brough, D. C. Cameron, O. S. Cameron, J. Dewar, R. B. Dutton, Sir Crisp English, R. H. Eustace, J. G. Fleming, A. H. Grubb, P. L. Hanbury, H. E. Joicey, F. S. Montague-Bates, S. F. Newcombe, W. J. Ottley, Sir James Purves-Stewart, A. F. Pery-Knox-Gore, C. F. Sankey, C. A. Smith, F. Stanley, A. Striedinger, H. E. Webb-Bowen, H. C. Wortham, and A. H. Yatman; Lieutenant-Colonels: F. J. Agg, L. S. Amery, M.P., H. F. Byrne, L. Chenevix-Trench, F. P. Dunlop, V. C. Egerton, J. J. Fox, H. P. Garwood, A. B. Hall, J. G. Henderson, J. N. Horlick, T. J. Hutton, W. R. Izat, B. A. Jackson, G. R. Levenson, H. Gordon Mackenzie, R. K. Morcom, A. S. Morgan, K. A. Plimpton, J. A. Rule, W. L. Sorel, H. R. Stevens, E. L. Strutt, E. S. Tidswell, A. C. Vicary, C. B. Walker, G. Guy Waterhouse, and S. G. Willis; and Major Elliot Bell (hon. secretary).

THE SUDAN DINNER CLUB.

The annual dinner of the Sudan Dinner Club was held at the Hotel Victoria on June 25. Those present were:—

General Sir Reginald Wingate; Sir Edgar Bonham-Carter, Sir K. Cornwallis, Sir James Currie, Sir E. C. Midwinter; Engineer Rear-Admiral W. Scott-Hill Colonels C. R. K. Bacon, M. H. Logan, W. E. Longfield, W. H. McCowan, J. P. Moir, J. K. Watson, R. S. Wilson; Captain E. M. Palmer, R.N. Majors R. B. Black, J. J. Bramble, the Hon. T. P. P. Butler, L. A. Deane, A. G. Lamb, W. St. J. Macartney, G. K. Maurice, R. Micklem, C. S. Northcote, O. H. Warne, M. Wheatley, N. T. Whitehead; Captains L. Bousfield, G. A. H. Buxton, J. Chrystall, J. Goings, C. Maydon, G. McKay, H. C. E. Routh; Messrs. L. E. Bolland, L. Bolton, W. R. C. Bond, C. P. Browne, G. Bramall, G. B. Bridgeman, S. G. Budgett, E. Campbell, W. I. Cheesman, F. H. Cobb, W. P. Cochrane, A. P. Coote, E. N. Corbyn, R. Couldrey, J. D. Craig, N. G. Davidson, R. H. Dun, A. Eastwood, B. W. Echlin, R. E. F. Fawkes, N. Field, A. W. Fraser, H. Fraser, C. Havercroft, H. V. Hawkins, H. P. Hewins, R. Hewison, S. Hillelson, C. G. Hodgson, A. J. C. Huddleston, C. J. Hunter, E. R. Hussey, D. H. Kitchin, J. M. Lee, C. E. Lyall, G. E. Mason, P. Munro, L. F. Nalder, the Hon. H. G. G. Pelham, C. H. J. Piercey, F. G. A. Pinckney, A. S. Redfern, A. E. Robinson, H. B. Sayer, A. W. Skrine, G. R. Storrar, H. Walmsley, H. Wynne; Doctors W. Byam, J. B. Christopherson, E. S. Crispin, G. R. Footner, J. C. N. Harris, V. S. Hodson, and N. E. Waterfield.

A Persian newspaper, *Taraghi*, points out that the commonest expression to be heard in Persia is: "I am overwhelmed with work." This expression, the paper adds, is "the most brazen-faced lie," as it merely entails sitting comfortably before a desk, drinking tea, sipping coffee, and smoking peacefully, while drawing a long bow and occasionally writing a few words. "For this reason ten Persians working for ten days do less work than a single American or Englishman in one day. We are, unfortunately, obliged to admit that we do not yet know what work is and often confuse it with repose, and this in spite of the vigorous incentive constantly administered by our indefatigable and august Sovereign."

Dr. Alan Gardiner and the British School of Archaeology in Egypt have jointly presented to the British Museum the remarkable and unique XIIIth Dynasty Enthronement Ritual papyrus known to Egyptologists as the "Dramatic Papyrus." From the Ostasiatiska Samlingarna at Stockholm comes a gift of Chinese neolithic urns, of the 3rd millennium B.C., excavated by the Director in Kansu, a find of great importance for the relations it suggests between the neolithic culture of North-West China and the contemporary arts of the Near East. There is also a chalcolithic vase from the same district, perhaps a millennium later in date, which has also been acquired.

NEWS IN BRIEF.

The Yugoslav Minister to Sofia, M. Neshitch, returned to Belgrade at the end of last week from the leave he has been spending abroad.

King Zogu of Albania arrived for a stay in Durazzo on June 26 from Tirana, accompanied by his military and civil staff.

The newly-enthroned Coptic Archbishop of Abyssinia and the recently consecrated Abyssinian Bishops left Cairo on June 18 for Port Said, where they embarked for Jibouti *en route* for Addis Ababa.

The Order of St. John of Jerusalem, headed by the Duke of Connaught as Grand Prior, held its annual festival in London on June 24.

Negotiations for a settlement of the long-drawn Greco-Turkish dispute on the subject of the exchange of populations prescribed by the Treaty of Lausanne are to be resumed in Angora.

M. Diamantopoulos, the Greek delegate on the Mixed Commission, left Athens on June 23 for Angora carrying the Greek Government's instruction to M. Papas, the Minister, for the resumption of negotiations.

Shaikh Abdel Aziz el Bishiri has been appointed Director of the Egyptian Press Bureau in succession to Farid Rifari Bey, who, at his own request, has been transferred to his former post of inspector in the Egyptian Ministry of the Interior.

An exhibition of antiquities recently discovered at Beth-Pelet, Palestine, by the British School of Archaeology in Egypt, under the direction of Professor Sir Flinders Petrie, will be opened at University College, London (Gower Street, W.C.1), from July 8 to 27.

The Air Ministry regrets to announce that as the result of an accident near Luqait, Iraq, to a Wapiti machine of No. 30 Bombing Squadron, Hinaidi, on June 28, Flight-Lieut. Christopher George Halliday, the pilot of the aircraft, was killed. Aircraftsman John Laverty was slightly injured.

According to a Constantinople message the Turkish Public Prosecutor has demanded the death sentence for 35 of the Communists who are being tried at Smyrna. The Communists are accused of having distributed Communist propaganda and having tried to undermine the existing régime.

A boulevard leading from Krassnoselo, a suburb of Sofia, to the village of Boyana has been named "Buxton Brothers Boulevard," in honour of Mr. Noel Buxton, Minister for Agriculture in Mr. MacDonald's Cabinet, Mr. Charles Buxton, the Rev. Harold Buxton, and Mr. Leland Buxton, whose past services to Bulgaria are thus recognised.

It is reported from Cairo that an agreement between the Yaman and Egypt, as well as an agreement between the Yaman and Great Britain, is expected to follow the present visit to Cairo of an official delegation from the Arab kingdom. The delegation is understood to be in touch both with the Egyptian Foreign Office and with Lord Lloyd, the British High Commissioner.

H.E. Sir Abdul Hamid Suliman Pasha, Egyptian Minister of Communications, expects to leave Egypt for Europe on July 22.

The Air Ministry has made a grant of £500 towards the new Y.M.C.A. building serving British airmen in Baghdad.

"The Sands of Egypt," the Newdigate Prize Poem which was won by Miss Phyllis Hartnoll, has been published by Messrs. Basil Blackwell.

A mission for the delimitation of the Perso-Turkish frontier left Teheran for the frontier on June 29. The Turkish mission is reported to have left Angora on the previous day.

Sir Donald Ross was on June 21 presented, at Kensington Town Hall, with the West London Medico-Chirurgical Society's triennial gold medal for his valuable research work in connexion with malaria.

According to Berlin message storms in Yugoslavia last week ruined the harvest in the Sarajevo neighbourhood, in Herzegovina, and in Northern Dalmatia. The railway between Sarajevo and Mostar was destroyed. The damage is estimated at 40,000,000 dinars (£145,000).

A well-known Deputy of the Yugoslav Independent Democrat Party, M. Zeryav, has died in a sanatorium in Slovenia. M. Zeryav was working at the draft of a new Constitution for Yugoslavia, and was trying to bring together Zagreb and Belgrade.

Several important persons were arrested last week in Teheran in connexion with the rising in the Province of Fars. The Minister of Finance, Prince Firooz Mirza, the Nusret-ed-Dowleh, has also been arrested.

The Bulgarian Chamber has adopted by 139 votes to 90 the second reading of the first article of the Amnesty Bill granting an amnesty to the former Liberal Ministers, MM. Radoslavoff and Tontcheff. There is a further proposal to grant an amnesty to the former Minister of Finance in the Agrarian Cabinet, M. Tourlakoff.

King Fuad of Egypt, attended by Hafez Bey Affi, Minister of Foreign Affairs, arrived in Prague on June 26. In the afternoon King Fuad laid a wreath on the Unknown Soldier's grave, and in the evening attended a State banquet given in his honour. The following day he received the degree of Doctor of Philosophy from the University. King Fuad left Prague on June 29 for Pilsen.

A third son was born at the Royal Palace, Bled, to the King and Queen of Yugoslavia on June 28. According to Serbian custom, the baby Prince has received the provisional name of Paul, which will be changed for a permanent name when he is officially christened. Like his elder brothers, the new Prince will be a godson of the Duke of York.

On June 24, the Feast of St. Paul, an open-air service was held in Athens on the Areopagus commemorating the Apostle's preaching there. The Archbishop of Athens and numerous bishops officiated. An address was delivered and the cathedral choir sang Byzantine hymns.

For the first time in the history of the American University of Beyrout, the Rector of the Jesuit Faculty attended the "commencement exercises." It is announced that £30,000 has been raised in the United States in response to the recent appeal for funds for the University.

Yugoslav Consulates in Vienna, Budapest, Berlin, Rome, Paris, Bucharest, Prague, Buenos Aires, and Corfu are to be abolished, and new Consulates are to be opened in Hamburg, Bordeaux, Genoa, Pittsburg, and San Paulo, and a new Legation under a *Chargé d'Affaires* in Riga.

The Sultan of Zanzibar, Prince Abdulla, Shaikh Seif bin Suleiman and suite made an extensive tour of Harrods Stores on June 28. Among their many purchases were suit-cases, sticks and umbrellas, boots, shirts, and boating requisites. His Highness has arranged to visit Portsmouth to-day (July 4), motoring from London, accompanied by his son, Seyyid Abdulla and the members of his staff. He will be received with a salute of 21 guns, and will be shown over H.M.S. Victory by the Admiral Superintendent (Rear-Admiral L. A. B. Donaldson). This afternoon the Sultan and party will embark on board H.M. Submarine L5. The submarine will proceed to sea, escorted by the destroyers Wrestler, Tilbury, and Tribune. On arriving in Spithead the submarine will dive and make an attack upon the Wrestler, and will fire torpedoes at her. This evening the Sultan will inspect the Cunard liner Berengaria, and will then motor back to London.

The second secretary of the Turkish Embassy at Washington and the private secretary to the Ambassador are plaintiffs at Camden, New Jersey, in a \$5,000 dollar suite for damages for injuries sustained in a motor-car accident last August.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

NON-ARAB REMAINDERS IN SOUTH ARABIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In the light of his preconceived view of a single ethnographical framework of Arabia uniform in racial origin and language, Mr. Philby's attempt to explain away the considerable *bloc* of anthropologically and culturally peculiar tribes inhabiting the southern borderlands of Ruba al Khali, is intelligible, but unconvincing.

In his letter of April 16 he witnesses the corrupt races of the Hijaz littoral (the result of a continuous process of contamination which he states to be due to the Pilgrimage, and in the case of Jidda to be largely of recent origin) as a presumptive argument for similar corruptness in South Arabia.

I hold that there is no analogy. The non-Arabs of the Central South have been there from a dim antiquity, the masters of the land, maintaining their physical identity and their own languages. Two of them, the Shahara and Mahra, are mentioned by the earliest Arab writers; the Mahra, in fact, are specifically equated with the Himyarites by Al Autabi, an Omani historian writing nearly a thousand years ago. The Bautahara, maintaining their own language and with whom there is no intermarriage, have a local origin anterior to the Mahra, for the two tribes share a common tradition that the Bautahara were originally driven east from the habitat thereupon, and still, occupied by the Mahra.

Hear also what Burton says:—

"I was desirous . . . to try, by actual observation, the truth of a theory proposed by Colonel W. Sykes, namely, that if tradition be true, in the population of the vast peninsula there must exist certain physiological differences sufficient to warrant our questioning the common origin of the Arab family;" and on the very next page of "The Pilgrimage" (Vol. I pp. 4) Burton states with emphasis, "Finally, I have found proof, to be produced in a future part of this publication, for believing in three distinct races (1) the aborigines of the country, driven like the Bhils and other autochthonic Indians, into the eastern and south-eastern wilds, bordering upon the Ocean (II) etc. (III) etc."

Now when I wrote of "uncontaminated survivals" I was not consciously aware of Burton's conclusions, and had in mind only what I had observed on my journey, namely

- I. indications of a great local antiquity for the *bloc* of unusual tribes,
- II. their palpably different physiological type and distinct dress, betraying no sign of Arab assimilation,
- III. a consciousness shared with the Arab of racial distinctness between them, though in no sense of the word implying that they were foreigners in the land,
- IV. their four several languages, not understood by Arabs, three of them belonging to the Himyaritic group,
- V. their observance of weird customs, different from the Arab ones, throughout an area exactly coinciding with a distribution of an archæological remain, a trilith monument and probably Sabæan relic, which, where inscribed, bore early Himyaritic and not Arabic characters.

Mr. Philby suggests that the racially corrupt Hijaz presents a precisely similar phenomenon.

Does it?

And he hazards a speculation that a common non-Arab influx still going on in the Hijaz has merely come to a stop here in the Central South, in quite modern times, for economic reasons.

But what of the alternative view of Burton, who, incidentally, also knew his Hijaz, the view that the early inhabitants of Arabia were driven to the shores of the south eastern wilds before the wave of Arab invasion from the north? And if Burton held this, Glaser taught it. And now my own slight discoveries, made independently of this knowledge, fulfil the implications of their theories. Dr. Rathjens would appear to be in good company.

Mr. Philby's letter takes me to task for two suggestions in the field of identification:—

- | | | | |
|------|---------------|---|----------|
| (I) | Ahl al Hadara | = | HADORAM |
| (II) | Dhufar | = | DHU AFAR |

As regards No. 1, Mr. Philby rightly observes that HADARA has the meaning, in Arabic, of "downwardness" or "belowness." This is a commonplace; but why limit the significance of the word to a narrow topographical sense, especially when the term here applies exclusively to the inhabitants of a really mountainous part of Arabia? In Mr. Philby's narrow sense of the word almost any other of the low coasts of south and east Arabia have a better right to it e.g., the Jaalan of the Persian Gulf, yet Ahl al Hadara is applied by Omani Arabs exclusively to the inhabitants of the mountainous central south. How comes it, too, that the Qara—later comers—who live in the heart of Ahl al Hadara, are excluded from the group? And finally the Arabs of the low coastal town of Murbat refer to the Mahra inhabitants of the upland steppes as Ahl al Hadara, a negation of that literal definition of the world demanded by Mr. Philby.

Then says Mr. Philby, "Hazarmaveth was the country of the Hadoram from Genesis onwards"—with, I venture to think, some hardihood. But first, à propos of Mr. Philby's conception of Hazarmaveth as a geographical region corresponding with Hadhramaut as we have it to-day, Bent, the most celebrated English traveller to that country has this to say on the subject:—

In the proper acceptance of that term, the . . . Hadhramaut is not a district running along the . . . south-east coast, but is simply a broad valley . . . running for 100 miles to discharge its water . . . into the sea at Saihut. There is every reason to believe that anciently too, the Hadhramaut meant this valley: we learnt from Himyaritic inscriptions that five centuries B.C. the name meant in that tongue the "enclosure or valley of death," a name which in Hebrew form corresponds exactly to that of Hazarmaveth of Chapter 10 of Genesis.

Genesis, Chapter 10, verses 26, 27 show Hazarmaveth and Hadoram to be brothers, the third and fifth sons of Joktan. It is really beside the point whether these names are the names (I) of the generations of the sons of Noah (II) of ancient tribes, or (III) of geographical regions. They may be one or other, but they cannot, in fairness, be an arbitrary two of them, or all three at will. The Genesis version that they were brothers must mean that they were essentially of the same nature, and yet two separate entities. When, therefore, Mr. Philby states that Hazarmaveth is the land, and Hadoram the people who dwelt in it, he is taking leave of Genesis. On the other hand, my discovery of the tribal group called Ahl al Hadara (the "m" is a known form of plural) contiguous with the Hadharim of Hadhramaut seems to me to afford a parallel for the brothers Hazarmaveth and Hadoram placed in close juxtaposition in Genesis. The kinship with Joktan, i.e., Qahtan, need not worry us unduly, as the writer also makes Canaan a son of Ham.

As regards derivation No. 2, Dhufar from Dhu Afar. Mr. Philby has three complaints.

(I) He complains that I have ignored Sephar of Genesis.

As Sephar has been mentioned by Ptolemy, located by Forster, and laboured by every writer since Bent, it is perhaps time that valuable space should not be wasted in continued iteration. Albeit, it no more invalidates any other name for the same region, than the term Iraq is invalidated by Sumer, Akkad, Shinar, Chaldaea, Babylonia or Mesopotamia.

(III) He complains that I ignored the disparity between the letter "dhal" of Dhu and the letter "dha" of Dhufar.

Mr. Philby is mistaken. I pointed this out in my paper to the Oxford Congress as a possible snag, as it seemed to me, in the suggested derivation, only to learn from a celebrated scholar of Semitic languages that this initial letter in this sense is not necessarily so "unfortunate" as Mr. Philby would seem to think.

(III) Mr. Philby's third complaint is that I ignored what he terms an abstruse point, namely that the word on the bases of my derivation would be written DHU'L AFAR not DHU AFAR.

Where is the definite article "AL," asks Mr. Philby. But vain is the net spread in the sight of the bird. There is no article "AL" in these South Arabian languages.

And while I deplore trespassing any longer on your valuable space, Sir, there is yet one other of Mr. Philby's small points which calls for comment. It states that I was never, in the course of my long journey, thirty miles distance from the sea. This is cutting it a little fine by one whose reputation for photographic detail is unrivalled amongst Arabian travellers. Such limitations as that referred to were honourable ones imposed upon me by the physical conditions of Ruba al Khali, whose borderlands Mr. Philby will remember I was hugging. But a man must have water; and even thirty miles—incidentally it was more like 50 miles longitudinally measured from Murbat—involved a six days' stretch without water; and there were no Arab or any other tribes inland of my line of march during this stage of my journey.—I am, etc.,

May 22, Muscat, Arabia.

BERTRAM THOMAS.

IRAQ AND THE WAHHABIS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Your Baghdad Correspondent, writing in your issue of May 16, is rightly furious with me. He is "privileged to have first-hand information of the recent occurrences on the Iraqi-Najd frontier." I wonder what he means, but in any case it is sheer impertinence on the part of your Jidda Correspondent to challenge the accuracy of his first-hand information. Nevertheless, after carefully considering the version he now gives of the affair in question I repeat (and I claim to have the best of reasons for repeating) what I wrote on February 7: "So far as can be gathered there is no reason whatever to connect the recent attack on a motor convoy . . . with the Wahhabis." That is the official attitude of the Hijaz Government, and the British Government appears to have dropped its claim for the punishment of the criminals whose identity cannot now be established owing to the failure of "all the King's aeroplanes and armoured cars and Intelligence Officers to track them down." An accused person is to be presumed innocent until his guilt is proved. It is a pity in these circumstances that your Baghdad Correspondent has not seen fit to place his first-hand information at the disposal of the British authorities when they needed definite facts to go on in bringing the guilty to justice.

His explanation of the long delay in the mobilisation of the Air Force is interesting; but one wonders whether he has ever been in the desert or studied a map thereof when he gaily tells us that the wicked raiders got away over the 70 odd miles that separated the scene of their enormities from the safe refuge of the Najd frontier with 4,500 sheep and 500 donkeys with a start of only 48 hours on the aeroplanes. Some sheep and some donkeys! There can be little doubt of the gullibility of the British newspaper-reading public when it swallows stuff of this kind and seems to like it.

The problem is capable of a much simpler solution than that which appears to commend itself to the Iraqi authorities, and it is to be hoped that the new régime in Iraq (the admirable combination of Sir Gilbert Clayton and Taufiq al Suwaidi, both of whom gave ample evidence of their

good will last August) will give it a trial. The Iraq Government should discourage the immigration into its territories of disgruntled elements from Najd instead of encouraging it, and it should make up its mind finally to send back to Najd those tribal elements which appear to prefer the unsettled conditions of the Iraq frontier-tract to the stricter discipline of Najd where shepherd tribes are safe from all molestation.

Your Baghdad Correspondent represents the tribes as "fighting for their lives against overwhelming odds." He does not tell us exactly what the odds were. But the attackers were about 200 men!

So much for him; and now a word in season for yourself, Sir, in connexion with your "Notes of the Week" of May 9. You say: "From this last fact alone it appears to be abundantly clear that those were absolutely in error who sought, in justifying the hostile attitude of Faisal al Duwish . . . , to lay the blame for the trouble on those officials of the Iraq Government whose one (and whole-time) duty is to preserve peace on the frontier." That to me looks like begging the whole question at issue. As far as the question of the forts is concerned the attitude of Faisal al Duwish was in no way different from the attitude of his King and Government; and whether their attitude was sound or not will presumably be decided when the matter is submitted to arbitration. While continuing to justify that attitude, I am content to await and abide by the result of the proposed arbitration which will decide whether the Iraq Government were justified in building the forts or not. The action taken by King Ibn Saoud against Faisal was in no way intended as a punishment for holding the same views of a particular matter as the King himself, but was due to the fact that Faisal considered himself at liberty to take direct action in spite of the King's decision that the matter should await arbitration. Your Note seems completely to misjudge the real facts of the situation, and it is surely obvious that none of all this trouble would ever have arisen, if the wretched forts (whose practical value is demonstrably nil) had never been built.

I would venture to quote certain remarks made in a very different connexion in the House of Lords recently by Lord Reading, who said: "The reputation of this country for carrying out its obligations in good faith must beyond question be maintained." No one will challenge such a sentiment, but it is of universal application, which is sometimes forgotten.—I am, etc.,

Jidda, May 30.

YOUR JIDDA CORRESPONDENT.

[We are unrepentant. The forts having been built, it is still the patent duty of all British officers in the desert area, even were they to disapprove of the construction of the forts, to work for peace. We have never suggested that there was a difference of opinion between King Ibn Saoud and Faisal al Duwish on the actual forts, but the King's recent treatment of Faisal seems to exonerate us entirely from the charge of begging the question. The forts are one issue; the conduct of Faisal was another. Had it not been Faisal al Duwish who was the main danger to peace, why should he have been punished?—Ed.]

DOCTORS IN GREECE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—With reference to the remarks contained in your Athens letter in the issue of May 30 about doctors in Greece, you may find the following interesting.

A Vlach friend of mine, who is a *cherlingas*, or sheep-farmer in Greece, was talking to me about the future of his two adolescent sons. "The younger," said he, "is really clever. I think I'll put him into my own job. The other one's a duffer. I think I'll make a doctor of him." And he is doing so.—I am, etc.,

MARGARET HASLUCK.

A Postgraduate Travelling Studentship has been awarded by London University to Mr. Raymond T. Butlin, who proposes to make a phonetic study of the chief dialects of spoken Arabic, and will visit Egypt, Syria, Palestine and possibly Iraq.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Liubliana Samples Fair.

We publish this week two very interesting articles on the recent Liubliana Samples Fair which, as our Liubliana Correspondent shows, was an extremely successful affair and has once again demonstrated that in the Near East the Fair is still an extremely important medium of trade development. This point is evidently in danger of being lost sight of by British firms, as regards the Near East at any rate, for Mr. Mantuani, in a review of the Machine Section of the Fair stresses the extremely poor representation of this country. An outstanding feature was the predominance of German exhibits, while American motor cars, as usual, were well represented. The development of German enterprise in Yugoslavia is very significant, suggesting as it does a determined effort to regain the pre-War position in the Near East. Mr. Mantuani, it may be noted, points out that British goods are favoured in Yugoslavia, and as that is the case it will be a thousand pities if our manufacturers do not take the necessary measures to obtain a satisfactory footing in that market. With the intense international competition which exists at the present time our manufacturers cannot afford to ignore an outlet as promising as Yugoslavia undoubtedly is, and it is nothing less than sheer folly to leave the field to Germany and America.

Conditions in Syria.

The position in Syria during the past year, as in other Near Eastern countries, was dominated by the adverse effect on the crops of the climatic conditions which resulted in the country having to import wheat and flour on a large scale to make good the shortage of the wheat harvest. This was the second bad harvest in succession, and much will naturally depend on the outcome of the current year's crop. In the report of the British Consul-General at Beyrout on conditions in Syria in 1928-29 the remark is made that agriculture in the country merits much more assistance than it has received, but of course no amount of attention to agricultural development will overcome climatic difficulties. It is Syria's great handicap that it is not, and is never likely to be, an important industrial region, though the efforts that the French are making to establish various industries will go some way to placing the country in a stronger economic position. But as the country will always be predominantly agricultural, so there will always be the liability to those recurrent crises which are inevitable in the case of countries which are mainly dependent on the soil. It is interesting to note from the report that, despite the crisis, a great deal of building has been going on in Beyrout, Damascus, and Aleppo, and it is pointed out that there is a danger that this may be overdone with the sequel of a slump in urban real estate.

The Position in Persia.

The trans-Persian railway which is now under construction, was, of course, the subject of reference at the general meeting of the Imperial Bank of Persia, a report of which will be found elsewhere in these columns. Work on the line, Sir Hugh Barnes pointed out, is now proceeding surely, if somewhat slowly. It is reported that a few miles have been opened to traffic in the north, while in the south the line is being completed between Ahwaz and the new port of Khor Musa, which is to be known as Bandar Shapur. In this port it is believed that the Persians have at last acquired a sheltered deep-water harbour, and if this proves to be the case, Bandar Shapur's part in the future trade of the country is likely to be of the greatest importance. Apart from the railway Sir Hugh Barnes was able to point to progress in regard to other means of communication. Thus steady attention has been given to the question of the improvement of the roads which is, of course, one of the great problems to be solved in the development of the country. As regards the outlook, Sir Hugh Barnes stated that the prospects for the current year are not unfavourable, and that the wheat crop in the south is reported to be very good. The promise of the outlook is qualified, however, by the proviso that the disturbances at Shiraz are speedily quelled and order and security restored.

The B.I.F.'s New Home.

The London Section of the British Industries Fair is to be held at Olympia next spring instead of the White City, which has been its home now for a number of years. To provide adequate accommodation for the Fair Olympia is being specially enlarged by the addition of a new four-storey building which will provide as much space as was available at the White City. The whole building will not be completed, however, in time for the next Fair, and there will thus be a temporary reduction of space. It may be pointed out that the 1929 Fair beat all records as regards the number of exhibitors, the space occupied, and the number of buyers from home and abroad. It is satisfactory to know that it will be possible in future years to provide at Olympia whatever accommodation may be required.

COMMENTATOR.

BANK OF ATHENS

The Bank purchases drafts, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms. The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfer on all its Branches, at the exchange of the day.

The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.

Power of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.

The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — SOFIA — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

AGRICULTURAL RESEARCH.

The Activities of Imperial Chemical Industries, Limited.

The new agricultural research station of Imperial Chemical Industries, Limited, at Jealott's Hill, Warfield, near Maidenhead, was opened on June 28 by Mr. J. H. Thomas, Lord Privy Seal, who is in charge of the Government's measures for dealing with unemployment. The station comprises a farm of 360 acres, of which 160 acres are under cultivation, and a grass holding of 76 acres. Here are the headquarters of the research organization maintained by Imperial Chemical Industries in connexion with the fertilizers which form an important branch of their activities. Laboratories are provided for analytical work of all kinds and for research into such subjects as bear upon the application of fertilizers. The influence of these on crop production is affected by all the many soil and climatic factors on which the growth of plants depends, and a proper understanding of the uses of fertilizers necessitates a study of all these factors. Accordingly the Research Station will be responsible for the investigation of soil fertility in all its aspects both in temperate and in tropical countries, and in relation to all crops of economic importance. Although primarily intended to serve the scientific development of agriculture in Great Britain, and, secondly, to assist the agricultural needs of the British Empire, the sphere of Imperial Chemical Industries is world-wide, and its products as well as the scientific knowledge derived from its investigations are at the disposal of agriculture throughout the world.

As in the case of experimental work in the British Isles, much of the experimental work which is also being conducted under the Company's auspices overseas, both in the British Empire and in foreign countries, is carried out with the active assistance and co-operation of Government agricultural authorities, and educational and research institutions. In India and all the overseas Dominions, as well as in several foreign countries, subsidiary or associated companies of Imperial Chemical Industries are established, whilst branch offices have been opened in some other countries. In most cases technical agricultural officers are employed on the staffs of these subsidiary or associated companies. Working in close association with the Jealott's Hill staff, they are responsible for the conduct of experimental work in the countries in which they are operating. Thus in the Near and Middle East Imperial Chemical Industries are represented in India (covering Burma and Ceylon), where they are in close touch with the official agricultural departments in regard to experiments on the principal crops, and in particular on rice, cotton, sugar and tobacco. The headquarters of the Company in Palestine are at Haifa, and it is engaged in experiments on bananas, citrus fruits, tobacco, vines, tomatoes, olives, wheat, barley, clover and grassland. In Cyprus experiments are being

arranged on cereals, forage crops, vines and citrus fruits; in Iraq experiments are being conducted on wheat, cotton and date palm, partly in co-operation with the Department of Agriculture; in the Sudan the experiments in progress, again partly in co-operation with the Department of Agriculture, concern cotton and dura. Finally, in Egypt there is a branch of Imperial Chemical Industries in Cairo, which is responsible for experiments, partly in co-operation with the Egyptian agricultural officials dealing with cotton, wheat, maize and bersim.

It was, therefore, not without significance that among the guests at the opening ceremony on June 28 should be Mohamed Pasha Mahmoud, Prime Minister of Egypt, and Hamza Bey, the new Chargé d'Affaires, and the Staff of the Royal Egyptian Legation. At the luncheon which was the central feature of the opening ceremony, Lord Melchett, Chairman of Imperial Chemical Industries, proposing the toast of "Agricultural Research" pointed out that science and research knew no boundaries. They were world-wide, international, interchangeable and co-operative among nations over the entire world and for all humanity. Agricultural skill was the foundation of human prosperity, and Jealott's Hill was intended to be a nerve centre for competent observers all over the world. Mr. J. H. Thomas emphasized the fact that the new Government could be relied upon to be as proud of their heritage as any party that had ever held office. To-day they were prepared to place at the disposal of agricultural interests, not only in this country but also in the Empire, knowledge and science, not alone for mere material gain, but because they knew that ultimately it would benefit the Empire as a whole. Because the laboratories and scientific resources of the Imperial Chemical Industries, with its world-wide ramifications, were doing good work in this direction he was glad to be present.

Speeches of a more technical nature were subsequently given by Sir David Milne-Watson, Sir Frederick Keeble, Mr. John Garton and Sir David Hall. After the luncheon the large gathering dispersed for a detailed inspection of the Research Station, with its laboratories, greenhouses, gardens and orchard. Special demonstrations were given during the afternoon in connexion with grass preservation, grassland management and deep cultivation.

The production of the Anglo-Egyptian Oilfields for the week ended June 28 amounted to 5,004 tons.

The Roumanian Treasury receipts during May amounted to 2,637,929,688 lei, as against 2,557,989,106 lei for the corresponding month of the previous year.

The total crude oil production of the Roumanian oilfields during May was about 375,000 tons, as compared with 350,000 tons in the previous month and 358,000 tons in May, 1928. The production of the principal companies during the month was as follows (in tons):—Steaua Romana, 68,957; Astra Romana, 56,669; Creditul Minier, 39,765; Rom.-Americana, 38,256; Phoenix Oil, 36,029; Sirius, 33,168; Concordia, 21,361; I.R.D.P., 18,866; Colombia, 15,569; and Petrolul Romanese, 10,718.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

BULGARIA.

Briquetting Factory.—The Administrative Council of State Coal Mines at Pernik, Sofia, invites tenders for the supply and erection of a complete briquetting factory with washing plant, for an output of 30 metric tons of briquettes per hour. August 30. (D.O.T.)

GREECE.

Turntable.—The Hellenic State Railways invite tenders for a railway turntable. Firms interested may obtain further particulars from La Direction, Depot General du Matériel, Chemin de Fer de l'Etat Hellénique, Athenes. July 11.

EGYPT.

Fishery Research Vessel.—The Director-General, Coastguards and Fisheries Administration, Governorate Building, Alexandria, invites tenders for the construction of a fishery research vessel. September 14.

Filter Chamber, Etc.—The Director-General, Tanzim Department, Cairo, invites tenders for the construction of a filter chamber, filters, clean water reservoir and its supplementary works at Giza and Gezira Water Works, Giza. August 3.

Cooling Tower, Etc.—The Director-General, Mechanical and Electrical Department, P.W.M., Cairo, invites tenders for the supply and erection of a cooling tower for Seru Pumping and Power Station, August 10; and for the supply and erection of two Diesel pumping units at Bousseli Pumping Station. August 10.

Diesel Engine Alternator.—The Ministry of the Interior invites tenders for the supply, delivery, and erection of an additional Diesel engine alternator for the Zagazig Power Station. August 15. (D.O.T.)

Timber, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of timber, August 6; mallets, wood and pins, wood, August 10; and paints, resin, tar coal, glue, glass or sand paper and liquid for polishing brass, etc., August 14, for the Department of Ordnance Services, Egyptian Army, Citadel, Cairo.

Electric Articles and Lamps.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply of electric articles and lamps required during 1929-1930. July 13.

Miscellaneous.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of pipes, cocks, wire, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo (July 22); metal brass, metal copper, metal bronze scrap, tin solder, zinc, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo (August 7); metal iron, cotton waste, white, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. August 12.

Water Meters.—The Egyptian Ministry of Public Works invites tenders for the supply of rotary and French water meters. July 13. (D.O.T.)

YUGOSLAVIA.

Bridge.—The Ministry of Public Works, Belgrade invites tenders for the construction of a bridge across the Sava river. July 15. (D.O.T.)

Gas Tubes.—H.M. Consul at Sarayevo (Mr. C. A. Greig) reports that a local firm are desirous of receiving quotations from British manufacturers for the supply of some 15 tons of butt welded (Stumpf geschweisst) black and galvanised gas tubes in sizes ranging from ½ in. to 2 in. (D.O.T.)

A recent Roumanian Royal Decree increased the Customs duty on imported wheat from 60 to 160 paper lei per 100 kilograms. The increased duty is to remain in force until further notice.

NEWS FROM ALL SOURCES.

In January last 4,104 private cars and 2,174 trucks and omnibuses were in use in Persia.

Sir Alexander R. Murray, of Tummers, Chalfont St. Peter, Bucks, has been elected to a seat on the Board of Lloyds Bank.

By virtue of a recent Decision of the Council of Ministers the export of wine from Roumania is only permitted under a special authorisation from the Ministry of Agriculture and Domains. Moreover, each parcel of wine exported must be accompanied by an analysis and a sealed sample of each wine contained.

The numbers are announced of the scrip certificates of the Roumanian Stabilisation and Development Loan Monopolies Institute Seven per Cent. Guaranteed Sterling Bonds, amounting to £10,100, which have been drawn at the Roumanian Legation, London, for repayment at par on August 1.

The Sudan Plantations Syndicate announces an interim dividend of 10 per cent. (2s. per share), less Sudan business profits tax and subject to British income tax, payable to shareholders registered at the close of July 13. Sudan business profits tax at the rate of 1s. 5½d. in the £ takes 1.7375d. per share, and British income tax at the rate of 2s. 6½d. in the £ 2.8408d. per share, leaving a net payment of 1s. 7.4217d. per share.

The new Customs Agreement between Palestine and Syria, which came into force in June, provides that foreign goods (with certain exceptions) which have paid duty in one country and are exported to the other, unused, within twelve months shall (a) be admitted free when the duty is the same in both countries; (b) pay the difference when the duty is higher in the country of destination; or (c) receive a refund of the difference when the duty is lower in the country of destination. Goods which are wholly produced or manufactured in one country or are wholly manufactured in that country from foreign materials, or partly from foreign materials and partly from local produce, are to be admitted into one other country free of duty. The above provisions do not apply to tobacco and tombac, pure alcohol, spirituous liquors, salt and matches, and any other goods which may be agreed upon between the contracting parties.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, July 19); s.s. Elysia for Bombay (Birkenhead, August 6). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Matheran for Calcutta (Birkenhead, July 9); s.s. Markhor for Calcutta (Birkenhead, July 18).

Bibby Line.—S.s. Lancashire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, July 10).

British India Line.—S.s. Manela for Colombo, Madras, and Calcutta (London, July 13); s.s. Mundra for Bombay and Karachi (London, July 20).

Cunard Line.—S.s. Bothnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Corfu, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, and Gruz if sufficient inducement (Liverpool July 6, Swansea July 9); s.s. Brescia for Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza; also at Volo if sufficient inducement offers (Liverpool, Glasgow, and Swansea, July 27); s.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, Corfu, and Gruz if sufficient inducement (Liverpool August 3, Swansea August 6).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 9); s.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 3).

P. and O. Line.—S.s. Behar for Calcutta (London, July 19); s.s. Razmak for Bombay (London, July 19).

Prince Line.—S.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, July 3); s.s. Soldier Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, July 13); s.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus (London, July 20).

Ellerman and Papayanni Lines.—S.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Swansea July 6, Liverpool July 10, Glasgow July 10); s.s. Mardinian for Gibraltar, Algiers*, Malta, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool July 20, Swansea* July 20); s.s. Oporto for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool July 20, Swansea July 25); s.s. Voluturno for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 31); s.s. Algerian for Gibraltar*, Algiers*, Malta*, Patras, Smyrna, and Constantinople (Liverpool, August 10). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta, Syra and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.
MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*MASSILIA	...	July 23	†CASTALIA	...	Sept. 10
*ELYSIA	...	Aug. 9	†ASSYRIA	...	Sept. 27

*First class passengers only. Specially low fares. †Calls Port Sudan.

† First and Third class passengers.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 2.

Events in the Stock Markets have been largely dominated by the monetary situation which has been of an abnormal character. The heavy outflow of gold, which has raised fears of an early increase in Bank Rate, has produced weakness in gilt-edged stocks which show substantial declines on the week. The Consol market was also affected by the semi-official issue of £5 millions debentures for the Agricultural Mortgage Corporation and by money requirements for the turn of the half-year. Events in the gilt-edged market set the tone for other sections, where apart from some of the American favourites, which benefited from renewed activity in Wall Street, the general tone was dull. As the King's Speech at the opening of Parliament draws near political uncertainties showed themselves in the markets, though they reflected general uncertainty rather than any fear of what the Government's programme may contain.

Defaulting Underwriters.

Cases have occurred recently of companies being forced into liquidation within a few months of their flotation through the underwriters failing to take up their engagements. The unfortunate investors who subscribed to these concerns find themselves faced with the loss of a substantial proportion of their capital, for the company must necessarily make a forced sale of its assets and the preliminary expenses have to be met. When issues are made by reputable issuing houses the underwriting arrangements are made with some of a small group of well-known institutions who can be implicitly relied upon to honour their obligations. During the boom period, however, the easy profits to be made out of underwriting when things go well and public support is secured, tempted other institutions to enter the field, and it is some of these houses which have been unable to face their commitments when public support is lacking and are causing the present trouble. In many cases, indeed, these underwriters have been very closely connected with the numerous issuing houses which were also formed in the boom period. Although these cases of defaulting underwriters are legacies of the boom period, the severe losses incurred emphasise the importance of investors paying attention to

the name of the house responsible for an issue, for a sound issuing house will have a connexion of reputable underwriters.

A New Trustee Security.

The Agricultural Mortgage Corporation, Ltd., recently made an issue of £5,000,000 5 per cent. debentures, which is an attractive offer in the category of trustee stock. The Corporation was formed a year ago, under the Agricultural Credits Act, 1928, not for the purpose of profit making, but to set up a machinery principally for providing long-term credit to farmers. Ordinary commercial banks are primarily concerned with short-term credit business, hence the creation of this bank to meet the farmers' special requirements. The share capital of £650,000 was subscribed at par by the leading joint stock banks and the Bank of England, and the new institution began properly to function at the beginning of this year. Already applications for loans amounting to £5,000,000 have been made, of which about £2,500,000 have been granted. The Government is intimately associated with the scheme and provides a guarantee fund equal to the capital of the company and also £10,000 a year for ten years towards management expenses. The 5 per cent. debenture stocks were issued at 100, but as the subscription is payable in instalments, the last of which is due on September 4, and a half-yearly dividend is payable on January 1, 1930, the issue price was equivalent to 99½. A sinking fund of ½ per cent. is provided for redemptions, which will be by purchases at par. Final redemption will be on July 1, 1989, but outstanding stock may be redeemed on three months' notice after July, 1959. The stock is a Scottish as well as English Trustee security and the yield of a full £5 per cent. on the issue price is therefore attractive.

Brewery Shares.

The announcement of the fusion of two Brighton breweries serves to draw attention to a market which has been neglected of late. Some investors avoid brewery shares because they fear political interference with the industry. While it is true that the breweries are more likely to be subject to such interference in the shape of restrictions or heavy taxation than most industrial concerns, these shares have attractions for investors prepared to take this risk. In any case, any legislation by the new Government is likely to be preceded by a lengthy inquiry. The well-managed breweries have a good record of maintained or gradually increasing profits in recent years, in spite of the falling off in the consumption of beer, and with an improvement in the industrial situation their earnings should increase. As a general rule, however, recent tendencies in the industry have favoured the larger concerns at the expense of the small breweries relying mainly on their local connexions. The big brewers have dealt with their profits conservatively and have spent large sums on reconditioning or improving their public-houses, which their smaller competitors could not afford. As a result, substantial reserve funds have been built up, in the case of Bass, Ratcliffe and Gretton, for example, amounting to 66 per cent. of the ordinary capital, and 36 per cent. of the deferred in that of Watney's, to quote two examples. Bass ordinary shares return £7 per cent., while on the deferred ordinary of Watney's a return of £6 4s. is obtained. Several breweries have well-secured prior charge stocks, Watney's 3½ per cent. perpetual debentures and Bass 5½ per cent. debentures both yielding £5 9s. per cent.

The interim report of the Assam-Bengal Railway states that the surplus profits for the six months ended September 30, 1928, after allowing for Indian taxation, were £8,985, enabling the Board to declare an interim dividend for the half-year at the rate of 10s. per cent., less tax (after deduction of Dominion income-tax relief) at 2s. in the £. This interim dividend was paid on June 30, together with the guaranteed interest, less income-tax at 4s. in the £, due at that date. The balance at the credit of the surplus profits, after making the above payment, will be £8,845.

Motors and Motoring.

(By Our Motoring Correspondent)

Care of Cars.

The result of the great endurance test at Brooklands ended as most engineers expected and every patriotic Englishman wished, in a victory for the Bentleys, although the foreign car made a magnificent bid for success. Of course, those racing cars are kept tuned up to the nines, as the saying is, which is more than can be said about most private cars. Were a competent repair engineer asked in what respect the average motor owner chiefly neglected his car, he would certainly answer that it was in regard to attention to minor parts, under which heading he would include all bolts, nuts, screws, shackles, etc. These are allowed to work loose, or rust into position, with the inevitable result that trouble is bound to occur, sooner or later. Oil, vaseline, or gear-box grease can be used to advantage on all such parts to prevent corrosion, and the use of a spanner, after a run, to replace or tighten up any nuts, adds a great deal to the life of any car.

Sometimes workmen themselves pay insufficient attention to these matters. Personally, I have found nuts far from tight on new cars and motor cycles, and it has often struck me that a more generous use of spring washers might be made. Speaking with regard to shackles in particular, there is no doubt that this was a, perhaps minor, part of car design which did not receive that degree of attention merited by its importance, but so far as I can judge, matters have changed considerably for the better of late, and more particularly is this the case in connexion with the small car. Of course, on the face of it, a shackle is a shackle, and one not accustomed to engineering details would imagine that one design is just about as good as another. Probably their very simplicity has caused them to be neglected. In principle, and, unfortunately, very often in practice, the design of the spring shackle is exactly where it was in the days of the horse-drawn vehicle.

That is so in a large number of cases of car design. But there are signs that the more important functions which the spring shackle has to perform on the automatic vehicle as compared with its function on the horse-drawn vehicle are now being more generally appreciated. Further, I would go as far as to say that these signs are now most marked. Since the springs of a motor-vehicle are subjected to many strains which were never contemplated in the case of the ordinary road vehicle, it seems reasonable that they should be carefully designed to suit exactly its functions. Shackles and spring anchorages have other strains upon them additional to the mere support of the weight of the chassis. Side-sway on corners, unequal rise and fall of the springs, twisting of the spring under some conditions, and, in the case of anchorages, the actual propulsive effort—all these have to be resisted by the shackles or other attachments. All the more reason, therefore, that these should be properly designed in the first place and given during use thorough attention on the part of the motor owner.

Efficiency.

In the motor trades, as in perhaps every other branch of industry, perhaps the most difficult of the many problems which confront the manufacturer to-day is that of still further increasing output without at the same time

increasing labour costs to a disproportionate extent and adding to the overheads.

A good deal has already been accomplished in that direction by decreasing the percentage—always high—of spoiled products, and the simplification and better co-ordination of processes of manufacture has also been the subject of much thought. But it is generally agreed in engineering circles that a complete solution of the problem is only to be found in laying down larger plants of bigger and improved machines.

The output of machines may be increased by adopting higher working speeds, but that is seldom sufficient to meet the case. To make a machine do a greater amount of work in a given time, or the same amount of work in a less time, is to increase the efficiency of that machine. In a number of trades, many machines might be run at a higher speed without incurring the risk of breakdown, and the majority of engineers have long since realised that speeding up must be brought about. Already in our engineering shops we have tools which will work at a far higher speed, and which will remove far more metal at that speed, than would have been thought possible a few years ago. That improvement in working conditions has been brought about by the use of improved steels and steel alloys. An instance may be given in the operation of cold-rolling tin-plate which may be hastened by speeding up the rolls or by increasing the diameter of the rolls, or by both. Getting additional speed out of the stands of cold rolls on the day turn and stopping a few mills on the night turn may effect a saving of both labour and fuel. Every engineer will admit that many machines are running at speeds which practice has determined to be fairly satisfactory, but which are not the most suitable for increased output. Each machine must be known to be operating at its maximum—doing its best. Before all things, constant and uninterrupted operation must be aimed at. A machine is productive only while it is in action. The advantages to be derived from large power units, cranes, conveyers and by-products installation point to larger plants as the way to higher efficiency, even though these may mean more heads of departments and an executive with a wide outlook.

Motor Ships.

The subject of motors and motoring naturally brings up that of motor boats and, secondarily, motor ships. For out-board motors there is no room to spare, but space may be found to say something regarding motor ships. It is generally thought that Britain, relatively, is not progressing so quickly in the production of motor vessels as she should. This statement may be true so far as cargo vessels are concerned, but it does not apply to passenger liners or tankers. Of these vessels there are as many under construction in this country as in the rest of the world combined. According to the *Motor Ship*, there are now 27 motor passenger liners of over 10,000 tons gross being built, and of these 13, totalling nearly 200,000 tons gross, are on the stocks in British yards. During the past two months a considerable number of orders have been placed, totalling well over 200,000 tons deadweight capacity, and of these again, rather more than half, or well over 100,000 tons d.w.c., are building in British yards. Incidentally, they include an order for one of the biggest tankers ever built, a 16,000 ton ship for Scandinavian owners.

MICA AND ALL ELECTRICAL INSULATING MATERIALS

Contractors to the British, American, French and Italian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

The report of the Egyptian Agricultural Company for the year to March 31, 1929, states that the profit on the agricultural estate amounts to £275, as against £304 last year. The area under cotton was greater than last year, and the yield per feddan heavier, in spite of the crop having suffered from drought and from the attacks of boll worm, but as against this the prices realised were lower. Most of the other crops turned out well. Sales of land during the year amounted to £534.

THE LIUBLIANA SAMPLES FAIR.

(From Our Own Correspondent.)

Liubliana, June 12.

The Ninth Liubliana International Samples Fair has turned out to be the most lively, the best attended, and the most picturesque that this little Alpine capital has seen so far. Every stall was taken, the weather was as perfect as late spring (or early summer) can make it, and good business was done. I had the pleasure of taking a few countrymen over the Fair, and my Slovene friends were astonished and delighted when they saw the genuine interest of their visitors. What did they, accustomed to the exhibitions of great cities, see in our little show? For one thing, a bit of the Near East Brought Very Near. Never before have we had so many gay and gorgeous carpet stalls, with every variety of Eastern and Balkan carpet or rug displayed by solemn, fez-wearing "Turks" (i.e., Serbian Muslims) who squatted beside their goods, smoking and absorbing black coffees over their deals. There was an unusually large stock of well-made Bosnian filigree, inexpensive and pretty. There were Croatian and Bosnian embroideries—lots of them and beautiful—and there was Slovene lace. There were Turkish-coffee men and *cevapacici* (small pieces of meat grilled on a spit) stalls—all combining to provide brilliant touches of colour and exotic interest. The military band played very musically, the radio harangued—less so. The deep-toned bronze bells of the Liubliana Machine Works and Foundry boomed a soothing and solemn *basso continuo*, the counterpart in sound to the dark green of the chestnut trees all about the grounds, both of them in a sort of humorous contrast to the clash and clatter and chatter of the Fair.

Apart from the Machine Section (which is dealt with in a separate article), the Furniture Section was by far the most important. It seems incredible that such finished and admirably designed work could be turned out in the small private factories and workshops in and around the chief towns of Slovenia. A great attraction was the Exhibition of the Intermediate Schools of Slovenia. All Yugoslavs have a natural gift for artistic design, and this is carefully fostered by the tradition of Yugoslav home industry, and judicious instruction, or rather encouragement, at school. The poultry and rabbit shows were only small collections of good prize specimens, but of great importance for the development of the national economy of Slovenia. That beautiful province is passing through a slow process of economic reorganisation. There are great possibilities about Slovene industry, but its full development will take time. Each year sees new factories spring up beside her rivers whose reserves of power have so far been scarcely tapped, but much water will run under the bridges before the country's industrial resources can be fully realised. Among its immediate assets there are the important timber industry, cattle breeding, bee-keeping, smallhold farming, dairy farming (Alpine), and the tourist traffic. The first three are old-established and merely keeping up-to-date. But for the rest much remains to be done. The efforts of the Farmers' Association to promote poultry-keeping on modern expert lines and to induce the Slovene small-holder to look upon rabbit-breeding as a lucrative side line, and not merely a hobby for children, are only part of a large general scheme. The material is there. Styrian native poultry breeds compare well with others; but far too little attention is paid to breed by the average farmer. Very much has been done for Slovene dairy farming since 1921. It is too big a chapter for me to do more than refer to it here.

A Summer Resort.

As regards the tourist traffic, the Slovenes are scarcely aware as yet of the real advantages of their country as a holiday resort. It is not a miniature Switzerland, but an Alpine region with a character of its own; even the

three principal mountain groups—the Julian Alps, the Karavanke, and the Stone (Kamnik) or Savinja Alps—have distinct characteristics. The spas and watering places have their own use and attraction, one of them at least (Rimske Toplice) was as well known to the Romans as our own Bath, and Rogashka Slatina (Roitzsch) provides the mineral water with which you are served as a matter of course if you express a doubt in regard to the local ordinary supply. It is prescribed for diseases of the stomach. But as a holiday playground, the mountainous region, most conveniently accessible from Celje or Liubliana, would be very hard to beat. The climate is temperate to cool, and very bracing, except locally in deep valleys. Mountain walks and tramps in all degrees of ease or difficulty are within reach, and for the expert there is first-class rock climbing. Well-appointed Alpine huts of the Slovene Alpine Society and its branches provide cheap and clean accommodation.

The Upper Sava Valley with its many summer resorts rises to just under 900 metres (3,000 feet) above the Adriatic. Unlike a Swiss valley at that altitude, it is open to sun and air, never unpleasantly hot in summer (not even in the sun, as a rule) and pleasantly cold enough for winter sports in winter, but again without touching the extremes of temperature recorded further inland. The Lakes of Bled and Bohinj are too well known for more than mention in this place. So are the fishing and shooting facilities of Slovenia.

Quite the best centre for Alpine Slovenia is Liubliana, the chief town of the province. Liubliana stands in a wide plain, on the Liublianitz, and not far from the Sava. The town itself is a thousand feet above the level of the Adriatic, the park and Castle Hill rise a good three hundred feet above it. Tentacles of the great Slovene pine forests which clothe most of the Inner Carniola and swathe her mountains up to the timber line (somewhere between 1,600 and 1,900 metres, or 5,000 to 7,000 feet) reach down to the ends of the street. In summer the temperature in Liubliana itself is always lower than in Zagreb or in the Dalmatian towns, the difference being anything from five to twelve degrees Celsius. When the average temperature of the day reaches 25 degrees C. we consider ourselves ill-used, and those who can make a bolt of it for the hills or the riverside. But the nights are fresh, and on hot days there is always a cool breeze from the mountains to the north. Other advantages of Liubliana are good hotels, good inexpensive restaurants and "kavarnas" with open air concerts, and convenient

CABLES AND WIRELESS LIMITED.

PLAN dated 14th May, 1929, for merger of interests in Ordinary Stock in The Eastern Telegraph Company Limited, Ordinary Shares in The Eastern Extension Australasia and China Telegraph Company Limited, Ordinary Shares in The Western Telegraph Company Limited, and 7 per Cent. Cumulative Participating Preference Shares, Ordinary Shares of £1 each and Ordinary Shares of 10s. each in Marconi's Wireless Telegraph Company Limited.

In Pursuance of the provisions of the above Plan and the Deposit Agreement therein referred to Cables and Wireless Limited hereby certify that the above Plan has become operative and that on and after the evening of the 15th day of July, 1929, the Special Register referred to in such Plan and Deposit Agreement will be closed.

Dated this 26th day of June, 1929.

The Common Seal of Cables and Wireless Limited was hereto affixed in the presence of—

J. C. DENISON-PENDER,

Governor.

EDWARD WILSHAW,

General Manager and Secretary.

Electra House, Moorgate, London, E.C.2.

Note.—The Plan and Deposit Agreement provide that after the 28th day of June, 1929, no one will be entitled to make a deposit under such Deposit Agreement or in any other way to accept the offer of exchange contained in the Plan unless the Company agrees to his so doing. Persons who are desirous of accepting the offer after that date should apply in writing to the Company, who will give them permission to accept subject to such adjustments as may be necessary with regard to dividends. Notice will be given by advertisement in *The Times* and two other newspapers published in London when this permission is withdrawn.

connexion by train or motor omnibus with every part of the mountainous country all around. Until this year the absence of a swimming bath was a real drawback, as far as foreign visitors were concerned. We who live in Liubliana would patronise a pet spot on the Liublianitza or Sava. But this year the Sports Club Ilirija has opened a large and absolutely first class swimming and sun bath close under the woods of Tivoli Park and within ten minutes easy walking of any central point in the town. The bath is large enough for races under international rules. Any one who wishes to sample Alpine Slovenia for a summer holiday resort I should warmly recommend to begin by coming to Liubliana and prospect from there, or even to use it as a headquarters from which to make excursions in all directions.

The Machine Section of the Fair.

By JOE MANTUANI.

Undoubtedly the Liubliana Samples Fair is of greater significance for the development of Yugoslavia's import trade than it is for the country's export abroad. The great majority of the more important exhibits of the machine industry—which was well represented and can always count on good custom in Yugoslavia—were of foreign origin. At first sight the Fair almost gave the impression of being a machine exhibition with interesting side-shows. Good business was done in agricultural machinery, motors and dynamos, mainly from Germany, Austria, and Bohemia; but the beginnings of a native machine industry were also well in evidence. Textile machinery was equally in demand. A considerable number of firms, mostly large works in Austria, Belgium, or (above all) Germany, which was represented by well-known old firms like Kirchner's, exhibited machinery for working up wood. Beside these foreign firms, the Liubliana Machine Works and Foundry showed saws, etc., sufficiently low-priced to compete successfully with foreign saws.

Machinery for the dairy and provision industries was poorly represented. I saw only a few separators and mechanical churns. As a matter of fact, such goods would do better at the Liubliana Autumn Fair early in September, which is more of an agricultural and dairy show. Motor vehicles filled a relatively large section by themselves. Again German makes of all types and kinds. This predominance of German goods is something new, not to say amazing, especially in view of the fact that one would have thought it impossible to oppose anything like successful competition to American automobiles. I ought to point out that in Yugoslavia cars are not taxed according to cylinder capacity, but simply as cars, be they large or small. The price of petrol is steadily going down. At the present moment it is down to 6 dinars (about 5½d.) the litre. And this is what closes the European market to American cars. Higher cylinder capacity tells for higher taxation and more fuel. During the ten years that Yugoslavia has existed various countries have tried in turn to monopolise her automobile market. In this rivalry Italy, France, and Austria were America's most powerful and most serious competitors. Until two years ago Germany was practically an unknown factor. At this last fair Germany, represented by permanent local agencies, exhibited 6 Mercedes cars, 4 Adler, 7 Opel, 1 Audi. Other German makes on view were Brennabor, Hanomag, Wanderer, etc. The motor cycle works of Opel,

"B.M.W.," "D.K.W." were also represented and have their established agencies in Yugoslavia. Of American makes, also represented by various agencies, we saw all types of General Motors, Ltd., vehicles, De Soto-Chrysler cars, Studebaker, Overland, Essex, and finally—of course—Fords. It was interesting to note that the body of a Ford omnibus was made entirely in Yugoslavia. The workmanship was, indeed, quite excellent as regards both carriage building and upholstery. Very interesting and instructive was the bisected model of a 350 c.c.m. Harley-Davidson motor-cycle, exhibited by that firm. British industry was represented by two motor works, "James," Birmingham, and "A.J.S." I have repeatedly referred to the well-deserved popularity of these makes in Yugoslavia. They have proved their merit over the heavy roads of the Banat, where the alluvial soil becomes almost impassable in wet weather, no less than on the hilly roads of Alpine Slovenia. This is the first time we have seen a James car at the Liubliana Fair, but I understand that several good orders were taken. It was a pity that neither B.S.A. nor Rudge-Whitworth exhibited this year. Both makes are very popular over here. Take all in all, the British motor industry was none too well represented at the Fair. I failed to find even a Swift, though the firm has a regular agent in Liubliana. Italian cars were conspicuous by their complete absence. I can suggest no reason for this indifference to the Yugoslav market. Nor were there many French cars. After repeated visits to the fair I discovered two little Renaults, and a Terrot motor cycle with a Jap engine. The Austrian section was large—Daimler, Saurer, Steyr, Puck, and Austro-Fiat all showed very handsome cars, and Steyr had some bicycles as well, which are manufactured in the firm's Yugoslav workshops. F. N. (Belgium) showed a few motor cycles. The Czechoslovak firm of Skoda exhibited models of cars, motor lorries, etc., and incidentally a steam-driven lorry. Skoda is the firm that used to manufacture the guns for the Austro-Hungarian Army during the War. They also turned out the famous motor mortars that demolished the walls of the Belgian fortresses in 1914. To-day the firm produces engines of a more peaceful kind. Its automobiles are very handsome, especially an agricultural tractor, a powerful machine and not too complicated in the working.

As regards the general categories of machines and the shifting of numerical proportions in comparison with past years, I am compelled to report a further falling-off in British imports, the total absence of Italian goods, and a decrease in French. German industry has gained ground enormously; in motor lorries she practically predominates—which means the end of American monopoly in this line. It is clear that she intends to reconquer, commercially, the territory she controlled before the War. Yugoslavia only represents the first stage—and a highly successful one, we must admit—in this campaign. This expansion towards the south-east is all the more intelligible as the west is closed by Italy's powerful native industry and protective tariffs as by a wall. It would be a good thing if British exporters were to keep an eye on this movement. Yugoslavia appreciates British goods and is open to receive them. Internally, the country is now so far consolidated that German industry is venturing freely. I repeat what I have already said, in THE NEAR EAST AND INDIA and elsewhere, that the Yugoslav market still offers excellent opportunities and that there is no reason why British firms should not, like those of other countries, establish their own workshops and permanent direct agencies in Yugoslavia.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swanea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz, and Braila.

For Rates of Freight, Insurance and other information apply to:

JOHNSTON LINE, LTD., 6 Brijiter Street, London, 86, Cross Street, Manchester.

and FURNESS, WITTH & CO., Ltd., Royal Liver Building, Liverpool

The Croat-Slavonian Sugar Company, of Osek, made a net profit last year of 7,067,732 dinars, as against 6,280,300 dinars in 1927. A dividend of 16 per cent. has been declared.

The Secretariat of the European Danube Commission has asked the Governments of Roumania, England, France, and Italy to ratify the issue of a loan of 400,000 gold francs to meet the cost of dredging operations up to July, 1930, and of a loan of 8,500,000 gold francs for extending the dam north of Sulina.

British Consular Reports

I.—SYRIA.

The report of the British Consul-General at Beyrout on the economic situation in Syria in 1928-29 states :—

So far as Beyrout is concerned, the twelve months ended April 30, 1929, may roughly be divided into three periods. Up to the end of August, 1928, there was a distinct crisis which resulted in a number of failures. From that date to the end of 1928 there were no more failures of any importance, but the utmost caution was observed and little business was done. Finally, during the early months of 1929 business was fairly brisk, and the situation seemed to be becoming more normal. This period of recovery was marked by two failures of some importance, but these were not followed by a crop of smaller ones, as had previously happened in similar conditions. There is thus reason to hope that the crisis may have eliminated the weaker firms, leaving those which are better able to encounter difficulties.

As regards the present situation, although money is still short in Beyrout itself, there seems to be a fair amount in other parts of the country, but everything really depends on this year's harvest. If it is a good one, and the indications are that it may be, then conditions should become much more stable. The 1928 harvest was a disastrous one, and that of 1927 was bad. Agriculture is the mainstay of the country, and merits much more assistance than it has hitherto received.

The Aleppo district, being pre-eminently agricultural and pastoral, was badly affected. Crops were reduced by one-half and flocks were decimated. Credit was restricted, and the situation, bad in July, 1928, was at its worst in September, when failures amounting to £70,000 were registered. Nevertheless, the market stood the strain well, and the close of the year brought a more optimistic outlook. Prospects are now described as fair. The prosperity of Damascus, too, is bound up with the weather and the harvest. At present it is hoped that there will be a surplus of wheat available for export, so that the buying power of the population will be substantially increased and a considerable importation of the staple articles will result, but until the harvest is actually gathered, any undue optimism regarding it would be misplaced. The winter rainfall throughout Syria was good, and in some districts above the normal, while, although there was no rain in March and most of April, heavy and general rain fell throughout Syria on April 21, which saved the situation.

Trade Position.

As regards the general trade of the country, imports increased in value by 41 million gold piastres as compared with 1927. The increase in weight was 107 million kilogs. This was not really a matter for congratulation, as, owing to the failure of the harvest, large quantities of wheat and flour had to be imported from Australia, America, and elsewhere for general consumption throughout the country. Even now this importation continues, and several shiploads are expected in the near future. To encourage this importation the duty was reduced by one-half to 5½ per cent. It is a regrettable fact that while the United Kingdom still holds second place, there was a drop of 47 million gold piastres in British imports, which are now but little ahead of those from the United States and Italy. While the United States, with Roumania, Egypt, Iraq, India, Palestine, and Persia improved their position as regards imports, Italy, with Belgium, Turkey, Czechoslovakia, and Japan showed decreases. As regards exports, there was naturally a distinct falling off. On a weight basis they were back to those of 1926, but their value was greater than those of that year to the extent of about 60 million gold piastres. Cotton was a greatly reduced crop, only 35,000 bales of wool were exported, and the export of liquorice was much decreased. Exports

of yellow berries, gall nuts, and wax were less, but prices were favourable.

Building at Beyrout.

So far as outward appearances go, Beyrout, despite its commercial crisis, wears an air of prosperity. Much building and re-building continues, streets are being widened and re-made, and motor traffic is continuous. This year several more streets are to be asphalted. The work will, as last year, be done by a British firm. When one sees the number of new houses, offices, and shops which are constantly being built, one is inclined to wonder how they can ever find tenants. So far, however, they have been occupied as soon as they are ready, and rents have not fallen appreciably. Nevertheless, there is a danger that building will be overdone, and that one day there will be a considerable slump in urban real estate. At Damascus, too, there has been a lot of building in the northern quarters of the city, and the municipality has imposed certain regulations as to the width of roads, drainage, and building material. Beyrout might well follow suit on the last two points, for the much-talked-of drainage scheme has made no progress, while, as regards building material and methods, it is clear that the amalgam of stone, brick, and reinforced concrete, of which even some of the more imposing new buildings are composed, is unsound. Aleppo, also, has seen street improvements and a good deal of building.

Both at Damascus and Beyrout the tramway companies are extending or planning to extend their systems. At Aleppo a good deal of work has been done, and trams are running in certain parts of the town. Owing to high fares the cars seem to be but little used. The tramway company also supplies the electric light. At Damascus the Ain Fijeh water scheme advances steadily, and good progress is being made. Beyrout has long been blessed with a good and abundant water supply. Aleppo, however, has hitherto been permanently short of water in the summer. A scheme for remedying this state of things is under consideration.

As regards extra-urban public works, they have been confined to the making of roads. The Lebanon, although it has a longer road mileage than the other States, is still behind in the matter of surface. Nevertheless, progress is being made with the asphaltting of the main roads running from Beyrout east to Damascus, north to Tripoli, and south to Sidon and Palestine. Also, these main roads are being progressively widened and straightened. Work is proceeding on the improvement of the Beyrout Harbour, and new Customs stores are being erected.

As regards railways the line has been opened to traffic as far as Nisibin. The sleeping-car service to Constantinople via Aleppo has been improved and seems to be popular. Nothing has yet been done in the way of new irrigation schemes, but it is believed that the French High Commissioner has in view something of the sort. His public utterances justify this belief.

The Lebanon summer season was a short one and disappointing. Only about 6,800 visitors came, a number much below that of previous years. On the other hand, the number of spring tourists is on the increase. A good many Christian pilgrimages seem to touch Syria on their way to or from the Holy Land. The route via Syria is also attracting an increasing number of foreign Muslim

Contractors to British, American, French and Italian Admiralty.

pilgrims. At present they come mainly from Iraq, but when the Persian Government authorises the use of the Syrian route by its subjects there should be a large influx of Persian pilgrims. Muslim pilgrims either travel by land via Palestine from Damascus or from Beyrout by sea. The concession for the sea carriage of pilgrims was this year secured by a British company whose arrangements have given satisfaction. All this coming and going of travellers of all creeds and classes is advantageous to Syria, and especially to Beyrout. What is now wanted are some good hotels. It is understood that certain undertakings propose shortly to remedy this defect so far as Beyrout, Damascus, and Aleppo are concerned.

Industrial Activity at Damascus.

Although Syria can never hope to be a successful industrial country on any large scale, it is interesting to note that there was in 1928 quite an industrial revival at Damascus. This has taken three forms: Increased output of existing factories, formation of associations among small producers, and establishment of new factories on modern lines. Of these latter there are now two, one for silks and one for woollen cloths. There is also a small match factory and another for "pates alimentaires." A first-class tannery, with the best modern equipment and Austrian technicians, produces the finest grades of leather. The trouble will be to find a market for what is produced. Turkey is installing a number of silk-weaving factories, and Palestine is intent on capturing for its industries as much of the Syrian market as it can. In Aleppo weaving looms renewed their activity, and work more and more with artificial silk. Interest is being taken in textile machinery generally. Tanneries are active in making native "morocco" leather. There is a scheme for the erection of a cement factory near Tripoli. If successful, it should diminish the importation of cement from Palestine, which is now considerable.

Home producers seem to be taking more interest in the Syrian market. Damascus reports that travellers' visits are more frequent, and some directors of exporting firms have found it worth while to study the market in person. The same may be said to apply to Beyrout. Unless this interest is taken and the district personally visited, it is difficult to see how British trade can expect to hold its place in face of the keen and ever-growing competition. Italian and other foreign piece-goods are still ousting the British article.

The following figures as to textile goods imported through Beyrout during the last three years are interesting:—

	1926.	1927.	1928.
	Packages.	Packages.	Packages.
Other Countries ...	1,119	1,992	1,269
England ...	4,483	5,864	3,220
France ...	4,393	4,139	3,208
Italy ...	11,882	14,347	11,761
Belgium ...	2,785	3,083	2,033
Via Trieste ...	1,720	2,965	1,960
Via Egypt ...	8,355	7,012	5,321
Total packages ...	34,647	39,402	28,772

At Aleppo British rayon silk is gaining ground, and Indian cotton yarns hold their place. It is satisfactory that a British firm has obtained a good footing in the road-asphalting sphere as in course of time more and more use will be made of this method.

The directors of the Royal Exchange have accepted with regret the resignation of Mr. W. G. Ross, chief cashier to the corporation, who has completed 40 years' service. Mr. R. E. F. Johns has been appointed to succeed him.

The traffic receipts of the South Indian Railway Company for the week ended June 1 amounted to Rs.13,45,944, making the total from April 1 Rs.1,15,40,655, as against Rs.1,14,19,485 for the corresponding period of the previous year.

COMPANY NOTES AND REPORTS.

EGYPTIAN HOTELS.

The report of the Egyptian Hotels, Ltd., for the year ended April 30, 1929, states that after providing for the charges payable in London and Cairo, the accounts show a profit of £100,843 16s. 4d.; the balance of undivided profit brought forward from last account is £6,376 19s. 2d.—£107,220 15s. 6d. From this has to be deducted depreciation of plant, fixtures and fittings at hotels, £7,000, leaving an available balance of £100,220 15s. 6d. The directors recommend: (1) The payment of a dividend of 5 per cent. on the preference shares for the year to April 30, 1929, absorbing £5,750; (2) the payment of a dividend on the ordinary shares of 35 per cent. for the year, £43,750, and a bonus of 4s. per share, £25,000, which will absorb £68,750; (3) to place to special reserve, £20,000—£94,500; leaving a balance to be carried forward of £5,720 15s. 6d.. At a general meeting of the shareholders of the company held in Cairo on April 25, 1929, a resolution was passed recommending that the capital of the company be increased by 100,000 ordinary shares of £1 each. In pursuance of this resolution an extraordinary general meeting has been convened to follow the ordinary general meeting of the company and at this extraordinary general meeting the shareholders will be asked to authorise the increase in the company's capital to the extent mentioned above, and also to approve certain suggested amendments in the articles of association to facilitate the issue of the new shares in the form of share warrants to bearer. By resolution passed at a general meeting of the company held on June 30, 1927, the ordinary share capital of the company was increased by 25,000 ordinary shares of £1 each, and these shares which have not yet been issued, together with the further 100,000 shares mentioned above, when created, will be offered for subscription to the ordinary shareholders of the company at par in the proportion of one new ordinary share for every existing ordinary share held. The offer of these shares for subscription will be made on October 1 next.

PHOENIX OIL AND TRANSPORT.

The report of the Phoenix Oil and Transport Company for 1928 states that the accounts show a net profit of £239,099, as against £223,553 for 1927; and £224,191 was brought forward. Out of the total of £463,290, the directors have decided to transfer £200,000 to investment reserve, to reserve £11,000 against sundry assets, and to write off the expenditure of £2,506 on furniture, fittings, etc. It is proposed to pay a dividend for the year of 6d. per share on the £1 shares and 3.464841d. on the 1s. shares, leaving £142,175 to go forward. The policy of the management during the year was to improve the methods of producing and refining and to effect general economies, no effort being made to increase the output of crude oil, which in fact was lower at 391,108 tons, against 434,897 tons. During the current year drilling activities have been increased, and for the first five months the production was in excess of that for the corresponding period of both 1927 and 1928.

SUDAN SALT.

The statutory report of the Sudan Salt Company states that the company was registered on March 23, 1929, with a nominal capital of £250,000 in 250,000 shares of £1 each, and became entitled to commence business on April 19. The number of shares allotted is 173,000, of which 12,500 were allotted as fully-paid to the vendors and 160,500 for cash. The total amount received by the company in respect of shares allotted for cash is £79,916. Payments to June 13 are as follows:—Remittances to the Sudan and sundry payments in the course of the company's business, £16,661; payment to Sudan Government, in accordance with the terms of the agreement, £10,256; payment to Port Sudan Syndicate under terms of agreement, £350; preliminary expenses, £3,497; interest, exchange, and general expenses, London, £96; leaving cash at bankers and on deposit, £49,513.

SOSPIRO OILFIELDS.

The report of the Sospiro Oilfields, Ltd., for the year ended March last states that the exploration of the extensive oil lands belonging to the Sospiro Societate has been continued during the year by geological survey and also by drilling. In the Cervenia field strong gas pressure has so far prevented the wells which are in drilling reaching production. The geological survey having proved an extensive oil-bearing structure to exist at Upper Cervenia, an exploratory well is about to be drilled. At Piscuri, which is adjacent to the Sospiro properties, two wells have recently been brought into production on a very large scale by other companies, and it is anticipated that the same oil-bearing structure will be found to continue into the Sospiro lands.

Mr. W. S. Highton has been appointed financial manager and secretary to Thos. Cook and Son as from June 26.

An Athens message states that the National Bank of Greece is issuing a second series of 23,333 bonds of a nominal value of 5,000 drachmæ. The subscription price will be 7,000 drachmæ, although the market price is 7,350 drachmæ. The subscription list will be opened on July 8 and will be closed on July 12. Applications will be received in Greece at the National Bank of Greece and in Paris at the Comptoir d'Escompte.

Company Meeting.

IMPERIAL BANK OF PERSIA.

The Trans-Persian Railway.

Sir Hugh Barnes' Speech.

The fortieth ordinary general meeting of the Imperial Bank of Persia was held on July 2 at the Cannon Street Hotel, Cannon Street, E.C., Sir Hugh S. Barnes, K.C.S.I., K.C.V.O. (Chairman), presiding.

The Manager (Mr. Sydney Rogers), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said :—I think it may be safely assumed that in the past year there has been no diminution of the energy and driving power which has always distinguished His Majesty the Shah, with the result that the modernisation of the structure of the State which has been such a remarkable feature of Persian history since His Majesty's accession has been making steady progress. You will remember that the old commercial treaties with the various European Powers, which conferred on foreigners extra territorial rights, came to an end a year ago. I am quite sure that the Persian authorities desire to exercise their new jurisdiction with fairness and circumspection, but for some time they will be faced with the difficulty of adapting their laws and training their judges and magistrates up to the standard of modern requirements.

The work on the proposed Trans-Persian Railway from the Gulf to the Caspian has been proceeding surely if somewhat slowly. We hear that in the north a few miles of line have recently been opened to traffic and in the south the American engineers are busy completing the line between Ahwaz and the new Persian port at Khor Musa, which is to be given the name of Bandar Shapur. From all we have heard, there seems to be little doubt that in the Khor Musa inlet the Persians have discovered what they have never possessed before, viz., a commodious, sheltered deep-water harbour in the Persian Gulf completely under their own control, which, when it is connected by railway with Teheran and the north, is likely to absorb a very large share of Persia's sea-borne trade.

The position at Mohammerah, the Persian port on the Shatt-ul-Arab, has never been a satisfactory one from the point of view of the

Persian Government, as the Shatt-ul-Arab up to low water mark on the Persian shore belongs to Iraq and the navigation is entirely controlled by the Basrah Port Trust. Beside the railway, other means of communication have not been neglected; the roads have been steadily improved. Other measures of internal reform are being taken in hand, but the two most important events of the year have been the election of Persia in September last as a non-permanent Member of the Council of the League of Nations, a timely and appropriate recognition of Persia's political progress, and the reconciliation of the Persian and Iraq Governments which took place last spring. Previously Persia had always refused to recognise Iraq. Now that friendly relations have been established the way is open for the settlement of several important questions at issue between the two Governments.

As might be expected, the year has not been entirely free from troubles. Early in May a rather serious disturbance, prompted by Communist propaganda, took place at Abadan, but this was quickly and efficiently dealt with by the Persian civil and military authorities and our business was not interfered with.

You will also have seen from the newspapers that a rather grave situation has arisen at Shiraz owing to the truculent attitude assumed by the Kashghai tribe. We know little beyond what has appeared in the telegrams to the Press, and can only hope that His Majesty the Shah with his usual tact and ability will be able to bring about a speedy settlement of the trouble. But the situation is obviously not free from anxiety.

I will now ask you to turn your attention to the figures of the balance-sheet. The total, as you will see, shows some diminution from that of last year. To clarify our accounts to the Inland Revenue Department with whom we have been in consultation, we have, as stated on page 2 of the Report, converted the Persian assets and liabilities into sterling at the rate of exchange ruling on March 20, instead of as hitherto at a fixed rate adopted since 1917, for the purpose of easy comparison year by year.

Our position continues to remain very liquid. Our cash in hand has been augmented by the completion of the coinage contract mentioned last year and to meet the increase in the note circulation of about half a million sterling for which we have to keep adequate reserve in coin. Investments are lower this year by about the same amount, occasioned by the employment of funds in other directions. Bills discounted, etc., are down relatively to the decrease in deposits. In this latter item is reflected the withdrawals by the Persian Government for expenditure on railway construction and in other directions, which, you will remember, I anticipated last year. Bills recoverable show a slight increase, which calls for no particular comment.

In the profit and loss account there is only one figure that calls for any comment, viz., the total. The net profit for the year is £125,955 8s. 10d., as against £135,311 13s. 1d., a reduction of £9,356 4s. 3d. There are, of course, bound to be fluctuations in all businesses, especially in the East where competition is very keen for the business offering, but nevertheless you will doubtless consider the results satisfactory, seeing that whilst we have maintained the dividend unaltered we have written £30,000 off bank premises, and have added £40,000 to reserve, bringing that item to £610,000, or only £40,000 less than the amount of our capital. We have also slightly added to our carry forward.

Assuming that the disturbances at Shiraz are speedily quelled and that order and security are restored, the prospects of the current year are not unfavourable. The wheat crop in the south is reported to be very good, and, as export is now permitted, considerable business should result.

The resolution was carried unanimously, and after the transaction of the usual formal business the meeting terminated.

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

YUGOSLAV PORTS DEVELOPMENT.

In the current issue of the *Belgrade Economic Review*, M. Slavko J. Sirishchevitch has an interesting article on "The Possibility of the Development of the Yugoslav Ports." We give the following extracts:—

The Yugoslav coast of the Adriatic is very rich in harbours. In not quite 600 kilometres as the crow flies there are some 360 harbours of different sizes and forms. The greater part of this really large number of harbours are used for purely local purposes, while trading centres of more importance are very limited in number. If we judge their importance, as we must, by the amount of goods which pass through them in a year, we shall find only six ports which have a trade of 100,000 tons or more per annum, and of these only four maintain this quantity regularly while in two cases it is only temporary. These six Yugoslav ports are, from north to south, Shushak, Shibenik, Split, Omish, Metkovitch and Dubrovnik. According to the statistics for 1927 the total traffic of these six ports amounted to 1,953,000 tons, while the traffic of all the other ports excluding the above-mentioned six amounted to 2,234,624 tons, that is to say barely 280,000 tons more, which shows how much more important these six are.

In order that the importance of this trade passing through the ports for Yugoslav foreign trade may be realised it must be pointed out that goods for foreign destinations passing through the ports amounted to 1,700,000 tons in 1927, while the whole foreign trade of the country that year amounted to only 5,197,287 tons and from which it will be seen that the traffic of the ports plays a considerable part in the foreign trade of the country. But this share in the foreign trade is not so great as it should be and could be in view of the extraordinary position of the coast and of the hinterland of these ports.

The most important feature of all Yugoslav ports is their exports. The ports are specially devoted to export traffic. The only exception to this is Shushak where the exports are fairly well balanced with imports. The exports from the Yugoslav ports are mainly bulky articles. The main item of export of all these ports is timber, the greater part of which is timber for building purposes but wood for fuel is also exported through most of them in considerable quantities. Exceptions to this statement are Split and Omish which export scarcely any wood but handle mainly cement and its raw material "Laportza" stone. But besides these three most important articles which together give over one million tons yearly, there are other bulky goods exported such as bauxite (the raw material for aluminium), lignite, artificial manures (calcium cyanide), carbide and other goods.

It is important now to discover whence come the materials for export through the ports. Most of the timber exported from the country goes by sea. Although the sea is comparatively distant and connexions are bad, timber will not stand long transport by land. Besides this most of the big timber concerns are situated near the Adriatic and the most important are in Bosnia. In this direction it will be necessary for the Yugoslav ports to wait until the railways have been built which will enable the exploitation of forests as yet untouched. Some of the exports now passing through Trieste will also be able to be sent through home ports. Cement and laportz stone are quarried on the coast itself near to Split and Omish which accounts for the large export of these products although land transport is so bad. Bauxite is sent by rail to Shibenik from the district close by and nitrogen products, for manures and lighting purposes the products of the great water power of Dalmatia, are sent through Shibenik, Split and Omish. Thus the main trade of these three central ports is in the goods produced by local industry.

The building of railway lines will bring to the ports great quantities of minerals since their construction will enable the exploitation of the vast, hitherto untouched, mineral wealth of the interior. Besides this when railways

have been built many of the other products of the country will be sent via the sea.

Shibenik has grown by 50 per cent. since the War. Split had reached in 1927 a total trade of almost three times that handled in 1913 and Omish has, from a very unimportant per-War harbour grown to be a very important export centre. Metkovitch has considerably diminished, especially because of the silting up of the Neretva River so that larger ships can no longer enter its port. This could be remedied by the dredging and deepening of the river. Dubrovnik has remained about the same as before the War.

CONSTANTINOPLE MUNICIPAL 5 PER CENT. LOAN, 1909.

Meeting of Bondholders.

A meeting of the bondholders of the Constantinople Municipal 5 per cent. Loan of 1909 was held at 8, Bishopsgate, London, E.C., on July 2, under the chairmanship of Lord Revelstoke, to consider an amendment put forward by the Turkish Government to the Agreement in connexion with the loan.

Lord Revelstoke said:—Bondholders who were present at the meeting held at Winchester House on May 14 will recall that at that meeting you expressed your approval of the provisional settlement which had been arrived at as the result of negotiations between the Municipality and Mr. Dickson. That settlement has since been ratified by the Municipality of Constantinople and by the President of the Republic of Turkey. The Government's ratification, however, carries with it the insertion of a new clause similar to a clause which forms part of the recently concluded settlement of the Turkish Public Debt, the effect of which is, shortly, to give the Turkish Government power to interrupt the service of the Public Debt abroad, in the event of unforeseen circumstances making it difficult or impossible for the necessary foreign exchange to be bought in the market. The Turkish Council of Ministers, who dealt with the matter, did not consult your Committee before inserting this new clause, but we understand that the Turkish Minister of Foreign Affairs did call upon H.M. Ambassador in Constantinople and explained to him that, in view of the powers granted under the Public Debt agreement, they did not feel willing to ratify the Municipal agreement without the addition of a clause granting similar powers. Consequently, although it need hardly be said that we would have preferred that our contract should remain in the state in which you expressed approval of it, we are now faced with an accomplished fact and we have to decide to-day whether we shall accept the agreement, varied as it is by the additional clause, or reject it and so reopen the course of negotiations which had been as we thought, at the cost of so much effort, concluded.

The following is the text of the new clause which it is proposed shall stand part of the agreement:—

"If as laid down by Article 17 of the Agreement dated the 13th June, 1928, signed at Paris for the settlement of State debts, the purchase of foreign currency should be provisionally interrupted either by agreement with the Council of the Public Debt or as a result of arbitration, the Municipality reserves the right to interrupt for a similar period the purchase of sterling exchange provided for by the present agreement. It is understood that even in this case the exchange value of the sterling instalment will be calculated at the rate of exchange for the day and lodged in currency at the Bank by the Municipality."

Your Committee have given the matter their most earnest consideration and the conclusion which they have arrived at is that, although the powers bestowed by these clauses both in the Public Debt agreement and in our agreement are in themselves undesirable from a bondholder's point of view, in our case the consequences of rejecting the ratified agreement might be so serious that we do not feel justified in recommending you to do so.

Subject to any questions which may arise for debate, the Committee recommend that you should adopt the following resolution:—

"That the meeting of holders of bonds and coupons in the Constantinople Municipal 5 per cent. Loan, 1909, accepts the addition to the terms of the Agreement confirmed at the meeting held on May 14, 1929, of a clause in the terms which I have already read out."

The resolution was carried unanimously.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 26:—

Egyptian Futures.

Sakel Contract.—During the sessions immediately following our last report, the market began to reflect in a more direct manner the consequences of the Government's declaration to auction their holding, and the decision of the employers in both the spinning and weaving sections to serve notices of a reduction in current earnings approximating to 12.82 per cent. As reported last week, at the first auction only 316 bales out of the 1,000 bales submitted were sold; the threat of the release of this stock, however, was sufficient at the present juncture to undermine the morale of those who have held cotton throughout the recent decline; consequently, both the Alexandria and local markets during the latter part of the week were called upon to absorb a considerable amount of unexpected liquidation. As a result of this, new low levels for the season were established, but afterwards an announcement that the Government is postponing sales of their old stock and consistent support through the medium of trade calling have caused a moderate reaction, to-night's close showing a decline of 30 to 17 points for near and 5 points decline to 12 points advance for new crop positions.

Whilst the trade outlook is rather obscured by the wages question, somewhat more business has been attracted by the decline, and in some cases margins show a slight improvement. At the lowest point of the week, our premium over the American contract closed down to about 525 points, a parity that does not appear unreasonable at existing levels, and one at which more business would be attracted were trade conditions normal.

Upper Contract.—Very little change has occurred in this market as a result of the past week's trading. Some heavy liquidation of new crop months yesterday morning caused values to break temporarily; since a recovery to previous levels has occurred, owing to increasing speculative support and to a slight improvement in spinners' activities. The spot basis shows signs of hardening and import houses are buyers of near positions, putting out sales of new crops against their stocks.

Egyptian Spot.

Owing to the further break which has occurred in Sakel prices, business in this growth has been somewhat restricted. We are, however, at the lowest point of the season, which represents a drop of approximately 365 points from the high level touched in March last. With this fact in view, and with the always critical month of July close at hand, it is evident that spinners are keeping in very close touch with the market, and it is significant how, on any appearance of strength on the American side, the spot demand improves out of all proportion to the amount of business doing. Although the sales of Egyptian have fallen off this week slightly as compared with last, this has been more than compensated by the improved demand for Sudan Sakel. The basis for the latter has remained very firm, and most of the business has been done in the medium and lower qualities. The demand looks like improving further. Reports from up-country have shown some slight improvement. The Upper market has been remarkably steady, and the basis for desirable cotton is slowly hardening. The bulk of the inquiry has remained stationary on the quality represented by 10 off to 10 on cotton, with some demand noticeable for cotton up to 40 on. There has been a quantity of very cheap Upper cotton on offer in our market lately, and this, added to the "mixed" cotton which has been such a feature this season, makes it difficult for the average shipper to get on as quickly as he would like to.

Pilion has again been in good request at from 12d. to 12½d., both for spot and shipment, but probably business in the latter has not amounted to very much.

Nahda and White have been in moderate request, but sellers have been inclined to let cotton go.

Maarad has been in fair request, chiefly, however, from one or two special sources. Buyers are very particular and their exact requirements are not easy to fill.

Tokar Sakel.—No improvement has been noticed in the demand for this cotton.

Low and Inferior Cotton.—A moderate business has been done in cotton at from 3d. to 10½d. C.i.f. business has been slow, so far as can be ascertained. Forwardings to the trade last week amounted to 7,073 bales Egyptian and 1,186 bales Sudan. Estimated spot sales for the week, 2,000 bales Egyptian and 1,300 bales Sudan. Quotations of Sakel have declined 20 to 55 points. Upper and Pilion are just a shade harder on balance. F.G.F. Sakel to-day, 15.95d. F.G.F. Upper to-day, 11.28d. F.G.F. Pilion to-day, 12.25d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended June 20, state:—

Since our last report the futures market has been very active, but the tendency has been distinctly weak. The week's summary of price movements is as follows:—Sakellaris: July, 31.63 dollars,

1.42 dollars down; November, 32.32 dollars, 1.13 dollars down; January, 32.76 dollars, 1.08 dollars down; March, 33.13 dollars, 1.07 dollars down. Ashmouni: June, 20.50 dollars, 0.40 dollars down; August, 20.83 dollars, 0.30 dollars down; October, 21.32 dollars, 0.29 dollars down; December, 21.80 dollars, 0.28 dollars down; February, 22.18 dollars, 0.05 dollars down.

Sakel.—This market has not shaken off the heaviness to which we alluded in last week's report and quotations have again lost a good deal of ground. Some liquidation of old bull positions, a fair quantity of speculative sales, and very few trade purchases are the direct causes of the decline in prices during the week. Speculative shorts were encouraged to renew their attacks on the market by the decision of the Government to begin, at last, the liquidation of its old stock. The results of the first auction held by the Government on Wednesday last were not altogether satisfactory. Only 316 bales out of the 1,000 offered found buyers, while 684 bales had to be withdrawn, either from lack of bidders or because the Government Commission did not find the prices offered satisfactory. The next sale has been fixed for Wednesday, the 26th inst., and the quantity offered will be 992 bales in 21 lots. It is to be hoped that the present level of prices, which we consider very reasonable, will attract a better demand from spinners, which might help the liquidation of the Government cotton.

The Sakel Uppers straddle (November/October) this week stands at 1,100 points, against 1,184 points last week and 1,438 points at this time last year.

Uppers.—This market has also reacted slightly in sympathy with Sakel, and, more particularly, with New York. Straddle operations initiated by local operators, and consisting in buying October Uppers and selling November Sakel, have been a sustaining factor. The trade demand has not been marked by any special feature, but while only of moderate volume, it has continued to be very regular and has emanated from all consuming centres. As stated in our previous report, we are of opinion that the market will be governed principally in the near future by the fluctuations of New York.

The Ashmouni American straddle (October/October) this week stands at 263 points, against 286 points last week and 665 points at this time last year.

OVERSEAS AGENTS FOR THE SALE OF "THE NEAR EAST AND INDIA."

ALBANIA.

Tirana: Librairie Lumo Skendo.

AMERICA.

New York: Brentano's, Fifth Avenue and 27th Street.

Boston (Mass): Smith and McCance, Ashburton Place.

The week's receipts amount to 3,270 kantars, against exports 129,594 kantars; the stock in Alexandria stands at 2,257,225 kantars.

Spot.—We have had quiet markets during the last week, the total sales being only 7,000 bales, of which we estimate 3,600 B.S. Sakellaridis, 2,600 bales Ashmouni and Zagora, 600 bales Pilion, 75 bales White, 65 bales Nahda, and 60 bales Maarad.

Sakellaridis.—There has been more interest shown in Sakel, and there has been some buying of the better grades. Good style cottons of the middle grades are becoming very scarce indeed, and the premiums for these grades have gone up considerably this week.

Ashmouni and Zagora.—Much quieter than last week, with the strongest demand for Fully Good Fair up to Good about. Premiums are much the same as last week.

Pilion.—There has been a very good demand for Fully Good Fair to Good and Good and nice lots are easily sold. Premiums are unchanged.

White.—A small business has been put through, but no great interest is being shown. Premiums are as last week.

Other Varieties.—Neglected, and the only business done has been in one or two lots of Maarad and Nahda.

Crop, 1929.—Despite the rather cool weather and humidity during the nights, the plants are strong and flowering is becoming general. Egg masses of the leaf worm are being destroyed wherever they make their appearance. In Upper Egypt, bolls are beginning to form in advanced plantations. There is nothing particular to report on the subject of irrigation, the supply of water being everywhere sufficient.

The Roumanian import duty on wheat has been increased from 6,000 to 16,000 lei per 10 tons.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows for the week ended June 30:—

Currants.

The market continues under the influence of the new Australian fruit, and with further arrivals from the Commonwealth to replenish the poor selection of medium qualities on offer, Greek growths remained in a state of apathy, with very little change in the general position. The lower and medium grades were neglected with prices slightly easier, but for best grades values are unchanged, with an occasional sale at from 54s. to 56s. for Choice Bold Shade Dried Vostizza. The small business passing comprises Amalias, 45s.; Zante, 46s. to 46s. 6d.; Gulf, 46s. to 51s.; Vostizza, 54s. to 56s.; and Smalls, 50s. to 52s. S.S. Bactria and Edfou, bringing small quantities, arrived during the month. Quotations:—Pyrgos, 45s.; Amalias and Patras, 45s. to 46s.; Gulf, 46s. to 50s.; Vostizza, 49s. to 56s.; Vostizza, Smalls, 50s. to 52s.

Sultanas.

Smyrna.—Are nearly cleared; a few parcels of good quality at 41s. 6d. and Fine at 50s. changed hands. Latest reports of new crop indicate that the coming yield is estimated as likely to reach 55,000 tons, although weather conditions during the next two months will be the dominating factors to be considered. Offers of G.A.Q. quality for September shipment at about 31s. c.i.f. have failed to interest buyers.

Figs.

New Crop Genuines have sold at 22s. 6d. c.i.f. September shipment, and 23s. c.i.f. first half September.

Notes of the Week.

The Dead Sea Salts Concession.

In spite of the fact that the Dead Sea Salts Concession was formally granted by the late Government, the controversy on the subject has not been permitted to die down, and it would appear that attempts are still to be made to challenge the award. With the fabulous value that has been attached in the popular estimate to the chemical contents of the Dead Sea, there is no cause for wonder that all those who have allowed the prospect of obtaining the Concession to be dangled before their eyes should be reluctant to accept disappointment as final and irrevocable. Hence the keen struggle not only up to the moment of the award, but also, seemingly, after the matter is supposed to be a *chose jugée*. The Concession, as it stands granted to-day, comprises a happy combination of mixed interests; of the two concessionaires one is a Palestinian subject, the other is British; the Chairman of the Company to be formed to exploit the Concession, as well as a majority of the Board, will always be British; the capital behind the undertaking will be British, Palestinian, Trans-Jordanian (if subscriptions are forthcoming) and American (in view of the large Jewish-American interests in Palestine). If, therefore, there is to be any further challenge to the Concession, it will be well for the British public to understand on whose behalf the challenge is raised. The unsuccessful tenderers fall into two groups. Behind one, as has been stated in Parliament, stands, or stood, a strong financial syndicate, which regards the Dead Sea as it would a railway line across the Arabian Desert, the Mosul oil-fields, or any other concession that promised a lucrative return; its interest is strictly financial. The second group bases its claim on the purchase, since the War, by two British subjects of a concession granted in 1913 by the Turkish Government to three Ottoman subjects. When the British Government refused to recognise the validity of a pre-War concession granted to enemy subjects, the purchaser, or purchasers, assigned the concession to a third party, an Indian resident in England, who in turn assigned his interest to a French syndicate. To judge from Press references to the subject, the hopes

of all the unsuccessful tenderers are now being raised by reports that the French Syndicate intends to contest the validity of the Dead Sea Concession before The Hague Court.

Under Which Flag?

In order to justify their action in taking up the time of Parliament over a business matter, those who challenged the late Government's good faith and patriotism in connexion with the award of the Dead Sea Concession laid special stress on the necessity of keeping a potentially enormous supply of potash in British hands and free from international control or interference. The value of their professions will be apparent, if they are found to have any hand in the new development now threatened. The French Syndicate was deliberately called into existence by the last purchaser of the Turkish pre-War concession, because, as a British national, he could have no recourse against his own Government before an international tribunal. It was to consist of commercial men "of the highest standing and commercially strong," whose main recommendation was their ability to promise the backing of the French Government of the day, in the persons of M. Briand, M. de Monzie and M. Doumergue. The agreement between the Syndicate and the vendor contemplated the ratification of the concession, whether by The Hague or by negotiation with the British Government, or the grant of a new concession. In either case French control over the exploitation of the Dead Sea salts would be established, the various vendors contenting themselves with such financial interest in the exploitation as they had been able to secure under their agreements. Whether the British and Palestinian Governments could be expected to enforce on a foreign syndicate terms as favourable to Palestine and Trans-Jordan as those which have been embodied in agreements with concessionaires who are actuated by patriotic interest in Palestine and the British Empire no less than by business motives must remain an open question; it is certainly of no concern to any of the British vendors. The French Syndicate is, no doubt, acting strictly within its rights, and it is entitled to contest the

validity of the pre-War Turkish concession at The Hague; but the effect of this development, if it takes place, is to cut the ground away from under the feet of those who have claimed to be inspired by patriotic motives in contesting the grant of the Concession to those who were adjudged to be the most suitable tenderers.

A Treaty Interpretation.

In challenging the Dead Sea Concession the French Syndicate, and the French Government, if, as is understood, the latter has already approached the British Government on the subject, are relying on the verdict of the International Court at The Hague which upheld the concession granted to M. Mavromatis in Palestine that had been overridden in the concession granted by the Palestine Government to M. Rutenberg. Whereas, however, M. Mavromatis could claim to be an Allied and not an enemy subject, there can be no question that the Turkish concession for the extraction of the bromide contained in the waters of the Dead Sea was given to an enemy subject. On this point the Treaty of Lausanne appears to the lay mind to be explicit. Article 73 states that certain classes of contracts concluded between persons who became enemies remain in force, subject to the provisions of the contracts and to the stipulations of the Treaty, but it adds that this Article "does not apply to concessionary contracts." Again, Article 77 states that "contracts between Allied and Turkish nationals concluded after October 30, 1918, remain in force," but the concluding paragraph of the same Article reads: "The provisions of this Article are not applicable either to concessionary contracts or to transfers of concessions." The intention of the Treaty to exclude recognition of pre-War enemy concessions even when transferred to Allied subjects after the War would seem to be clear, and even if one of the Turkish concessionaires happened to be an Arab, it is not apparent how his subsequent citizenship of Syria or Palestine is to change the "enemy" character of the original concession. The French Syndicate, however, claims to believe in the strength of its case and to be supported by the opinion both of the Greek jurist and of the English barrister who advised M. Mavromatis.

Dr. Radoslavoff.

Rightly or wrongly, no Bulgarian, with one possible exception, has been held to be more responsible for his country's misfortunes, arising out of the mistaken policy adopted at the outbreak of the Great War, than Dr. V. Radoslavoff, Prime Minister from July, 1913, to April, 1918. Since the War, Dr. Radoslavoff has been an exile from Bulgaria, but it is now proposed that he should be granted an amnesty and should be allowed to return to his native country. The attitude of most people on this question will be that, if Bulgaria wishes to receive back to her bosom the man who has presumably wronged her more than anyone else, it is her own affair. This, however, does not seem to be the view held in Yugoslavia where the addition of one, in the person of the former Prime Minister, to Bulgaria's population of five million seven hundred thousand inhabitants is regarded as sufficient to turn the scale against Yugoslavia's thirteen million population. The compliment thus paid to Bulgarian prowess in general and to Dr. Radoslavoff in particular will be noted, but it may be doubted whether any other country will be inclined to make such a fuss about a man of seventy-five years of age, who is not likely to find himself much of a hero on his return to end his days in obscurity in Bulgaria. It is true that, if he had been a native of any other Balkan country, Dr. Radoslavoff might have been shot or left to pass the rest of his days in prison. That he should now be amnestied may seem in all the circumstances an act of supererogation, but there can be no doubt that, as an exhibition of Christian charity, it is a solecism in Balkan history. For this reason it is bound to give offence somewhere, and Bulgaria must be prepared to see a large increase in the armed forces of her neighbours in order to protect them against Dr. Radoslavoff.

Yugoslavia and Bulgaria.

Whatever opinions may have been held regarding the wisdom or fairness of the representations made last August by Great Britain and France to the Bulgarian Government, there can be little doubt that the two Great Powers have been well advised to remind simultaneously the Belgrade and Sofia Governments that the tension caused by the recent frontier incidents is viewed with regret, if not with anxiety, outside the two countries concerned. The course of events, during the last year has shown how almost impossible it is to look to either Belgrade or Sofia for the statesmanship necessary to obviate friction between the neighbouring peoples. That the hopes based on the establishment of the Dictatorship have not been realised is not solely the fault of Yugoslavia, for Bulgaria has shown little inclination to let sleeping dogs lie. The Greco-Yugoslav Treaty was received with bad grace by the Bulgarian Press, which was equally uncomplimentary when the Belgrade Government reopened the frontier and proposed a joint conference, which was subsequently held at Pirot. The crowning folly came when two Croat politicians were allowed to make triumphal progress in Bulgaria and to seize the opportunity of inveighing against the Dictatorship. Yugoslavia, on the other hand, failed to ratify the Pirot Agreement and has taken no steps to prevent frontier incidents, by impressing upon officials and gendarmerie that, inasmuch as the Yugoslavs have the frontier that they want, it is to their interest to keep the people contented and to facilitate movement across the frontier. As things are, each fresh incident serves to confirm the unpractical character of the present demarcation, which was enforced at the request of the Serbian authorities. If, therefore, frontier incidents are to continue indefinitely, the Great Powers responsible for the Treaty of Neuilly must sooner or later realize the hopelessness of the boundary line as it now stands drawn, and in the interest of peace in Europe, will have to face the necessity of re-drafting it. The cultivation of a little statesmanship in Belgrade, it might be thought, would make every Yugoslav anxious to show that the Bulgarians have nothing to complain of, but are as free to come and go as if they were not divided by a frontier line from their properties and kinsfolk. What seems to be happening on the Yugoslav side of the frontier is that no opportunity is lost of reminding the Bulgarian population that it is under an alien and unsympathetic jurisdiction. Nationalism run riot and stupidity can go no farther.

The Arabian Nomads.

Unquestionably one of the most considerable achievements of King Ibn Saoud is his attempted solution of the problem of the *Badawin*. As is well known, he long ago started the policy, which has so far proved amazingly successful, of settling bodies of *Ikhwan* in Najd in agricultural villages, and of then persuading the *Badawin*, through the medium of learned Wahhabi shaikhs, that a settled life and the maintenance of good conduct and loyalty towards one's neighbours were pleasing in the sight of Allah. It is now stated that this policy of colonization—a stroke of genius in a king who is himself not of *Badawin* stock—has been extended to the Hijaz, though whether the number of one a month which is reported to be the rate of foundation is correct we do not know. Other details of these new Hijazi colonies are said to be that a settler must consent to sell his camels (with the implication that the nomadic style of existence will be abandoned), that he is given a plot of land, seeds for planting, and the means to build a house, and that the smallest colony is to consist of 2,000 persons. This experiment of *Ikhwan* settlements is intensely interesting, which may conceivably transform the face of the Arabian Peninsula. It was recently stated in the *Umm ul Qura* that a third of the population of Najd is now engaged in agriculture and commerce, and hopes have been expressed that in a few years' time the nomadic life will be a memory in Central Arabia. But the Western observer,

indeed, all students of Arabia, will need more particulars about these settlements before so optimistic a forecast can be wholeheartedly accepted as probable. How far are these settlements really self-supporting? Are these settled *Ikhwan* really cultivating the land, and if so, with what results? We wish to know these things, and it is highly desirable that someone with authority should inform the world of the degree of success which King Ibn Saoud has had in inducing an untractable soil, with a most precarious or tenuous water supply, to yield fresh products. Certainly the Wahhabi King deserves all support and all encouragement both in his negative aim of abolishing the *ghazzu* and in his constructive aim of establishing new settlements; there can be no right-minded man who will not wish him well in his great endeavour.

The Franc-Turkish Accord.

A study of the French and Turkish Press comments upon the agreement which was signed at Angora on June 22 last indicates that a very welcome compromise has been hit upon. If the details of this compromise are worked out in the spirit of good will, there seems little reason why, as is foreshadowed both in Paris and in Constantinople, a Treaty of Friendship should not be signed later on between the French Government and Fethi Bey, French Ambassador in Paris. These details are, in brief: the railway from Mersina to Adana, which since the War has been administered by a French company, is handed over to the Turkish Government, provision being made for specified Syrian rights; the work of the Neutral Commission under General Ernst upon the disputed border region between Nisibin and Jazirat ibn Omar is ratified; common measures are to be taken for security in this frontier region; the properties of optants in Syria and in Turkey are to be the subject of regulation. Both sides are to be congratulated on this sensible arrangement, and it is by no means extravagant to look in the near future for a general liquidation of all questions outstanding between France and Turkey. If France, as Mandatory Power for Syria, is about to enter upon a new era of genuine friendship with Turkey, her neighbour to the south and east of Syria will be the first to congratulate the French and the Syrians upon the change. As far as can be seen at the moment, the interests of the Syrians have been sacrificed in no way in this new accord—it is particularly gratifying to note that the Turks have had the commonsense at last to recognise the justice of the award of the International Commission upon the disputed frontier—and it may be that, as Syrian-Turkish commercial relations improve, so there will come about additional prosperity to Iraq through a much desired development of Iraq-Turkish trade.

Palestine and the League.

The statement which Sir John Chancellor, High Commissioner for Palestine made before the Permanent Mandates Commission on July 5, lacked nothing in optimism. Arab-Jewish relations, he is reported to have said, had considerably improved during the past year: only the Wailing Wall incident had come between the old inhabitants and the new settlers. The attitude of an important section of the Arab population, moreover, was changing—it was now asking for a representative régime. The High Commissioner, however, must know better than anyone else that the Arabs, having gained nothing by non-co-operation, can at least argue that they stand to lose nothing by asking for a Parliament: the request does not necessarily denote a deliberate recognition of the "Jewish National Home." For the rest, Sir John pointed out that Jewish immigration had recently re-started, that the Jerusalem University was rapidly developing, to become a "Jewish intellectual centre of the greatest importance," and that there was encouraging improvement in both agriculture and industry. The High Commissioner's report seems, in fact, to have been painted in the rosiest colours, although reservation was made upon the notori-

ously difficult question of education for Arab and Jew in Palestine. There will be few observers not to share his enthusiasm in regard to Palestine's security and material prosperity, but opinions may conceivably differ on his appreciation of the political situation and of the reality of the change of the Arabs towards the Balfour Declaration. We trust that Sir John is right, but since we hear from official lips every year that Arab hostility to the "Jewish National Home" is diminishing, and since this diminution takes on no very visible form, we can but live in the "larger hope."

INDIAN NOTES.

The Prime Minister's Appeal.

Although India was not directly mentioned in the King's Speech which was laid before the new Parliament on July 3, the obvious reason for the omission was afterwards explained by the Prime Minister in terms which all parties will heartily approve. For as Mr. Baldwin aptly reminded the House later in the same Debate, whatever the divisions on domestic policy may be it is essential for the country and especially for the Empire that it faces the world as a united Parliament. It is beyond the power of any government in the position of the present Administration, without the help and active co-operation of the House of Commons as a whole, to obtain, as he said, "a settlement of the most difficult question of all which lies before us," and which will have to be dealt with when the Report of the Statutory Commission is laid before Parliament. "For that," Mr. Baldwin proceeded, and we cannot do better than give his own words, "we shall want the best work this House can give; that, more than anything else we shall have to face, will be the supreme, the acid and the ultimate test of how fit we are for the democratic conditions under which we work." Mr. Ramsay MacDonald was also brief but equally to the point. After recalling shortly the circumstances in which the Commission—to which "we gave," he added, "not only our confidence but also our hopes"—was appointed he regretted that "influential opinion in India, mass opinion in India, has not been favourable" in spite of the experience which it had since had of its working. After paying a well-merited tribute to the members of the Indian Central Committee, "who have commendably considered it to be their duty to give

PERSIA AND GREAT BRITAIN.

It is convenient at times to stand away from the drama that is unfolding itself in the Middle East, and, instead of projecting oneself into this or that event, with sentiments of laudation or of condemnation, calmly to appreciate the general trend of which these separate events are but symbols or to which they are exceptions. In regard to Persia, for instance, which is the best equipped observer: he who gauges Persian friendship towards the British by the recent Anglo-Persian Treaty, or he who puts first the various *démarches* which the Teheran Government has made over certain places in the Persian Gulf? Does the one to some extent cancel out the other? Is the policy being pursued in the Persian Gulf inspired by Persians themselves or by foreigners to Persia? Such are some of the questions which should be answered together, if a comprehensive and adequate view of Persia's present attitude towards the British Empire is to be obtained. First of all, let us look at the facts. It is indisputable, we think, that Great Britain does not stand in Persia where she did. Partly this is her own fault, partly the result of world forces, partly the effect of the surge of Persian nationalism. A number of Persians, probably, have not yet forgotten the cynical agreement which Great Britain came to in 1907 with Russia upon the division of Persia into two respective "spheres of influence"—with a neutral zone between them, which the Germans fast bespattered with their well-known activities. That agreement, however, was purely an opportunist move, which, had it not been spurned by Persians and Bolshevik Russians, would surely have been anathema to the present generation of Englishmen. In any case, it can be but an historical memory to the younger generation of Persian patriots. Their standpoint towards Great Britain would probably be based on the post-War Anglo-Persian Agreement, the upsetting of which they proudly and vividly recollect. How, they now ask, has British policy changed towards Persia since these post-War years? Is it not, or would it not be if it could, in essentials the same? Just as the Russians, they argue, keep their hold on the Caspian Fisheries and a gun-boat at Enzeli, so the British patrol the Persian Gulf and would on the least provocation turn the oil fields of Southern Persia into a Protectorate.

The argument is, of course, nonsense. There is as much danger of Southern Persia's becoming annexed to the British Empire as there is, say, of Alaska's becoming part of it. But the legend of British malevolence obviously persists. How quickly the Persians attributed British instigation to the revolt in the province of Fars, indulging again in the old but apparently inexhaustible story of British rifles, British ammunition, British gold, and so on, found among the insurgents! This particular

attitude of mind towards the revolt was in truth as intelligent as that which discovers Bolshevik conspiracy in every industrial dispute in the British Empire. To those who entertain it it does little enough credit, and to the dispassionate observer it provides a melancholy example of how slow-dying is the old suspicion of Great Britain in Persia. Persians in general are taking long, indeed, to recognise the fundamental truth that the capital problems of their progress are internal, rather than external. They need not look beyond themselves and their own conduct when conservative mountain chiefs rebel against radical town reformers; they need only study their present scientific capacity when they observe—and curse in observing—the development of their country largely in foreign hands. Educated Persians, of course, recognise these things fully, and are doing their best to remedy the unfortunate state of affairs, nor are they behindhand in recognising the great educational value of the Anglo-Persian Oil Company in their country. It is upon such men as these that the future of Persia to a considerable extent lies. What, then, is Great Britain doing to meet them?

Unfortunately, there is little sign that Great Britain is alive to her opportunities in Persia. There is a country, pleading for development, hospitable to foreigners, and governed firmly by a man of genius. And yet—England appears to be letting her chances slip by. The prestige of nations other than Russia and England has increased tremendously during the past few years. Of these we may mention but two: France and Germany. Certainly these two Powers cannot be grudging their successes, the one achieved largely in the cultural sense, the other in the commercial sense. But the fact of their position in Persia should be made known to Englishmen. The French colony in Persia has been growing steadily. French nationals operate the wireless in Teheran, and the activities of such institutions as the *Ecoles du Droit*, the *Ecole normale*, the Pasteur Institute, and the Alliance Française, are waxing yearly. Each year, too, a hundred Persian cadets go to St. Cyr, and fifty Persian women to schools in France. Nor is the record of Germany less encouraging from the German point of view. After the War, the German colony in Teheran consisted, we believe, of four persons; now there are 300 Germans in Teheran and over 700 elsewhere in Persia. The commercial penetration of Persia is, in fact, insufficiently realised in Great Britain, but when it is remembered that the Financial Adviser and the chief of the Persian National Bank are both Germans the high place which, largely owing to the energetic work of the German Legation in Teheran, the Germans now occupy in Persia, will perhaps be understood. This success of foreign nations in Persia, other than Persia's neighbours, is not surprising, but at least it might be counterbalanced by a corresponding increase in the position of Great Britain in the Shah's domains. Unhappily, however, the effort made to sustain and increase British prestige there is not consistently made. The support given by Britons to purely British institutions in Persia contracts very unfavourably with that given, say, to American institutions, and the way in which foreign commercial men are supported by their diplomatic representatives in Teheran has had the result of jeopardising the business of British firms. Such a state of affairs, we are convinced, need not exist. What the Persians demand to know is exactly where they stand with Great Britain. A fair and square exchange of views should be made. Essential British interests should be defined, and notice of our intention to maintain them should be given. Unessentials should be sacrificed. So long as there lurks a suspicion that Great Britain lacks sympathy with the Nationalist aspirations of Persia—a suspicion which we sincerely believe to be without real, though perhaps not without ostensible, grounds—so long will British official prestige be scored off by more pliant and adaptable foreigners. If the wood in Persia continues to be obscured by the trees, the British will indeed hardly get out of it!

*The Near and Middle East

From Our Own Correspondents.

Constantinople, June 25.

Disappearance of a Byzantine Church.

Consternation has been caused in artistic and archaeological circles in this city by the destruction within the last few days of one of the oldest Byzantine monuments in Constantinople, the small Church of Saint Thecla, known among Turks by the name of the Mesjid of Toclou Ibrahim Dede, situated on the southern bank of the Golden Horn.

Erected during the reign of Justinian, about fifteen centuries ago, the fabric of the building was restored by the Princess Thecla, elder daughter of the Emperor Theophilus, towards the middle of the ninth century. On the fall of Constantinople, this little gem of Byzantine architecture was converted into a mosque. The mortal remains of some of the defenders of the city against the Turkish hordes found a last resting place in a small enclosure adjacent to the church. For reasons which, as yet, have not been made public and which, in any case, it will be difficult to justify, this venerable little edifice has been razed to the ground by housebreakers within the last fortnight. The protestations of Halil Bey, Curator of the Stamboul Museum, and of some of the leading newspaper editors, have drawn from the Prefecture of the City a feeble explanation to the effect that the Municipal Technical Services, whatever that may mean, were unaware of the projected demolition and arrived on the spot too late to save the structure. Yet, it is not possible for an ordinary citizen to erect or demolish even the smallest garden wall without going through endless formalities at the Prefecture.

The irreparable damage has been done, however, and one can only hope, as suggested by the Deputy for Sivas, who is interested in the old monuments in which Stamboul abounds, that legislative measures may shortly be introduced which will prevent the recurrence of any such act of vandalism in the future by irresponsible Municipal underlings.

Turkish Trade Relations with Russia.

A special Trade Agreement governs the interchange of commodities between Turkey and the territories of the Soviet Republic. The quantity of exportable Turkish produce is regulated by the terms of this instrument, which stipulates that the origin of the goods must be attested by certificates delivered by the respective Chambers of Commerce in both countries. Turkish exporters, for many months past, have been finding it more and more difficult to obtain either payment for merchandise shipped by them to Russia or the equivalent in Russian raw material on a barter basis. The gist of the Russian complaint would appear to be that foreign goods are being surreptitiously exported to Odessa and other Black Sea ports from this country as *bona fide* Turkish produce. The Council of the Turkish Chamber of Com-

merce have protested vehemently against this insinuation, and have gone so far as to accuse the Soviet authorities of bad faith. In the meanwhile, legal proceedings are threatening on both sides; stocks from Anatolia for export to Russia are accumulating in Constantinople warehouses, and commercial intercourse between the two countries have virtually come to a standstill.

The Turco-Russian Trade Agreement expires automatically within the next few months, and several leading Turkish exporters have petitioned the Angora Ministry for its non-renewal. One cannot help feeling sorry for the Turkish export merchant, who is doing his best to carry on legitimate trade with his Russian neighbours; but the Turkish trader is learning to-day only what so many foreign business houses established in Turkey learnt by bitter experience when trading with Southern Russia and the Caucasus some four or five years ago.

Greco-Turkish Relations.

The order which has now been definitely placed by the Turkish Government with Italian shipyards for the construction of certain naval units is scarcely calculated to give an impetus to the slow progress of the Greco-Turkish negotiations. The road to a durable understanding between the two countries cannot possibly be paved with the good intentions of sober-headed statesmen, so long as the irresponsible firebrands on both sides, whether inside or outside the Cabinet, will persist in agitating that red rag to both the Greek and the Turkish bull, the question of naval supremacy in Aegean waters. Incidentally, in order to show to what straits the Turkish Treasury has been reduced in contracting for these vessels with the Italian builders, it is only necessary to state that the latter have agreed to accept, for an order totalling about £1,500,000 sterling, an initial cash payment of £25,000, with subsequent instalments extending over eight years. The British yards—Vickers, Thornycrofts, Yarrow and others—withdrew their offers as soon as the financial aspects of the proposition became known to them, notwithstanding the fact that, in certain instances, their tenders were below those of their foreign competitors.

Franco-Turkish Relations.

At long last an agreement has been reached between France and Turkey over the outstanding differences which have divided them for so long. This agreement, which foreshadows the conclusion at a relatively early date of a Pact of Amity and Conciliation between the two countries, provides, *inter alia*, for:

(a) the rectification of the Turco-Syrian frontier on the basis of the Angora Convention of March 30, 1926, which accorded to Turkey the right of taking such practical measures for the "supervision and protection" of the border-line—which obviously implies a floating population of nomadic tendencies—as the Turkish Government may think fit.

(b) the handing over to Turkey, fifteen days after the ratification of the Agreement, of the Mersina-Tarsus-Adana Railway, at present administered by a French Company, the Turkish Government undertaking to exploit this line and its extension in the direction of Nisibin.

The Turkish papers are unanimous in regarding the terms of the agreement as in every sense favourable to Turkey. The French, on the other hand, are, no doubt, relieved to be rid of an incubus which has overshadowed and reacted unfavourably on their diplomatic relations with Turkey for several years past.

The Birth of a Prince.

Belgrade, July 4.

The birth of a third son to the King and Queen of Yugoslavia aroused great enthusiasm throughout the whole country, where the personal popularity of the reigning House is still very great. The fact that the Queen was staying in the Summer Palace in Bled in Slovenia at the time has given great satisfaction to the people of Slovenia, who believe that in the circumstances, and in view of the fact that the first son was given a Serbian and the second a Croatian name, the third child will be given a Slovene name. The only difficulty is in finding a Slovenian name which is fairly common and purely Slav. Most of their common names are modifications of German Christian names. The child was born on the anniversary of Vidovdan (St. Vitus' Day), which is the anniversary of the Battle of Kossovo, of two important political murders, including that in 1914 at Sarajevo, which marked the outbreak of the World War and indirectly led to the liberation and union of the South Slav peoples, and of the coming into force of the ill-famed Vidovdan Constitution, which was suspended by King Alexander on January 6 of this year. It is, therefore, suggested that the boy might be given a name relating to one or other of these events, that of Lazar or Dushan, relating to Kossovo, being among the most favoured.

A Belgrade Contract.

Great dissatisfaction is expressed in many circles at the decision of the Belgrade Municipality to entrust the erection of the new electric generating station which is to supply the growing needs of Belgrade and the whole district to a Swiss firm, whose prices were almost double those offered by an English group which competed. No reasons are given for this strange decision, which is all the less comprehensible, as it is likely to discourage British capital, which might otherwise seek an outlet in Yugoslavia and which is essential to the rapid development of the potential wealth of this country and to its economic prosperity. Although the Press is not allowed to write on such matters, charges of corruption are to be heard on every hand in connexion with this award, and this is all the more disappointing, inasmuch as the new régime was expected to suppress corruption and to introduce administration in the interests of the people instead of in the interests of the administrators, as was common here formerly.

Crops and the Weather.

After the unusually severe winter it was expected, unjustifiably enough, that the summer would be a good one. It has, however, been completely marred up to the present by tremendous storms and periods of quite cold weather. As a result of lightning and floods, due to cloud bursts, about 120 peasants are reported to have been killed in various parts of the country, Montenegro, Bosnia and Herzegovina having suffered the worst. These usually dry and barrens districts had been looking forward to exceptionally good crops owing to the abundant rain, but

the hail and heavy rain, together with the flooding of the plains, have done enormous damage to the field crops and fruit, and it is feared that in some districts Government help will again be essential to save the population from starvation. This is the fourth successive year that some elemental misfortune has severely affected the population of these districts. Crop reports from other parts of the country, especially the Voivodina and northern Croatia, suggest that, if the weather should now become hot and dry, an exceptionally good yield of wheat and barley and maize may be expected. Very heavy crops of hay have already been stored in those parts of the country mainly concerned with cattle-raising.

Frontier Incidents.

The fact that M. Neshitch, Yugoslav Minister in Sofia, was recalled to Belgrade to report shows that the tension on the Yugoslav-Bulgarian frontier was very great. In reply to the Bulgarian reports that recent incidents are the result of the repression of the Bulgarian minorities in Yugoslavia the Belgrade Government has issued a report showing that the incident at Vranja, when an attempt was made to blow up a train, was the work of Bulgarian *komitajis*, who escaped across the frontier. Orders were then given that anyone attempting to cross the frontier anywhere except at the recognised crossing places should be captured by the frontier guards, and, if they tried to escape, should be shot down. A few nights afterwards a Serbian peasant woman who wished to rejoin her husband, a refugee living in Bulgaria, accompanied by her father and a guide sent by the husband to show the way by secret paths, was seen by a patrol and challenged. As they refused to answer and ran towards the frontier, they were shot down, all three being killed. The next night, at a spot close by, Bulgarian frontier guards, shooting from Bulgarian territory, killed a Serbian guard, as a patrol was passing along the Serbian side of the frontier. The Serbian patrol is reported not to have answered, but to have withdrawn and reported to headquarters. But when, the next evening, a patrol was again fired at from the same point the fire was returned, one Bulgarian guard being reported killed.

While it is difficult to establish the exact truth regarding such incidents, it is obvious that it is to the interests of Yugoslavia to avoid them, since she is satisfied with her present frontiers and asks nothing better than to be left in peaceful enjoyment of them. On the other hand, the Bulgarians are dissatisfied with the present situation and are willing to adopt any possible means to make it appear that the Bulgarian minorities, and the mixed Serbo-Bulgar population of the frontier regions, are dissatisfied and maltreated. The Yugoslav view is that so long as a Bulgarian Government allows its policy to be dictated by Macedonian *komitajis*, whose very livelihood and power depend on the maintenance of unrest in Yugoslav Macedonia and the creation of frequent frontier incidents, there is little chance of improvement in the situation. Indeed the lack of trust in the Bulgarian Government which this state of affairs has bred in Belgrade and the exasperation caused by these continual incidents on a frontier which they wish to be peaceful, are likely to lead to strong measures again being taken to prevent incidents. It is even possible that the frontier may again be closed and the good done by the Pirot Conference be destroyed. The danger to general peace presented by the tension on this frontier is increased by the fact that Italy is only too ready to intervene, should trouble arise. A series of anti-Yugoslav meetings organised, it is alleged, with Government help at various spots along the Bulgarian frontier recently were addressed by an Italian journalist, Nuri Giannia, who was until recently Press Attaché at the Italian Legation in Sofia. He is stated to have attacked Yugoslavia bitterly and promised Italian support, if the Bulgarians should attempt to secure their rights by the overthrow of the Peace Treaties and modifications of the frontier towards Yugoslavia.

Cairo, June 29.

The New Pension Law.

The series of new laws regulating pensions and cognate matters must have given satisfaction to a large number of officials. The existing legislation was no longer in harmony with the changed condition of things economically, which has come into existence since the War, while even before 1914 its application brought hardship, particularly to the family of the pensioner. Most of these grievances have been removed. For a higher deduction of $7\frac{1}{2}$ per cent. as against 5 per cent. of the pay, officials will be able to retire at an earlier age on a higher pension, and their widows and children will be better treated, while special provision is being made for parents and brothers and sisters who are dependent on the official or pensioner. At the same time special legislation has been enacted offering inducements to officials at present in the service to retire before they would do so normally with a view, on the one hand, to relieving the congestion, and, on the other, to enabling the State to make some economies on its present enormous wages and salary bill, which represents 22 per cent. of the total annual budget. It is not thought, however, that many will take advantage of the offer.

The Ministry of Foreign Affairs.

From next season the Ministry of Foreign Affairs will be properly housed and in a position to accommodate, in a manner befitting its dignity, distinguished foreigners who visit this country, as well as to do the entertaining which its relations with the foreign communities entail. It has long been the subject of much adverse comment that official banquets have to be given by the Government at one or other of the hotels, where also its guests have to be accommodated, and a contrast has frequently been drawn between the lavish manner in which the Legations abroad are equipped and the remarkably bad accommodation which the Foreign Affairs possesses in Cairo.

The Government has recently acquired the palace, at El Insha in the quarter of Cairo quite close to the War Office, of Mohamed Izzet Pasha, husband of the King's aunt, and one of the best known Egyptians in European society. It is a very fine building, where Izzet Pasha has given in the past many a memorable entertainment, and it is fully fitted for the object to which it is intended to put it. The occasion of the sale has been seized by the Princess and her husband to make the very generous proposal to the Government that the new villa in Garden City, which they have purchased with the proceeds of the sale of their palace, shall after their death be sold together with the contents and the money used to build and maintain a free hospital. They only stipulate that four paintings of the Khedive Ismail and his wife Princess Gashm and of Izzet Pasha and his wife, shall be retained and hung in the hospital, and they undertake to constitute a Wakf bringing in £E100 per annum towards the cost of running the hospital.

This is the third public donation of its kind this year, the other two being made by Shaikh Abdel Rahim El Demerdashi Pasha and Mohamed Badrawi Ashur Pasha, and may be regarded as a welcome indication of the change that is gradually taking place in the minds of leading Egyptians in the matter of their duty towards their less

happily-situated fellow-countrymen, and of their growing consciousness of what public spirit and civic duty mean.

The Mixed Courts.

It has now been definitely decided to promote the President of the Cairo Mixed Court of First Instance, M. Houriet, who is a Swiss, to the new European Counsellorship recently created in the Court of Appeal. It is not known yet who will succeed him, as the next Senior Judge, also a Swiss, M. Peter, is understood to be a candidate for a post attached to the League of Nations at Geneva. The matter will not be settled until the reassembly of the Courts in October, when the Judges will themselves proceed to the election of a President. It has been decided, on the other hand, to allot the European Judgeship thus becoming vacant in the lower Courts to an American, in view of the fact that the United States has complained that it does not consider that it is adequately represented there in contrast with the European Great Powers.

The promulgation of a new Pensions Law has been taken as an opportunity for rectifying the somewhat unfair position in which magistrates of the Mixed Tribunals have been placed in the matter of the calculation of their pensions. Compared with the members of the ordinary Civil Service, who enter at relatively young ages, in many cases Mixed Courts magistrates have been appointed at ages varying from 40 to 50 years—necessarily so, as a magistrate should have had a fair amount of experience of legal work before being given a seat on the Bench. This has meant that by the time they reach the age of retirement Mixed Court magistrates will have a period of service which would give them a pension not at all in proportion with the dignity of the posts they have held. It has, therefore, been decided to increase the period of service of all Mixed Court Judges, who join the Courts after the age of 35—provided they have had no previous service in the Government—by a period equal to one-third of the difference between 35 years and the age at which they were actually nominated to the Courts with a maximum addition of five years. It is laid down, however, that this addition cannot be used to complete the 15 years qualifying for a pension, or the 25 years entitling to retirement before reaching the normal retiring age.

Education in Alexandria.

This week the prize distribution took place at St. Andrew's School under the presidency of Mr. J. B. Barron, who has done and is still doing so much for British education in this country. The Headmaster, Mr. Ripley, had a very good report to make of this institution, which has for the past seventy years been providing

good commercial education for the children of the local British community. It has at present just over 200 boys in attendance, and its pupils are to be found in many of the local commercial houses, all of which speak most highly of the standard of education which this Scottish school affords. Mr. Ripley referred with feeling regret to the retirement of M. Coupson, who had been Frenchmaster for 44 years and had throughout been a tower of strength to the school, and at the close of the proceedings M. Coupson was the recipient of a presentation from the staff as a mark of their high esteem and affection.

The day before this tribute was being paid to a French member of the staff of this British school, a pleasing little ceremony took place at St. Mark's Collège des Frères, where the central figure was an Englishman. The occasion was the official announcement of the result of the recent examinations by the French Consul-General, M. Girieud, who said that he had been authorised by his Government to confer the decoration of Officier d'Instruction Publique on Brother Peter, the senior English master at the College, in recognition of the services he had rendered to education during the 48 years he had been at the Collège des Frères in Alexandria.

Sofia, June 25.

Tension with Yugoslavia.

Since at the recent conference at Pirot the Bulgarian delegation refused to accept the proposals of the Yugoslav delegation on the liquidation of "bilateral properties" and on the establishment along the frontier of a "forbidden zone," and especially since the Sofia Government, replying to the invitation of the Council of the League of Nations, according to the *démarche* of Dr. Stresemann at Geneva, addressed to the Committee of Three a special memorandum in which it explained its point of view on the protection of minorities and in which, in a very correct but very clever way, M. Bourroff raised in its entirety the whole problem of Bulgarian minorities, relations between Yugoslavia and Bulgaria have become strained. During the last few days great tension has existed. This tension has been particularly aggravated since the attack on Vranska-Banya on the railway from Nish to Skoplye, which the Yugoslavs tried, wrongly, to attribute to Bulgarian *komitajis*, and also since the visit of the squadron of Italian hydroplanes to Varna. These Italian aviators made some rather impetuous speeches, in which the Yugoslavs, equally wrongly, detect an Italian-Bulgarian friendship directed against Yugoslavia. They have, therefore, set themselves to persecute the Bulgarian population in the regions of Tsaribrod and Bossilégrad, which were detached from Bulgaria in 1919 and reattached to Yugoslavia for strategic reasons. The Yugoslavs claim that it was by this route that the *komitajis* went to attack the Serbian railway. They are, therefore, arresting the inhabitants, and beating and killing right and left, even those who had decided to leave their homes and to settle in Bulgaria. Every day there comes news of fresh murders of Bulgarians on the frontier or in the neighbourhood, and every day the Bulgarian public is thrown into new alarm. Naturally apprehension exists. The Press engages in interminable polemics. Thus the two Governments are reaching danger point.

It is to be hoped, however, that the Great Powers will intervene, and avoid disastrous complications between Yugoslavia and Bulgaria.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 20.

The Secretary of State.

England, on hearing that Captain Wedgwood Benn was to be the new Secretary of State for India, would naturally feel that she must give him her blessing, and hope that he would do well. Those of the English in India who follow Indian affairs closely, and such of those affairs particularly as are transacted in the British House of Commons, if I may put it so, will remember Captain Wedgwood Benn's record as one readier than others to put a question to the Under-Secretary of State, perhaps too, a question prompted by a malcontent. Probably too they will recall that he was readier than others to speak at the time of the annual Indian debate, and will wonder if he is one of those who Lord Morley declared once were a danger from their being so disposed towards India as to let their hearts govern their actions rather than their heads—their hearts that are always hotter than their heads are cool. Captain Wedgwood Benn was once a member of the Liberal Party. We are familiar, from Rudyard Kipling's writings and our own observation, with a school of Liberal politicians and its ingercence in the affairs of non-British races in lands, as the Sudan and India, flown over by the Union Jack, and we have grown beware of them. They may not do as much mischief as they are seen to do, when they are looked at through the Kipling spectacles; for there are always cooler heads near to check and control them. But to any of them one would say, as one would now say to the new Secretary of State for India, that a warm heart is a poorer guide in abstruse politics than a cool head. It is easy, so far away from the spot as Whitehall, to take deeply mistaken views of Indian affairs.

Dominion Status for India.

We are promised an announcement regarding India in the King's Speech. If it is merely the announcement that the inquiry begun under the late Administration will be completed, and legislation then proposed to Parliament, there will be no harm in it; but if it is a declaration of policy, worse still if it is a declaration in favour of unqualified Dominion Status for India, as in one quarter is suggested on the authority, it is stated, of a Cabinet Minister, then all one can say will be that it was a premature act to take. What one would welcome most would be the announcement that half a dozen or so leading Indian politicians were to be invited to proceed to England for a conference with the Prime Minister and the Secretary of State. The Statutory Commission, we have recently been informed by cable, has been moved by the result of the British General Election, and the prospect of having, not a Conservative, but a Labour Government, to which to submit its report, to a quickening of its interests in the Nehru Report, the cablegram even giving the detail that the members of the Commission had been supplied with copies of the Report. If the members did not furnish themselves with copies as soon as it was published, all one can say is that they were none of them fit to be members. But one cannot believe that they did not furnish themselves with copies. Sir John Simon would surely see to as much as that. But he also is a Liberal politician; one is left with very little faith in them; they have always tended to be doctrinaires, and the doctrinaire is a nuisance in politics. To return to the question of Dominion Status in India, a writer in the *New Statesman*, an organ not ill-disposed to the Labour Party, and presumably one with some influence in its counsels, if not an openly acknowledged influence, recently had this: "The politicians of India are disputing amongst themselves just now as to whether they should demand 'Dominion Status' or immediate 'full independence.' That they have not the slightest chance of achieving

either in the foreseeable future is a fact which they seem to have overlooked." That is to go too far in the other direction, but it may be taken as showing that the "hot-hearts" will not have things all their own way, or according to their own sweet will. They really must not be allowed to have it.

Extension of Term of Legislature.

Mr. N. C. Kelkar is reported as having said, speaking of the Congress decision to boycott the legislatures, that he could only regret that Pandit Motilal Nehru should "debase and abuse the dictatorial power that he had secured in the inner counsels of the Congress." "It is an unsound policy," he is also reported to have said, "to offer a gratuitous opportunity to our enemies . . . to widen the basis of opposition to the Nehru Report. I say it is gratuitous because there is no legitimate challenge for fight to the supporters of the Nehru Report or the opponents of the Simon Commission in the extension of the term of the legislatures. Government have never pretended that those who would resign did not represent the real opinion or sentiment of their constituencies on the issue of the Nehru Report or the Simon Commission. Why then imagine an issue and fight on it? This faked protest would involve for its gratification an expenditure of lakhs and lakhs of rupees." He also said that the Statutory Commission's Report "alone now presents anything like a live issue;" for the boycott of the Commission is now stale, and the Nehru Report is not a "new issue because it has been already accepted, for what it is worth, by all the non-communal political parties in the country." One would ask Mr. Kelkar if there is a single party that is genuinely "non-communal." There are those who maintain that the Congress is really ruled by the Hindu Mahasabha, and if the latter is not a communal body, what is one?

The Muslims and the Nehru Report.

The Nehru Report, Mr. Kelkar says, has been accepted by the non-communal parties "for what it is worth." According to Sir Abdul Qaiyum, who writes from Peshawar, it is not worth much. A word of explanation first. Political Britain is divided into a Conservative camp, a Liberal, and a Labour. It is not divided into a Roman Catholic, an Anglican, and a Nonconformist; if Britain were so divided, the division would be on the lines that obtain in India. Here the division is along the lines of religion. There is no party that says, "The Nation first, and no intermixture of religious feeling in political questions." The Hindus do not want specially to further Hinduism, nor the Muslims to further Muhammadanism. The Hindus do not want to be dispossessed of what they possess; that is, in influence and what it brings in money's and other worth; they feel they will only find support from the Hindus' forming a united body, the Hindus, that is, other than the "untouchables;" for there is also that cleavage. The Hindus feel that, if the Muslims had too much power in the land, the Muslims would dispossess them. The Muslims feel that, if the Hindus had too much power, the Hindus would dispossess them.

Indian Nationalism.

No one in India says, "The Nation first," and no one can, because there is no nation. Hear Sir Abdul Qaiyum: "Does not the very Nehru Report admit of the existence of communalism based on religion in India? Has not the author of the Report had to sacrifice his high principles of Indian nationalism to the clamour of the Mahasabhaite on the one side and of the Muslim on the other. I wonder what connexion these is between the author of the Report and Dr. Moonji—their political views are poles asunder—except religion, which is what cements the various sections of the majority community, and makes them sign the Report unitedly. This, according to Dr. Moonji, was done to further the cause of Indian

Nationalism, which it is highly desirable to further; but the question is whether it exists at present as a living force, or whether it has yet to be achieved." It certainly does not exist at present. There are those who doubt, and with strong reason, if it ever will. One once said to another in Calcutta, "Do you believe in this Hindu-Muslim unity?" "Where is it?" said the man asked: "show it me." He would have liked to see what he had never dreamt any one would ever see.

The Banking Inquiry.

I was once for a few days the fellow passenger of Lord Chaplin. He had been a member of the Gold and Silver Commission, or a later body of the same nature, and I had brought its Report on board to study. I remarked to Lord Chaplin that the Lombard Street brokers, summoned as witnesses before the Commission, had all talked nonsense, and that it was not until one came to the pages containing the answers of Alfred Marshall from Cambridge that one felt that here was a man who understood what he was talking about. "That is what one ought to have expected," said Lord Chaplin: "your brokers are men trained to turn to profit such currencies and systems of banking as they find in existence; but what should they know of the underlying principles of banking and credit, the theory of it?" Another man once said to me: "It is curious that money, a thing that man invented without help from God or Nature, is the thing of which he knows least and understands least." It is true: man knows little or nothing about his own money. Let me give a third reminiscence. I once invited a Calcutta banker to set an examination paper in banking and currency. He declined, explaining that he was a practical banker, and knew nothing of the theory. He had read none of the books. I believe myself that those books are read by all the world excepting the bankers themselves.

The banking inquiry in India should have been entrusted to six men at the very most, the six to include the two or three European authorities. What we are to have is a Central Committee, much too big, ten Provincial Committees, much too large, and the non-Indian experts. That is the Government's decision. A most mistaken one; all the days I have watched that Government, in no unfriendly spirit I may add, it has appeared to me weakest on the side of finance. Each retiring Finance Member (they come to us for five years) is spoken of as one who has performed yeoman service to India, but the new man, one notices, is spoken of as confronted with a financial system so primitive that it might have grown up of itself in a jungle. Nobody ever seems to observe the contradiction.

Medical Research in India.

I had a paragraph last week on the subject of medical research in India and the recommendations of the Fletcher Committee. The next day the *Pioneer* had a leader on that subject, and this occurred in it: "Why the Government of India should have delayed 14 or 15 months the publication of the conclusions arrived at by this Committee, who were dealing with matters of great concern to the country, is a question which naturally arises and which the public will expect the Government of India to answer. Even yet there has not been published, so far as we are aware, the full report of the Committee, but only a summary of its recommendations." As for the question of Dehra Dun, and its choice as the location of the proposed Imperial Research Institute, a matter that I touched on last week, I asked the opinion of a Professor of Physiology whom I happened to meet. He would have the institute where the climatic conditions make least against men doing good work; that is, not in Calcutta or Bombay or Dehra Dun, but at some relative high altitude, somewhere in the Hills. Another question that seems likely to become a burning one is whether the recruitment of the entire body of the researchers should not be by open competition. The Committee would have some of the posts reserved for members of the Indian Medical Service.

THE LATE MAHARAJA OF DARBHANGA.

By the death of the Maharaja of Darbhanga India loses one of the ablest and most influential of her great landlords, and one of her wealthiest men. Sir Rameswara Singh Bahadur, G.C.I.E., K.B.E., Maharajadhiraja of Darbhanga, was born on January 16, 1860. He was the younger son of Maharaja Moheshwar Singh Bahadur,

THE LATE MAHARAJA OF DARBHANGA.

and he succeeded his elder brother, Sir Lakshmeshwar Singh, as Maharaja of Darbhanga on December 18, 1898. He was educated at Darbhanga, Muzaffarpur and Benares; and he also had the advantage of private tuition under the late Chester Macnaughten and other tutors. He thus received a liberal education, and he was for a number of years a member of the Statutory Indian Civil Service. He resigned in order to be able to devote closer attention to his own affairs; and, on his resignation in 1885, he was granted the title of Raja Bahadur by the Government. He represented the landowners of Bengal and Behar in the Bengal Legislative Council as far back as from 1888 to 1890. After he became Maharaja of Darbhanga he served as many as five times in the Imperial Legislative Council. His vast estates are said to exceed in area those of any other landowner in India; and he was the acknowledged leader of the landowning class. He was life President of the All-India Landowners' Association, and of the Bihar Landowners' Associations. Before the separation—in 1912—of Bihar from Bengal the late Maharaja served for six terms as President of the British Indian Association, the premier association of landholders in Bengal. He also led a deputation of landholders before the Viceroy and the Secretary of State (the late Mr. Montagu) in 1917, and on another occasion before the Viceroy at Delhi. More recently he identified himself with the Country League, of which he was one of the first members. He had had considerable experience of administrative work; for not only had he been a civil servant, but he was for five years a member of the Executive Council of Bihar and Orissa.

As hereditary chief of the Srohia Brahmans the Maharaja was recognised as the head of the whole Brahman community of northern India. He was life President of the Bharata Dharma Mahamandal, an all-India religious organisation with its headquarters at Benares and with branches all over the country. He was also President of the Religious Convention (Parliament of Religions), which was held at Calcutta in 1910 and at Allahabad in 1911, and of which the object was the promotion of unity between the different religions of India. He was con-

sidered to be the leading orthodox Hindu in India; and the power of excommunication from the Hindu community in the territories formerly known as Mithila rested with him. The present Hindu University of Benares is the result of his munificence; and innumerable other good causes, some connected with Hinduism and others apart from it, were most generously helped by him. He was extremely orthodox in religion, but he was a man of wide culture and a great lover of books. His library at Darbhanga is said to be one of the finest in India; and he took special interest in the cultivation of Sanskrit learning. He was always a strong advocate of the British connexion; and on occasion he spoke out plainly and firmly against sedition.

The Maharaja's ancestors, the Rajas of Tirhut, were independent rulers of the country which was known in ancient times as Mithila, and which is now included in the districts of Darbhanga and Muzaffarpur. Under the Mughal Emperors the Rajas of Tirhut were allowed to continue to exercise their powers. It was to the Raja alone that the zemindars and taluqdars were responsible, the Raja alone being held responsible to the Emperor. The Muhammadan rulers sometimes allowed the Hindu chiefs to remain undisturbed in their possessions; and in some instances, as in Tirhut, the Hindu princes appear to have been practically independent so long as they paid the annual tribute to the Emperor. The old title—the Raja of Tirhut—was replaced by the "Maharaja of Darbhanga" as recently as the middle of the last century. In fact, the present Maharaja's elder brother, who died in 1898, was the first of his line to be styled Maharaja of Darbhanga. It is of interest to note that the question of restoring to the Darbhanga family the ruling powers which were formerly exercised by the Rajas of Tirhut has been mooted on more than one occasion of recent years. Among those who have closely studied Indian constitution problems there are some who, like Sir Walter Lawrence, would turn the whole of British India into Indian States. In support of this view they point to the recent creation, by the British Government, of a new Indian State when the Maharaja of Benares was made a ruling chief; and they express the opinion that

There is much to be said for this view; for, as the memorialists showed, there are but few opportunities of public service open to landowners. Throughout the country there are plenty of able men of this class; but there is a lack of opportunity for them, and the result is that some of them do not feel the responsibility of their wealth, and do not act in a manner commensurate with that responsibility. The question which the memorialists

SHRIMAN MAHARAJADHIRAJ KUMAR KAMESHWAR SINGH
SAHEB OF DARBHANGA.

ANAND BAGH PALACE, DARBHANGA.
The usual residence of the Maharaja.

all over the country there are great zemindars, taluqdars, sirdars, nawabs, and khans, who stand as the natural chiefs of future Indian States.

At the time when the Reforms scheme was under discussion a number of members of the Imperial Legislative Council memorialised Lord Chelmsford, the then Viceroy, on this question. These members did not, of course, urge that the whole of British India should be converted into Indian States; nor did they oppose the Reforms scheme. But they said that in their opinion, provision ought to be made—side by side with the Reforms—for strengthening the political status of at least a section of the landowning nobility.

raised was whether this state of affairs would not be improved if it were the policy of the Government to invest deserving, capable, and public-spirited landowners with ruling powers. The memorialists had no doubt as to what the answer to this question ought to be. They confidently anticipated that the adoption of such a policy would bring about a most beneficent change. They made no suggestion as to who among the landed nobility should be chosen in the first instance. But at a later stage—subsequent to the introduction of the Reforms—the name of the Maharaja of Darbhanga was prominently brought forward in another memorial which was submitted to Lord Reading by fifty-eight members of the then newly constituted Legislative Assembly. These memorialists referred specially to Bihar, and they strongly urged that the ruling powers which were formerly exercised by the Darbhanga Raj should be conferred on the Maharaja, "the premier nobleman of India, whose services to the British Government as well as his wealth, position, status and family tradition mark him out as eminently fitted to discharge the onerous obligations of a ruling chief." The memorialists pointed to the elevation of the Maharaja of Benares, a step which had been, they said, entirely successful, and which was, therefore, a cogent argument in favour of the restoration to ancient families of the powers which were exercised by their ancestors.

INDIAN NOTES.

(Continued from page 35)

us the advantage of their knowledge and their counsel," the Prime Minister at the same time made it clear that there would still be further opportunities for discussion and negotiation. "Again, I feel it my duty," he concluded, "to ask the representatives of Indian opinion to reopen the doors of their mind, and to consider whether they may not now come and help us to solve, and to secure a happier and more beneficial solution, of this very difficult problem."

THE INDIAN ROPE TRADE.

(From a Correspondent.)

The Indian Tariff Board recently recommended the removal of the 15 per cent. duty which is levied on all raw hemp imported into India. This recommendation the Government of India have accepted in principle, and they intend to give effect to it when financial considerations permit. The investigation which the Board made was undertaken at the request of some of the manufacturers of manila rope in India. The rope trade in India is not of very great extent, the total yearly consumption of manila rope being estimated by the Board at approximately 4,000 tons. Of this quantity roughly one half is manufactured in India and the other half is imported. The principal consumers are the steamship companies—who take more than half of the total output—the railways, various industries, and the Government. At the present time very little of the Indian manufactured rope is exported. Small quantities were formerly sent to Ceylon and the Straits Settlements, but these exports have now fallen away to practically nothing. The manila rope imported into India comes mainly from the Philippines and the United Kingdom. The quantities which formerly figured in the official returns as coming from Hong Kong apparently now come from the Philippines. It is probable that they were in the past, as they are now, manufactured in the Philippines, Hong Kong being the transshipment port.

The manufacturing trade is centred at Calcutta and about six or seven firms, some European and some Indian, are engaged in it. They asked several years ago that steps should be taken to help them in view of the duty of 15 per cent. on their raw material. Two or three of the firms expressed the opinion that the tax was an unfair burden on an Indian industry, and that it should be therefore withdrawn. On the other hand, manila rope imported into India also pays 15 per cent. Customs duty; and in view of this some of the manufacturers did not ask for any tariff alteration. They suggested that a rebate equivalent to the import duty on the raw material should be allowed to them.

Last autumn, however, a new factor was introduced into the situation. Two of the principal steamship companies—the P. and O. and the British India—established a bonded warehouse at Calcutta, and proposed to import manila rope, together with other ships' stores, for distribution to their foreign-going vessels. It appears from the report of the Tariff Board that by this arrangement, the steamship companies in question—and others are said to be contemplating similar action—will probably be able to import the bulk of their requirements of manila rope duty free.

Such being the position it is only right, as the Tariff Board point out, that the Indian manufacturers should

be exempted from payment of import duty on the manila hemp used in the manufacture of shipping ropes. But the Board found that to do this would be impracticable, and they accordingly came to the conclusion that the best way of helping the Indian manufacturer would be to make a general reduction, in the import duty on manila hemp, corresponding to the proportion of rope supplied to the shipping companies to the total output. This would have meant a reduction of the duty to 5 per cent. But, after taking into consideration the possibility of developing the export trade in Indian manufactured rope, the Board decided to recommend the complete withdrawal of the duty. For they ascertained that if manila hemp were admitted free the Indian manufacturer would be in a position to quote competitive prices in the export markets nearest to India.

THE INDIAN EMPIRE GARDEN PARTY.

The annual Indian Empire Garden Party for officers and civilians, with their wives and daughters, who have resided in Aden, Borneo, Ceylon, China, Cyprus, India, Iraq, Malaya, Palestine, Persia, and Siam, took place on July 3. at Ranelagh.

The Reception Committee included the Marquess of Reading, Mary Countess of Minto, Admiral of the Fleet Earl Jellicoe and Countess Jellicoe, Field-Marshal Sir William Robertson and Lady Robertson, Field-Marshal Sir Claud Jacob and Lady Jacob, Marshal of the Royal Air Force Sir Hugh Trenchard and Lady Trenchard, and Lieutenant-Colonel C. C. Anderson (Hon. Secretary).

Among those who accepted invitations were:

Sir Leonard and Lady Adams, Sir Harvey and Lady Adamson, Lady Addis, Lady Airedale, Colonel and Mrs. J. J. Aitken, Colonel and Mrs. W. N. S. Alexander, Mrs. N. S. Alington, Mr. and Mrs. L. S. Amery, Lieutenant-General Sir Hastings and Lady Anderson, Sir Charles and Lady Armstrong, Mr. Justice Ashworth, Sir Arthur and Lady Bannerman, Sir Charles and Lady Bayley, Mr. and the Hon. Mrs. Bayley-White, Mr. and Mrs. Wedgwood Benn, Sir William and Lady Beynon, Sir St. John and Lady Branch, Sir Charles and Lady Burtchael, Sir Thomas and Lady Carey-Evans, Lady Carmichael, Sir Hubert and Lady Carr, Sir Austen and Lady Chamberlain, Sir Edward and Lady Chamier, Mr. Winston Churchill, Lieutenant-General Sir Frederick and Lady Clayton, General Sir Arthur and Lady Cobbe, Mr. Justice Costello and Mrs. Costello, Major-General Sir D'Aguilar and Lady Crookshank, Lieutenant-General Sir Ernest and Lady De Brath, Lady Deverell, Brigadier-General and Miss de Winton, Mrs. H. E. Brake-Brockman, Major-General and Mrs. Dunsterville, Sir Stuart Fraser, Sir Theodore Fraser, Sir Henry and Lady Freeland, Sir Selwyn and Lady Fremantle, Major-General Sir Thomas and Lady Gallwey, Lieutenant-General the Hon. Sir Francis and Lady Isobel Gathorne-Hardy, Sir Robert and Lady Holland, Sir Walter and Lady Headlam, Major-General Sir Bernard and Lady James, Major-General Sir Frederick Mercer, Sir Duncan and Lady Macpherson, Lieutenant-General Sir George and Lady MacMunn, Sir Reginald and Lady Mant, General Sir Charles and the Hon. Lady Munro, Major-General Sir Lothian and Lady Nicholson, Brigadier-General Sir Valentine and Lady Murray, Sir Donald and Lady Robertson, Major-General Sir Philip and Lady Robertson, Sir John and Lady Simon, Sir Hugh and Lady Stephenson, Sir Dorabji and Lady Tata, Lord Shuttleworth and the Hon. Rachel Kay Shuttleworth, Sir Henry and Lady Wheeler, Sir James and Lady Walker, Lieutenant-General Sir Herbert and Lady Uniacke, Sir William Vincent, Lady Tighe, Sir Seymour and Lady Tritton, and Major and Mrs. M. S. Young.

18, OLD BROAD ST., LONDON, E.C.2

PERSONAL AND GENERAL

TO-DAY

July 11, 1929 (New Style).

June 28, 1929 (Old Style).

Saphar 3, 1348 A.H., of the Muslim Calendar.

Tammuz 3, 5689, of the Jewish Calendar.

Sir Cowasjee Jehangir, jun., and Lady Jehangir have arrived at 41, Park Lane.

Lord and Lady Meston left 38, Parkside, Albert Gate, on July 5 for Hurst, Cookham Dean.

Sir John and Lady Maffey arrived last week at the Wellington Hotel, Harrogate, for the cure.

The Maharanee of Baroda arrived last week at Grosvenor House, Park Lane, W.I., from Paris.

The King received the Maharaja of Rewa and the Maharaja of Alwar at Buckingham Palace on July 4.

Mr. and Mrs. Thomas Russell have returned from Cairo and are staying at 10, Wyndham House, Sloane Gardens.

Ex-King George, of Greece, was the guest of Viscount and Viscountess Elibank at dinner at Clardige's Hotel on July 3.

The Maharaja of Kapurthala, who is staying at the May Fair Hotel, entertained the King of Spain at dinner on July 3.

King Fuad of Egypt is expected to arrive in London on a private visit about July 15. He will stay for several weeks.

The Prince of Wales received His Excellency Mohamed Mahmoud Pasha (Egyptian Prime Minister) at St. James's Palace on July 3.

Sir Samuel and Lady Wilson returned to England last week from East Africa. Their address until the end of September will be Star Cross, Compton, near Guildford.

Major R. C. Duncan (Officer in Charge) and the King's Indian Orderly Officers had the honour of being received by his Majesty the King on July 4.

The Prince of Wales received at St. James's Palace on July 5 the Maharaja of Kapurthala, and the Tika-Raja of Kapurthala.

Lieutenant-General Sir Cecil Deverell arrived at Marseilles on July 6 from Bombay in the P. and O. s.s. Mooltan. Major-General J. F. S. Coleridge and Sir Phiroze Sethna were among the passengers.

The marriage took place on July 2, at St. Aidan's Church, Johannesburg, of Harold William Vazeille Temperley, Peterhouse, Cambridge, Reader in Modern History, to Dorothy Vazeille, daughter of the late Canon Arthur and Mrs. Temperley.

Sir Aurel Stein, the explorer, was on July 5 presented with the Petrie Medal at University College, Gower Street, W.C., in recognition of his services to archaeology in Central Asia and Western China.

Lord Melchett entertained at dinner on July 2 at 35, Lowndes Square, to meet the Egyptian Prime Minister, the following guests: Sir Austen Chamberlain, Mr. Amery, the Egyptian Minister, Sir Harry McGowan, Sir Hugo Hirst, Sir Ronald Lindsay, Sir John Norton-Griffiths, Sir David Milne-Watson, Sir Frederick Keeble, Sir Frank Meyer, the Hon. Henry Mond, Mr. Frederick C. Goodenough, Mr. Lennox Lee, Mr. Wickham Steed, Mr. Percy Stout, Ahmed Rassin, and Mr. Conway Davies.

Mr. Bernard Henry Bourdillon, Counsellor to the High Commissioner for Iraq at Baghdad, has been selected for appointment at Colonial Secretary of Ceylon in succession to Sir Arthur George Murchison Fletcher, who has been appointed Governor and Commander-in-Chief of Fiji and High Commissioner for the Western Pacific. Mr. Bourdillon joined the Indian Civil Service in 1908. Born in Tasmania, he was educated at Tonbridge and at St. John's College, Oxford.

The Secretary of State for India (Captain Wedgwood Benn) on July 8, in the House of Commons, presented a Bill "to enable the superintendence, direction, or control of the Military Government of Aden to be transferred to, and vested in, such person or authority, as His Majesty may, by Order in Council, direct, and for purposes consequent on the matters aforesaid." The Air Ministry in London is at present responsible for military affairs in Aden.

The Abouana, with an Abyssinian bishop, arrived at Jibouti from Egypt on June 24 and stayed two days at Dire Dawa, where he was received by the Governor of Harrar (who is a cousin of Ras Tafari, the King-Regent) and the Egyptian Consul. The Abouana then proceeded to Addis Ababa by a special train, which arrived on June 28, and was met by the King-Regent at the station. The following day a reception in honour of the Abouana was held by the Empress. It was attended by the King-Regent, the Diplomatic Corps, and the principal Chiefs. On June 30 there were religious receptions at the Church of St. George, attended by the Empress, the King-Regent, the Egyptian Consul, and others.

Where to stay in the East

*Write for particulars of attractive offer
for Advertising Hotels on this page.*

CAIRO—The National Hotel.

JAFFA—Hotel Jerusalem.

JERUSALEM—Hotel East.

H. & F. Fast, Proprietors

KYRENIA, Cyprus—

ASSOUAN : Ideal Winter Climate. The place for a rest cure.

The CATARACT HOTEL—On the banks of the Nile.

The GRANE HOTEL—Entirely renovated.

Golf, Tennis and Excursions.

THE AL BU SAID DYNASTY.

Before the lecture delivered by Mr. Rudolf Said-Ruete at Burlington House on July 1, a reception was given by the Royal Asiatic Society and the Central Asian Society in honour of the Sultan of Zanzibar, who afterwards, during the lecture, occupied the President's Chair. There were also present on the lecturer's platform Shaikh Hafidh Wahba, the representative of King Ibn Saoud now in this country, and Lord Allenby, representing the Central Asian Society, and Professor D. S. Margoliouth, representing the Royal Asiatic Society.

Mr. Said-Ruete, the title of whose lecture, which was illustrated with lantern slides, was "The Dynasty of the Al Bu Said in Arabia and East Africa," said that the dynasty represented there that afternoon did not originate in Zanzibar, but sprang up in Oman, more than 2,000 miles distant on the south-eastern coast of the Persian Gulf. At the opening of the sixteenth century, Zanzibar and the islands around it, Mafia and Pemba, became subject to Portuguese influence, and later they occupied Muscat and Sohar in Oman. By 1651, the Portuguese had been expelled from Oman by Sultan Bīn Seif, son of Nasir bin Murshid, who began the line of El Yaareba. The inhabitants of the East Coast of Africa were bound to Oman by affinities not only of religion, but also of race, and it was natural that they should turn to Oman for help in throwing off the yoke. Seif built what might definitely be called a navy, and with its aid he occupied the islands of the whole of the coast from Mombasa to Kilwa, and in a few years his influence extended as far as the distant island of Zanzibar. Unfortunately, much of his work was undone by the dynastic quarrels which sprang up at his death. There was no strong central power in Oman, and after Seif II, grandson of Seif bin Sultan, secured election to the Imamate, he called in the aid of the Persians to bolster up his position against his rivals. Brought in as auxiliaries, they remained as tyrants.

There was in the service of the Yaaruba as Wali of Sohar, one Ahmed bin Said, a man of unblemished, though humble, descent, and his action at this crisis made him the worthy founder of a dynasty which was destined to be one of the most powerful and respected in Arab history. As the Yaaruba had obtained power by expelling the Portuguese, so Al bu Said attained it by expelling the Persians. As the Yaaruba had shown their energy and initiative by stretching their power over East Africa, so the Al bu Said showed theirs by recovering what thirty years of strife had lost. By taking in marriage the daughter of Seif el Yaareba, Ahmed strengthened his position with the partisans of the deposed dynasty. To cement friendly relations with the Turks and to strike a blow at the Persians, who had invaded the country of the Shatt al Arab, Ahmed set out for Basrah with his fleet conveying 10,000 men. He forced the iron chain suspended across the river, and routed and drove out the Persians. The Danish traveller, Niebuhr, visited Muscat at this time, and was impressed by the noble qualities, the religious tolerance, and the politeness shown toward foreigners by the inhabitants. A still more famous man visited Oman in the summer of 1775, for Horatio Nelson was then a midshipman on board the *Seahorse*, which was stationed at Muscat for about two months.

Ahmed showed an energy and resolution which had since characterised his descendants, but having acquired by his heroic acts undisputed civil power over Oman, he made the mistake of attempting a decentralised form of government. He established his sons in key positions throughout Oman, giving them civil power. The results were worse than disappointing, and at his death in 1783 there was great controversy upon the succession to the Imamate. In the end, the weakest of the candidates, Ahmed's second son, Said, was made Imam. The result was not so much to give scope for internal disruption as to allow stronger men not clothed with the panoply of the Imamate to concentrate civil power in their own hands. He retained some semblance of religious control, while the country as a whole was well directed under the

civil power. It grew accustomed to what had at first been a novel form of dual government until in the end the experiment of the eighteenth century became the established practice of the nineteenth.

The year 1800 was noteworthy for Oman, as by Sultan's request the first Resident on behalf of the East India Company was installed at Muscat, and it was in the same year that the warlike Wahhabis of Central Arabia made their first appearance in Oman. After the death of Sultan in 1804, in an attack by pirates, the rule gradually devolved on his younger son, Said, who showed that firmness of character, pertinacity of purpose, and quickness of decision which rendered him famous among Arab rulers. He was only thirteen at the time of his father's death, and it was twenty years before he could be said to have his position secure against the dangers, on the one hand, of piracy by the Cowasim, and, on the other, of the relentless puritanical fervour of the Wahhabis. When he had consolidated his position at home, he was drawn to the idea of that overseas empire which his fathers had established. The passing of the years had separated East Africa from its Omani masters, and the reposition of Arab power was a task not easily to be encompassed. The empire which he ultimately built up, one of the largest Arab empires which the world has ever seen, and by no means small even to modern European eyes, was the fruit of three great and many small expeditions, and of twenty years of able planning, ceaseless striving, and clever manipulation.

The two enduring monuments to his fame were the foundation of the modern town of Zanzibar, and the establishment of the clove trade. The old town of Zanzibar had practically disappeared with the overthrow of the Portuguese, and Said re-established it, not in its old situation, but in one which none but the discerning eye would have chosen. Equally unaided was his establishment of the clove trade, and equally unlooked-for its success. What the clove meant to Zanzibar was now the common knowledge of all men; its introduction was the work of one man. English influence was of no small assistance to Said, but he paid for that support in a generous and highly unselfish manner. This was the period at which, under the stimulation pre-eminently of Wilberforce and of the Clapham Sect, the English conscience was becoming alive to the abhorrent, but frequently much over-estimated effects of the slave trade. Said signed two treaties, in 1839 and 1845, whereby he set himself to discountenance traffic in slaves and to abolish it within his dominions. It was to be remembered that this was the act of a man to whom the trade gave no religious offence, rather the reverse; of a man who had grown up to regard it as part of the ordinary course of nature, and whose greatest source of revenue it was. Nor was the opposition aroused in his subjects to be estimated lightly.

In 1837, His Highness was made an honorary member, one of the very first, of the Royal Asiatic Society, in token of its approbation of the encouragement given by him to the arts and sciences among his people, particularly to those of shipbuilding and navigation.

The situation which existed in the joint dominion of Oman and Zanzibar on the death of Said would have been as difficult as any of the past had not the presence of the British exercised a moderating influence and thrust succession troubles beneath the surface. Said himself, strong though he was, and great as was his prestige, had found the dual government no easy burden to maintain. Indeed, the friendly intervention of the English had helped him to preserve his suzerainty over Oman. He directed that his son, Thuwayni, should rule at Muscat, while another of his sons, Majid, should succeed to Zanzibar, and from his death in 1856 the two countries had been controlled by separate lines of the same dynasty.

After tracing the fortunes of Zanzibar and Muscat from the date of the division to the present day, the lecturer said that the Sultan of Zanzibar, whom they were privileged to have with them that day, maintained undimmed in the sixth generation the lustre of his ancestral line.

His territory was obviously destined to be of increasing importance in the affairs not only of this country, but also of East Africa in general. The years which had elapsed since the end of the Great War had shown with increasing clarity that to our generation at any rate the proper study of mankind is man. They had been engaged that afternoon in the study of the work of a generation of men which had shown each after the other in varying degrees, but with no exception, certain qualities which were confined to no race, and to which no nation could lay exclusive claim. The Al bu Said rescued their country from anarchy, welded it into such coherence as was permitted by the material they handled, opened up rich new territories to the eyes of man, and in the subsequent administration of those territories showed qualities of loyalty and friendship and a capacity for harmonious co-operation which would be no mean ornament to any dynasty, race, or period of history.

After the lecture, Mr. Yusuf Ali, who referred to his ancestral connexions with East Africa as well as with Oman and the Yaman, spoke of the important part which the rulers of Zanzibar might play in the future unity of East African territories.

Sir Lionel Haworth drew attention to the fact that, although the Persians had had dominion over Oman for perhaps seven years in over four hundred, it was of interest to note that they were now claiming possession of Muscat.

Admiral Sir Herbert Richmond spoke warmly of the kindness shown by H.H. the Sultan of Zanzibar towards the men of the Royal Navy; and Lord Allenby also praised the hospitable ways of their Royal guest and the beauties of his island home.

SAIYID TALIB PASHA.

Various feelings will be aroused among those who served in Mesopotamia before, during, and after the Great War, at the news of the death of Saiyid Talib Pasha, which, we regret to record, occurred last month in Germany. Saiyid Talib, who was 61 years of age, had flown from Basrah to Germany to receive treatment for the illness from which he had suffered for some time.

The merits and demerits of this doughty Arab are likely to be argued for long, particularly in consideration of the unusual way in which his personality was removed from the political scene in Iraq in connexion with the instalment at Baghdad of the Sharifian Dynasty—a step taken on official British advice. The details of Saiyid Talib's arrest and of his banishment to India will be fresh in the minds of all students in the Middle East. Suffice it here to recall how widely they have been both condemned and vindicated.

Saiyid Talib was the eldest son of the late Naqib of Basrah, Saiyid Rajab, a descendant of the Muslim saint, Saiyid Ahmad al Rifari. Early in life he developed a keen political sense, acquiring renown and popularity in Basrah among the Arabs and inspiring a certain fear among the Turkish overlords. In the first few years of this century he saw much of Constantinople, where for a time he was a Deputy for Basrah, and there he became possessed of new political ideas. At one time he was a member of the C.U.P., but later he appeared to conceive, according to the late Gertrude Bell, of the idea of making himself a semi-independent ruler of the Basrah wilayat, and of establishing a confederation of Arab shaikhs and amirs—a kind of pan-Arab movement under the nominal suzerainty of the Sultan. Quite certainly in the years before the War he was regarded by young Arabs, whether in Syria, Egypt, or Mesopotamia, as one of the most formidable exponents of Arab Nationalism. About this time Turkish authority in Southern Mesopotamia suffered a certain diminution of authority owing to the methods employed by Saiyid Talib. He was, in fact, thoroughly distrusted by the Turks, who resolved, just before the War, upon his arrest. Naturally, however, news of this

intended move reached the resourceful Pasha's ears, with the result that a visit to India was considered timely.

After the Armistice he came back to Basrah, and there were not wanting those who considered, in virtue of the strength of his character and the hold which he had upon Basrawis, that he might be chosen as head of the new Mesopotamian State that was to be. The choice of the British, however, fell elsewhere.

Saiyid Talib was not allowed to return to Iraq until the Constitutional Law of Iraq came into operation. He found on his return a new Basrah, which provided little scope for the exercise of his hitherto powerful personality. His last years were spent quietly, being largely occupied with agriculture—a subject on which his son, Tawfiq Bey, who was educated at Oxford, is an authority.

Saiyid Talib had his faults, his vices, his black spots. These, illustrative of a somewhat lurid career, are well known and need no enlargement here. But there is none that knew him who will gainsay the fact that he was a true Arab and a real man.

MRS. THEODORE BENT.

The death occurred on July 3, at the age of 83, of Mrs. Theodore Bent, widow of James Theodore Bent, the eminent traveller and explorer, who died in 1897. Much of Bent's work was shared by Mrs. Bent, who went with him in pursuit of archaeological and other research to such places as the Egean, the coast of Asia Minor, East Africa, particularly Abyssinia, the Bahrain Islands, and Southern Arabia. The Bents developed some notable theories, such as, for instance, that Bahrain was the early home of the Phœnicians, and that the builders of the ruins at Zimbalwe in Mashonaland were a northern race from Arabia, akin to the Phœnicians. Perhaps, however, it is upon their discoveries in the little known Hadhramaut (upon which Mrs. Bent wrote a book, "Southern Arabia," published in 1900) and upon their work in Southern Arabia generally that their chief claims to fame will rest. Certainly they gave immense impetus to research into the connexion between Arabia and Africa—a subject which, as readers of the correspondence between Mr. Bertram Thomas and Mr. St. John Philby in our columns will recall, still provokes the liveliest discussion.

LIUBLIANA UNIVERSITY.

On June 22 Liubliana University, which was established by a Decree dated July 23, 1919, celebrated its tenth anniversary. Although it is regarded as the youngest of the three Yugoslav Universities, in reality its foundations go back further than those of either of the others, as it can trace its descent directly from the High School founded in Liubliana in 1563. In the seventeenth century there was a Faculty of Philosophy and Theology in Liubliana, which was competent to bestow degrees. In 1760 there was added a High School of Physics; in 1762 one of Surgery and Anatomy; in 1767 one of Engineering, and somewhere about that time also a School of Agriculture. Towards the end of the eighteenth century (about 1783) the Austrian Government transferred the Liubliana Faculties to Graz and Innsbruck, and in spite of all protests of the Carniolan native population the lost Faculties were never properly re-established, and still less was a complete university granted to the capital of the Slovenes, in spite of the insistent demand for one. What Vienna refused to give, Napoleon in 1800 established at one stroke, viz., a complete University with the right to bestow academic honours. Unfortunately the return of the Austrians to power in 1813 brought abolition or degradation of the Liubliana Faculties in its train. But by this time the Slovene national spirit was aroused and could not be stifled as before. The continued agitation for a complete University in Liubliana was really, though at first unconsciously, part and parcel of the Yugoslav Movement, as it developed gradually during the course of the nineteenth century. Within less than a year of the Union on December 1, 1918, the University of Serbs, Croats, and Slovenes was fairly established in Liubliana.

The University has five Faculties: Philosophy, Law, Medicine (still incomplete, but very good so far as it goes), Engineering (Technical Faculty), and Theology. During the ten years of its existence Liubliana University has amply proved its use and justified its foundation. The students are recruited in the main, of course, from Slovenia, the Dalmatians coming next in numbers. Among its professors there are Yugoslav savants from all parts of the kingdom. The Lecturers in foreign languages alone are foreigners. On the occasion of this tenth anniversary of the foundation the name of the institution was changed to that of King Alexander I. University. The present Rector of the University is Dr. Milan Vidmar, best known in general, perhaps, as one of the world's masters in chess playing, but equally well-known among his scientific *confrères* as an ardent engineer. The admirable work done within these ten years by the Liubliana Technical Faculty is largely due to his personal efforts and devotion.

F. S. C.

THE CENTRAL ASIAN SOCIETY.

The Annual Dinner of the Central Asian Society was held on July 4 at the Hotel Cecil. Field-Marshal Lord Allenby received the members and guests, and Lord Peel presided over the Dinner.

It may be remarked that perhaps the high-water mark of the speeches made at the Annual Dinner of the Central Asian Society was reached on the memorable occasion when the late Lord Curzon addressed the Society, yet though that standard may be impossible to maintain, every endeavour, as we hope we may say without offence, should be made to insure that original or profound comments, worthy of a learned Society, are always heard by such an assembly as meets at this Annual Dinner.

In proposing the health of the Central Asian Society and of its President, Lord Peel, Sir Aurel Stein suggested that he knew little of that vast domain, including Africa and that annexe of Asia, called Europe, as well as Asia itself, having concentrated his endeavours on Central Asia. He then paid testimony to the part which the Central Asian Society was playing in explaining to the ordinary citizen of the British Empire the profound importance of Asia. In an eloquent way he spoke of the remarkable services of Englishmen who could combine with their daily duty as British pro-consuls in the East research into the lives, literature, and character of the of the races among whom they lived. In this manner he mentioned the stimulus which he himself had received from such men as Elphinstone, Lyall, Rawlinson, and, above all, perhaps, Curzon. He was himself one of the few men still living who could vividly recall the genius of Sir Henry Rawlinson, the statesman who could warn the British Empire of the ceaseless expansion eastwards towards India of the Power north of the Oxus and of the Caspian, the scholar who could decipher the cuneiform inscriptions which he found in Mesopotamia. Sir Aurel then turned from the past to the present. He said that men who, like himself, had travelled in Near Eastern countries must have been deeply impressed by the rapid adoption of mechanical transport. It seemed as if this change were revolutionizing notions of time and space in countries which had no routes worth speaking of in an even more rapid manner than in this country or in America.

Experiences such as he had had on regular trade routes within fertile parts of Northern Syria seemed in fact to suggest that there, anyhow, the brave, patient camel—his old friend in Central Asia—might before long come as near extinction as the earthenware seemed to be in this country. He was glad that he had not to undergo the rather disturbing mental evolution which the change from old caravan methods and estimates of time to more modern means of locomotion must involve for the Badawin. And he mentioned, as illustrative of this sudden change, how he discovered two Shaikhs, in the middle of the Syrian desert, hunting in a Ford car a flock of sheep that had strayed from Iraq.

Along that part of the Roman *limes* which divided the Roman province of Syria from Mesopotamia when the latter was under Parthian and later on under Sasanian domination, Père Poidebard during the last few years had been able to accomplish remarkable work with the aid of the French Air Force and the Service Géographique, carrying on surveys in the French mandated area. In the "tame" desert which stretched between the Tigris and

Euphrates he had thus succeeded in clearly tracing ancient Roman roads and lines of border posts.

When thus travelling past the foot of the Sinjar range, that forbiddingly barren abode of the so-called devil worshippers, Sir Aurel was much pleased to recognize the outlines of a small Roman castellum in the steppe just within the Syrian border. He thought it was a lucky discovery, but when later on he visited Père Poidebard at Beyrout, he found that he had already secured an excellent air photograph of that very site.

Sir Aurel Stein said he could not forgo, though his archaeological enthusiasm might be running away with him, pointing out how desirable it was that air survey work, such as was being accomplished by the French in the north, should be undertaken also in the south from the side of Trans-Jordan. There, too, to the east of the Hijaz railway, there must have run once a desert border, guarded by Roman troops. Their task of warding off raids of nomads was now being carried on, he hoped in a less arduous fashion, by the Royal Air Force. The significance of aerial photography of archaeological remains had been proved by Mr. O. G. S. Crawford. Could not the aid of the R.A.F. be utilized also for tracing the remains of their predecessors' lonely stations and routes of communication?

In reply, Lord Peel congratulated the Society on having earned the praises of so eminent a man as Sir Aurel Stein, whose recent work in identifying the site of Aornos was of monumental importance. No one could fail to be convinced that Pir Sar was indeed the base of Alexander, and even Field-Marshal Sir Claude Jacob (present at the Dinner) would agree that no site could have been better chosen than that selected by the great Macedonian General. The President then went on to refer to the tremendous change which had come over the affairs of Afghanistan since last year. When King Amanullah was last in London, he said, he was greatly impressed by the stability of British institutions. He was particularly impressed by the continuity reflected in Windsor Castle. But, unfortunately, he was a reformer in a hurry. If only, Lord Peel continued, he had adopted the motto "Safety First," or had, instead of rashly rushing into reform, started to "open up negotiations," to "explore avenues," or even to appoint Royal Commissions, his fall might have been long delayed. Lord Peel enlarged upon the possibilities of the Central Asian Society. Originally, he said, the Empire had been formed primarily through conquest and through trade. Now, however, there had been produced generations of Englishmen who strove to interpret, for the benefit of the whole world, the civilisation and religions of the various constituent parts of the British Empire. Prominent among such interpreters was Sir Aurel, who, though not born an Englishman had been inspired by and had carried on the traditions of Englishmen—and in this connexion Lord Peel mentioned the debt which Orientalists owed to that gallant country, Hungary, whence Sir Aurel derived.

In proposing the health of the guests, Lord Allenby spoke of those people who, possessing ideas, lacked the words to express them, and of those who, in speaking, manifested the opposite quality. For himself, he had neither ideas nor the capacity for words. Of Central Asia, moreover, he knew nothing, never having been, he said, east of Suez. But he did know how to obey orders. And his very pleasant duty was to propose the health of the distinguished guests.

Lord Melchett, in responding for the guests, professed his ignorance of who were members of the Society and who were guests. He then dilated on the significance of the vast changes at work in the East. Did they mean, he asked, that a new Asia was in process of rising against Europe? No: for his part he did not believe in any fundamental differences between Oriental and Occidental. It was a wonderful thought to gaze upon the past civilisations of say, China, India, or Persia, and to wonder what the application of modern scientific methods would mean

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

to them. He then proceeded to pay his tribute to the great Englishmen who had explained to the world the greatness of past Oriental civilisations, mentioning in particular the work of Curzon in caring for the Asiatic treasures of India.

Finally, Sir Denison Ross explained that there were in reality no guests—those so-called were "gate-crashers!" In narrating some of his recent adventures in the Middle East, Sir Denison likened his attitude of mind to that of the poet Saadi, who, after travelling most extensively, said, on being asked which was the most wonderful experience he had had, that it was his safe return! Similarly an Irishman who had been all round the world, from America to China, reflected that the most wonderful thing he had seen was a heifer in Kilkenny. For his part, after seeing Egypt, Palestine, Syria, Iraq, Persia, and Russia, he could tell them of an excellent hotel in Berlin! Concerning Egypt, he spoke of King Fuad's scheme for introducing capitals into the Arabic alphabet, and humorously mentioned the possibility of his earning the £100 prize which His Majesty had offered for the best system. At Sir Aurel Stein he had a sly dig when he explained how much he enjoyed seeing the sights of Jerusalem as described by a Greek guide, who pointed out everything as resting on the authority of the mother of Constantine. Of his stay in Persia Sir Denison spoke in rapturous tones, first pointing out that the Persian Minister in London, who was with them that night, was a most distinguished scholar, having translated the whole of Shakespeare into Armenian and much of him into Persian. Lord Peel had referred to the magnificence with which ex-King Amanullah had been entertained in Europe. But Persia also had fallen into the trap. In Qazvin, for instance, buildings had been torn down in order that a new *khiaban* should be constructed in the Afghan monarch's honour. Moreover, this work was accomplished within a month! Sir Denison then referred to the Central Asian Society. Its *Journal*, he said, was in the home of every British exile in the East as an indication of its superlative value. He issued a warning, however, that a high standard could not be indefinitely maintained, unless contributors were paid. Its increasing importance and responsibility were illustrated by the spate of excellent books on the East which had been recently published. Of these he mentioned three: Eldon Rutter's "Holy Cities of Arabia," "Travels of Ibn Battuta" (recently translated into English by Mr. H. A. R. Gibb), and the "Autobiography of Ousama." Of this last book he spoke at some length. It proved what had already been pointed out by Lord Melchett, that there was no fundamental difference between Oriental and Occidental. This fact he illustrated by reciting the following passage from "Ousama":—

In the army of King Fulk, the son of Fulk, there was a respectable Frankish knight who had come from their country to make a pilgrimage and then return. He made my acquaintance and became so intimate with me that he called me "My brother." We liked one another and were often together. When he got ready to go back over the sea and return to his own country, he said to me, "My brother, I am returning home and I should like, with your permission, to take your son with me to our countries (I had with me my son aged fourteen). He will see our knights, and he will learn wisdom and knowledge of chivalry there. When he returns, he will have taken on the bearing of an intelligent man." My ear was hurt by his words, which did not come from a wise head. If my son had been taken prisoner, captivity could have brought him no worse fate than to be taken to the Frankish countries. I answered, "By your life, that was my intention, but I have been prevented by the affection that his grandmother, my mother, has towards my son. She let him leave with me only after making me swear to bring him back to her." "Is your mother still living then?" he asked. "Yes," I replied. He said to me, "Don't disappoint her."

That, said Sir Denison, was a most wonderful story.

WAHHABISM IN ARABIA.

Shaikh Hafidh Wahba, Counsellor to King Ibn Saoud of the Hijaz and Najd, lectured to the Central Asian Society, at the rooms of the Royal Asiatic Society, 74, Grosvenor Street, on July 5. Lord Allenby was in the Chair. Shaikh Hafidh read his paper in Arabic, and his Secretary, Shukri Bey, translated it, section by section, into English.

The lecturer began with the significance of the Muslim theologian. Ibn Taimiyyah. It was, he said, late in the sixth century (Muslim era) that Ibn Taimiyyah appeared. Curiously enough, he stated, the appearance of that great reformer in the East synchronised with the appearance of the great reformer Luther in the West. But for the differences of creed and the then scanty means of communication between Orient and Occident, it might be said that these two men were preaching a similar Gospel. While Luther was attacking the clericals, Ibn Taimiyyah was harassing the "mullahs" and "Sufis." Both were against intercession. In short, both were endeavouring to emancipate humanity from the clerical bondage, so long as that emancipation did not involve an abandonment of any of the sound principles laid down by religion. But, whereas Luther was supported by Princes, and his doctrines were consummated in the new Protestantism, Ibn Taimiyyah drew on his head the wrath of the Mameluke Sultans, who imprisoned him.

The term "Wahhabism," continued the lecturer, was literally unknown in Najd. Probably the Turks called the Najdis "Wahhabis" in the hope that Islam, thinking that a new sect was being formed, would be unfavourable to Najd. As a matter of fact, the Najd people were followers of the Imam Ahmad Ibn Hanbal, the fourth of the four schools of thought in Islam.

Shaikh Hafidh Wahba then dealt with the rise and the teaching of Muhammad ibn Abdul Wahhab in the eighteenth century, with the superstitious condition of Najd prior to his birth, with his linking up with the Saoud dynasty at Dariyyah, and with the forceful measures taken by Muhammad Ali against the Wahhabis last century. He then summarised the teachings of the Wahhabis as follows:—

1. Individual interpretation from the Quran and Traditions is open to one and all so long as a person, in virtue of his education and learning, can do so.
2. Everything and every action is done by God, who is omnipotent. No human being, however exalted, can intercede with him for a sinner. The Creator is accessible to His creatures without any intermediary.
3. Actions only matter in this world—i.e., one is not considered a true Muslim merely because one believes in God and His Holy Prophet without performing the practices of Islam.
4. Worship in its various forms should be given to God and to God alone. Access to God should not be sought through tombs, nor should these be approached for fulfilment of worldly desires.
5. God-worship must be on the lines indicated by His Holy Prophet.

In a word, said the lecturer, the Wahhabis were aiming at the restoration of the happy days of the Caliphs.

After the suppression of the political influence of the Wahhabis by the Turks, he went on, Wahhabism was almost confined to Najd. But Shaikh Muhammad Abdu, Grand Mufti of Egypt, was the first man in the Nile Valley to eulogise Shaikh Muhammad Ibn Abdul Wahhab and to denounce his opponents. The disciples of Shaikh Abdu were in fact Wahhabis, though not in name. It was gratifying to see many of the principles of Ibn Taimiyyah incorporated for the first time in the history of Egyptian legislation, in the law dealing with personal relations. Great credit for this was due to present chief of Al-Azhar and his colleague the Grand Mufti, who were among the senior disciples of Shaikh Abdu. It was now no exaggeration to say that the enlightened class in every Muslim land was Wahhabi in practice, though not in name or origin,

because this class preached the gospel of self-reliance, suppression of hagiology, or appeal to the inmates of tombs, who belonged to the past and could do neither good nor evil. Furthermore, Wahhabism preached true democracy and exclusion of the so-called "holy influence" which the Turkish Ottomans assumed for themselves. To see the chief of the Wahhabis now mixing freely with his people was to imagine oneself in Islam's glorious bygone days.

In 1913 King Ibn Saoud resolved to extend Wahhabism beyond the towns to the Badawin. He established special dwellings for them near the springs and encouraged them to follow agricultural pursuits. This policy had been so successful that the Badawin, after being a great menace to Najd, now had a powerful say in the administration of the country.

Turning to Wahhabism and the Caliphate, the lecturer denied categorically that King Ibn Saoud was aiming at the Caliphate. Most of the Muslim people nowadays, he pointed out, were under the sway of foreign Powers; a Caliph would accordingly have no authority whatsoever. He could at best be a mere figurehead to an institution that no longer existed, and King Ibn Saoud most emphatically declined to be that figurehead.

In conclusion, Shaikh Hafidh Wahba paid a tribute to the tolerant character of the British people which permitted propaganda in Great Britain, to the British Government for the hospitality extended to the delegates of the Universal Postal Congress, and to the Chairman, Lord Allenby, who, he said, on many an occasion had shown a marked sympathy with the cause of the Arabs.

After the lecture, Professor D. S. Margoliouth spoke, in Arabic, Mr. Yusuf Ali, in English, Mr. Eldon Rutter, in Arabic and in English, and Sir Percy Cox, in English and in Arabic.

SYRIAN NATIONALISM.

(At a meeting held at Damascus to commemorate June 9, 1928, the day on which the deputies of the Constituent Assembly sent their final demands to M. Ponsot, the High Commissioner, speeches were delivered by Nationalist deputies and others. The speech of Adib Effendi al-Safadi, Editor of *Al-Shaab*, was published in that newspaper as the leading article on June 11, 1929, and was as follows.)

"Mr. President, Gentlemen,—

"It is indeed a great honour to address you on this occasion and to recall the days which we hoped would herald a new era of mutual co-operation and understanding, but they would not have it so. We looked forward to frank co-operation and a mutual understanding, towards which we marched steadily and honestly in the hope of attaining that life and liberty the nation desires. But they would not have it so. They prepared to maintain the attitude they have taken up from the first, to manoeuvre round it, not to give way an inch.

"In this spirit we marched towards our goal, our opponents twitting us now with over-eagerness, now with hanging back, but we persisted in our course in the full knowledge that the nation looked for rest and that in the opportunity afforded us wisdom alone could win the day. This was the course adopted by our deputies until, embarrassed by intrigues, their patience was worn out. Then on August 9 they declared that they would maintain the country's rights to full sovereignty and freedom, insisting that sovereignty was vested only in the nation and that liberty was a right common to all under the protection of the law.

"I have never opposed the presence in this country of the French. I do not speak of the date when it began, nor of the stages gone through. That would take too long, but there are certain preliminary remarks it is impossible to omit. We fought the Turks for our independence and our liberty. Our independence was the object of engagements on the part of Europe. The French entered our country sword in hand and with artillery at their back. The Powers and their Governments acted on the principle of cutting up our country piecemeal and of destroying the strength of its unity. We compared this act with our rights, we contrasted the engagements they have made with the policy they have pursued until this hour. The methods of colonial exploitation have been gradually introduced. We are now confronted with a state of things we may describe as we see it with our eyes.

"Business is at a standstill. We have lost our markets in Anatolia, Trans-Jordan, Palestine, and the Hijaz, our trade grows dull and scarce, our profits dwindle away. Progress moves backwards, crumbling ruins fill the land. Our economic life moves backwards too, for our stock of gold has been transformed into a paper currency, the value of which is nominal, unsubstantial, depending on the strength of France and on the question whether peace in the West will be preserved at a moment when every morning we

are threatened with impending war. Regulations, decrees, enactments follow on each other's heels, one conflicting with the other. Our public offices are in a state of confusion that does not spare even the independence of our law courts. In such matters as frontier difficulties, Customs barriers, postal regulations, even in the domain of the humanities, agreements are made for us in our name. There are other matters too in which our interests are not consulted, in which we are not even regarded as concerned or having any views of our own. Our public enterprises are in the hands of foreigners, French companies for the most part, in which the first thought is given to the interests of the company, while our welfare which they came here to foster is so much ink on paper, a tale that is told for us to repeat in each other's ears.

"What, gentlemen, should I recapitulate to you further? What would you have me say? M. Ponsot arrived. First we were invited to the policy of co-operation that we might be rescued from his disquieting state of things. The High Commissioner repeated his invitation and we accepted it. The national declaration, published immediately after the Conference at Damascus, announced that the acceptance of elections in no wise bound the nation. Our intentions were pure. We would make the experiment. Maybe the people would know whom it was their duty to elect. We were invited to elect an assembly in order to formulate a Constitution. We said to ourselves: 'This invitation augurs well. A Constitution formulated, the term of the Mandate is in sight, it will come to an end!' The elections were held. From among her sons the nation chose honest men of liberal views. The Assembly met, the Constitution was laid down. We could agree unanimously with our chief Ibrahim Bey Hananu and justly say, 'The country has now an organised law that makes Syria a State with international prerogatives.' In all this we proceeded according to our natural right to liberty and independence. A Constitution is the property of the nation. The nation lays it down for the present and the future. A Constitution must guarantee the country's aims and objects. Such was the Constitution we drew up.

"For our part this is what we did. But they called a halt, protesting that they had rights in the country, that they were bound by international obligations impossible for them to forget. Negotiations were set on foot, Notes exchanged. As Nationalists we desired not to destroy the policy of co-operation with our own hands, that the French, not we, should be accused of this. We said to them: 'It is for you to share with us the nation's rights; what we absolutely reject is that you should dispose of them at your pleasure.' And this is the sense of the distinguished advocate Fawzy Bey Al-Ghazzy's words: 'I would rather see the country remain as it is a hundred years than admit what we are called upon to accept.'

"We are met together here to-day, Gentlemen, to commemorate and consecrate a day glorious to the name of Syria, glorious in the history of our cause, to honour the nation's demand for a Constitution drawn up by her own responsible deputies before the world, to salute the people's will which was voiced in the Chamber and which saved the country from colonial tutelage. Life is a struggle, Gentlemen, particularly for oppressed nations such as we are. Our principles are firm, our faith is strong, our parties united. We are ready to sacrifice our lives and money, as yesterday so to-day and in the future. Long live Syria, free and independent! Long live our distinguished deputies!"

NEWS IN BRIEF.

King Inayatullah of Afghanistan and his family left Bombay on July 5 for Basrah, *en route* for Persia.

The free zone in the port of Salonika, which was granted to Yugoslavia by Greece in 1923, is now working regularly.

Turkish airmen who are visiting England laid wreaths at the Cenotaph and the Air Force Memorial on July 4.

The pact of arbitration and friendship between Greece and Roumania was ratified on July 5 by the Greek Foreign Minister and the Roumanian Minister at Athens.

A French military aeroplane of the force surveying the Alaouite State, Syria, capsized in landing on July 4 and caught fire. The occupants, a lieutenant and a non-commissioned officer, were burned to death.

H.M. Stationery Office has published at 2s. net the Notes exchanged between Great Britain and Egypt about the use of the waters of the Nile together with the Report of the Nile Commission of 1925 and its appendices and diagrams illustrative of the flow of water. (Cmd. 3348.)

M. Michalakopoulos was sworn in on July 6 as Greek Minister for Foreign Affairs and will act as Prime Minister during M. Venizelos's absence. Dr. Christomanos, Under-Secretary of State for Health, has withdrawn his resignation.

The Sultan of Zanzibar sailed for home on July 5 in the Windsor Castle from Southampton. Before leaving he said that his most outstanding impression had been the great reception which he had had everywhere. It had convinced him that the friendly relations which had existed between England and Zanzibar for the past 200 years would continue.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Sudan Trade Improvement.

The figures for the trade of the Sudan via the Red Sea ports and Wadi Halfa for the first quarter of this year make a most favourable showing compared with those for the corresponding period of 1928. There is an increase under every one of the chief headings, while the total trade at £4,504,490 shows an increase of £1,034,534. When it is borne in mind that only a little while ago the country's trade did not total ten million pounds in the whole year it will be realised what progress is being made when almost half that total is reached by the end of the first three months. The increase of £1,034,534 is unevenly divided as between imports and exports, for while the imports show an increase of £130,155 at £1,677,647, the exports at £2,745,489 are up by £879,957. The items which make up the balance—re-exports and transit trade—show increases respectively of £10,350 and £14,112. Various features of the trade call for some reference. In Government imports there were decreases in sugar, metals and metalware, and cement, but these were more than counterbalanced by increased imports of machinery, motor cars, cycles and accessories, timber and railway sleepers, and arms and explosives. The chief and most significant increase in public imports was in cotton piece-goods, the value being £340,199 or 23.1 per cent. above the figures for the same period last year. Among the other commodities which showed more or less substantial increases were motor cars, cycles, soap, tea, timber and benzine and kerosene. The increase in exports was due, of course, to the increase in the exports of cotton. The exports of Egyptian cotton totalled 280,483 kantars as compared with 175,415 kantars, while the value was £2,018,802 as against £1,180,528. While it would be unwise to draw unduly optimistic conclusions from the trade figures they do make it quite clear that the position of the country is gradually improving, and there are various indications such as the growing consumption of sugar, which point to the fact that the material prosperity of the inhabitants is on the up grade. Good rains this year and a satisfactory harvest will result in making this prosperity much more apparent.

Conditions in Turkey.

It is decidedly interesting in view of the attitude adopted by Turkey towards foreign trade to find that the Turks are now becoming seriously perturbed at the rising cost of living in the country. At the present time living in Turkey is higher than anywhere else in the world, and while the great contributory cause of the rise in prices in the past year has been the failure of the harvest, the present price levels reflect to a considerable degree the complete failure of the economic policy of the Government. A policy of "Turkey for the Turks" may be a desirable end in the view of the Angora authorities, but an attempt to carry it out by "root and branch" methods was bound to be a failure unless the Turks were in a position adequately to carry out the development of the country. They have not been able to do so, and the measure of the complaints against the prevailing high prices is in a way the measure of the failure of their efforts. It would be interesting to know what the Angora authorities imagine will be the effect of their new tariff on prices. Obviously as it is made more difficult to

obtain foreign goods so will prices tend further to rise, though if they go much higher than they are at present in Turkey the inhabitants will simply be unable to buy commodities, for while wages and salaries have gone up from three to seven times what they were, the increases have followed the rise in prices very slowly as is always the case. How the Government will meet the situation, and whether it will decide to modify its views on the merits of protection, must remain to be seen.

Germany and the Near East.

A further indication of the efforts Germany is making to consolidate her position in the Near East is provided by the news of the formation by the firms of Junkers, of Dessau, and the Borzig Locomotive Works, of Berlin, of the United Industrial Works of Junkers-Borzig-Hall Ltd., with offices in Cairo, for the development of the sale of pumps, motors, and machines in Egypt, the Sudan, and Cyprus. This is only one of many recent examples of German activity in the Near East markets, and it may be hoped that it will serve to give an incentive to British firms to show more activity with regard to that region.

Hotel Accommodation in Egypt.

Each year the demands imposed on the hotel accommodation in Egypt by the tourist traffic are growing greater, and it is quite obvious that Egypt, given normal conditions, must look for a great increase in the number of visitors in future years. In the circumstances the development of the provision made for visitors is naturally essential, and at the meeting of the Egyptian Hotels this week (a report of which will be found elsewhere in these columns) Mr. Charles Bachler, the managing director of the company, gave some details of extensions which have been undertaken. They include a new wing to the Semiramis Hotel, a new hotel in Cairo for people of moderate means with provision for 100 rooms, and the conversion of premises at Fayoum into an hotel. The company, it may be added, has acquired a share interest in the Palestine Hotels, Ltd., which is building a large hotel at Jerusalem—a development which points to the importance that the tourist traffic is also assuming for Palestine.

SHELL

COAL PRODUCTION IN BULGARIA.

The Pernik Mines.

(From Our Sofia Correspondent.)

One of the consequences of the War was to give a decided impetus to the exploitation of coal mines in Bulgaria, as the country was deprived of foreign coal for the duration of hostilities, and this made it necessary to develop the production of the home product which is found in numerous beds but has been insufficiently utilised. Before the War Bulgaria imported very considerable quantities of coal, notably from Great Britain, Austria, and even from Turkey. After the War the importation of coal began to decrease steadily owing to the improvement of home production, and seems likely to disappear completely from the country's trade balance. In recent years, parallel with the constant reduction in imports, there has been in evidence the equally constant development of an export trade, which owed its origin to the obligation, imposed on Bulgaria by a special clause of the Treaty of Neuilly, to deliver each year to Yugoslavia for a period of five years fifty thousand tons of coal from the Pernik mines. Since the War the Pernik coal has generally served as the medium for reparations due to Yugoslavia, with the result that Bulgaria has thus been freed in many cases from cash payments.

It is the national mines which play the most important part in Bulgaria both as regards export and production. If the production of the national mines is compared with that of the private mines during the past three years it will be seen that of all the coal produced during that period, 89 per cent. came from the national mines, 84 per cent being from the Pernik mines, while only 11 per cent. came from the private mines. At present the Bulgarian State exploits the coal mines of Pernik, Maritza, and Bobov-Dol. Naturally the first place is held by the Pernik mines, which provide more than a million tons a year.

The Pernik mines constitute the greatest coal mining enterprise in Bulgaria. They cover all the tertiary basin of Vladaia (nearly 16 kms. south-west of Sofia) to the vicinity of Breznik between the Lulin and Golo-Brdo mountains. That basin has an area of 30,000 hectares, and it is already sufficiently well-known owing to the minute studies to which it has been subjected up to the present time. Four seams have been proved, and they are below the level of the Struma river. The seams are indicated by the first four letters of the alphabet, A. B. C. D. The last letter is given to the formation nearest to the surface. The seams are unequal in thickness. For the time being only the B. and D. seams are being worked. The D. seam is of the best quality and the working is easiest; it has a total thickness of 4 metres of which 2.9 metres are constituted by the coal. The coal reserve of the mines is estimated at about a milliard tons.

The Pernik coal is old brown coal, and is one of the best of the type. It is of a brilliant black colour, and is hard to the touch and brittle; it catches fire easily and burns with a clear, strong, and long flame. All the coal is passed through modern sifters, which free it from foreign bodies and help to separate it and classify it into four qualities according to the size of the pieces, as follows: first quality over 60 m.m.; second quality from 30 to 60 m.m.; third quality from 16 to 30 m.m.; and fourth quality under 16 m.m. The analyses which have been made up to the present of Pernik coal have given the following results:—

	Quality			
	1	2	3	4
Water	11.95	12.92	13.16	12.88
Ash	7.15	13.52	18.70	19.61
Coke	49.89	51.49	32.35	53.68
Pure Charcoal ...	52.75	37.50	33.72	34.07
Volatile Substances	38.10	35.64	34.50	33.46
Sulphur in general	1.53	2.01	2.57	2.36
Volatile Sulphur ...	1.13	1.21	1.65	1.72
High Calorific Power	6220	5369	5068	4843
Low Calorific Power	5898	5018	4680	4590

At present only seven mines are worked, five under the soil and two on the surface. Machinery is being installed, which will be first to be used in the country. It is expected that it will be completed by the end of the current year.

A special Law of February 19, 1925, made the Pernik mines an autonomous national enterprise under independent administration and constituted it juridically a "person." These mines are now organised on a commercial and industrial basis, which places them on an equality with private enterprises, and frees them from the drawbacks attaching to direct State management. This new organisation which has been given to them helps to assure their regular development, and guarantees their complete freedom in the sale of coal for export.

The autonomous administration of the mines is placed under the surveillance of the Council of Ministers, who, on the proposal of the Minister of Commerce, Industry and Labour, can revoke any decision of the Administrative Council which it considers contrary to the organic law regarding that enterprise or other laws of the country. The Administrative Council presents to the Council of Ministers at the end of each year its report and balance-sheet for approval. The Council of Ministers nominates each year a committee of control comprising four members, of which one represents the Ministry of Commerce, Industry and Labour, one the Ministry of Finance, one the National Bank, and one is a specialist in accountancy. The committee of control watches the conformity of the decisions of the Administrative Council with the prescriptions of the law and the rules regulating exploitation, as well as the precise application of its decisions in the administration of the enterprise, and advises the Council of Ministers of each case of contravention noted.

The whole of the Pernik mines are administered by a directing committee composed of a director-general nominated by the Council of Ministers and the delegates of the Administrative Council. The Administrative Council, compared with the committee, is a directing and at the same time a controlling organ. Nominated by the Council of Ministers, it is composed of 8 to 12 members. The president is the Minister of Commerce, Industry and Labour; it includes, further, three mining engineers, of whom one is the head of the mines section of the Ministry of Commerce, Industry and Labour; the four to eight others are chosen freely from among the technical experts, economists, financiers, industrialists, and merchants of the country, which permits the inclusion of some persons who have rendered great services to their country and who are in adverse circumstances. The term of office of the Administrative Council is three years, but only a third of its members are liable to removal at the end of that period. Another innovation is the establishment of a workers' committee, which the directing committee consults on questions regarding housing, food, hygiene, the technical education of workers, and in general on the improvement of working conditions.

The profits of the Pernik mines are divided, in conformity with the Law, half going to the State and half to

EGYPTIAN GOVERNMENT.

THE ASWAN DAM

WITH reference to previous Notices with regard to the heightening of the Aswan Dam on the River Nile, the date on which the tenders both for the masonry work and for the modifications and additions to the sluice and lock gates must be submitted to His Excellency the Minister of Public Works, Cairo, Egypt, has been altered to mid-day on October 1st, 1929, instead of September 14th, 1929, as previously advertised.

the mines. Of the State's portion a sum of 30 million leva is paid to the Treasury under the head of public revenues, while the remainder goes to increase a special fund, instituted by the decision of the Sobranye, to further the economic improvement of the country. The profits of the mines are divided as follows:—10 per cent. to the reserve fund, 18 per cent. to the fund for the development and technical improvement of the mines, 15 per cent. to the personnel, $\frac{1}{4}$ – $\frac{1}{2}$ per cent. to the director-general, 1 per cent. to the members of the Administrative Council (not including the Minister, whose presidency is honorary), $\frac{1}{4}$ per cent. to the members of the committee of control, 3 per cent. to the fund for the upkeep of a school of mines which is to be created in the future, for the payment of grants for the publication of works on the mining industry in Bulgaria, the expenses of specialisation by engineers abroad, etc., and $2\frac{1}{2}$ per cent. to the fund for sickness and for the cultural and social improvement of the miners.

It will be seen that the national enterprise of the Pernik mines constitutes an immense mining undertaking, and is of great importance for the material and moral progress of Bulgaria.

CYPRUS IMPORTS INCREASING.

The report on Cyprus trade for May shows that there was a further increase in imports but a slight fall in exports as compared with May, 1928. In both cases, however, the values were in excess of the quinquennial average. Imports at £173,704 were £30,362 above those of May, 1928, and £46,544 over the quinquennial average. The principal items showing increases were flour (£6,387), cotton goods (£4,764), petrol (£3,528), and motor cars (£3,423). There was a general all round increase in other articles.

Exports at £132,309 were £16,556 less than in May last, but £18,846 above the quinquennial average. The item which accounted for this decrease was carobs. Other exports showed increases, the principal being in potatoes (£7,996), pyrites (£5,481), wine (£3,064) and asbestos (£2,323).

Twenty-two steamers called at Larnaca, 25 at Limassol and 20 at Famagusta as against an average of 27, 28 and 21 respectively.

The Bulgarian Government has begun an investigation of the salt deposits in the district of Provacia. It is believed that these deposits are among the most extensive in southern Europe.

Yugoslavia's exports in May totalled 461,117 tons, of the value of 533,661,310 dinars. The figures for May, 1928, were 331,652 tons and 431,559,622 dinars respectively. The exports for the first five months of this year amounted to 1,737,325 tons, of the value of 2,450 million dinars, as compared with 1,600,550 tons, of the value of 2,233 millions for the first five months of 1928.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Paints, Etc.—The Officer Commanding General, Royal Yachts Administration, Ras el Tin, Alexandria, invites tenders for the supply of paints, cleaning articles, electric articles and stores for engine-room, necessary for the Royal Nile Yachts during the year 1929-1930. July 23.

Towels, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of towels, tassels for turbushes, collars and caps, to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. September 2.

Electric Lamp Standards.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of 240 electric lamp standards with armature and globes. October 1.

Articles for Cotton Spinning Factory, Etc.—The Director-General of Prisons, No. 43, Sharia El Bustan, Cairo, invites tenders for the supply of articles for the cotton spinning factory and humidifying and ventilating plant for the said factory at Delta Barrage, August 27; and for machines, engines (Diesel and semi-Diesel), boilers and electric batteries, etc. September 28.

Cooling Tower, Etc.—The Director-General, Mechanical and Electrical Department, P.W.M., Cairo, invites tenders for the supply and erection of a cooling tower for Seru Pumping and Power Station, August 10; and for the supply and erection of two Diesel pumping units at Bousseli Pumping Station. August 10.

Diesel Engine Alternator.—The Ministry of the Interior invites tenders for the supply, delivery, and erection of an additional Diesel engine alternator for the Zagazig Power Station. August 15. (D.O.T.)

YUGOSLAVIA.

Railway Trucks.—H.M. Consul at Sarajevo, Yugoslavia, reports that a local Department will shortly be inviting tenders for the supply of six railway trucks, narrow gauge (760 m.m.). (D.O.T.)

INDIA.

Live Roller Gate.—The Indian Stores Department invites tenders for the supply of a live roller gate for the under-sluice of the Midnapore Weir across the river Cossye. July 23. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, July 19); s.s. Elysia for Bombay (Birkenhead, August 6). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Markhor for Calcutta (Birkenhead, July 18); s.s. Macharda for Calcutta (Birkenhead, July 25).

Bibby Line.—S.s. Cheshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, July 24).

British India Line.—S.s. Manela for Colombo, Madras, and Calcutta (London, July 13); s.s. Mundra for Bombay and Karachi (London, July 20).

Cunard Line.—S.s. Brescia for Patras, Piraeus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement offers (Liverpool, Glasgow, and Swansea, July 27); s.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, Corfu, and Gruz if sufficient inducement (Liverpool August 3, Swansea August 6).

Johnston Line.—S.s. Aviemore for Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 3).

P. and O. Line.—S.s. Behar for Calcutta (London, July 19); s.s. Razmak for Bombay (London, July 19).

Prince Line.—S.s. Soldier Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, July 13); s.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus (London, July 20); s.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, July 24).

Ellerman and Papayanni Lines.—S.s. Mardinian for Gibraltar*, Algiers*, Malta, Piraeus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool July 20, Swansea* July 20); s.s. Oporto for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool July 20, Swansea July 25); s.s. Volturro for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 31); s.s. Algerian for Gibraltar*, Algiers*, Malta*, Patras, Smyrna, and Constantinople (Liverpool, August 10). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syra and Cyprus via Alexandria; Greek outports via Piraeus or other convenient port.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 9.

The monetary situation has again been the most potent of the various influences affecting the Stock Markets and the drain of gold from the Bank of England prevented any return of confident conditions. The King's Speech was regarded as moderate but uninformative, and the vagueness of the political pronouncements left room for doubt, but the general effect on markets was slight. British Government stocks remained at about the lowest level of the year in view of the uncertainty of the monetary outlook. Industrials generally were quiet and the renewal of bullishness in New York failed to stimulate interest. Breweries and motor shares were marked down on the indications of the new Government's intentions. The half yearly dividends so far declared by the banks and discount houses have, as anticipated, been at the same rates as at this time last year, and the approach of the railway dividends for the past six months has awakened no interest in home railway stocks.

Italian Bonds.

It is perhaps political considerations that mainly account for Italian Government securities not being among the most highly valued foreign bonds in the Stock Exchange lists, but it is also true that the country has not yet economically recovered from the effects of the War. The report of the Department of Overseas Trade on Economic condition in Italy in 1928, published on Thursday, emphasises that the year was one of reorganisation and adjustment to the new conditions created by the stabilisation of the lira in December, 1927. A somewhat mixed picture is presented. Italy is still predominantly agricultural, and apart from the grain crops results were not very satisfactory in this sphere. As regards foreign trade, too, exports fell off by some 7 per cent., and imports rose by 8 per cent. compared with 1927, though it can be claimed that raw materials constitute the bulk of the imports. On the other hand, in the latter part of the year there was a distinct improvement in the industrial situation, and employment was substantially better than in the corresponding months of 1927, though not in

artificial silk or cotton, while the consumption of electricity increased by 17 per cent. Bank deposits and savings bank deposits also show satisfactory advances. It appears therefore that the recovery, though slow, continues. If the progress made is maintained without a relapse, and no adverse political factors appear, holders of Italian securities should of course benefit. The $3\frac{1}{2}$ per cent. Rentes can be bought to yield £5 13s. per cent., while the 7 per cent. Credit Consortium bonds return £7 per cent.

Distillers' Profits.

The recently published accounts of the Distillers' Co., for the year ending May 15, show this Edinburgh firm to have completed another very successful year. Profit and loss account, after paying interest on the several debenture stocks, shows a record balance of £2,317,411, compared with £2,269,655 last year, and with the amount brought in there is £2,529,943 available, against £2,401,958 in 1928. The dividend for the year is 20 per cent., the same as for the last three years, but on an increased capital; £500,000 against £400,000 is now placed to the general reserve fund, bringing it up to £1,750,000 against an issued capital of £2,317,412; the fire insurance special reserve again receives £5,000 and £227,990 is carried forward. The accounts are all the more gratifying because they reveal that the while the dividend remains constant the amount actually earned for the ordinary shares has steadily increased during the last few years from 24 per cent. to 26.2 per cent. The directors state that the value of obsolete distilleries has been written down and plant has been kept in a state of efficiency during the year entirely out of revenue. Earnings are coming more and more from dividends as the Distillers' Co. is increasingly a holding company whose financial connexions now extend abroad also, the company having this year acquired interests in Australia, in addition to establishing jointly with a Continental group, British Industrial Solvents Ltd., which has a distillery at Hull. The £1 ordinary shares of Distillers' Company of which there are over 10½ million, yield £5 8s. per cent., while the 6 per cent. cumulative preference, whose dividend was covered nearly 18 times by this year's earnings, yield £5 9s. per cent.

International Tea Bonus.

The accounts published this week of the International Tea Company, the great producing, importing and distributing grocery concern, which embraces the Star Tea Company, Ridgways, and Kearly and Tonge in addition to its own stores record a fresh advance in earnings. Trading profits for the year to April 27, 1929, amounted to £675,919 against £579,553 for the year 1927-8. After debiting all charges, including an allowance of £50,000 for depreciation, the net available profit is £546,636 compared with £480,000 last year, to which it had grown from £349,643 in 1923-4. Of the available profit £150,000 is to be placed to reserve and an ordinary dividend of 30 per cent. is to be paid which compares with 25 per cent. last year, 22 per cent. in 1926-7, and 20 per cent. in 1925-6. In view of the growth in the company's business its resources are to be increased by an issue to shareholders of 1,000,000 5s. ordinary shares at 20s. each in the proportion of one for every four now held, the market price being 30s. 9d. In view of the company's prospects the ordinary shares have attractions, and since they yield just under £5 per cent., on the assumption that the dividend is maintained on the enlarged capital, "pay for their keep." The very well-secured 6 per cent. cumulative first preference shares return £5 7s. per cent.

In accordance with the recent agreements, the Greek authorities on July 2 handed over to the Yugoslavs the section of the railway line between Kenali, on the Greco-Yugoslav frontier, and Bitolia (Monastir), in Macedonia.

ECONOMIC CONDITIONS IN BULGARIA.

The following notes are taken from the bulletin of the British-Bulgarian Chamber of Commerce of Sofia, dated June 30.

General Situation.

Before the summer recess, certain financial and economic legislation has been voted by Parliament. The Foreign Exchanges Act has undergone a revision. Purchases of foreign currencies up to 100,000 leva worth may be effected without previous authorisation of the National Bank and without production of justificative documents. Credits and guarantees in foreign currencies are to be granted under the National Bank's control. Payments in leva into the accounts of foreign residents are free, provided they are justified by real needs or effective trade transactions. Foreign depositors of leva with Bulgarian banks may freely employ their credit balance for payments in favour of Bulgarian or foreign beneficiaries. They may equally transfer their balances into foreign moneys with the authorisation of the National Bank. That institution retains in fact the monopoly of dealing in foreign currencies; the formalities and technical intricacies are somewhat reduced. This measure is described as a transition to complete liberty in foreign exchange operations.

The Railways Reorganisation Act has been definitely voted. The Administration, the finances, and the general policy of the railways become almost completely independent from political influences, and more up-to-date methods of accountancy, exploitation, supply of materials, building of new lines, etc., are adopted. The budget of the Railway Administration is separated from the general budget of the State.

The settlement of the Disconto Gesellschaft issue has been ratified by Parliament.

In spite of damage by hail storms all over the country, the position of crops remains generally satisfactory, at any rate better than it had been anticipated as a consequence of prolonged frosts.

The continued deficiency of foreign trade is giving rise to some anxiety in business circles. Imports, although slowing down during the recent weeks, are still at a high level. The position of the leather, cotton and textiles trades remains uneasy. Solvency is practically at the same level as last month.

Monetary and credit conditions are becoming gradually stringent. The National Bank rate is to be raised from 9 to 10 per cent. as from July 1 next.

Imports and Exports.

The trade balance during the month of May is again adverse by 248,199,380 leva, as against 81,633,285 leva for April and 91,000,000 for March. Imports during May totalled 50,075 tons for 853,854,165 leva, and exports aggregated 22,364 tons for 605,654,725 leva, while in April, imports amounted to 39,609 tons for 784,462,888 leva and exports totalled 27,888 tons for 702,829,603 leva.

The main export items in May, as against those for April are:

Produce		1929	1929
		May Tons	April Tons
Wheat	...	20	143
Rye	...	—	1,093
Barley	...	302	1,532
Maize	...	6,729	11,448
Tobacco	...	2,369	2,438
Eggs	...	1,813	1,642
Fowls	... pieces	33,630	52,814
Fodder	...	934	2,005
Cattle	... heads	1,004	2,260
Oilcake	...	2,462	1,815
Ores	...	1,720	1,279

Forthcoming Tenders.

The Administration of State Railways is inviting tenders to take place on July 22 for the supply of 100 tons of round iron for concrete reinforcements. The estimated cost is 700,000 leva. A 5 per cent. caution is required with offers, i.e., 35,000 leva.

The Ministry of Agriculture and State Property is inviting tenders, which must be deposited by July 20, for the erection of a dam wall alongside the Danube river from the village of Koshova to the town of Vidin for the protection of the low lands in the Vidin valley. The estimated cost is 21,000,000 leva. A 5 per cent. caution is required with offer, i.e., 1,050,000 leva.

Strikes in Tobacco and Textile Industry.

During the period under review two strikes were declared in the tobacco manipulation trade. They are now about to be settled. As the employees will receive an increase of wages, this will reflect on the cost price of tobacco for export.

The textile industry at Sliven has also experienced a strike of employees, who demanded an increase in their wages. The employers are in general not inclined to grant any increase of wages, and a lockout since the 26th has been declared by all textile factories at Sliven, the main centre of the woollen industry in Bulgaria.

Miscellaneous.

The quantity of notes in circulation during June shows a steady level. On May 23, the notes in circulation amounted to 4,039,034 leva, on May 31, 3,977,155,000 leva, on June 7, 4,007,763,000 leva, and on June 15, 3,981,559,000 leva.

The foreign exchange reserves of the National Bank, owing to reduced exports during the late spring and summer months, showed a gradual decrease during the month of June. Thus on May 23 foreign exchange amounted to 1,791,899,000 leva, on May 31, 1,788,098,000 leva, on June 7, 1,779,537,000 leva, and on June 15, 1,710,339,000 leva.

Protested bills during the first quarter of 1929 as compared with the corresponding period of 1928 shows a slight decrease as to the number of bills protested and their aggregate value.

The wholesale commodity index number (on the basis of 1914 equals 100) for May was 3,338, as compared with 3,318 for April, and 3,290 for March, and 3,134 for May, 1928. The general level of wholesale prices, therefore, has risen by 0.6 per cent. as against April, and by 6.5 per cent. as compared with April 1928. The increase in the cost of living is due to rising prices of foodstuffs (plus 2.7 per cent.) and foodstuffs of animal origin (plus 2.1 per cent.).

Receipts of the State Treasury for May, show a marked decline as compared with the figures for April, which is due to decreased receipts from Posts, Telegraphs, and Telephones, and from the Municipalities toward teachers' salaries. In May, ordinary receipts amounted to 448,653,000 leva, while in April they were 531,246,000 leva.

According to official data furnished by the Labour Section of the Ministry of Commerce, Industry and Labour, the number of employees in industrial undertakings during May was 82,169 against 75,492 in April and 60,523 in May 1928.

Engineering Topics

(By Our Engineering Correspondent)

The Small and Medium Sized Boiler Plant.

Typical of the economies to be obtained in the average industrial steam generation plant, using any type of boiler is the case of the Holden Wood Bleaching Co., Ltd., of Haslingden (Lancashire), who installed forced draught steam jet furnaces on their "Lancashire" boilers in 1926, with hand firing as usual. The general conditions are difficult because of the violent fluctuations of steam demand characteristic of the bleaching and similar industries, but in a letter they state these furnaces of the "Turbine" make have been most successful, enabling a cheaper grade fuel to be burnt, with actually a less consumption weight for weight, and therefore a substantial saving on the annual fuel bill. Also the total maintenance costs have been so far fifteen shillings, whilst the cleaning out is easier, this being due to the fact that the steam keeps the grates cool, and prevents melting of the ash, and clinker formation, the material being granular and therefore much easier to handle. In another case at Kircaldy a boiler plant, also in the textile industries, with much "boiling" and process steam, was burning 17-18 tons per week of double washed nuts at 21s. per ton, which incidentally resulted in much smoke. After installing "Turbine" furnaces the same steam is supplied by 15 tons of "Duff" coal at 13s. per ton, cutting the fuel bill in half, a special trial undertaken showing that 60 tons of this "Duff" coal lasted practically five weeks, the previous consumption having been about 70-75 tons a month of the expensive coal.

Naturally the savings to be obtained on any given boiler plant varies according to the local circumstances, especially as regards relative prices and qualities of fuel obtainable. The main point is, however, that the "Turbine" furnace, hand-fired as usual, and with only one steam valve to control, enables any fuel irrespective of the quality to be burnt at will by means of a forced draught blast so that a high furnace temperature is obtained with maximum emission of radiant heat, while the consumption of steam at the nozzles does not exceed $2\frac{1}{2}$ to 3 per cent. of the steam output of the boilers. This is practically no more than mechanical draught, and without of course for smaller boiler plants complications in the way of fans, engines, motors, trunking, and dampers, while any boiler can be fitted merely by taking out the existing firebars. On these lines there can always be used fuels that represent the best value for money in actual heat units supplied, and the saving thereby as against ordinary methods of operation may be anything from 15 to 50 per cent. in normal practice. In this connexion also it is of course essential to keep proper weekly records of the performance of the boiler plant with the aid of water or steam meters, so that one quality of fuel may be tested against the other on the large scale under actual commercial conditions, and also the plant always maintained at the highest efficiency.

A Sewage Plant.

Dealing some little time ago with sewage disposal, I made some remarks which led to correspondence with an engineer in Holland, who writes now to give details of an activated sludge plant with many novel features which is now at work at Apeldoorn, Holland. Of course, surface aeration of sewage is common practice on the Continent; they are far more enthusiastic about it than British engineers, though it is difficult to say on what grounds. Anyhow, this plant seems to represent the last word in ingenuity and many of my Near Eastern readers may glean some useful hints from a description. The engineer is Mr. H. Kessener, who is the director for the Dutch Government of the State Institution for the purification of waste industrial liquids.

The absorption of oxygen is the underlying principle in

the surface aerators activated sludge methods of dealing with sewage, whether the processes be purely chemical, purely biological, or a combination of the two. The greatest proportion of the compressed air supplied for activation is merely used to keep the solids from settling, or to keep them in suspension. Mr. Kessener says, in his description of the plant, that, assuming that the activated process is a combination of chemical and biological agents, the organic substances are decomposed by this bio-oxidation process, whereby the carbon is changed partly to CO_2 and partly utilised in order to build up living organic matter. More than that, it is even possible that during the first period of aeration, which occupies only a few hours, the whole of the oxygen is made use of for the growth and multiplication of micro-organisms.

Under the influence of prolonged aeration sulphur compounds and nitrogenous substances do not produce, as end products, NH_3 , H_2S , and Mercaptans, but NO_2 , NO_3 , and SO_4 . During the first few hours in aeration, the type and number of organisms present undergo a change, and simultaneously re-assimilations of carbon and clarification of the sewage takes place.

In consequence the conclusion has been arrived at that the activated sludge process should be separated into stages in order that more efficient operation of each stage should be secured. Mr. W. Rudolfs, of the New Jersey (U.S.) Experimental Station, has gone into the subject fairly exhaustively and he agrees with Mr. Kessener in this. In fact, he goes further and suggests that surface aeration is particularly adapted to such a separation of stages on account of ease of manipulation and low costs. We must not lose sight of the fact, however, that good results can be obtained with the process even if only one tank be used.

The plant mentioned as having been laid down at Apeldoorn is designed for the purpose of dealing with slaughter-house waste, and is a surface aeration activated sludge plant. It consists of a bar screen, a grease catcher, an aeration tank, a sedimentation chamber, a septic or digestion tank which is practically flat-bottomed, a great pit, and a sludge pit. The plant is on the small size, as it has only been designed for handling between 30,000 and 31,000 gallons of waste, which is received during eight working hours daily, except on Sundays.

The incoming waste is violently agitated and kept in suspension by means of wooden racks or paddles, motor-driven, which turn diagonally to the incoming sewage.

The surface aerating device is novel and consists merely of ordinary circular street cleaning brushes, such as are used on municipal motor vehicles for sweeping refuse to the side of a road. They are 9 ft. in length and are arranged four in a row. They are totally submerged, but only to a depth of from $\frac{1}{2}$ to $\frac{3}{4}$ of an inch, and are chain-driven from a line of shafting, the power being obtained from a variable speed electric motor. The agitating paddles make $3\frac{1}{2}$ revolutions per minute, whilst the brushes make 57 revolutions in the same time; but as the character of the sewage may vary, arrangements are made whereby these speeds can be carried in proportion, the higher speeds being used for the lightest sewage. The paddles break the surface into waves and the revolving

STEAM & HYDRAULIC ENGINE PACKING MANUFACTURERS

Contractors to British, American, French and Italian Admiralty.

brushes cause an even rippled flow. The amount of air beaten into the sewage is considerable, owing to the large air spaces between the bristles of the brushes.

As is common with all slaughter-house waste, the strength of the sewage before treatment is considerable. The effluent is blood-coloured and has a most disagreeable odour. After treatment, the final effluent is colourless, odourless, and quite clear, and is, in short, such as no engineer would mind passing into a river or stream. In the results given it is noticeable that there is a reduction in the alkaline content, which in connexion with the reduction in oxygen consumed gives additional evidence of the high degree of purification brought about.

According to the figures supplied, the installation was inexpensive. The wooden paddles were made at a low cost from spare timber, the brushes, in Holland, cost only a few shillings each, the tank was of reinforced concrete, and the other accessories, including the motors, were obtained at a reasonable cost. The electric power used for driving the submerged brushes and the submerged shaft of the paddles, taking the revolutions per minute at the highest figures, was only 1.3 kilowatt-hours. This deals with the refuse from a maximum kill of 20 cattle and 80 hogs. The notes sent say that it has been found that the system has great flexibility, as if the sewage becomes stronger, all that has to be done is to submerge the brushes a little deeper into the liquid. The settled sludge is digested in the flat-bottomed tank, provided the usual precautions are taken and the proper conditions observed, without the least difficulty. It is said that so far no hitch has occurred with the working of the plant and that the results obtained have been uniformly good.

The Gas Turbine.

Improvements have been made to the gas turbine, and it is in this direction that I am convinced we shall find efficiency. The reciprocating internal-combustion engine of whatever type is at best a compromise; an attempt to obtain a fair amount of something we want accompanied by not more than we can comfortably bear of something we do not want. I am quite aware that such a statement is heretical; no doubt what I am about to say will be regarded as a greater heresy still.

Of the three classes of gas turbines I incline to the belief that the fixed abutment type, which the majority of engineers regard as hopelessly obsolete, will ultimately come into more general use than any other class. I am, of course, aware that a number of authorities use the

word "turbine" in its strictest sense, and to them the fixed abutment class of machine is a rotary-piston machine, and not a turbine at all.

At the same time, I admit the possibilities of the gas-driven water-turbine and the gas turbine pure and simple; I have no intention of speaking disparagingly regarding them. All I contend is that the rotary-piston type of machine should prove of great commercial value, and to those who would regard this as impossible, and who look on the machine as something relegated to the scrap-heap, I would say: If you would take the trouble to look up the early specifications relating to electric lamps you will find that almost every investigation, from Starr downwards, was working on metals, as platinum tungsten or iridium, for filaments.

GOOD CYPRUS HARVEST.

The report on Cyprus crops for June gives the following details:—
A good wheat harvest, as foreshadowed in last month's report, is now practically assured. The price is 6s. to 7s. per bushel.

Notwithstanding damage done by heavy rain to barley whilst the crop was in sheaves awaiting threshing, it is above the average in quality and quantity. The price is unsettled, at about 2s. per bushel.

Harvesting of oats is still in progress. The crop is poor both in grain and straw.

The new crop of potatoes is rather poor, and tubers are undersized as compared with last year. Considerable quantities are being exported to Greece, Palestine, Egypt, and Syria. Exports for the first fortnight of June amounted to 1,050 tons. The price is £5 10s. to £6 per ton, with a downward tendency.

If conditions continue favourable to growth, an increase in the yield of cotton may be expected. The export of lint continues.

It is too early to give any forecast of the new orange crop. The fruit is now forming, but a considerable amount of "June drop" is noticed in most groves.

Reports indicate that last month's forecast of the carobs crop was a little too optimistic. Whereas in some localities the crop is better than that of the preceding year, as a whole it is expected to be slightly smaller. The price is £5 10s. per ton.

The crop of Latakia and cigarette tobacco is expected to be good. The harvesting of the leaves has commenced.

There is a very good crop of cumin. The price is £40 per ton.

A limited area was planted with aniseed. The plants have flowered satisfactorily.

Up to the present the prospects of the 1929 olive crop are promising.

A very satisfactory crop of grapes is expected, though heavy rains and hail have caused a good deal of damage in some parts of Pitsillia.

COMPANY NOTES AND REPORTS.

PHOENIX OIL PRODUCTS.

The report of Phoenix Oil Products, Ltd., for the past year states that the gross income for the year amounted to £69,647 1s. 8d., an increase of £12,912 5s. 8d. over the previous year. After providing for administrative expenses, etc., and the dividends on the issued preference capital, there remains a surplus for the year of £12,213 11s. 7d., which, added to the sum brought forward into the balance-sheet, gives a balance of £17,953 10s. 1d., which is carried forward. The company's distributing organisations in Austria and Hungary, Southern Germany, Yugoslavia, and Belgium have not only been maintained, but extended by the addition of further storage depôts, pump stations, etc.

P. AND O. BANKING CORPORATION.

The report of the P. and O. Banking Corporation for the year ended March 31 last states that the net profits for the year, after providing for taxation, bad and doubtful debts and valuing investments at or below market rates, amount to £106,017 3s. 5d., which, with £20,404 18s. 10d. brought forward from last year, gives an available balance for disposal of £127,412 2s. 3d. Out of this amount the directors propose to pay a dividend of 5 per cent., less income tax at 3s. 6.41d., absorbing £106,787 10s. 4d., carrying £20,624 11s. 11d. to the next account.

ADVERTISING IN

"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of *all* classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

British Consular Reports

II.—SMYRNA.

The following extracts are taken from the report of the British Consul-General at Smyrna on the economic situation in the Smyrna District in 1928:—

Favourable weather conditions during the winter of 1927-28 produced the hope of better crops in 1928 than in previous years, and as the prosperity of Smyrna district depends principally on its agriculture, it was anticipated that an improvement in trade would result. Unfortunately, drought and hot north winds in the summer of last year injured the crops, with the result that a monetary crisis prevailed locally and the impoverishment of the peasants increased.

The loss of man power which has hampered agricultural development is gradually being remedied, partly by mechanical methods and partly by immigration of Muslim peasants from Macedonia and Yugoslavia. Up to the end of 1928 it was reported that nearly 60,000 such immigrants had been settled in the vilayet of Smyrna alone.

Of the population of Turkey approximately 70 per cent. are agriculturists, and they cultivate about 6 per cent. of the area of the Republic. The primitive manner and means of cultivation which are still employed by the vast majority of farmers are slowly giving way to modern methods and implements. Various appliances and machines of American, German, and Hungarian manufacture were exhibited in a special section at the Smyrna Fair in 1928, but only a minority of big cultivators can afford to purchase them at present. A number of American and Hungarian tractors are being used, and iron threshing machines, ploughs, etc., are being imported, most from Central Europe, and are bought in increasing numbers. The imports of agricultural implements in 1928 amounted to 357 tons, as against 166, 119, and 129 tons respectively in the three previous years. In addition, 192 tractors were imported last year.

The Crop Situation.

In 1927, exports of wheat from the Smyrna district amounted to 2,493 tons. In addition, 18 tons of flour were exported. By May, 1928, it was realised that the wheat crop would not be sufficient for home needs for the whole year, and that it would be necessary to import. From September last to the end of the year no less than 12,000 tons of wheat were imported into Smyrna. As regards barley, exports from Smyrna in 1927 amounted to 17,280 tons. The harvest was 25 per cent. below that of 1927, and the total yield was at first placed at about 45,000 tons. After the long summer drought this estimate was brought down to 35,000 tons, of which at least half would be required for home consumption. Exports of barley in 1928 ultimately amounted to 8,895 tons.

The area under oats is relatively small, and the crop is not an important one. At the end of last year about 6,000 tons of the crop were to hand, as compared with 4,232 tons in 1927. The millet crop was good in quality, but the quantity grown was approximately 30 per cent. less than in 1927; exports did not amount to more than 161 tons. The rye crop totalled 24,000 tons, a decrease of 16½ per cent. from 1927. Imports of millet in 1928 amounted to 49 tons; bran, 619 tons; forage, 995 tons; and rye, 101 tons. As regards exports, millet totalled 161 tons; baghala, 20; bran, 1,209; forage, 9; rye, 50; hemp, 174; aniseed, 65; and sesame, 26 tons. The broad bean crop was expected early in 1928 to produce 30,000 tons; only 9,000 tons, however, were realised. The total exports were 5,563 tons, the bulk of which went to France, Belgium, the United Kingdom, and Turkish ports.

Tobacco was sown in 1928 over an area of 30 per cent. less than in 1927, owing to the low prices which obtained in 1927. Cold weather destroyed the first sowings, and in summer continuous north winds caused the "Akdaman" disease to become very prevalent. The crop totalled only 22 to 23 million okes, or 2½ million okes less than in 1927.

Exports totalled 20,879 tons, and of this the United States took 6,724 tons and the United Kingdom 107 tons, while 2,730 tons were shipped to Turkish ports.

The olive crop in the 1928-29 season was the most successful of the district's crops, and large hopes were based on it, especially as Spanish competition was not to be feared as it was in 1927. In that year only 5,500 tons of oil had been produced, and therefore none was available for export. It was expected that 25,000 tons of oil would be extracted in 1928, and statistics show that in the second half of the year about 200 per cent. more oil was brought to Smyrna from the interior than in 1927. Exports of olive oil amounted to 1,471 tons, valued at £T854,087.

The raisin crops of 1927 and 1928 were approximately the same, viz., 48,000 tons. The chief buyers in 1928 were Germany, £T4,957,176 (8,953 tons); the United Kingdom, £T3,709,678 (9,055); Italy, £T1,993,896 (4,176); Holland, £T1,682,951 (3,286); Belgium, £T684,353 (1,251); and the Soviet Union. The total exports in 1928 were placed at 29,370 tons, valued at £T14,13,830, as against 34,500 tons in 1927. The fig crop was considerably affected by the continuous hot north winds in July of last year. It was estimated that the crop would show an increase of 10 per cent. over 1927, when 27,800 tons were exported; actually there was a decrease of 10 to 15 per cent. Up to the end of last year 27,514 tons were exported, in addition to 3,032 tons of refuse. During the second half of 1928 exports of figs amounted to £T9,294,064. The United Kingdom received 2,487 tons of worked figs and 3,744 tons of natural figs, valued at £T2,085,826.

The supply of liquorice is automatically regulated by the demand, for it requires no cultivation, and almost inexhaustible quantities are available as required. There was a decrease of 30 per cent. in the amount of liquorice root brought down for shipment in 1928 as compared with 1927. Statistics show that 13,545 tons of root were exported in 1928, the United States taking 9,870 tons and France 3,084 tons; 83 tons of paste were exported. In 1927 the respective totals were: root, 14,470 tons and paste 48 tons. The total value of root exported in 1928 was £T883,153.

Last year's cotton crop was less abundant than that of 1927, for though it was expected that 40,000-45,000 bales would be gathered, as against 30,000 in 1927, drought and north winds spoiled the plants, and not more than 28,000 bales were gathered. Of these only 15,000 bales had been sold by the end of January, 1929; local mills absorbed 5,000 bales, and the remainder were exported principally to France and Greece. Imports of cotton last year amounted to 18 tons, and cotton yarn 1,211 tons, while

exports of cotton totalled 2,935 tons, cotton yarn 446 tons, and cotton seed 6,065 tons. The total value of cotton exported was £T2,275,449, and that of cotton seed £T410,033.

Early estimates of the valonea crop placed the amount at 25 per cent. more than the 1927 crop, which had totalled 43,500 tons, and of which 34,888 tons were exported. The total gathered reached 55,000 tons, but the quality left much to be desired. Foreign demand was less than in former years; only about half of the total crop was exported. Exports of valonea extract, however, showed an increase as compared with 1927 of 65 per cent., large contracts received from the Soviet Union doing much to stimulate the local extracting industry. Imports of valonea amounted to 7,271 tons; valonea extract, 12 tons; and valonea refuse, 15 tons; while exports of valonea totalled 23,661 tons and of valonea extract 5,131 tons.

Increased Exports of Carpets.

In spite of Greek competition exports of carpets from the Smyrna zone have gradually increased since 1923. The United States continues to be the best market, especially for the higher grades, about 70 per cent. of the exported Sparta carpets being sent there. The total production in 1928 was 490,800 square yards. Of 361,338 sq. metres exported in 1928, representing a value of £T4,513,214, the United Kingdom imported 160,860 sq. metres, valued at £T1,816,133.

A fairly large trade is done in lambskins and kidskins; the former were of good quality and the latter abundant last year. The 250,000 lambskins produced were all exported to Germany, Czechoslovakia, Austria, and Italy. Other skins sold on the Smyrna market were hare, goat, fox, marten, jackal, badger, and other skins. Imports of hides amounted to 666 tons, while exports of lambskins totalled 291 tons; kid, 164; hare, 11; goatskins, 138; and hides, 139 tons. In addition to the tanneries in Smyrna and Adalia, local tanning industries are carried on in various towns in the interior, notably Denizli, Manissa, Usak, and Balikesir.

The chief imports of minerals in 1928 were petroleum,

15,489 tons; sulphur, 2,721 tons; and coal, 44,331 tons, while included in the exports were emery, 1,377 tons; mercury, 4; antimony, 21; arsenic, 248 lb.; lead, 58 tons; oxide of copper, 18; metal scrap, 1,808; salt, 212; and chrome, 1,000 tons.

ROUMANIA'S RIVER PORT TRAFFIC.

The continued inactivity which characterised shipping at the principal Roumanian ports during 1928 was due to a number of causes and has existed since the immediate post-War years, at which time shipping was stimulated temporarily by a heavy import movement brought about by the extreme shortage of goods after the War (says the American Consul at Bucharest, Mr. J. Rives Childs, in a recent report).

Prior to the War the bulk of Roumania's foreign trade moved through the ports of Galatz and Braila, although the port of Constantza had a limited importance for winter traffic when the Danube was frozen. The principal export port was Braila, on the upper Danube, and Galatz was the chief port for imports. Practically the entire foreign trade of Roumania prior to the War moved through the Danubian ports, the intensity of the shipping movement having been in direct proportion to the foreign commerce of Roumania. The importance of the Roumanian ports, however, particularly Galatz and Braila, has not developed in proportion to the enlarged territory and increased economic interests of Roumania as a result of the War.

The fact that exports of cereals have not attained the volume of pre-War grain exports is one of the causes for the decline in Roumanian shipping. Another cause is the disorganisation of the Roumanian railway system, combined with the fact that the railway network in the newly acquired territories was directed from Transylvania toward the ports of Trieste, Fiume, and Hamburg; from Bessarabia toward Odessa; and from Bukowina toward Danzig.

The above-named ports are said to have drawn freight traffic from the Roumanian ports as a result of unsatisfactory local transportation conditions, lack of modern port facilities, docks, warehouses, etc., as well as the unsettled juridical régime at the mouth of the Danube, the high taxes levied by the European Commission of the Danube, the repeated silting up of the Danube in the Sulina channel, and a variety of other causes.

The declining shipping movement in 1928 was aggravated by two factors—the precipitate drop in exports following the generally poor agricultural yield of the previous year, and the decrease in value and volume of imports as a result of the crisis which occurred in 1928.

Notwithstanding an increase of lumber exports to the Near East and Italy through the port of Galatz during 1928, as compared with 1927, the total export tonnage through this port during the six months ended December 31, 1928, showed a decline of approximately 100,000 metric tons from the similar periods of preceding years. During the calendar year 1927, there were shipped from Braila 186,000 metric tons of cereals, whereas during the first 11 months of 1928 only some 50,000 metric tons were loaded.

A total of 1,149 vessels, aggregating 2,334,000 tons, entered the port of Constantza during 1927, and 1,055 vessels of 2,241,000 tons entered during the first 11 months of 1928. These figures indicate that Constantza has not been subject to the general decrease in traffic that has affected Roumanian river ports. The shipping movement of Constantza in 1928, as in preceding years, was concerned in the main with exports; these totalled 1,846,000 metric tons during the first 11 months of the year, while imports during the same period amounted to only 121,000 metric tons. Of the export traffic, oil products constituted 1,543,000 tons; cereals, 222,000 tons; lumber, 50,000 tons; and miscellaneous goods the remainder. Import traffic during 1928 was divided among metal goods, tools, colonial goods, fruits, coal, etc.

Company Meeting.

EGYPTIAN HOTELS.

A Successful Year.

Sir William Peat's Speech.

The thirty-second annual general meeting of the Egyptian Hotels, Ltd., was held on July 8 at the registered offices of the company, 11, Ironmonger Lane, E.C., Sir William B. Peat, C.V.O. (Chairman of the company), presiding.

The representative of the Secretaries (Messrs. Peat, Marwick, Mitchell and Co.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—The directors' report and accounts for the year to April 30, 1929, have been circulated, and I presume you will agree to take these documents as read. (Agreed.)

You will have noted from the accounts that the profit for the year to April 30 is shown at about the same amount as that for the preceding year, which is a very satisfactory position. The dividend on the ordinary shares recommended by the directors is at the same rate as that for the previous year, namely, 35 per cent., with a bonus of 4s. per share.

As you are aware, the business of the company is controlled by the local Board of Directors in Cairo, and I have invited Mr. Baehler, the chairman of that Board, and our managing director, whom we are pleased to welcome here to-day, to give you a summary of the local Board's report on the operations of the company in Egypt for the past financial year.

The addition to freehold and leasehold buildings of £26,153 represents the cost of the acquisition of land adjoining Shepherd's Hotel at Cairo. This land is considered very valuable property, and it was important to the company's undertaking that it should be acquired.

The payments on account of the new wing to the Semiramis Hotel of £14,137 are shown as a separate item in the balance-sheet, and the corresponding advance of a temporary character by the bank to meet this expenditure is shown in the liabilities. The total cost of this new wing is estimated by the local board to be approximately £120,000. It is intended that this expenditure should be covered by the amount to be received from the issue of new ordinary shares, proposals in regard to which are to be submitted to a subsequent meeting of the shareholders, of which notice has already been given.

The company has subscribed for 10,000 shares of £1 each in the Palestine Hotels, Ltd., who are building a first-class hotel in Jerusalem, and a sum of £2,500 paid on account of these shares is shown in the balance-sheet under the heading of "Investment." The stocks and sundry debtors are a little above the corresponding figure as at April 30, 1928, which is an ordinary business fluctuation.

The liability to the Grand Hotels d'Egypte has been reduced during the year from £30,769 to £20,512.

The increase of £13,835 shown in the item of sundry creditors and credit balances when compared with the corresponding figure at April 30, 1928, is principally represented by the balance of the cost of acquisition of the land adjoining Shepherd's Hotel, which had not been paid as at April 30 last. As already mentioned, the total cost of this land, including the amount unpaid, is shown as an addition to the item of freehold and leasehold land and buildings.

The amount of cash at bankers and in hand of £101,768 will, of course, be subject to considerable reduction upon payment of the dividend and bonus for the past year. An amount of £7,000 has been written off for depreciation in respect of plant, fixtures, and fittings for the year to April 30, 1929. This sum is slightly in excess of the amount provided in the previous year, and in the opinion of the local Board is an adequate provision.

It will be observed from the balance-sheet that the total assets employed in the company's business amount to a little over £534,000, whereas the nominal capital of the company at the present time is only £240,000. In some quarters a suggestion has been made that the company's profits are unduly high, but when these profits are contrasted with the total assets figure of £534,000, the yield, although very satisfactory, is not considered excessive.

At the present time the company is enjoying the prosperity which the conservative policy of the past and the valuable and able direction of Mr. Baehler and the local Board have brought about. It is my duty to convey to our managing director, Mr. Baehler, and to the other officials and staff of the company who have laboured incessantly in the company's interest, our great indebtedness for their services to the company's undertaking.

I beg to move: "That the directors' report and accounts for the year ended April 30, 1929, as submitted to the shareholders be received and adopted, and that the sum allocated to special reserve out of the profits of the past year of £20,000 should be held as applicable to the amortisation of the considerable expenditure now being made on the Semiramis Hotel."

Managing Director's Speech.

Mr. Charles Baehler (Managing Director): I beg to second the resolution. You have heard the Chairman's able explanation of the balance-sheet and the financial position of the company, and it only remains for me to inform you in as brief a manner as possible of the progress of the company's business in Egypt during the past financial year. There have been fluctuations in the working results of the various hotels controlled by the company, but collectively the

results shown are satisfactory, as you will see from the profits included in the accounts.

The season again started late, possibly due to the important political and other events in certain countries from which come many of our guests. The working results were good, and although the season started later than customary, there is a steady tendency every year for it to be prolonged.

During the year the policy of improving the hotels of your company has been actively continued. Part of the third floor of Shepherd's Hotel has been renovated, and in carrying out this work the company has been able to provide for a larger number of private bathrooms without diminishing in any way the accommodation available. The hotel is entirely up to date, possessing every convenience and comfort for its guests.

The charm of Shepherd's Hotel is not due only to its high standing; it has been for very many years in advance of modern requirements in hotel accommodation, and this policy has been so extended and amplified that at the present time it remains in advance of any hotel accommodation obtainable in any part of the world.

With regard to the Semiramis Hotel, the restaurant has been newly decorated and provided with the most modern ventilation system. A large number of rooms in the hotel have been redecorated and refurnished and running water fitted. The building of the new wing to the Semiramis Hotel is already well advanced, and it is hoped that it will be completed and ready for opening by January 1 next. Apart from a beautiful and large restaurant and banqueting room overlooking the Nile, the ground floor of the new wing will be provided with an elaborate tea room with a special entrance for Cairo residents, and a private dining and bridge room.

The new wing will also contain eight private sitting rooms, about 70 bedrooms, and 60 bathrooms, giving additional accommodation for about 100 guests, together with well-furnished servants' bedrooms in the fifth floor. The whole of the new wing will be furnished and decorated in the smartest and most attractive manner.

There has been a demand for a good hotel in Cairo of a somewhat less luxurious nature than that of the Shepherd's Hotel or the Semiramis Hotel, and an excellent opportunity occurred for the company to satisfy this demand. A lease for ten years, renewable, if desired, for a further 20 years, has been acquired of an hotel comprising 100 rooms, each with a private bathroom. This hotel, which we have called the "Metropolitan," provides first-class accommodation for people of moderate means, and it has already been opened.

The company has also taken a lease of premises at Fayoum to be converted into an hotel. Fayoum is an oasis in the desert situated about 80 miles from Cairo and is of particular interest to sportsmen. A fleet of motors will ply between Mena House Hotel and Fayoum, running daily on the newly made road connecting Mena House and Fayoum. As a complement to this hotel a small pavilion will be built at the edge of the lake at Karoun which is a few miles from Fayoum Town and where there is excellent fishing and shooting.

Your company has also acquired a share interest in the Palestine Hotels, Ltd., which company is building a large hotel at Jerusalem. This hotel will be called the "The King David Hotel," and it is intended to accommodate about 200 visitors. It is also proposed that the hotel should be managed by the Egyptian Hotels, Ltd., under the terms of an agreement by which the remuneration of the Egyptian Hotels, Ltd., will be settled by a percentage of profits. The King David Hotel is not expected to be ready for opening before the beginning of the year 1931.

All the company's hotels and the furniture and equipment therein have been maintained throughout the year in an excellent state of repair, and these hotels are in perfect condition, enabling them to rank and to compete with the most luxurious hotels in the world. (Applause.)

I greatly regret to report the loss of our friend and colleague, Mr. Warren Gilman, who has been a director of the local Board in Egypt for a great many years. His colleagues deeply deplore his loss. His advice was at all times available for the benefit of the company.

The resolution was carried unanimously.

The Chairman then proposed: "That a dividend of 5 per cent. on the preference shares for the year ended April 30, 1929, be and the same is hereby declared, payable on and after July 15, 1929."

Mr. H. M. Snow, C.V.O., seconded the resolution, and it was unanimously approved.

The Chairman next proposed: "That a dividend of 35 per cent., together with a bonus of 4s. per share, for the year ended April 30, 1929, be and the same is hereby declared, payable on and after July 15, 1929."

The resolution was seconded by Mr. Baehler and was passed unanimously.

On the motion of Mr. Baehler, seconded by the Chairman, the retiring director, Mr. H. M. Snow, C.V.O., was re-elected.

The auditors, Messrs. Turquand, Youngs and Co., were re-appointed, on the proposition of Mr. H. S. McAuslan, seconded by Mr. P. S. Joselin, and the proceedings terminated with a vote of thanks to the Chairman.

An extra-ordinary general meeting followed, at which a resolution was unanimously passed making certain alterations in the articles.

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives. The Bank transacts every description of banking operations.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 3:—

Egyptian Futures.

Sakel Contract.—Without displaying any particular feature, values in this market held at a steady level up to the end of last week; since this a declining tendency in the American markets and advices of another attempt on the part of the Government to auction a further 1,000 bales to-day, have created a nervous undertone. With present conditions not encouraging from either a trade or speculative point of view, the limited amount of selling that has come into the market during the past two sessions has only been placed at material price concessions, the decline on the week amounting to 26 to 33 points for near and 51 to 71 points for new crop months. The slight improvement in the trade situation referred to by us last week has not been maintained, as spinners' business has since been on a much reduced scale; uncertainty regarding the wages question is causing most spinners to work on a week-to-week policy of securing their requirements, and whilst this is resulting in rather more cotton going out of local stock, the forward demand is practically at a standstill. As we anticipated some little time ago, near positions are now beginning to reflect in a greater measure the restricted amount of tenderable Sakel now held at this side; most of the old undesirable dockets which have depressed successive current months have now been absorbed. A few days ago July stood at 34 under November; the difference has now closed to 15 points, with a further hardening in prospect. The Alexandria market has fluctuated in a somewhat erratic manner; periodical reactions have occurred, but values have always quickly resumed a downward course. New crop reports continue to be of quite a satisfactory character, but private opinions incline to the view that next season's yield will fall considerably below this year's supplies.

Upper Contract.—A further decline in values has taken place in this market during the past week, and differences with the American market have narrowed down to the lowest of the season. Some heavy liquidation of Julys by Continental interests at the end of last week attracted support from spot houses; tenders so far have only amounted to 850 bales, and the ready acceptance of these has already influenced a closer difference between old and new crop values. Crop reports are favourable, but we hesitate to express a definite view upon ruling levels or differences until clearer ideas of the American new crop staple position can be formulated.

Egyptian Spot.

More actual business has taken place this week both in Egyptian and Sudan growths, and, whilst generally speaking quotations are lower in sympathy with the futures markets, the scarcity of certain qualities has been accentuated by the improved demand. As a result the lower and medium grades of Sakel have hardened. The improved spot demand is somewhat difficult to account for in view of the possibility of labour trouble, and the fact that the Bolton mill holidays have now commenced. Probably it merely indicates an increase of hand-to-mouth purchasing at the expense of the normal c.i.f. quota, rather than any genuine improvement in trade. It is merely repeating ourselves to say that Sakel is now at an attractive level, provided the incentive to buy could be forthcoming. Opinions about Uppers are more mixed and spinners are inclined to look for lower prices still, although, in our opinion, the current premium of 100 points over American looks reasonable.

Sakel has been in moderate request for practically all qualities and attractive lots of the lower grades, from F.G.F. downwards, have become hard to find. The better qualities are freely offered.

Uppers.—As usual the most popular range has been 10 off to 10 on, and this market also is becoming bare of good lots. A lesser demand has been in evidence for cotton up to 40 on, but the top grades have remained neglected.

Pilion.—This growth has again been in good demand, chiefly at from 11.75d. to 12d. Here and there an inquiry for the "Best" has been met with.

White, Maraad, and Nahda.—These have all suffered from neglect this week.

Sudan Sakel has been in good request at steady rates. Most of the business has been done in the medium and lower grades, which are of a very attractive character this season.

Tokar Sakel.—This cotton still awaits a revival in the demand.

C.i.f. business has been on the quiet side. Forwardings to the trade last week were returned as 7,519 bales Egyptian and 2,039 bales Sudan. Estimated spot sales for the week, 2,400 bales Egyptian and 2,150 bales Sudan Sakel. Quotations of Sakel from Extra Fine to F.G.F. are reduced 55 to 5 points, Good Fair and Fair are 10 to 25 points higher on the week. Uppers have given way 31 points, and Pilion 25 points. F.G.F. Sakel to-day, 15.90d. F.G.F. Upper to-day, 10.97d. F.G.F. Pilion to-day, 12.00d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended June 27, state:—

Since our last report the futures market has not been very active, and the tendency has been undecided. The week's summary of price movements is as follows:—Sakellaridis: July, 31.55 dollars, 0.08 dollars down; November, 32.18 dollars, 0.14 dollars down; January, 32.66 dollars, 0.10 dollars down; March, 33.06 dollars, 0.07 dollars down. Ashmouni: August, 20.85 dollars, 0.02 dollars up; October, 21.25 dollars, 0.07 dollars down; December, 21.73 dollars, 0.07 dollars down; February, 22.18 dollars, unchanged.

Sakel.—The week opened with rather weak markets, and July at the lowest was quoted at 30.70 dollars. There was some short covering and reversals of straddles by purchases of Sakel against sales of Ashmouni, and prices at the close of the week had more or less regained the ground lost earlier on. The trade demand, while still of only moderate volume, has at the same time been slightly better than last week. Latest reports from the textile centres are not brilliant and prospects are for a reduction in yarn production, both in America and on the Continent; in England there is fear of a lock-out as a result of the dispute between the mill owners and their employees on the question of wages.

The stock of Sudan Sakel in Liverpool remains at a large figure, which exercises a depressing influence both on the Liverpool Egyptian market and our own. In spite of the fairly strong technical position of our market and the present reasonable levels of prices, we think that the probability of a rise of moment can be dismissed from consideration, in view of the existing supplies which appear to be sufficient to satisfy the prospective modest requirements of spinners from all parts of the world for the three months remaining before the first arrivals of the new crop.

The Sakel Uppers straddle (November/October) this week stands at 1,093 points, against 1,100 points last week and 1,407 points at this time last year.

Uppers.—This market has continued to show the firm tone to which we have been accustomed of late. The straddle sales of Uppers against purchases of Sakel have been easily absorbed by the trade by reason of the fact that spinners, particularly the Continental spinners, have again been in the market for important lines. The difference with New York remains at about 2½ dollars for the respective October deliveries, and we are of the opinion that this difference will not undergo any great change until a more definite idea can be formed as to the figure which new crop long staple American cotton will attain.

The Ashmouni/American straddle (October/October) this week stands at 273 points, against 263 points last week and 609 points at this time last year. Against the third June tender, dockets for 5,750 kantars were issued, which brings the total for the month up to 7,500 kantars.

The week's receipts amount to 3,207 kantars, against exports 125,691 kantars; the stock in Alexandria stands at 2,134,561 kantars.

Spot.—We have had higher average markets this week due to freer offerings, owing to the demand moving to slightly better grades. The total sales are about 9,400 bales, of which we estimate 4,550 bales Sakellaridis, 4,340 bales Ashmouni and Zagora, 450 bales Pilion, and 60 bales White and other varieties.

Sakellaridis.—The good demand for medium grades still continues, but this week there has also been a moderate demand for Fully Good Fair/Good, which has increased the turnover, as there is a fair quantity of these grades on the market. The premiums for medium grades have stiffened compared with last week, as decent staple lots are very scarce indeed.

Ashmouni and Zagora.—Here we have had a fair turnover in the grades Fully Good Fair/Good and Good, the buyers paying full premiums on August. The demand for Fully Good Fair still exists, but there are very few lots on offer. Sellers are maintaining the prices and buyers are plentiful.

Pilion.—This market is much the same as last week, with the demand general for all grades. Premiums are unchanged.

White and Other Varieties.—Have been in very moderate demand.

Crop, 1929.—The news received this week on the crop is very good. Under the influence of warm weather and normal irrigation, the plants present a robust appearance and their progress is quite satisfactory. There have been a few complaints of leaf worm

attack, but the resulting damage, at any rate up to now, has been insignificant.

A Yugoslav-Belgian Chamber of Commerce has been instituted at Brussels for the promotion of trade between the two countries.

The prohibition which was imposed in January on the export and re-export of barley from Syria has recently been withdrawn.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for June was 68,040 tons.

The provisional receipts of the Suez Canal for the first six months of the current year amounted to 561,230,000 francs, against 548,545,000 francs for the corresponding period of 1928, making an increase of 12,685,000 francs.

Sir Herbert Baker, A.R.A., F.R.I.B.A., has undertaken the design of the Victoria Embankment elevations of the new head office of Cables and Wireless, Ltd., and Imperial and International Communications, Ltd. The building is to be erected on the site of the old L.C.C. Education Offices adjoining the Temple Station.

The directors of Westminster Bank Ltd. have declared an interim dividend of 10 per cent. for the half-year ended June 30 on the £4 shares, and the maximum dividend of 6½ per cent. on the £1 shares for the same period. The dividends, 2s. per share and 1s. 3d. per share respectively (both less income tax), will be payable on August 1.

Notes of the Week.

Friction in the Balkans.

With the return to Sofia of the Yugoslav Minister accredited to the Bulgarian Government, who has established a reputation as a keen advocate of good relations between the two countries, the danger that tension in this part of the Balkans will become still further aggravated has been reduced, although it has not been altogether removed. M. Neshitch was unable to bring with him from Belgrade any assurance that the Pirot Protocol would be ratified; but in view of the friendly suggestions made on this subject by the British and French representatives in Yugoslavia, it was not to be expected that the Belgrade Government would be disposed to take at once the step recommended to them. It is all to the good that M. Neshitch has been allowed to return to his post, and that he has had a friendly conversation with the Bulgarian Prime Minister. The strong bias of European opinion in this recrudescence of trouble between Yugoslavia and Bulgaria will not have been lost on King Alexander's Government. It is no question this time of provocation by *komitajis*. The troubled area lies to the north of the Macedonian arena, and covers the territory which was allotted to Yugoslavia by the Treaty of Neuilly under the belief that Yugoslav security required the frontier to be moved within thirty miles of the Bulgarian capital. It was not contended that the inhabitants of this area were other than Bulgarian, but strategic reasons were held to overrule national and economic factors. From a statement issued by the Bulgarian Government it would appear that over fourteen thousand Bulgarian subjects owning property in the ceded districts were handed over to Yugoslavia, and nearly eight thousand of those who became Yugoslav subjects still have property in Bulgaria. In these circumstances it is not surprising that this part of the Yugoslav-Bulgarian frontier has proved a Balkan "sore." Under a just and enlightened administration it is conceivable that the industriousness of a hardy people would have induced the great majority of them to accept their lot philosophically; but the harsh policy adopted towards them and the restrictions placed on free movement across the frontier have had the inevitable effect of keeping the sore an open one.

Attempts at Settlement.

With the advent to power of the present régime in Yugoslavia the Belgrade authorities appear to have been anxious to find some friendly settlement for this frontier problem. The Pirot Conference was held, and a *modus vivendi* was arranged, although the Bulgarian Government would not accept the Yugoslav suggestion that the simultaneous owning of land on both sides of the boundary should be abolished. Unfortunately, certain incidents in Bulgaria have given the Yugoslav Government an excuse for not ratifying an agreement that failed to embody all its recommendations, and the Bulgarian population in Yugoslavia has experienced a tightening of the screw. Accordingly, if matters are allowed to drift, there will be a long series of outrages on this section of the frontier. The Great Powers that transferred the population in question to an alien jurisdiction cannot divest themselves of all responsibility in the matter, and it is satisfactory to find that the new British Government favours the appointment of a Neutral Commission to take charge of the Yugoslav-Bulgarian frontier. The suggestion may not be to the liking of the Yugoslav Government, but if it secures the support of France, Yugoslavia will find it less invidious to agree to such a Commission. A continuance of frontier incidents between Yugoslavia and Bulgaria must sooner or later rouse public opinion in Europe to an appreciation of the fact that a demarcation which might have worked satisfactorily with other peoples has proved impossible in the Balkans, and the need for imposing peace from outside will become imperative. The advocates of revision of the Peace Treaties inevitably find their strongest arguments in the actions and policy of the Governments which so strongly oppose it.

A Plot in Roumania.

Drastic censorship in time of war is an admitted necessity; under peace conditions it may be doubted whether it serves any really useful purpose. For this reason it is a matter for regret that the present Roumanian Government, which, to judge by the last elections, had some claim to be broad-based upon the people's will, should have emulated the Bratianu régime in enforcing the

ensorship in regard to a so-called Fascist plot. Europe to-day has an instinctive interest in the political stability and material progress of every single country. It made up its mind that the former Government in Roumania, even if firmly entrenched, could never connote material progress for the country, and the advent to power of Dr. Maniu's party was welcomed as affording some promise that Roumania would again pull her full weight in the economic reconstruction of Europe. That an unconstitutional attempt should be made at this early stage to upset the Maniu régime is sufficient in itself to incur the full reprobation of all responsible European opinion, and the Roumanian Government, therefore, would appear to have nothing to lose in allowing the full light of publicity to be brought to bear upon the "plot." The more insignificant or localised the movement, the greater the advantage of allowing all the facts to be known. If only official *communiqués* on the subject are permitted to be published, the inference is at once drawn that the Government dare not divulge the real extent of the plot. In the present instance there may be no justification for this inference; but the policy adopted has not made it easy for the Government to be given the benefit of the doubt. According to the official statements a small "Fascist" group, including certain officers, conceived the idea of a *coup d'état*, but the plot was brought to the notice of the authorities and was nipped in the bud. There follow, however, rumours of a Ministerial crisis and of strained relations between the Government and the Council of Regency, with the result that there is a danger that the efforts of Dr. Maniu and his associates during the last seven months to place conditions in Roumania on a stable basis will be checked. The dragooning of the electorate and the censorship were two bad features of the previous régime, and it was thought that the latter had been as resolutely abandoned as the former under the present Government. It is to be hoped, therefore, that any setback to the confidence placed in the National-Peasant Party to make good will quickly be removed, and that Dr. Maniu will not be deterred from his policy of purging the administration of the country of bad features that have characterised it for so long.

Democracy.

The new British Government has done good service by taking early steps to show that it does not propose to lose sight of practical considerations in any attachment to doctrinaire views. Nowhere have greater hopes been built on the advent to power of a Labour Government in England than among the Opposition in Egypt. Its success, a statement issued by the Secretary-General of the Wafd declares, "was looked upon by the Egyptians as heralding a new era of friendship and understanding between our two democracies"; but the rest of the announcement made it clear that the reader was expected to hold the view that Egypt could be a democracy only under the Wafd, and did not come within the category under the present régime. In the opinion, however, of one spokesman of the present British Government there are democracies and democracies, and his warning may be commended to countries where there is a tendency to set more store on words or definitions than on things that really matter. In other words, all practical people of the world over endorse Pope's contention: "For forms of government let fools contest; Whate'er is best administer'd is best." In the course of a speech last week Mr. J. H. Thomas, Lord Privy Seal, declared that he was a believer in democracy and that he never apologised for democracy; but he could conceive of nothing worse than an ignorant democracy and of nothing worse than a power so great, so important, so fraught with great and tremendous possibilities as that of the Government of Great Britain being entrusted to people who did not realise that power carried responsibility. So much lip-service is paid to democracy, especially in the East to-day, by those who refuse to admit, or act up to, the responsibility involving upon the would-be leaders of a democratic country.

A Parliament for Palestine?

The High Commissioner for Palestine is known to be discussing with the Colonial Secretary the possibility of granting some sort of representative institution to Palestine. Before leaving the Holy Land for Geneva Sir John Chancellor promised to a delegation of Arabs that he would do as much, and the proposition is said to be supported—though it should be remembered that Palestine is perhaps *par excellence* the land of rumours—by a number of British officials. It is quite certain at any rate, that considerable anxiety is professed in certain Jewish quarters over the possibility of a granting to the Arabs of some degree of the ideal of self-government to which a section, at all events, of the Palestinian people so ardently look forward. Whether there will be any concrete outcome to these discussions is problematical, but if the Arabs of Palestine were in any way to countenance the Balfour Declaration, it is difficult to see how a Parliament could much longer be denied to them. As things are, it seems improbable that the Arabs will be conceded their desires, and, curiously enough, the majority of Zionists would wish things to continue as they are, that is for the Arabs to persist in their refusal to accept the Balfour Declaration. Far better, in the Jewish view, to have the united but hitherto powerless hostility of the Arab people than a Legislative Council which in the guise of good will might conceivably harm the "National Home." It is true, of course, that the Arabs have once been offered a representative institution, and that they refused it. On that occasion, during the régime of Sir Herbert Samuel, the initiative came, we believe, from the Mandatory Power. This time it proceeds from the Arab Executive itself. What conditions that Executive has attached we do not know, but the result of the discussion between the High Commissioner and the Colonial Office will be awaited with extreme interest.

Great Britain and Palestine.

One of the results which, as we have often pointed out, may be expected to follow the representation of non-Zionist Jewry, particularly of American Jewry, upon the Extended Jewish Agency, is an increase in the criticism of the Mandatory Power for Palestine. Even before the Zionist Congress, which meets at the end of this month, and which will, it is confidently expected, consummate the Weizmann-Marshall Agreement, there is discernible a tendency to forget what the Mandatory Power has done for the Jews in Palestine, and to emphasise what has not been done. Even of the High Commissioner himself, who at first was hailed by Zionists as a practical man who would give fresh impetus to the "Jewish National Home," bitter things are being said. He is blamed, for instance, for "the curtailment of Tel-Aviv's autonomy, the land conflict in Infyat, the transfer of Jewish colonies to a purely administrative Arabic district, the stricter enforcement of the certificate system, the attempts to minimise the rights of Hebrew"; and so on. To those who are aware of the details of the conditions of Palestine, such criticism of what in the main is merely a tightening up of administrative efficiency will seem strange; but it is probably symptomatic. Many Jews do not yet realise, apparently, that what British officials in Palestine are being asked to do, and what they are striving to do, is a most difficult and unusual task, particularly for Englishmen. Preferential treatment for a minority—or, if you will, the trusteeship, through a handful of Jews in Palestine, for the fifteen millions of Jews in the world—is neither a conception the justice of which is easy to grasp nor a duty easy to perform. Sometimes one is impelled to feel that the Jewish people, even those Jews who have adopted Palestinian nationality, are in fact the chief obstacle to the realisation of the British ideal in the Holy Land; the creation of a Palestinian people which shall think in terms of country and not of religion or of race. It is a comparatively simple matter for the philosopher to comprehend the idea that the Jews in Palestine are not an ordinary minority, but are (in theory,

at least) representative of the whole of their race; it is another thing for the local British official, who has to distinguish, so to speak, between the smaller and the greater justice. Yet these officials have performed their work so admirably that they need no apology, nor defence. We could wish, however, that the Jewish Nationalist Press would desist in its attacks upon them as "anti-Semitic"—a quaint adjective, in any case to use in connexion with a land almost wholly peopled by Semites.

The Sixteenth Zionist Congress.

Zionists in general appear to be looking forward to the Sixteenth Congress, which assembles at Zurich on July 28, with considerable hope, even if some anxiety is expressed on the score of what the "non-Weizmannites" may say. For one thing the Zionist movement has ridden successfully the severe storms which have broken upon it during the last few years. The economic depression in Palestine, the unemployment and the necessitated payment of the "dole," the restriction on immigration and the actual emigration of Jews from Palestine—all these things are in the main now past history, although the possibility should never be overlooked that in so "artificial" a movement as the establishment of a "Jewish National Home" crises may re-occur. In any case, the movement has emerged from the testing-time badly battered, it is true, in the financial aspect, but probably sounder and keener in the psychological or moral aspect. It is in good heart, therefore, that the Zionists will be assembling at Zurich. Another reason for buoyancy may be found in the way in which plans have gone forward for the representation of non-Zionists on the Agency, or, in other words, for the collection of additional funds for the colonising of Palestine. Dr. Weizmann has stated, indeed, that provision has been made, in connexion with the Enlarged Agency, for the reinstatement of the Zionist Organisation as the Agency under the Mandate, if at any future time circumstances should bring about the dissolution of the Enlarged Agency. But this, as he says, is a remote contingency, and the Zionists are justified in assuming that the financial aspect of the movement for Palestine will be radically improved. It is interesting to note, however, that instead of the annual budget of £1,000,000 which was suggested by the Joint Palestine Survey Commission as a minimum, the Zionist Congress will be asked to ratify a minimum budget of £750,000 a year for the next two years. This last figure represents an increase of fifty per cent. over the budgets for the financial years 1927-1928 and 1928-1929.

The Revolt in Persia.

The course of the revolt among the tribesmen in Persia has been singularly difficult to follow, owing to the meagre information supplied by the Persian Government. As far as can be gathered, the situation among the Kashgais is stabilising itself, but trouble is reported among the Arab tribes of the South who are said to be endeavouring to throw off altogether the authority of the Teheran Government. It is remarkable to notice that Persians themselves—particularly the Russophil *Chafagh Sorkh*—have not failed to criticise their government, and particularly the Minister of War, for not publishing fuller information on this rebellion—with the natural consequence that wild rumours abound. Certainly it might have been beneficial, seeing that the revolt began early in June, if official Persian announcements had not confined themselves to remarking that the situation was well in hand. A better conception of the seriousness of the revolt is gained perhaps from the statement that the Minister of War himself, Jaffar Kuli, the Sardar Assad, has been sent from Teheran to pacify the Bakhtiari. But even now the position is obscure; it is still unknown even whether the insurgents had anything other than a negative aim in the vigorous attitude which they have adopted. From the facts that the outbreaks have been sporadic and not simultaneous it is probably to be

inferred that grievances were local rather than general, and that no common ambition united the rebels. If, however, the revolt has taught the Teheran Government the folly of imposing non-essentials upon tribesmen who are perfectly good Persian patriots, it may not have been without its benefits. The warning must nevertheless be issued that the end of the rebellion has not yet been achieved; nor will those who realise that the tribesmen are the backbone of Persia fail to be anxious until definite news is to hand that these hardy sons have been reasonably pacified.

INDIAN NOTES.

Commerce and the Police.

It is a matter for some regret that the lack of unanimity among the constituent members has necessitated a further representation being made by the Associated Chambers of Commerce to the Statutory Commission upon a point which, while of relatively minor detail, nevertheless raises issues of far-reaching importance. In its original Memorandum, the Association, it will be recalled, stated that a majority of its members was in favour of the transfer to Autonomous Provincial Governments of the control of the police and the responsibility for the maintenance of law and order provided safeguards were laid down for efficient administration and the security of life and property. At the same time, in view of the fact that other Chambers preferred either to see the Police Administration in the hands of the Central Government, or at least maintained as a Reserved subject under the direct charge of the Governor of the Province, no definite recommendation was put forward. Furthermore the issue has been somewhat confused by the use of a much wider and more comprehensive term—Law and Order—in the Memorandum of the European Association. It is now shown that, with two exceptions, the Chambers are definitely opposed to the transfer of the control of the Police Administration to an elected Minister responsible to the Legislature. The point would seem to resolve itself largely into the practical question that, if representative institutions are to be a success in India, the Indians will have to realise the paramount necessity of an efficient police force. Will they ever, however, appreciate this undoubted fact, unless and until they are made responsible for such a body? After all the maintenance of Law and Order—in the general and broadest sense—is the primary function of every Government; and there can be no such thing as provincial autonomy if this responsibility is not borne by the provincial administrations.

THURSDAY, JULY 18, 1929.

EGYPT AND GREAT BRITAIN.

The return to London of Dr. Hafiz Bey Afifi, Egyptian Foreign Minister, with the Prime Minister, Mohamed Pasha Mahmoud, who had paid a brief visit to Paris, has given rise to the supposition that negotiations are in progress with the British Government for a settlement of all questions outstanding between the two countries. At the same time confident reports in the London Press that an Anglo-Egyptian agreement may be expected within the course of the next few weeks have been interpreted to refer to a final adjustment of the four Reserved Points. It is more than probable that the event will prove that the wish in this case is, as often, father to the thought. With the advent to power of a new Government in Great Britain, it was a wise move on the Egyptian Prime Minister's part to pay a visit to London, in order to establish personal touch with His Majesty's Ministers. Both Mr. Ramsay MacDonald and Mr. Henderson, it is not unreasonable to suppose, were glad of an opportunity to form a first-hand opinion of members of the Government of a country so closely connected with Great Britain as Egypt is. It cannot be overlooked that the present régime in Egypt is familiarly described as a dictatorship, and that consequently some fundamental incompatibility of temperament between the "Dictator" and a British Labour Government might be expected to develop in any negotiations for a settlement of the future relations of the two countries. The establishment of personal touch between the members of the two Governments would, at least, enable one or both to determine how far labels in these cases are an infallible guide, and whether good government is not possible under more forms than one. There is reason to suppose that Mahmoud Pasha's visit to London has, in this respect, achieved its object. Neither the man nor his methods suggest the dictionary dictatorship, and one result of the personal touch established between the two Governments would appear to be that the present British Cabinet is as ready as its predecessor to give Mahmoud Pasha the fullest credit for the soundness of the intentions with which he took office and the substantial measure of achievement that he has already attained.

The hopes entertained by the Egyptian Opposition that the new Government in Great Britain could be persuaded to dictate to Egypt the form of government that it must adopt could never be fulfilled and have now been definitely belied. For the last year the spokesmen and writers of the Wafd have never wearied of describing their country as living "in an atmosphere of dictatorship and terrorism." Only last week the details of the picture were filled in by the Secretary-General of the Wafd in suitably lurid colours :—"Hardly a day passes without the arrest

of individuals of different classes, or the suppression of newspapers, or the searching of private houses without legal warrant, or the preventing of public and private meetings, or assault on demonstrators, or disbanding of law courts or the dismissal of officials and mayors and students, or the passing of laws of exceptional rigour." Now, even if this description were literally correct, it could not be overlooked in Great Britain that every single measure mentioned might not only be justified, but also be imperatively necessary for the restoration to good government of a country that had been at the mercy of a régime which, with the Wafd's record, sought to introduce the Wafd's Law of Public Assembly. The issue between the Opposition and the present Administration in Egypt appears to turn on the interpretation of good government, and the Wafd can hardly fail to realise that there was nothing in its own record which would lead any British observer to suppose that it had even an elementary knowledge of what the term implied or indeed of the real meaning of constitutional government. When, therefore, another party comes into office in Egypt which proves that it has entirely different ideas of what constitutes good government, it is necessarily assured of a sympathetic attitude on the part of any British Cabinet. It was only to avoid a greater evil, involving other than Egyptian interests, that Great Britain took the extreme step of interfering in the matter of the Public Assembly Law. Mahmoud Pasha's Government has been long enough in office to show that under the present régime there is no likelihood of a repetition of the provocation. The change thus indicated in Anglo-Egyptian relations could not fail to be welcomed in Great Britain, and, on the top of the good impression that the new Egyptian Government has already created by its administrative measures, the British Prime Minister had no reason to delay his personal assurance to Mahmoud Pasha that a Labour Cabinet has no intention of interfering in the purely domestic affairs of Egypt.

Any agreement that may be reached as a result of the present discussions in London is more likely to be connected with the system of Capitulations in Egypt than with the Reserved Points that await settlement for a final adjustment of Anglo-Egyptian relations. Preliminary conversations on the subject had been initiated by Dr. Hafiz Bey Afifi during his visit to London before the General Election, and there is no reason why the new Government should not formally conclude the arrangement that had already been reached in principle by its predecessors. Egypt necessarily looks to Great Britain for a lead to be given to the other Capitulatory Powers, and the ease with which the existing system is adjusted to modern requirements will depend largely on Great Britain's whole-hearted support of the Egyptian contention that no case can any longer be made out for the retention of the Capitulations. That a Wafd Ministry, so long as it persisted in its indifference to good government and in its Britain-baiting infatuation, could never have secured the full measure of British support will not be lost on the great body of Egyptian public opinion. Neither Mr. MacDonald nor Mahmoud Pasha is likely to make the mistake of supposing that all the questions at issue between the two countries can be finally adjusted, until the Egyptian Parliament is once more in existence. Given good will on both sides, the Reserved Points have been shown to lack any urgency for settlement. In the meantime Egypt has an opportunity to set her own house in order, with the knowledge that the more thoroughly this work is carried out, the more likely is the final settlement of Anglo-Egyptian relations to conform with her own way of thinking. Mahmoud Pasha has decided that Egypt's future depends on her capacity for good government and hard work. On this point the Wafd joins issue with him, maintaining that years of barren controversy with Great Britain were more in keeping with Egypt's dignity and interests. In a controversy of this nature no British Government has any part, and its rests with the Egyptian people to decide, of its own free choice, which school of thought it favours.

'The Near and Middle East

From Our Own Correspondents.

Cairo, July 6.

The High Commissioner.

The High Commissioner is back after a week's tour of Syria and Palestine. He was the guest of M. Ponsot at Beyrout, after which he visited Tripoli, Homs, Khaled El Husny and Damascus. At Damascus he was entertained by the French High Commissioner's delegate. From there he motored to Nazareth and Jerusalem, and returned *via* Ludd and Kantara, where he inspected the War cemetery. Lord Lloyd has not yet fixed his departure for Europe, but it is highly probable that he will leave before the middle of the month. Mr. Reginald Hoare, the Counsellor at the Residency, will be Acting High Commissioner during his absence, and the Residency will be transferred to Bulkeley for the summer.

The New Customs Tariff.

While the new tariff itself, drawn up by the foreign experts engaged for the purpose, is still under consideration by the Egyptian Government, the latter has communicated to the various Chambers of Commerce part of the new regulations which it is proposed to apply under the régime of specific duties. I understand that the British Chamber of Commerce has presented to the Government a Note in which it criticises the new regulations, and gives it as its considered opinion that the Government would be well advised to abandon the proposed substitution of specific duties for the existing system of *ad valorem*, and so avoid the many complications which it foresees will arise if the change is introduced. I have reason to believe that the other commercial communities are likewise exercised, in regard not so much to the change in method of assessment of duty, as to the situation which will arise from the alteration of system.

The Mixed Reforms.

The Justice and Foreign Affairs Committee which is dealing with the proposed reform of the Mixed Tribunals is still far from reaching the end of its labours. It is expected that by the end of the month the special sub-committee will be in a position to submit a text of the proposed code of criminal procedure to meet the needs of the transfer of limited criminal jurisdiction. But no further progress has been made with the scheme for the reorganisation, and it does not look as if it will be possible to present any concrete proposals to the Powers before the late autumn. As is well known, the Egyptian Government is now very anxious to obtain a complete transfer of criminal jurisdiction from the Consular to the mixed jurisdiction instead of the limited transfer which it proposed itself two years ago.

One of the directions in which reform is urgently needed and where, without waiting for any decision with regard to matters now under consideration, the new Procureur-Général could render a service to the community, is in regard to motor-car contraventions. While the severer enforcement of traffic regulations, which has been effected during the past year or so, has done much to improve the state of the streets and prevent the dangerous driving, which not long ago made them a positive danger zone, nevertheless a system is really iniquitous where it is possible for motor-car owners to be reported for contraventions without their being at all aware that they have offended, for writs to be served months after the offence has been committed and without giving any reasonable notice for the offender to make arrangements to appear in Court, and for sentences to be inflicted without the offender's being aware that he has been called before the Courts. One hears on all sides strong complaint in this respect, and it is certainly high time the whole matter was placed on a proper basis and an end put to the delays and injustices which now take place.

Copyright Congress.

Next winter the *Association Internationale de la Propriété Artistique et Littéraire* will hold its congress in Cairo, and the King has just signed a Decree creating an Organising Committee under the presidency of the Minister of Education. This Congress will discuss, among other matters, the question of copyright, in regard to which Egypt is very badly organised. A special commission was formed two years ago to study the question and to draft a law. The commission carried out its mission, and the text of the proposed legislation was duly published. But the question got no farther, and the draft has gone to keep company in the Government archives with the many other similar projects which bear witness there to the fate which befalls so many good intentions in this life. Perhaps the imminence of this Congress may stimulate the Government to resurrect this excellent project and get it put into operation in the same manner as the knowledge that the Tropical Medicine Congress was to be held in Cairo last winter impelled the authorities to promulgate a month or so before it met the much-needed law regulating the practice of medicine in Egypt.

The Pilgrimage.

This year's pilgrimage to the Holy Places of Arabia is now over, and has been declared by the Quarantine Board as net, i.e., free from infection, though as smallpox exists in the Hijaz it has been laid down that all returning thence must undergo vaccination unless they have been recently vaccinated or have suffered from that disease. Just under 28,000 pilgrims have so far passed through Tor, the quarantine station for those belonging to or returning to their homes *via* the north. (The other pilgrims from the Far East and West Africa undergo their quarantine at Suakim, Kameran and Massawa.) Of these 18,600 were Egyptians and the rest foreigners, including 2,100 Algerians, 1,500 Syrians, 1,500 Tunisians, 660 Iraqis,

1,300 Persians, 400 Moors, and 500 Palestinians. Special arrangements for their repatriation have to be made so as to avoid congestion and delay, and the organisation of the Quarantine Board, which is responsible, works nowadays exceedingly smoothly in this respect. Very considerable improvement has been made in the accommodation available for pilgrims at Tor, and it is now possible for better-class Muslims to secure special treatment at a relatively cheap cost.

The question of giving a concession to an Egyptian company, who would provide ships meeting the peculiar requirements of the pilgrim traffic, is at present under consideration. But if this is done, clearly one of the conditions should be that the ships should be British built and British manned, while the principle of Anglo-Egyptian financial and economic co-operation, which is so close to the heart of Mohamed Mahmoud Pasha, could be adopted by laying down that the capital should be part British and part Egyptian.

The Taxation Question.

In usually well-informed Egyptian circles it is affirmed that within the very near future the Egyptian Government will receive the assent of the Powers to the imposition of the ghaffir tax on foreigners and the introduction of a petrol tax. Contrary to what is generally said, the ghaffir tax was never rejected by the Powers, when it was originally put up. It was referred back because they did not consider that the organisation and mode of assessment and collection gave the necessary guarantees. During the War it was collected under martial law, but large numbers of foreigners still refuse to pay it, in many cases with the assent of their Diplomatic Representatives. The tax is a perfectly just one, if a proper service and assessment are provided, and as guarantees in regard to these are forthcoming it is expected that the assent of the Powers will be secured. The petrol tax is likewise perfectly just, since motorists will only contribute to the upkeep of the roads, to which the proceeds are to be devoted, in proportion to their use thereof. It is also expected that some arrangement will be made with regard to a better organisation of the various dues which the municipalities and local councils collect. But no assent will be given to any form of taxation which is to produce fresh revenue without giving in return a service, and it is from that point of view that the proposed stamp duty, which was to have brought in well over £E500,000 per annum, will, it is expected, fail to go through.

Sofia, July 10.

A Political Provocation.

There are some people, living for the most part outside Bulgaria, who do not wish to see appeasement settle throughout the country. This appeasement, towards which the Liaptcheff Government has worked wholeheartedly and in which it has made increasing progress, received a powerful impetus from the amnesty which was recently introduced into the Sobranye, for all those compromised in the internal struggles of the last few years. The Sobranye showed particular generosity towards the Agraro-Communists, of whom the greater number have been pardoned and have resumed their peaceful work. This was a wise gesture of confidence on the part of the Government, for the country wished only to forget and to

liquidate the civil war. But this pacification and this return to legality inspired justifiable fears among the fomenters of trouble, particularly among those Agraro-Communist chiefs who had emigrated. For these saw that they might be abandoned by their troops and remain completely isolated. And so the idea arose of organising a criminal persecution in the hope of frustrating the good effects of the said amnesty.

This provocation took place on July 6 in the form of an attack on the carriage of the President of the Council, M. Liaptcheff, and of the Minister of Public Works, M. Vanileff, on the road from Kritchim to Plovdiv. Happily, the two Ministers were not inside. They had gone to this district in order to be present at the inauguration of the construction of the great national route joining Kritchim to Deuven, two important forestry centres whence Bulgaria obtains almost all her wood for building purposes.

The attack, badly organised, and even more badly executed, was evidently designed to provoke new disorders and new persecutions so that peace could not be consolidated in the country. The Government, perceiving the intention, resolved to change in no way its policy of appeasement.

The Return of Radoslavoff.

At the same time as it amnestied the Agraro-Communists, the Government, in its aim of liquidating the political past, granted an amnesty to those responsible for the great national catastrophe, namely, M. Radoslavoff and M. Tontcheff, who in 1915 decided upon allying Bulgaria with Germany and upon fighting against the Allies of the Entente.

This amnesty has irritated the Serbs, who imagine that Bulgaria is returning to the policy of 1915. The Belgrade Press, which writes only to order, has directed a violent campaign against the Bulgarian Government. Serbo-Bulgarian relations are extremely strained. The aggravation would certainly be even more dangerous if M. Radoslavoff, who since 1918 has been living as a political *émigré* in Berlin, were to return immediately to Bulgaria, instead of postponing his action, as he has done, until the end of the summer.

It must be emphasised that the amnesty of M. Radoslavoff does not bear the interpretation given to it in Belgrade, and that even if the ex-President of the Council, who is 75 years old, wished to preach an anti-Serb policy and a war of revenge, he would find in Bulgaria no listeners, the Bulgarian nation hoping only for peace in order to pursue their political, economic, social, and cultural ends.

But the amnestying of M. Radoslavoff has had another unexpected effect. It has provoked a grave crisis within the Government group of the Democratic Entente. The friends of the President of the Council, M. Tzankoff, have voted against the Cabinet. The friends of M. Liaptcheff press for an open rupture with the recalcitrants. A change in the Ministry in the near future can be foreseen, and it is probable that M. Liaptcheff will take as collaborators with him the representatives of one or two groups of the Opposition.

The Yugoslav-Bulgarian Conflict.

The intervention of the Powers which I foretold in my last letter has come about.

The representatives of Great Britain and France have notified the President of the Council of the *démarches* which their two Governments made to Belgrade to bring about a softening of the régime on the Serbo-Bulgarian frontier and the ratification of the protocols of Pirot, and the provisions which they include for the liquidation of all incidents by the regular functioning of a mixed body of control. They have urged the Bulgarian Government to take appropriate measures in the task of smoothing down the difficulties with Yugoslavia, to assure the maintenance and consolidation of peace in the Balkans.

It is hoped that after this intervention of England the situation will gradually mend and the danger of complications be avoided.

GREECE.*Athens, July 9.***The Budget.**

The Budget proposals for 1929-1930 were discussed in the Chamber on June 29. The reduction of 107 million drachmæ in naval expenses, originally estimated, will, it seems, be sensibly modified, in view of the development in Turkish naval policy. The chief feature of the new Budget is that the failure of the heavy direct taxes is recognised, and many of them will be dropped. To fill the gaps in the revenue thus created, it is proposed to create an organisation like the *Istituto Nazionale di Assicurazione di Vita* in Italy, which would, in co-operation with the National Bank, monopolise life insurance; to extend the lottery system; to bring back foreign and Greek capital which has been driven away by the severity of the conditions imposed upon it in recent years, and to attract new capital.

A Minister's Resignation.

The most interesting political event during the last fortnight has been the retirement of M. Zavitsianos, Minister of the Interior. It was not the first time that he had sought to resign, but on each occasion the Prime Minister had succeeded in prevailing on him to reconsider his decision. The ostensible reason is a difference of opinion over the appointment of candidates for the posts of Mayor of Athens and Salonika, M. Venizelos holding the view that these appointments should be non-political. One may conjecture that the real reason lies deeper, and that causes of a more personal nature have something to do with the resignation, not so much between the retiring Minister and his chief as between the Minister and other members of the Council. It seems that M. Christomanos, Sub-Minister of Health, almost followed the example of his colleague, but fortunately he has been persuaded to stay. With his autocratic temperament the Prime Minister cannot always be an easy person to work with or under, and those who do must often be content to submerge their own individualities. In this connexion, it is interesting that after prolonged *pourparlers*, M. Michalakopoulos, a man of marked individuality, has consented to become Minister of Foreign Affairs and Vice-President of the Council. M. Argyropoulos becomes Minister of the Interior.

Collections for the State.

The heirs of the late M. Benachi have presented to the nation his residence and the collection of objects of art which it contained. This collection contains much valuable Rhodian pottery and pictures of historic interest. In the same building will be housed the collection of M. Antoine Benachi, consisting of Oriental objects and relics of those who took part in the War of Independence.

Another valuable collection which has been acquired by the State is the Mavrocordato Library, bought last year from the heirs of the Mavrocordato-Baltazzi family. The collection was formed by Prince Alexander Mavrocordato and his brother Nicholas; it will be divided between the National Library, the Library of the Chamber, the General Archives, and the Academy.

Archæological Controversy.

Archæological results of unusual interest are reported from excavations on the island of Ithaca, which have been undertaken by a local architect, M. Oiconomou. That modern Ithaca was the Ithaca of Homer was until a short time ago accepted without question by almost everyone. But the researches of Dr. Doerpfeld, the famous German archæologist, compelled him to abandon this view and to see in the neighbouring island of Leukas the authentic Ithaca. Though the Homeric description can be made to fit equally to both islands, what was really wanted to clinch the argument either way was remains of the Mycenæan Age—in other words, the palace of Odysseus. Unfortunately for their respective champions, neither island had been able to produce them. Now news comes

that M. Oiconomou's researches have revealed considerable Mycenæan (as well as pre-Mycenæan) remains. First reports from archæological excavations should always be received with caution, but should these from Ithaca be confirmed, the controversy will assume a new aspect: the Ithacists will have the best of the argument, until the Lefkadists can produce something equally good.

The Tourist in Greece.

Gratitude is due to M. Constantine Melas, Director-General of the newly-formed autonomous "Office of Tourism," for his remarks at a recent meeting of that body. It is refreshing to hear that Greece, in developing her tourist possibilities, is not to become a large hotel for the exploitation of her rich visitors; that the words "exploitation of foreigners" should be erased from the Greek vocabulary; that the Office of Tourism has an obligation to the country, to its past, present, and future; that tourists must be made to regard their visit to Greece as a pilgrimage, and that the glories of mediæval and modern, as well as of ancient Greece, must be brought before their eyes. All this is admirably said. The chief difficulty in its realisation will be the tourist. Perhaps the day will come when tourists will be allowed to land only if they have first passed an examination on the history and antiquities of the country. The very rich can always find somewhere else to go, or they might even stay at home.

CYPRUS.*Nicosia, July 1.***The Situation.**

tive Council (excepting two who are absent from the island) met on June 19 to discuss the situation, at the Archbishop's residence. It was decided that a deputation of two members, viz., the Bishop of Kition and Mr. N. Nicolaides, should proceed to London to present a memorial, drawn up by three members of the Council, to the Secretary of State for the Colonies. At a further meeting on June 21 the memorial was fully examined and agreed to. It is a long one, and is intended to enlighten fully the new Minister for the Colonies and the Government as to the state of island affairs as described by the Greek leaders. It is submitted that it behoves Great Britain, whose principles respecting the rights of subject peoples are so well known, to yield, as a duty, to the claims of the Greek Cypriots, who form the large majority of the population, based as they are on ethnic and historical considerations. It also proceeds to criticise adversely the backward state of the country, and refers especially to an alleged over-burdensome and increasing taxation, to a too costly administration, to an excessive number of British officials, many of whose offices are stated to be sinecures, to the neglect of agriculture and its many needs, and of the industrial classes, to the need of better communications with Cyprus, of the improvement of harbours, and other public works.

The Greek Archbishop has telegraphed to Mr. MacDonald, "in the name of the Cyprus people," their congratulations on his accession to the office of Prime Minister and expressed the hope that in the carrying out of the principles of the Labour Party the rights of the Cypriot people will not be overlooked. His Eminence has been informed by letter from the Colonial Secretary that his congratulations to His Majesty on the occasion of his birthday have been forwarded to the Secretary of State.

Development of Flax Cultivation.

The Agricultural Department continues to take active measures for the improvement in flax cultivation and its preparation for export. It is said that the Imperial Board for development of Empire products will grant £2,500 for three years, provided that the Cyprus Government will contribute an equal amount. The centre of activity is Zodia, where there is a factory. Two students of the Cyprus Agricultural School are now in N. Ireland, and on their return will be employed in teaching advanced methods of cultivation and preparation for export.

General News.

The Turkish community has now submitted a petition, similar to that of the Greeks, that a Director of Education

may be appointed for their community. It is much to be regretted that there should be so long a delay in appointing a successor to Canon Newham.

The Anglican Bishop in Jerusalem, Dr. McInnes, who visited Cyprus on June 6, and who has been to Limassol and Larnaca, as well as Nicosia, left the island on June 10.

The *Gazette* states that Sir Ronald Storrs was granted further leave of absence, on half salary, from May 18 to June 17.

Archdeacon Buxton, of Nicosia, has left for a visit to England.

THE ANGLO-EGYPTIAN ASSOCIATION.

The Anglo-Egyptian Association held its annual gathering on July 11 at the Victoria Hotel. The afternoon gathering, at which some two hundred guests were present, was followed by a Dinner. Colonel Sir Henry Lyons presided in the absence of the Chairman, Lord Allenby, and the Association had as its chief guests Colonel Sir Henry McMahon and Lady McMahon. Sir Henry Lyons proposed the toast of "The Guests," and Sir Henry McMahon replied. Canon Horan proposed the health of the Honorary Secretary, Mr. H. Ward Boys, to whom the Association was indebted for the successful meetings that day.

Among those present were:—Mr. and Mrs. Beeston, Col. and Mrs. Blunt, Mr. and Mrs. Boxwell, Sir A. Boyd-Carpenter, Mrs., Miss, and Mr. Boyd-Carpenter, Mr. and Mrs. Ward Boys, Mrs. Henry Boys, Miss Brockwell, Mrs. Bury, Mr. Campbell, Mrs. Carey, Mr. and Mrs. H. B. Carver, Mr. L. J. Carver, Miss Clark, Mr. and Mrs. Crewe, Dr. and Mrs. Day, Miss Devonshire, Sir E. Dowson, Mr. and Mrs. Duke, Mr. Edleston, Mrs. Finlaison, Mr. Foote, Mr. and Mrs. E. W. P. Foster, Miss C. and Miss S. Foster, Mr. Foster-Smith, Miss Frinneby, Mr. and Mrs. Gandy, Mrs. Godfrey, Mr. Griffin, Mr. and Mrs. Griffith, Col. and Mrs. Clifford Hall, Miss Hame, Mr. and Mrs. Henderson, Mr. Hendry, Mr., Mrs. and Miss Hopkins, Canon and Miss Horan, Mr. and Mrs. Kinder, Major and Mrs. Liddell, Mrs. Lowe, Miss Lowndes, Mr. and Miss Macaldin, Mr. and Mrs. McCallan, Mr. McAllister, Mr. McClean, Mr. McColl, Mr. Mackness, Messrs. Mason, Moore, Moss, Pringle, and Spooner, Mr. and Mrs. Peckitt, Mrs. Rabagliati, Mr. and Mrs. Richards, Mrs. Travers Symons, Mr. and Mrs. P. M. Tottenham, Major-General W. Turner, Mrs. Caux, Mr. Waller, Colonel and Mrs. Watson, Captain Weldon, Mr. T. W. V. Williams, Lady Willcocks, and Mr. Young.

THE "ASIATIC REVIEW."

The *Asiatic Review* for July is an unusually interesting number. Included among the articles issued under the auspices of the Asian Circle is one by Sir Denison Ross upon "Impressions from the Near and Middle East," and an anonymous one on "Some Features of the Afghan Problem"; and in the section called "The Inner East" are two very valuable articles, one by M. Mustapha Chokaiev on "The Bolsheviks and Afghanistan" (which contains much new matter, derived from Central Asian sources), and the other by Mr. W. E. D. Allen on "Recent Soviet Publications." Other things to note in an excellent number are the numerous reviews, and an article on "Exploring Royal Nineveh," by Mr. Warren Dawson.

THE OLD PAULINE CLUB.

The Old Pauline Club held its annual dinner at the Trocadero Restaurant, London, on July 9. Mr. Cyril Bailey, President of the Club, was in the Chair. India was "represented" by Sir Leslie Wilson, late Governor of Bombay, Sir Arthur Froom, Mr. H. A. Sams, and many others, and references to the India Branch of the Club disclosed the fact that some four hundred Old Paulines are resident in India.

Several prominent Turks and Jews have been arrested in Constantinople and Angora. They are all concerned in the gunpowder and explosives monopoly, and are suspected of having indulged in corrupt practices.

The Commission appointed by the Greek Senate to examine charges against General Pangalos, the former Dictator, and his Ministers, on July 9 decided to liberate General Pangalos, M. Tantalides, his Minister of Finance, and M. Vogopoulos on bail.

After the conclusion of the joint *jirgah* (conference) of Afridis, Sunni Orakzais and Shiah Orakzais at Peshawar, the Afridis interviewed the Political Agent and agreed to hold another *jirgah* in their own country with the Orakzais in a further attempt to find a formula acceptable to both tribes for the settlement of the dispute over the village and lands of Kalaya in the Tirah, where Shiah property has been occupied by Sunnis.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 27.

The Viceroy at the Chelmsford Club.

The other evening at the Chelmsford Club in Simla Lord Irwin delivered by far the best of his speeches in India. To begin with it was a debating fighting speech, really an answer to the too vehement, little truth-regarding critics of the Government, those pandits who so, ordinarily, have it all their own sweet way in the Assembly. It was a speech spoken from the Viceroy's clear-thinking head, and not, as his other speeches have been, from his sympathetic heart, from his generosity and desire not to hurt. It is better to hurt a little while day is than to wait and hurt a great deal, when the dark comes, the dark that in India will be public confusion, disturbance in the country, and general fear. It is still day with us; it is even more still the day than the editors of such newspapers as the *Manchester Guardian* think, and there is no need to consider desperate remedies. If things are allowed to drift, the dark will come, and with it the need for desperate measures; but the Viceroy seems resolved not to let things drift any further, and India is to be congratulated on that.

The Critics of the Government.

The critics of the Government of India are for the most part critics of its proposal for legislation, if of late the arrest of the Meerut accused has added an act of administration to the black-list. The Viceroy was thinking of those arrests, when he said: "Let no one deceive himself. The effect of a transgression of the law is more far-reaching than the actual breach committed, and any society that forgets that the reign of law is a condition of its existence will soon find itself helplessly drifting towards the cataracts of anarchy. I do not claim that the Government of India is perfect. Few human institutions are, but I do claim that it enjoys no monopoly of human wickedness, and that its opponents enjoy no monopoly of human wisdom. I find it hard to believe that those who attack the Government on these lines are concerned so much to examine the merits or demerits of a particular policy as to use any argument—good, bad, or indifferent—which may in the opinion of some bring discredit upon the Government."

The Indictment.

The Viceroy was speaking of those who have been attacking the Government "on these lines." What lines these were he had stated in an earlier passage of his speech. The principal indictments in the count are three in number—the Public Safety Bill and the Ordinance that was enacted, when the Assembly President's ruling stopped further progress with the Bill, the Trades Dispute Act, and "certain arrests and prosecutions during the last few months." The Viceroy dealt with these one by one; he dealt with them forcibly, if sometimes with a little too much subtlety for his audience; and any man who declares himself not satisfied shows himself to be an unreasonable being. I have dealt with the matters myself in past letters, if without that inside knowledge of the working of the Viceroy's mind that His Excellency was to be supposed to know more about than I could know. They are none of them of the kernel of the Indian tangle; so no more need be said about them. There are more important things to pass to, things that are of the tangle. Let us pass to them. The Viceroy's speech will naturally be read in full by those on your side who are following Indian affairs with close attention.

The Statutory Commission.

Speaking of the work of the Statutory Commission, work that the Viceroy must be expected to regard as important, however others may think that the tide has flowed so far since the Commission was conceived as to

make its work no longer as important as it promised to be at the beginning, the Viceroy quoted that passage from Sir John Simon's speech at Ootacamund that I called attention to myself at the time: "No one," said Sir John, "should regard the Statutory Commission or its colleagues as though we were settling or deciding the constitution of British India. Our task is very important, but it is not that. Our task is that of making a fair, honest, and sympathetic report to the Imperial Parliament. When we have made our report, then it would be India's opportunity to make her full contribution, which is right and necessary, to her future constitution, which would be framed by Great Britain and India together." That is so; but let the Statutory Commission *make its report quickly*: there is need for that. If the situation is not critical, but serious, it is so because India has grown impatient: India is at the moment in the frame of mind of the man who is afraid that, if his wife dawdles any longer, they will miss their train. The Statutory Commission is the wife this time; India the husband.

The Communal Problem.

The Viceroy dealt, of course, with the communal problem. I have said that the Chelmsford Club speech was his best in India so far. One thing that made it so good was its comprehensiveness. It surveys the whole vexed ground, the whole field of battle. It would not have done that without an examination of the communal problem. My letters would have failed of comprehensiveness, if they also had left the communal problem out in the cold. Speaking of that problem, the Viceroy said: "We know very well that as a political question the communal problem is still unsolved. As in the international problem of disarmament, the first requisite of progress is to exorcise and allay the spirit of suspicion and fear that forbids mutual confidence and drives men to seek security in the strength of their own defences, so it is with the communal problem in India. Could the leaders of the majority communities once convince the minorities that their interests are in no danger at their hands, the backbone of the problem would have been broken. This the leaders of the majority communities alone can achieve, and they would be the first to recognise that they have not yet succeeded in it. So long as this is so, it must remain the purpose of all patriotic men to bend their energies to the task of bringing into concord the different component parts of India's common life, and in the meantime to avoid anything that may make their task more obstinate." That is the way to speak to them; to tell them plainly that the task is theirs; theirs, not the task of the British in India.

The Agricultural Research Council.

The Viceroy's task the following day was a much pleasanter one—that of delivering the inaugural address to the Agricultural Research Council, the body called into being on the recommendation of the Royal Commission on Agriculture. One is not sure that the same criticism could not be brought against the Council that has been brought, by myself among others, against the machinery provided for the banking inquiry—that it is too large and promiscuous a body; but as the work to be forwarded is that of research, and as that must be the work of trained scientists and not of any council throned above them, its being a promiscuous body may not matter so much. If the Government of India, with the Viceroy at its head, is open to serious criticism—I believe it is—it is because of its childlike complacency over the bodies that it calls into being to carry through important public tasks. It is open to criticism on that ground, and on the ground of the many bad appointments it makes. Simla is far too full of incompetent men.

The Bombay Mill Strike.

The new Governor of the Bombay Presidency seems, fortunately for Bombay, the most distracted spot in India at present, one of the competent, even one of the highly

competent. He has been bending his energies to mobilise the competent in Bombay, with a view to having that vexed mill strike settled, and has gone about things in a way to show that he is possessed of an original mind. So vexed a thing as that demented strike was not to be settled in a day, even by a man of very great originality, and one cannot yet report the thing as settled; but the outlook is more hopeful than it for long has been. The Bombay Stock Exchange has been re-opened, and that may be taken as a sign that, in the opinion of the share brokers, the worst is over.

COMMERCE AND THE SIMON COMMISSION

In the issue of *THE NEAR EAST AND INDIA* of August 23, last year, we reviewed at some length the able and reasonable memorandum which the Associated Chambers of Commerce of India and Ceylon had submitted to the Statutory Commission on behalf of the European commercial and industrial community in India. In that memorandum it was explained that there was considerable divergence of views among the members of the Association as to the control of Police and the maintenance of law and order, but that a majority of the Chambers were in favour of a transfer of that subject, holding that the risk involved in such transfer must be taken if any real measure of self-government were to be given to the provinces.

In the oral examination of the Association's representatives which took place last January a number of questions were asked with the object of ascertaining the strength of the majority in favour of that transfer. The Association's representatives explained that the majority had been merely numerical, on the basis of each Chamber having one vote; that possibly some of the larger and more important Chambers had not been with that majority; and that had the voting been taken on the usual basis, each Chamber being credited with a number of votes corresponding roughly to its membership, the result might have been different. A question was also asked as to whether the view expressed in the Memorandum was the view of the majority of the Chambers, but the witnesses were unable to answer that question.

The report of that oral examination has been studied by the members of the individual Chambers and has led to further discussions on the subject of the transfer of Police and of law and order. As a result of such discussions and of subsequent happenings in various parts of India, opinion has been modified and has become more definite. It is felt that the oral examination may have failed to give a true impression of the views of the Chambers at the time the Memorandum was submitted, but, however that may be, it seems clear that the Memorandum does not reflect faithfully the views held by the various Chambers at the present time.

It is difficult to exaggerate the importance of this question of the control of the Police and the maintenance of law and order, for upon the good administration of this Department depend the stability of the country and the security of life and property. The Association, therefore, has felt it necessary to reopen the subject with the Commission and to endeavour to remove any misunderstandings which may have arisen from the oral evidence by placing before the Commission the views held by the Chambers at the present time.

In a second Memorandum, which was addressed last month to the Commission in London, the Association expresses regret that the fact that these views differ from those expressed in the Memorandum may cause inconvenience to the Commission, but adds that it feels sure that the members of the Commission will recognise that it is right for the Association to remove any wrong impressions that may have arisen as to the views held by individual Chambers on this important matter.

"The Association," the Memorandum proceeds, "has referred this question to each of its constituent Chambers for further discussion and has now received replies giving the present views of those Chambers. It is the general wish of members of the Association that their views should be recorded on the subject in so far as concerns their own Province. A summary of those views is, therefore, set out hereunder province by province.

"The Bengal Chamber, in reply to the reference made to them along with other Chambers, states that in their opinion the Commission, and the Joint Free Conference, clearly understand there is a wide divergence of opinion among the Chambers in the matter, and that accordingly no further representation to the Commission is necessary. Such a representation would, in the opinion of the Bengal Chamber, be required only if there were any doubt in the minds of the Commission and the Joint Free Conference on this point. While this is their feeling, the Bengal Chamber, in response to a request that they should state their views in the matter, expresses the opinion that unless the responsibility for the maintenance of order (which they regard as the primary function of Government) is transferred to the charge of a Minister, provincial autonomy cannot be regarded as having a proper chance of fulfilment. At the same time they appreciate the grave dangers attached to this policy, and they would not be averse to any scheme which postpones the transfer of the Police until the Local Government shows signs of permanent stability.

"The Bengal Chamber further considers that the grant of full provincial autonomy should be accompanied by the strengthening of the Central Government's ultimate powers of maintaining or restoring order; in this connexion they offer the suggestion that the Armed Police in each Province might be strengthened and retained under the Central Government for discipline and pay, but be seconded for service when required under the local Government in whose area they are serving. The two other Chambers of Commerce situated in Bengal, viz., the Chittagong and Narayanganj Chambers are quite

definite in their opinion that, as far as Bengal is concerned, the control of the Police and the maintenance of law and order should not be transferred to a Minister. The latter Chamber is in favour of the control of the Police being reserved and in the hands of the Central Government.

"The Bombay and Karachi Chambers of Commerce agree in opposing the transfer in their Presidency. The Bombay Chamber of Commerce is of the opinion that its view that the control of the Police and the maintenance of law and order should not be transferred is immensely strengthened by the very serious communal rioting in Bombay during February and May this year when conditions of communal discord would have rendered it, in its opinion, impossible for an elected Minister to have functioned successfully.

"The Karachi Chamber of Commerce has already put its individual views on record with the Commission and desires to abide by these as expounded in oral evidence. Briefly speaking, they do not favour transfer at present, but consider that the constitution should allow for the transfer later on, should conditions so warrant.

"The Madras Chamber of Commerce definitely favours, so far as the Madras Presidency is concerned, the transfer of Police Administration to the charge of a Minister directly responsible to the Legislature. In this view they are supported by the Cocanada and Coimbatore Chambers and opposed by the Tuticorin, Cochin, Tellicherry and Calicut Chambers. The last named Chamber contests the right of the Madras Chamber to speak for the whole of the Madras Presidency and claims that both geographically and ethnographically Malabar is entirely separate from the rest of the Presidency. It is strongly of the opinion that whatever arrangements may be made for the rest of the Madras Presidency, the Police of the whole district of Malabar, including the Malabar Special Police, should be placed under the control of a special Commissioner of Police directly responsible to the Central Government. With these views the other Chambers situated in the Malabar District, viz., Cochin and Tellicherry Chambers concur.

"The Burma Chamber was not associated with the Associated Chambers' original Memorandum, but they desire to emphasize that the reasons which prompted them to dissociate themselves from the views of the Association in the first place still hold good and that they are strongly opposed to any proposal to transfer the control of Police Administration as far as Burma is concerned.

"The views of the Upper India Chamber of Commerce are already on record with the Commission and they desire to abide by them. They are definitely against transfer for the reasons given in their Memorandum and expounded in oral evidence.

"The Punjab Chamber desires to abide by the views expressed in its separate Memorandum to the Commission in which at page 10 the view is expressed that the general Police Force should be under the direct control of the Central Government.

"It will be seen from the above opinions, which cover those of all constituent members of the Association except the Ceylon Chamber, who are not directly interested, and the Northern India Chamber who prefer not to express an opinion, that the majority view is now quite definitely opposed to the transfer of the control of Police administration to an elected Minister responsible to the Legislature. It is with the object of making this fact quite clear that this further reference is made to the Commission."

The letter concludes with an intimation that all save one of the gentlemen who composed the delegation which gave oral evidence in January in Calcutta happen to be in England at the present time and, though no special reference has been made to them in the matter, the President of the Association has little doubt that they would be prepared to appear before the Commission to elucidate the Association's position and to speak for their respective Provinces, if the Commission so desired.

THE SECRETARY OF STATE FOR INDIA.

An Appreciation.

"The well-kept secret of the India Office," remarks the *Review of India*, in an editorial reference to the new Ministry in its June issue, "was perhaps the biggest surprise of all. Many probabilities were mentioned for what is likely to be in the near future one of the most difficult of all offices; none of them materialised. Mr. MacDonald has done well in bringing to bear on the great problems ahead in India one of the cleverest and most vigorous minds at his disposal. Captain Benn, as politicians go, is a young man for the great office with which he has been honoured, but he has proved in other spheres that he possesses the qualities essential to success—brain, courage and sympathy."

An interesting sketch of the career of the new Secretary of State appears in the same issue of the monthly organ of the European Association, from which the following is reproduced:—

"Few who have followed the brilliant career of Captain Wedgwood Benn, or who have personal contact with his magnetic personality, will doubt that his selection for the position of tremendous responsibility which the India Secretaryship to-day entails, will be justified by events. For 'Little Benn,' as he has long been affectionately called in the House of Commons is in almost every sense of the word a 'big' man."

After explaining the circumstances in which, after being a Liberal Member of Parliament for twenty-two years, Captain Wedgwood Benn decided last year to join the Labour Party, the writer of the sketch concludes: "The other issues which we cannot escape will confront Captain Benn at the India Office. He may succeed or he may fail in the handling of them, but they will at all events be faced with courage by a fresh, vigorous, unprejudiced and sympathetic mind."

LORD IRWIN'S RETURN.

A distinguished gathering welcomed Lord Irwin on his arrival in London on July 13 on four months' leave of absence. Those present on the platform at Victoria Station to greet the Governor-General, who was accompanied by Lady Irwin, included Sir Robert Vansittart (representing the Prime Minister), Mr. Wedgwood Benn, Secretary of State for India; Sir John Simon, Sir Atul Chatterjee, High Commissioner for India; the Maharaja of Alwar, the Maharaja of Burdwan, the Maharaja of Rewar, the Earl of Inchcape, Sir Hugh Stephenson (Governor of Bihar and Orissa), Colonel J. F. Stanley (Governor Designate of Madras), Sir Charles Harrington, Sir Umar Hayat Khan, Sir Michael O'Dwyer, Sir Saikaran Nair, and Dr. Drummond Shiels (Parliamentary Under-Secretary for India).

The proceedings were of a purely informal character and elaborate precautions were taken by the authorities to prevent any possible disturbance. Lord and Lady Irwin left for their country seat at Garrowby, near York, the following morning, but the Governor-General is expected to return to London shortly for consultations with the Secretary of State for India.

Dr. Drummond Shiels, Parliamentary Under-Secretary of State for India, has appointed Mr. George Mathers, M.P. for Edinburgh West, to be his Parliamentary Private Secretary.

Fleet Orders announce that the sloop which is under construction by Messrs. Swan, Hunter and Wigham Richardson for the Indian Government has been named Hindustan.

The King has approved the appointment of Mr. Walter Frank Hudson, C.I.E., Indian Civil Service, as a member of the Executive Council of the Governor of Bombay in the vacancy caused by the retirement of Sir Jean Louis Rieu.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE "ENOSIS" AGITATION IN CYPRUS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I read your article headed "The Dodecanese and Cyprus," which appeared in your issue of May 30, and I should be grateful to you if you would be good enough to allow me to use your columns to say a few things about that part of our article which referred to Cyprus. Your newspaper, it is well known, is exceptionally well informed on Near East matters, and that is why I was particularly surprised to notice your reference to "a handful of the Island's Greek lawyers who share with Athenian politicians a belief in the divine right of demagogues to spoils of office." You evidently do not happen to know certain facts which you will be interested, I am sure, to hear. About five-sixths of the inhabitants of this Island are Greeks. Thousands of these Greeks fought and were distinguished as volunteers in the Greek Army during the recent wars of Greece against Bulgaria and Turkey, and I have no reason to believe that all these were "politicians" or "demagogues." Now these Greeks, in spite of their deep respect for Great Britain, want to form part of the Greek Republic—which they monotonously enough insist on calling "Mother Country"—rather than to continue to belong to mighty Great Britain, towards whom they feel utter strangers. The above wish of the Greeks has been considered by many humble Britons and many illustrious Britons not as an abnormal one, but rather as quite normal and even noble. All these facts, Sir, you apparently do not know, and you are under the impression that "a handful of lawyers" make all the fuss here about Union with Greece, and, therefore, it would have been unfair for us to say that all you wrote about Cyprus was merely a clever, although somewhat uninviting specimen of cynical literature. That is why I disagree with some of your readers who understood you to mean that the word "Justice" should be discarded from the English vocabulary. Your beautiful language has many words synonymous to "Justice," but I like best of all your term "Fair Play," and as long as those two wonderful words are not effaced from your language, and British hearts continue to feel their stirring beauty, Cypriots shall not despair of the ultimate success of their cause, which asks for nothing else but "Fair Play."—I am, etc.,

MICH. HERACLES MICHAELIDES.

Member of the Legislative Council.

Limassol, June 12.

[The "facts" to which our correspondent refers are well known. Cypriots, in common with Greeks from Egypt, America and other parts of the world, volunteered for war service with Greece; but the latter do not use this patriotic action as an argument for the incorporation of Alexandria or New York in the Greek Republic. The British Government has indicated to Greek Cypriots, in effect, that, while it sympathises with their aspirations, there are weighty international reasons why it cannot accede to their request for union with Greece. This point of view has been endorsed by the present Greek Prime Minister, who has warned both Greek Dodecanesians and Greek Cypriots to cease their agitation. M. Venizelos has possibly realized that the method adopted by the Turks of ridding themselves of agitation on the part of the Greeks in Asia Minor might be applied with effect elsewhere, and he wants no further influx of repatriated Greeks this time from the Dodecanese and Cyprus. One of the difficulties with which Great Britain has to contend is that no equivalent of the term "fair play" (which our correspondent rightly extols) exists either in the Greek or in the Turkish language, and unfortunately in the glib appropriation of an essentially British conception the Greek and Turkish interpretations

are diametrically opposed. Thus what seems to our correspondent to be merely a matter of justice and fair play—the handing over of Cyprus to Greece—becomes in the eyes of the Turkish inhabitants of the Island an act of flagrant injustice and unfair play. At the same time long suffering Europe would be saddled, by the action of Great Britain, with yet another Minority problem. As for the urban character of the "Enosis" agitation, nothing that our correspondent write invalidates this established fact. When the handful of agitators have been careful to explain to all Greek Cypriots and to place in the forefront of their propaganda that "Enosis" means conscription, heavier taxation, government from Athens and no guarantee from capture by any Power with a more powerful navy than Greece's, it will be time enough to claim that the agitation for union has been spontaneous amongst the peasants, who form the bulk of the Greek community in Cyprus.—E.D.]

NON-ARABS IN SOUTH ARABIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Mr. Bertram Thomas and Mr. Philby in their discussion in your last issue of the Arabic word *Ahl al Hadara* (or more correctly *Hadarah*) seem erroneously to connect it with *Hadara*, meaning to cast down from a height. But this last word is spelt in Arabia with a "d," whereas the first one is spelt with a "dad," and so they are of two separate roots and meanings.

The late Miss Gertrude Bell made a similar mistake in one of her early books, saying how absurd(?) the Arabs were in naming the desert *Béida* and a white house *dar al Béida*!

It may, therefore, help these two scholars to compose one of their differences to know that *Ahl al Hadara* means nothing more or less than "The Moderns," i.e., towns' people, not nomads.

This mistake is excusable for strangers, because even Persians and Turks cannot pronounce this Arabic "dad" and make it "z," as in Reza for "Reda" and "Idul-Azha" for Idul-Adha"—hence the Arabs call themselves "Ahlu-dad."—I am, etc.,

A. SEFI.

July 6.

THE "BECCAFICO" OF CYPRUS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—With reference to the *Cyprus Gazette* of April 12, a Bill to amend the Game and Wild Birds Protection Law, I take it that the chief purpose of the Bill is to prevent the capture of the "Beccafico" or "Ambelepoulia." This is the *Sylvia atricapilla*, the Blackcap; although other species such as the *Ortolan* and the *Garden Warbler* are sometimes included under the somewhat loose designation of "Beccafico." (See J. A. Bucknill; "Ornithology of Cyprus.")

Protection is advocated on account of the benefit rendered to agriculture by these birds, who are said to feed upon insects. But there is considerable difference of opinion on what is the food consumed by them. Many farmers in Cyprus deny that they eat insects. This is probably because the injury to farming caused by the destruction of the birds is more than compensated for by the profits of the trade. According to Witherby ("Practical Handbook of British Birds," Volume 1) the food of the Blackcap consists of "insects, fruit and berries." A resident of Larnaca who has tested the question by opening the stomachs of these birds, states that "They do not eat grapes, their principal food being the berry of the thinia, figs and blackberries." We are not informed which are the harmful insects destroyed by these birds. Is it not possible that they destroy a good many useful ones?

Protection is advocated again because the practice of using birdlime for the capture of these birds is a cruel one. No serious person will deny the cruelty or will fail to hope for the prevention of it, as soon as possible, by legal or other means.

But, in my opinion, it is undesirable and indeed unfair at one blow to sweep away a trade which has for several centuries been carried on in Cyprus. Long before the Turkish occupation (1553) these birds were pickled and exported in jars to Venice year by year. Their numbers do not seem to have been appreciably reduced in spite of this trade. Many poor people in the Famagusta and Larnaca districts earn their daily bread by catching these birds during the three months August, September, and October. The villagers of Paralimni, Ayia Napa, and Sotera claim that they can make about £1,500 per annum out of the business. If this traffic is to be forbidden, surely some *quid pro quo* is due to those who have hitherto been accustomed to depend for their living upon it?

The effect of this Bill, if carried into law as it stands, will alienate the sympathies of the majority of the village people on the South side of the Island.—I am, etc.,

HAROLD BUXTON.

Nicosia.

PERSONAL AND GENERAL

TO-DAY

July 18, 1929 (New Style).

July 5, 1929 (Old Style).

Saphar 10, 1348 A.H., of the Muslim Calendar.

Tammuz 10, 5689, of the Jewish Calendar.

The Bulgarian Minister left London on July 10, for Brighton.

Lord and Lady Irwin arrived in London on July 13, and left the following day for Yorkshire.

Mr. and Mrs. Sperling arrived last week at Donnington, Newbury, from the British Legation, Sofia.

M. Georges Cattau, Secretary to the Egyptian Legation, last week returned to London from Berlin.

Lord Lloyd, High Commissioner in Egypt, sailed for Alexandria on July 11, in the *Ausonia* for Geneva.

Abdel Malek Hamza Bey, Counsellor to the Egyptian Legation in London, has been appointed *Chargé d'Affaires*, in succession to Sesostri Sidarouss Bey, who leaves shortly to take up his post as Egyptian Minister in Athens.

Captain Sir George Rowley left London on July 11, to join the P. and O. s.s. *Macedonia* at Marseilles for Bombay.

The Roumanian Minister and Mme. Titulesco arrived last week in Venice. M. Constantin M. Laptew is acting as *Chargé d'Affaires*.

The Maharaja of Alwar and Sir John and Lady Maffey were among the guests at a Dinner Party given by the Prince of Wales on July 9.

The Prince of Wales received Captain C. E. Turle, R.N., late Head of the British Naval Mission in Greece, on July 11, at St. James's Palace.

Sir Ronald Storrs left England on July 10, on his return to Cyprus. Lady Storrs and Miss Mary Clowes will be at 84, Elm Park Gardens until the beginning of August.

Sir Louis and Lady Kershaw sailed from Southampton, on July 13, in the Viceroy of India for a Mediterranean cruise.

Mahmoud Pasha, Egyptian Prime Minister, who left London on July 8, for Paris, to meet King Fuad, returned with Dr. Hafiz Afifi Bey, Egyptian Foreign Minister, on July 11.

The King of Egypt, who will arrive at the Ritz Hotel from Cairo on July 20, for a stay in England of from four to six weeks, has accepted an invitation by the Lord Mayor of London and the Lady Mayoress to take luncheon at the Mansion House on Tuesday, July 23.

It is announced in the *London Gazette* that the King has granted to the following permission to wear the under-mentioned decorations and orders granted to them by the respective foreign Government:—

Star of Roumania (Grand Officer).—Mr. Smith Austin Guest.

Brilliant Star of Zanzibar.—Mr. Shapurji Dunjishaw Bhicaji Elavia.

The King has approved the appointment of the Hon. Sir Francis Oswald Lindley, his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Oslo, to be his Majesty's Ambassador Extraordinary and Plenipotentiary at Lisbon. Sir Francis Lindley has served in many other capitals, including Teheran, Cairo and Athens.

Dr. Seton Watson, who, while on a journey in Yugoslavia, was taken ill some time ago and underwent a slight operation at Sarajevo, in Bosnia, has made satisfactory progress and is now convalescent.

REPARATIONS IN TURKEY.

The Commission for the Assessment of the Damage Suffered in Turkey, which has its headquarters in Paris, is now approaching the end of its labours. It has examined and disposed of more than 16,600 claims presented through the British, French, Italian and Japanese Delegations, and has accepted over 8,800 of these. The awards total more than ten million Turkish gold pounds, so that the percentage payable will not amount to more than 52½ per cent. of the amounts allotted, and of this a preliminary distribution of 40 per cent. has already been made in the great majority of cases.

Final payments of awards on this basis—i.e. a further 12½ per cent.—will be made as soon as possible, without awaiting the assessment of the few cases which remain to be disposed of from Delegations other than those mentioned above. For these a fixed sum has been set aside by the Commission from the total amount placed at its disposal.

Resmijeh Tarzi Khanum, mother of Queen Surayya of Afghanistan, arrived in Constantinople last week, accompanied by other members of the Afghan Royal Family.

The Greek Chamber has passed a Bill authorising the issue of an international loan of about £2,000,000 for the purpose of indemnifying the Greeks who suffered losses during the War.

Negotiations in Angora between M. Pappas, Greek Minister to Turkey, and the Turkish delegates for a settlement of outstanding questions between Greece and Turkey, in which a hitch occurred recently, are being continued.

Sir Demetrius George Metaxas, G.C.V.O., for 13 years Greek Minister in London and afterwards at Rome, left unsettled property in England valued for probate at £14,906 gross, with net personalty £14,656.

The trial in their absence of the former Croat Federalist Deputy, Dr. Ante Pavelitch, and of his secretary M. Pertchetz, on charges under the Defence of the Realm Act was begun in Belgrade on July 11.

The recent troubles in Afghanistan, according to *The Times*, have left their mark on the stamps in the form of a special imprint incorporating the title of Habibullah applied at Kabul to the remaining stock of the last issue of Amanullah. The circulation of these overprinted stamps is of course restricted to the region at present under the control of the Government of Kabul and does not extend over the entire country.

Book Review

SAID BIN SULTAN.

"**SAID BIN-SULTAN, 1791-1856, Ruler of Oman and Zanzibar. His place in the History of Arabia and East Africa.**" By Rudolph Said Ruete (London: Alexander Ouseley, Ltd. 16s. net.)

Here is a book about one of the greatest figures thrown up by Arabia in a thousand years, a claim the author may fairly be said to sustain. The author, Mr. Rudolph Said-Ruete, is no less than the grandson of its hero, Said bin Sultan, and in this historical biography of the Ruler of Oman and Zanzibar during the first half of the last century, Mr. Said-Ruete gives us a serious contribution to modern Arabian history. Assiduous care has been devoted to the collection of the materials, its treatment is scientific, and one feels that the author has brought a filial devotion to his task.

The period coincides with that of the early days of militant and proselytizing Wahhabism, of Qawasim piracy in the Persian Gulf, of the Egyptian Invasion of Arabia under Muhammad Ali, and of the later days of British and French rivalry for trade supremacy in the Indian Ocean. And if these issues are not primarily the subject matter of the book, it is their repercussions on Oman and Zanzibar affairs that provide the situations with which the life of Said is bound up.

In 1806 Said came to the throne of Oman, an immature youth of 15 years. It was no bed of roses. His father, Sultan bin Ahmad, the son of the founder of the Albu Said Dynasty, had lately been murdered on the high seas by Qawasim pirates, and his death, in a theocratic Ibadhi State where succession was not necessarily determined by primogeniture, was the signal for a rising by an uncle. Another uncle, cherishing similar ambitions, was acting Regent, and the two in their respective bids for power proceeded to make ruinous alliances with the two enemies of the country, Wahhabi invaders on the one hand, Qawasim pirates on the other. The first act of young Said was to decoy his Regent Uncle and to assassinate him. This "will to power" was applauded by the country. It was no strange means to employ. Incidentally Said's successor, Thuwaini, was destined to be murdered by his own son, Salim, who thereupon succeeded to the Sultanate, and during the past five years fratricide, a time-honoured institution for the purpose has on three several occasions been responsible for a change of Shaikhship in the powerful Omani tribes of Bani Ali, and of Bani Yas of Abu Dhabi. There followed a rallying of the tribes to Said's side. The Wahhabis withdrew. Our East India Company, which had suffered heavy depredations from Qawasim piracy, and was shamefully faced with having to buy immunity, had up to this time observed a clearly understandable neutrality in internal affairs in Oman. But now it saw in the turn of events—and a Commercial Treaty between the Young Ruler and the French may have provided a spur—a suitable ally in Said to approach the Qawasim question. The Qawasim were thereupon driven into the arms of the Wahhabis, who, with the recent arrival of Saoud himself, their leader from Najd, were at this time in the ascendant. A British Expedition was fitted out to attack Ras al Khaima, the pirates' stronghold, Khor Fakan, another

lair, and Shinas, where the Wahhabis had obtained a footing. All the objectives were secured, but no sooner had the British Fleet left for India than the good work was undone. The Wahhabis revived, and proceeded to overrun the country. Said turned in vain for support to the British. He then obtained 1,500 Persian mercenaries from the Governor of Shiraz, but they proved ineffective. Baraimi, the headquarters of Wahhabi activities—it still inherits a nebulous tradition whose victim I myself have been when turned back from before its gates—now received further reinforcements under two Najdian princes, and the Wahhabis, sweeping like a flood through the land, soon had the two principal ports of Sahar and Matrah, the latter only two miles distant from the capital, Muscat, at their feet. Said had no other course than to buy them off with an annual tribute of 40,000 dollars, a burden from which he could only hope for relief by their declining fortunes. Fortunately, respite was at hand, its sources, largely extraneous, springing from the Egyptian invasion of Arabia under Muhammad Ali, the death of the Wahhabi Chief, Saoud, and the decision of the India Government to send another expedition against Ras al Khaima. This, with which Said co-operated (1819), consisted of nine ships and 3,000 men. It succeeded in giving the final *coup de grâce* to Qawasim piracy and a stunning blow to their Wahhabi alliance. For Said matters rapidly mended: and now, in 1820, after fourteen years of incessant struggle, he found himself the unchallenged ruler of his country. This marked the end of the first of three phases, of almost equal duration, which made up his fifty years reign.

The middle phase, the sixteen years 1820-1836, was characterised by a policy of overseas expansion. Said had nourished secret dreams of becoming master of the Island of Bahrain, had already in fact, with his Persian allies, made an attack, albeit abortive, on the Qawasim established there, but he now turned his eyes to covet wider horizons, and for the next eight years his activities in the Persian Gulf suggested that that inland sea was, for the nonce, Persian only in name. Oman is essentially a maritime State with a long coastline, a large sailor population, a wealth deriving from freedom to sell its date produce overseas, and a secondry industry in its fisheries. Outlets it must have, to live. Even before the accession of Said, Bandar Abbas, Kishm, and Hormuz had been leased to Omani Imams by the Persians, and Said's appointment of Governors and tax collectors to this part of Southern Persia, now invested him with virtual sovereignty there. In 1826 he conducted a fleet to Basrah and brought back the Turkish Pasha a prisoner to Muscat, his design to blockade Bushire in the same year was only prevented by British representations, and two years later he must perforce make yet another vain attempt on Bahrain.

But the results of these Gulf adventures were ephemeral. It is the work of the next following eight years, 1828-1836 that forms a more notable achievement, for it was then that Said, facing right about, laid the foundations East Africa. For this the natives had paid a nominal and East Africa had existed from remote times. As early as 1652 an Imam of Oman sent a fleet to expel the Portuguese from Mombasa, and it was an Omani fleet which in 1698 led to the final expulsion of the Portuguese from East Africa. For this the natives had paid a nominal tribute to Oman, but emboldened by the disruptive effects attending the dynastic change from Ya'araba to Albu Said, they had of late defaulted.

Said, secure in Oman, now turned his attention to this African Arcadia. He fitted out and personally conducted four expeditions during the period 1828-1836, and on the last occasion remained in Zanzibar for a space of three years, during which time he disposed characteristically, if mysteriously, of his rivals after arresting them

and dispatching them by ship to Bandar Abbas. In 1839 he returned to Oman for a season, disturbed by the news of Muhammad Ali's successful Arabian war of annexation. Said is believed to have cherished an Egyptian *rapprochement* with a view to securing Bahrain, but sensing Muhammad Ali's own ambitions, wisely abandoned this shadow for the substance of British friendship, which grew apace.

The last phase of his reign was spent consolidating himself in East Africa. The year 1840 saw him undisputed Ruler of both Oman and Zanzibar, but it was the latter place that he now made the seat of Government, and thither, and not to Muscat, was posted the British Resident to his Court. Indeed, for the next sixteen years Said paid but two short visits to Muscat, where his son Thuwaini was Regent, and these only under the compelling influence of a reviving Wahhabi menace. It was on the sea voyage as he was returning from Muscat to Zanzibar that he died in 1856.

Said's name to-day is a name to conjure with South Eastern Arabia, where his achievements are held in proud and sacred memory, achievements of a resolute, resourceful, liberal-minded leader of man. To have welded a tribal State, riven by internal dissension and buffeted from without, into any sort of cohesion, would have been a statesman's lifework; what shall we say, then, of the qualities of heart and mind by which he not only accomplished this, but also conquered and consolidated a great African possession, and built up a considerable private fortune (without, be it noted, forfeiting the love and respect of the common people) as shipowner and merchant prince?

More visible, more fruitful results of Said's work are his introduction of the clove into Zanzibar, the now flourishing industry by which the Island principally lives; his co-operation with us in the suppression of slavery, a tremendously strong initial action for an Arab Ruler to take, when one remembers that in his country slavery not only had religious sanction but also represented a powerful vested interest, and finally his Commercial Treaties with Britain, France, and America, Treaties sought by the Great Powers for the first time at his hands, and which substantially endure to this day.

Mr. Said-Ruete is to be congratulated for producing so valuable a work on his august ancestor, a work which no student of Arabia can afford to miss. **BERTRAM THOMAS.**

"THE MOSLEM WORLD."

The July issue of the *Moslem World* contains two articles which will be of exceptional interest to reader of *THE NEAR EAST AND INDIA*. These are "Christians at Mecca," by Mr. Arthur Jeffery, and "Mohammed Abduh the Reformer," by Dr. C. C. Adams. The first, which is inspired by the recent publication of Mr. Eldon Rutter's "Holy Cities of Arabia," mentions, from the roll of Christians who since the sixteenth century have penetrated into the Hijaz, Ludovico di Varthema, Vincent Leblanc, Johann Wild, Joseph Pitts, Badia, Seetzen, Burckhardt, Finati, Roches, Wallin, Burton, Keane, Hurgronje, Courtellemont, Wavell, and finally Rutter. It is a representative, though by no means complete list, and as an introduction to a fascinating subject will be found very useful.

The article on the great Islamic reformer, Shaikh Muhammad Abdu, is also valuable. It refers to his early connexion with *Al-Ahram*, his co-operation with Jamal Al-Din Al-Afghani, his endeavours to reform not only Al-Azhar but also the whole of Islam (two of his *fatwas*, for instance, declared it permissible for Muslims to eat the flesh of animals slaughtered by Christians or Jews; and for Muslims to deposit money in the Postal Savings Banks of the Government). His death in 1905 left his work uncompleted, but it is evidence of his tremendous influence upon Islamic, and particularly upon Egyptian thought, that his lectures and commentaries are now being reprinted. At the moment, indeed, the movement to reconcile the fundamental ideas of Islam with the scientific ideas of the West is receiving perhaps its most considerable impulse from the writings and memory of Shaikh Muhammad Abdu. Dr. Adams has written a very timely article.

NEWS IN BRIEF.

M. Neshitch, Yugoslav Minister to Bulgaria, returned to Sofia on July 12

M. Henri Ponsot, French High Commissioner for Syria, arrived in Paris on July 12 from Beyrout.

Mgr. Damianos, Patriarch of Jerusalem, was reported on July 14 to be dangerously ill in consequence of a stroke.

Ismet Pasha, Turkish Prime Minister, arrived last week at Constantinople from Angora for a month's holiday.

M. Venizelos announced in the Greek Chamber on July 9 that the Government would introduce a Bill during the next session giving women the vote in municipal elections.

Prince Mustapha Kiamil Fazil, first cousin once removed to the King of Egypt, has died at Grasse at the age of 43, leaving one daughter, the Nabila Saliha.

The King of Yugoslavia, having ended his tour in Dalmatia, reached the Royal summer residence at Bled on July 11 after traversing a portion of Croatia.

M. Polychroniadis, Greek Minister in Belgrade, was married on July 14 to a Serbian lady, Mlle. Nikolaevitch. The wedding took place at the Greek Legation.

Eighty members of the Archaeological Society of London arrived last week in Zagreb as the guests of the Yugoslav Society of Archaeologists.

In his European tour during the summer recess M. Venizelos will visit London, Geneva, Berlin, Warsaw, Prague, Vienna, Budapest, Bled (the Yugoslav summer resort), and Belgrade.

Famine in the Hadhramaut, in the Aden Protectorate, is reported to be so severe that large numbers of camels have died, and the rate of hire has risen owing to the consequent lack of animals.

Lord Peel will preside at a meeting of the East India Association on Wednesday, July 31, at the Caxton Hall, at 4.30 p.m., when Mr. Kikabhai Premchand, a member of the Indian Central Committee, will lecture on the economic and industrial outlook in India.

Mr. Henry Van den Bergh, who in 1912 presented the Bleazby collection of over 2,500 Islamic coins to the British Museum, and has made other gifts to this section, has now given a series of 16 Indian gold coins, all of extreme rarity and importance, and including several unique pieces.

The ex-Queen Mother of Greece, with her daughter, the Princess of Roumania and Princess Irene, and her grandnephews the Princes Alexander and Nicholas of Karageorgevitch, left Bucharest last week for Bled to visit the Queen of Yugoslavia.

Mr. Peterson, First Secretary at the British Legation, Cairo, is acting as High Commissioner for Egypt until the return of Mr. Hoare, the Counsellor, on July 17. Aly Pasha Maher, Egyptian Minister of Finance, and Mr. Watson, Financial Adviser, left Alexandria on July 11, embarking in the *Ausonia*.

THE WEEK AT HOME

London, Tuesday Morning.

A Lively House.

The new House of Commons is incomparably more interesting than its predecessor, owing mainly to the fact that individual sincerity is being allowed to penetrate the gloomy front which party loyalty has been supposed to demand. It is all to the good when Labour Members of Parliament criticise, and criticise bitterly, their own Cabinet Ministers; it is equally to the good when leading Conservatives offer opposed counsels. For we know from this that men are thinking, and not simply doing what they are told to do.

The Labour Party, of course, were prepared for this. Their leaders knew well that their educational proposals, for instance, would gravely disappoint many members whose return to Parliament was brought about largely through the promise to raise the school-leaving age; they also knew that opposition was certain to their Imperialistic proposals. This division of opinion in the Government Party may become more serious, but it may also become a source of strength, in that richness and variety are added to it.

The Unionists, on the other hand, seem to have been taken aback by the show of dissension in their ranks. They profess to be gravely put out at the difference between Mr. Churchill and Mr. Amery, for example, on the question of co-operation with the Liberals and Socialists; they are perturbed over the obvious difficulty in establishing a common front over the issue of Protection. Their more craven advisers are, therefore, suggesting that Mr. Baldwin should tighten up the discipline of the Party, and put a stop to all this division of counsel.

In my view, it would be in the best interests of the Unionists to allow the widest possible freedom of expression. They need all the brains they can command, and to suggest that all the young men and all the old men in the Party can think, or should vote, in the same way on all occasions, is tantamount to suicide. What is the good of pretending that all Unionists think alike on the question of Free Trade? It would be a gesture that would deceive nobody; and might bring to the Party such disastrous results as occurred to the Liberal Party through the utterly false assumption that they were a united Party.

It seems, however, that all sections of opinion in this House will have a good say—in which case Ministers will have a wearying time, but the country will have good reading and may—who knows?—regain the once firmly held conviction that the "House of Pretence" is, indeed, the font of all political wisdom. It is possible, on the other hand, that the politicians will so disport themselves as opportunists and office-holders at all costs as to bring Parliamentarism into ever deeper disrepute. On first appearances, however, the House promises to be a lively, stimulating, and really helpful one.

Trotsky.

It is commonly said that nothing now divides Tories from Whigs but the fiscal issue. But an instance of where the old Liberal or Radical spirit strongly and solitarily asserted itself occurred last week, when it was announced that the Labour Government had decided not to allow Trotsky to visit Great Britain. The decision was generally applauded—particularly by the Conservatives—but the old-fashioned Liberals were aghast at the inhospitality of the British Government and the violation of our traditions of granting asylum to political refugees.

Why the Home Office under Mr. Clynes acted as it has

done is something of a mystery. Of course there is the obvious explanation that, were the Labour Party to admit Trotsky, the old jibe that Labour man is but mild Bolshevik might receive fresh countenance. That is a poor explanation.

It is suggested, on the other hand, that the present Moscow Administration, with which the British Government wishes to cultivate cordial relations, would dislike such courtesy to be shown towards a man whom they have banished from Russia. That also is rather unconvincing.

It certainly is curious. But one really does wonder whether, as a certain Labour Member suggested, Trotsky should be classed with Garibaldi, Mazzini, and other rebels who found temporary disfavour at home. After all, such men did kindle emotions in Englishmen. But what is the average impression of Trotsky in this country?

Church and State.

There are few wise heads that are not shaking in perplexity over the decisions taken last week by the Convocations of Canterbury and York to ignore the double refusal of Parliament to allow the use of the Revised Prayer Book. No one knows what will be the outcome of the flouting by the Church of England of that Parliament by which it was established. At first sight it appears to point direct to Disestablishment; but that is a hasty and very possibly incorrect assumption.

The details of the problem will be remembered. Certain practices were being indulged in by Anglican clergymen in violation of the law. The Bishops attempted, in the Prayer Book which was rejected by Parliament last year, to bring some of such practices within the law again.

What is now to be done? The Archbishop of York says that the Church must do its best "apart from the law." One understands his position, one sympathises, indeed, with it. But how to defend illegalities? Will Parliament allow itself so to be humiliated as to see without interference those changes which it refused to sanction formally put into practice?

The position is a desperate one—else the Bishops, loyal Englishmen all of them, could not have counselled as they did. Manifestly the relationship between Church and State will have to be modified, possibly snapped. But who will grasp the nettle? That immortal man has not yet appeared.

King Willow.

The bat beat the ball both in the Oxford and Cambridge and in the Eton and Harrow match, but the first was a rather dull, the second a decidedly interesting draw. Unquestionably the 'Varsity elevens were on the whole poor elevens, with little of highest quality in either batting, bowling, or fielding. Enterprise, courage, and imagination were all too infrequently displayed: the off ball was left severely alone in every sense of the word. A draw was, therefore, a fitting result, in the sense that neither side deserved to win.

Eton and Harrow, on the other hand, had an excellent game, with Harrow—whom practically everybody wanted to see win—slightly inferior the whole two days and yet making a most gallant fight.

Of the Test Match, one ought to say only that South Africa had but half a team. They are a very popular side, whose fielding is brilliant, and though their skill is not tremendous, they play the kind of game which endears them at once to the English public. The English Selection Committee, by the way, did a very popular thing in playing Bowley and Woolley.

ALTER EGO.

THE CENTRAL ASIAN SOCIETY.

At a meeting in the Room of the Royal Society, Burlington House, on July 10, of the Central Asian Society and of the Persia Society, it was decided that the latter be merged in the former, on the condition that the Society's new name be the "Central Asian Society with which is incorporated the Persia Society."

THE AIR ROUTE TO INDIA.

The Alexandria-Genoa Section.

By ARTHUR S. MERTON.

Flying Boat G.E.B.V.G. Over Genoa. Imperial Airways started the Great Britain India service three months ago by the inauguration of the air-link Genoa-Alexandria. During the interval the Company has had time to perfect the ground arrangements, and it has been with the object of investigating the conditions under which the trans-Mediterranean service is now run that I decided to travel by it when going on leave, instead of, as usual, proceeding by sea.

The Alexandria-Genoa route is *via* Tobruk, Suda Bay, Athens, Corfu, Naples, Ostia, and Genoa, and is timed to take 3 days 4 hours, connecting at Alexandria with the Government Mail from India and at Genoa with the night train to Bale, whence the mail proceeds to London *via* Paris and Croydon.

The flying boat G.E.B.V.G. in which I am travelling, inaugurated the trans-Mediterranean service on March 3 last. This week's flight has in every respect proved a searching test of the efficiency of the ground organisation, the ability of the pilots and the air-worthiness of the machines.

Even before we left Alexandria we experienced a setback, for on account of the monsoon and other causes the Karachi mail was late. It did not reach Aboukir until the afternoon instead of during the morning and the transshipment of mails and passengers—two Japanese from Kobe—could not be completed until 5 p.m., so we left Alexandria 3½ hours late, which made it impossible to reach Tobruk that evening. To meet the emergency it was decided to stop at Mersa Matruh, about half-way to Tobruk, and continue to the latter place next morning. This eleventh-hour alteration proved a success, for here in a rest-house kept by an Englishman for the caravans proceeding to or from Siwa we passed an excellent night, with good meals, and by leaving early next morning, we were able to keep our contract and call at Tobruk and be off on our cross-Mediterranean journey at almost the hour we were normally due to leave that point. Here came the supreme test of all.

We had reached Crete and had to cross the island at Suda. We rose to 3700 feet and just as the pilot let his engines full out in order to start to cross, the middle engine failed. The machine with a sudden lurch dropped some 500 feet and the pilot only saved the situation by a skilful manoeuvre. We had to make a complete detour and pass round the S.W. end of the island to reach Suda. This took 1½ hours and made us a full two hours late in arriving there, going on two engines all the time.

For a little while it was uncertain whether we should be able to proceed that night, as it was doubtful whether the repairs could be carried out on the spot for us to reach Athens before nightfall. But the M.M. ss. *Imperia*, which Imperial Airways keep at Suda to provide accommodation for passengers and to serve in emergencies as a rescue ship—we found incidentally that she had steam up, so to speak, ready to come to our aid, and we needed it—unable with the flying ship's engineer to carry out the necessary repair-work very speedily and after a good lunch, which we badly needed after an 8 hour fast, we left for Athens at 5.15 p.m.—2½ hours behind time.

Our trying and tiring experience of the day had its consolation, however, in the fact that we passed into the Gulf of Athens, the sun set and our entry into Athens port synchronised with the disappearance of the flaming red sun-disc behind Corinth and the lighting up of Morean Hills in an exquisite pink-mauve mystic light. We reached Athens at 2.45 p.m., but still in a position to continue the scheduled timetable the following morning—an achievement of which in the circumstances Imperial Airways and its personnel may be justly proud. The

day had provided a wholly unforeseeable emergency, the successful meeting of which demonstrated the wisdom of using three-engine machines, the admirable ground organisation which provided relief ships and the means of repair just where it was wanted, the resistance of the *Calcuttas* and the endurance and skill of the pilot and crew. By this time our four passengers had been increased to ten, including Sir Arthur Evans.

The flying from Athens to Corfu is usually the most interesting and picturesque section of the voyage, since it follows the Corinth Canal past Corinth, through the Gulf of that name, past Lepanto, Missolonghi, Patras and round the coast northwards through the Ionian Islands to Corfu. But this time there was an added interest, for over the Dragoneri Isles we saw the Mediterranean Fleet at anchor, preparatory to paying a visit to Zante. We could count twenty-one large units below in addition to an aeroplane carrier with its deck laden with hydroplanes, and close by a swarm of submarine and torpedo-craft. We circled as a salute all round at a height of 1,100 feet, watching the crew drilling on the flag-ship and thoroughly enjoying the spectacle, and as we proceeded on our way to the north, two Moths started off in fast pursuit from the aeroplane carrier and escorted us on either side until we reached the waters round Corfu—a delicate compliment, which we fully appreciated.

Only a short stay at Corfu for lunch—far too short—and then away across the Adriatic and the instep of Italy, which we crossed in 27 minutes, up the West coast to Naples, where, with a magnificent view of Vesuvius in eruption, we landed at 5.30 p.m. To-day we left there at 10.15, on the last of the sea journey, and as the Tiber is too low to allow a landing for lunch at Ostia, we are making one "jump" to Genoa and have taken our lunch literally "*al fresco*" some 2,000 feet above Livorno. We are now within sight of Genoa where we shall arrive three-quarters of an hour ahead of schedule.

And so in half an hour this eventful journey will come to an end and this letter, which, written en route, proves the smoothness of the flying, will be carried on by the air mail *via* Bale and Paris. Its arrival in London on time in spite of incidents, which might well have caused serious delay, is an eloquent demonstration of the thorough efficiency of the Britain and India service. Punctuality is the essence of such a service. But punctuality must be accompanied by "safety first" precautions, and my experience has shown one that both these features are outstanding characteristics of the Imperial Airway's organisation.

I started out last Wednesday evening for Alexandria, an anxious air novice, never having been in the air before. I reach my destination after mid-air baptism inspired with the fullest confidence in air travel.

A Congress of Albanian Muslims from all parts of the country is being held at Tirana to discuss the introduction of reforms under the new Civil Code.

Lieutenant-Colonel Sir Henry Blyth Hill, Bt., D.S.O., late Royal Irish Fusiliers, of the Army and Navy Club, Pall Mall, S.W., formerly Governor of Berber and Bahr-el-Gazal, Sudan, who died on May 2, left £7,528, with net personality £7,418.

Engineers representing the Italian State Railways, who have been seeking oil at Tirana, recently reported important discoveries. One well which was sunk near Ben Kove to a depth of 1,200 ft. is now producing ten tons of oil daily. This output is expected very shortly to be increased.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Growth of Tariffs.

Recent developments provide an interesting commentary on the proposals for reductions in tariffs of the Geneva Economic Conference. Since that Conference there have been a number of reduction in duties, notably in certain Near Eastern countries, and, as our columns frequently bear witness, the process is still going on, but what has been gained in one direction has been lost in another, and now, as if to put an end to all questions of tariff reductions, comes the United States Tariff Bill, which obviously aims at preserving the United States market for home manufacturers. As America is the world's creditor, it would be interesting to know the view of those responsible for the Bill as to how America's numerous debtors are going to pay their yearly instalments if America is unwilling to take their goods. There is also another aspect. The countries who will suffer by the proposed tariff are important customers of America, and if, as will certainly be the case, they resort to retaliation, America may find her tariff a very doubtful weapon. It is not a little difficult to understand America's viewpoint not only with regard to the question of protection, but with regard to other developments since the War. If it had been her object—which, of course, it has not—to make things as difficult as possible for European reconstruction, her policy in regard to War Debts and tariffs could not have been better calculated to achieve it. In the present case she has succeeded in giving an effective set-back to the movement to reduce tariffs; whether there will be other consequences in bringing the Empire and the European countries closer together must remain to be seen.

The New Regime in Roumania.

It is one of the great points in favour of the present Roumanian Government that, unlike so many other Administrations, they have lost no time in endeavouring to translate their pre-election pledges into action. The outstanding case in point is, of course, the new Mining Law, to which I have already referred, which is designed to make things easier generally for the companies exploiting the oilfields and to place foreign enterprise on an equal footing with native capital. An appreciative reference to the new legislation was made at the recent meeting of the Phoenix Oil and Transport Company by Sir Edward Manville, who pointed out that the law had been made much more flexible for foreign interests, and that it was the policy of the Government to do all that was possible in co-operating with foreign capital. A great handicap from which Roumania's oil industry still suffers—the excessive taxation—will naturally receive attention as soon as the Government is in a position to do so, but that is not likely to be just yet, for the rate of taxation is a reflection of Roumania's lack of progress since the War, and it must take some time before the steps taken by the present Government to further the progress of the country have marked results on the economic position.

Tea-Drinking in Egypt.

I referred recently to the surprising development in the consumption of Virginian cigarettes in Egypt. This is by no means the only instance of changing habits in this part of the Near East. Another of equal interest is discussed in a recent issue of the *Monthly Journal* of the British Chamber of Commerce of Egypt, this being the marked

expansion of the consumption of tea in the last few years. In Egypt as in so many other Near Eastern regions the staple drink has been coffee, and except among the Europeans tea has been regarded rather as a medicine than a beverage. A few figures will show how the attitude towards tea has altered. For 1913 the imports of tea totalled 965,971 kgs., as compared with 6,339,157 kgs. for coffee. For 1927 the figures were 3,929,606 kgs. for tea and 9,952,590 kgs. for coffee, while for last year the imports of tea were 6,517,188 kgs., as compared with 8,092,183 kgs. In this case, as in others, as our contemporary suggests, there is little doubt that the change is due to the War. It will be interesting to see how far it will go, and whether the rapid rise in the consumption of tea will go on until it has quite superseded coffee as the principal drink of Egyptians. Incidentally, this change has an important lesson for our traders, showing as it does how a market can be developed for a commodity which has not so far been in favour.

Rise in Tanker Freights.

Messrs. John I. Jacobs and Co. point out in their half-yearly report, extracts from which are given elsewhere in this issue, the change that has taken place in the oil tanker freight market during the present year. While it was believed at the end of last year that the worst of the depression had been seen, they point out that few would have anticipated an appreciation in freight rates of about 80 per cent. But that is what has happened, and while last December 12s. 3d. per ton was quoted, the rate last month was 22s. 6d. per ton. There has been an advance also in time charter rates, and it is evident that the rapid increase in the consumption of oil throughout the world has had the effect of reversing the situation which obtained last year when the available tanker tonnage was in excess of the demand for it.

Furness Withy.

A satisfactory report is forthcoming from Furness, Withy and Co. for the year ended April 30, the net profits being £653,393, as against £627,750 for the previous year. This result is the best achieved since 1921-22. The dividend is maintained at 10 per cent., but the allocation to depreciation is this time £250,000, as against £200,000, leaving the carry-forward at £264,957, as

COMMENTATOR.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, July 10.

Raising of National Bank's Discount Rate.

As a result of the demand for very considerable sums in foreign exchanges to meet the need of imports, which are tending to increase greatly to the detriment of the country's commercial balance, which is already seriously affected, the National Bank has decided to raise its discount rate from 9 to 10 per cent. The rate of interest for deposits of drafts and commercial bills is raised from 10 to 11 per cent.; the rate of interest for current debtor accounts is maintained at its present level.

Textile Workers' Strike.

Following the great strike of tobacco workers, which was terminated by a friendly arrangement brought about by the mediation of the Ministry of Labour on terms which gave the strikers an increase ranging from 10 to 15 per cent. on their wages, Bulgaria has witnessed the outbreak of a number of other strikes. For the most part they have been unquestionably due to Communist agitation. The most important strike has been that of the textile workers at Sliven, which has extended to the factories at Stara-Zagora, Stanimaka, Raikovo, and other places. However, Gabrovo, which constitutes with Sliven one of the two most important industrial centres in Bulgaria, has escaped this epidemic. As it was found to be impossible to bring about an agreement between the workers and the masters owing to the intransigence of the strikers, the Sliven manufacturers have had recourse to a lock-out. They have been less reluctant to apply this measure as the factories are going through a serious crisis as a result of the over-production in the industry which makes it impossible to dispose regularly of the products. It is interesting to note that while the tobacco workers' strike, which was known to be unaffected by subversive influences, benefited by a large measure of support of public opinion, that of the textile workers has been severely condemned in all centres.

Disastrous Storms.

At the end of June terrible storms burst upon Bulgaria, and have caused damage such as the population cannot recall ever having happened before. The disaster (for

such it is), which has affected eight departments, is to be attributed particularly to the serious hailstorms which accompanied the torrential rain, and which in many regions was marked by hailstones weighing a kilogram. Men and women have been killed, or have perished in the rapid inundations, without counting the victims of the lightning. There are places where the hail has been so violent and so prolonged that it has lain a metre thick. The storms have devastated the regions of Trn, Sofia, Orkhanye, Pleven, Sishtov, Bela, Popovo, Lovetch, Sevliyevo, Panagurishtë, Karlovo, Kazanlik, Stara-Zagora, and Nova-Zagora. The north of Bulgaria has generally suffered more than the south. The damage has been particularly severe in the districts of Trn, Pleven, Nicopol, and Svishstov, where all the crops have been destroyed and where there have been twenty deaths. The losses of the farmers are estimated at over 500 million leva.

The Government has taken swift measures to succour the unfortunate farmers, and at its instance the Agricultural Bank has immediately opened credits sufficient to carry out at least part of the requisite reparations and to proceed immediately, with the assistance of the agents of the bank, with the resowing of the fields with late crops so as not to lose the season entirely.

A New Danube Bridge.

The question of the construction of a bridge over the Danube has been for long a matter of discussion between Bulgaria and Roumania, but political vicissitudes and the difficulties of deciding on the locality of the bridge have hitherto prevented its realisation. Recently a new factor has entered into the question: that is the desire of Poland to divert a part of her exports towards the Ægean, and for that purpose to have a way of access to the south. That desire is supported by Greece, who has every interest in the increase of the trade of the Ægean ports. So negotiations have been entered into between these two countries and Roumania for the establishment of more or less direct communications with the Ægean. The new Roumanian Government, presided over by M. Maniu, who has more far-sighted views than his predecessor, has conferred with the Bulgarian Government and discussions are to be opened for the construction of a moving bridge between Giurgiu and Rushchuk, the cost of which will be borne by the two countries. In Roumania this project is linked with the construction of a canal from Giurgiu to Bucharest, which will constitute a branch of the Danube.

The construction of a Danube bridge, if it is realised, will necessitate the re-arrangement of the Bulgarian railway system and notably the union of the Bulgarian railways with those of Greece at Koulata, on the Greco-Bulgarian frontier, so as to avoid the detour by Sofia, Nish, Skoplye. That will represent a great advance of enormous economic importance for the Balkans and the whole of Eastern Europe.

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and super-vises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

GREECE'S TRADE BALANCE IMPROVING.

A large adverse trade balance has been a steady feature of Greece's commerce, and it is, therefore, not without significance that the returns for the first five months of 1929 showed a marked improvement in this respect. This improvement is no doubt to be attributed to a large extent to the part that the refugees are now playing in the national economy of the country. A particularly notable feature of the returns is the fact that the smaller adverse balance has been achieved in the face of a rise in the value of the imports. For the period in question—the five months ending May 31—the value of the imports was 5,541,000,000 drachmæ, as compared with 5,398,000,000 drachmæ for the same period of 1928, while that of the exports was 3,246,000,000 drachmæ, as against 2,323,000,000 drachmæ. Thus the adverse balance for the period was 2,295,000,000 drachmæ, as against 3,075,000,000 drachmæ.

The first place in Greece's imports for the period is taken by the United States with 18.2 per cent., Great Britain being second with 11.6 per cent., Germany third with 9.4 per cent., France fourth with 7.1 per cent., Canada fifth with 6.5 per cent., and Roumania sixth with 6.1 per cent. In Greece's exports the position of the countries is very different. Germany heads the list with 31 per cent., the United States is second with 17.4 per cent., Italy third with 10 per cent., and Great Britain fourth with 5.4 per cent. It is noteworthy that agricultural products still form the chief item in Greece's imports, the total under this head for the period being 1,644,976,000 drachmæ. As regards exports, the principal place is occupied by tobacco, the value of which was 2,154,942,449 drachmæ.

THE INDUSTRIES OF NORTHERN GREECE.

An official report gives some interesting details of the industrial production of Greek Macedonia and Thrace in 1928, from which it appears that the industries of that region showed a considerable development in that period. The chief product of the metallurgical industry is magnesite, of which the production amounted to 8,000 tons, representing a value of 12,000,000 drachmæ. The production of the machine tool industries included 1,600 tons of nails of the value of 8,000,000 drachmæ, 500 tons of metal articles of the value of 5,000,000 drachmæ, 175 tons of aluminium, copper, and tin articles of the value of 5,750,000 drachmæ, 3,000 beds, and 2,000 ploughs, while the work of repairing and manufacturing machines and tools was estimated at 6,000,000 drachmæ.

The building industry had an active year, the output including 30,000,000 bricks, 1,500,000 French tiles, 3,000,000 native tiles, and 60,000 square metres of

mosaics. The value of the output of this industry for the year was 35,350,000 drachmæ.

The spinning mills and the textile industry fill an important part in the manufacturing activities of these provinces, and in the period under review the value of the total output was 534,200,000 drachmæ. The production of the spinning mills amounted to 540,000 bales of cotton thread of the value of 129,600,000 drachmæ, of which 160,000 bales were employed in the local industry and 200,000 were exported to Yugoslavia, Roumania, and other countries. The remaining 180,000 bales were absorbed by local consumption. The manufacture of woollen fabrics amounted to 1,750,000 metres of the value of 210,000,000 drachmæ.

The manufacture of food products, alcoholic liquors, etc., is also of very considerable importance. Flour is the chief product, and represented in 1928 150,000 tons of the value of 1,050,000,000 drachmæ. The value of the production of the other items in this category was 304,606,000 drachmæ.

The chemical industry produces soap, paraffin, and various other products, its output in 1928 representing a value of 26,000,000 drachmæ, for the greater part of which the production of soap, totalling 1,200 tons, was responsible. The leather industry is of considerably greater importance, its production in 1928 amounting in value to 80,000,000 drachmæ. Paper and printing is another small industry of these provinces, the value of its production being about 20,000,000 drachmæ. The tobacco industry is, of course, one of some importance in these provinces, and in the year the value of the cigarettes manufactured was 122,000,000 drachmæ. The electrical industry also plays its part now, and in 1928 the production of electric current by installations in Macedonia and Thrace amounted to 16,000,000 kilowatts of the value of 88,000,000 drachmæ.

The value of the total production of the industries of Macedonia and Thrace for the year was 1,277,106,000 drachmæ, excluding the production of wheat, wine, and oil. Compared with the figures for 1927 of 1,225,675,000 drachmæ, this shows an increase of about four per cent.

AGRICULTURAL METHODS IN CYPRUS.

An article in a recent Agricultural Supplement to the *Cyprus Gazette* draws attention to the shortcomings in the system of threshing which is at present in use in the Island. It is pointed out that the heavy rains at the end of May caused considerable damage to the grain on the threshing floors, while the damp condition has caused deterioration of the straw, and that losses such as these could be obviated by the use of up-to-date methods of threshing. The present method is by the old-fashioned threshing-board, which has been used in the Island since mediaeval times. Recently it has been noted that some of the farmers are using a tractor to pull a large threshing-board, and while this is probably an uneconomic process, it is remarked that it shows initiative and points to the recognition that more modern methods are required. The use of power threshing machinery, it is pointed out, would result in a great saving of time and labour. Thus the animals, instead of being used for weeks or months simply to go round and round the threshing-floor, would be available for ploughing the land after the harvest and for cross-ploughing fallow land. As regards the relative

ATTWATER & SONS, PRESTON, England

values of straw resulting from the threshing-board and power threshing machinery, it is observed that straw threshed by the former method (1) is unclean and unwholesome; (2) the straw is cut so fine that animals have difficulty in digesting it; (3) a considerable part of the best material is blown away during the process of threshing and winnowing; (4) sifting has to be resorted to to remove dirt, stones, etc. On the other hand, straw threshed with power machinery is (1) clean and sweet; (2) wholesome and easily digested; (3) there is no loss in threshing; and (4) it can be fed direct to animals.

THE TRADE OF THE PIRÆUS IN 1928.

Last year there was a slight falling off in the amount of commodities exported through the Piræus, but on the other hand the imports through that port showed a considerable increase. The exports totalled 334,456 tons, as compared with 344,696 tons in 1927, and of this total only 94,623 tons were actually destined for foreign countries, the balance being dispatched to other Greek ports. Italy headed the countries of destination with 18,535 tons, as against 17,975 tons in the previous year, the principal items comprising this total being metals, 5,140 tons, and forest products, 5,951 tons. France was second with 15,807 tons, as against 28,054 tons, the principal commodity being spirits, 13,277 tons. Egypt was third with 12,571 tons, as against 8,462, the principal item here also being spirits, 10,734 tons. Germany was fourth with 11,619 tons, the chief item being vegetables. Great Britain's total was only 3,649 tons, which represented, however, a substantial increase on the total for the previous year of 2,818 tons.

Imports for the year totalled 1,823,681 tons, as against 1,760,689 tons in 1927, an increase of 62,992 tons. Of this total 1,527,095 tons came from foreign countries, as against 1,528,075 tons. The first place in the list of countries as regards imports is taken by Great Britain with 549,606 tons, as against 577,471 tons in 1927. Second comes American with 138,407 tons, as against 198,513 tons, while Roumania was third with 122,157 tons, as against 141,796 tons, and Canada fourth with 109,184 tons, as against 75,051. This development as regards Canada is one of the most interesting features of the year's commerce.

The net profits of the Imperial Bank of India for the half-year to June 30, 1929, were Rs.64,59,300, against Rs.71,38,500 for the corresponding half of 1928. The carry-forward was Rs.16,72,200, against Rs.11,56,600, making Rs.81,31,500, against Rs.82,95,100 at June 30, 1928. The governors have declared a dividend of 16 per cent. per annum, free of tax, absorbing Rs.45,00,000, transferred to reserve fund Rs.5,00,000, to pension fund Rs.3,48,000, carrying forward Rs.27,83,500.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

BULGARIA.

Briquetting Factory.—The Administrative Council of State Coal Mines at Pernik, Sofia, invites tenders for the supply and erection of a complete briquetting factory with washing plant, for an output of 30 metric tons of briquettes per hour. August 30. (D.O.T.)

EGYPT.

Steel Burnishers, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of burnishers, steel; sieves corn; sponges; hobbles, rope; stones, grind; and shoes red to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. September 9.

General Stores, Etc.—The Director-General, Mechanical and Electrical Department, P.W.M., Cairo, invites tenders for the supply of general stores for 1929-1930, such as paints, cotton waste, ropes, chains, pipes, beltings, bolt and nuts, mild steel plates, joists, white metal aluminium ingot, tin ingot, upholstery materials, crockery, cutlery, electric materials, etc., required for Irrigation Services and Pumping Stations of the Mechanical and Electrical Department, Public Works Ministry, Cairo, July 30; and for the supply and erection of a pump and pressure filter required for Maghagha Pumping Station, Maghagha. August 7.

Ghafir Clothing.—The Ministry of the Interior, Egypt, invites tenders for the supply of ghafir clothing (black drill belts, drawers, shirts). August 1. (D.O.T.)

Towels, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of towels, tassels for turbushes, collars and caps, to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. September 2.

CYPRUS.

Gypsum Burning Machinery.—A firm in Cyprus desires to purchase gypsum burning machinery (rotary type). (D.O.T.)

YUGOSLAVIA.

Centrifugal Pump.—H.M. Consul at Sarajevo reports that a local firm of engineers and contractors desire to receive quotations for the supply of a centrifugal pump with accessories. July 27. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, August 6) (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Macharda for Calcutta (Birkenhead, July 25); s.s. Mathura for Calcutta (Birkenhead, August 1).

Bibby Line.—S.s. Cheshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, July 24).

British India Line.—S.s. Merkara for Colombo, Madras, and Calcutta (London, July 27); s.s. Masula for Bombay and Karachi (London, August 10).

Cunard Line.—S.s. Brescia for Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement offers (Liverpool, Glasgow, and Swansea, July 27); s.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, Corfu, and Gruz if sufficient inducement (Liverpool August 3, Swansea August 6).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 3).

P. and O. Line.—S.s. Bhutan for Calcutta (London, August 2); s.s. Rawalpindi for Bombay (London, August 2).

Prince Line.—S.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, July 24); s.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 3); s.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus (London, August 21).

Ellerman and Papayanni Lines.—S.s. Mardinian for Gibraltar*, Algiers*, Malta, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool July 20, Swansea July 20); s.s. Algerian for Genoa, Leghorn, Naples, Palermo, Messina, Cattania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool July 20, Swansea July 25); s.s. Voluturno for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 31); s.s. Andalusian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 8); s.s. Oporto for Gibraltar*, Algiers*, Malta*, Patras, Smyrna, and Constantinople (Liverpool, August 10). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syra and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 16.

The Stock Exchange has passed a dull week, though the improvement in the exchanges and the slight betterment in the monetary outlook for the immediate future produced a better tone in the gilt-edged market. There is, however, very little sign of public interest in the markets, and activity has been confined to one or two special sections. Dealings in the new Cables and Wireless stocks began and provided some interest, but elsewhere in the industrial markets quietness was the prevailing condition. Motor shares were flat on apprehensions of the withdrawal of the McKenna Duties and breweries weakened on the promised appointment of a Liquor Commission, but the downward movement in the latter was overdone and there was a distinct rally later in the week. A rise in the price of the raw commodity stimulated some interest in rubber shares and prices responded quickly, though how far the public is taking part is not certain. It must be remembered that a large amount of money is tied up in miscellaneous shares issued last year which have fallen to rubbish prices, a fact which is likely to act as a serious check upon any revival in speculative activity.

Bank Shares.

Banks, as a whole, have a very good reputation among investors. At present, as is well known, the leading banks, like the railway companies, have been built up by the amalgamation of smaller banks; this process, and the weeding out of the less stable institutions, has resulted in the existing joint stock banks becoming perhaps the most regular profit-earning concerns in the country. While this cannot be said of all the British banks whose business is mainly overseas, most of them are as sound as the British institutions concerned principally with banking in Great Britain, though careful selection is necessary

in the case of banks engaged in foreign or colonial business.

The attraction of banks for the investor is the security of the investment and the regular dividend. The large sums of money handled, in proportion to the capital and the large reserves, both disclosed and hidden—which are also earning profits—give the shareholders real sense of security and the regularity of the dividends is borne out by the unaltered payments of the last few years and confirmed by the unaltered interim dividends this half year. Among the "big four," National and Provincial ordinary shares can be bought to yield £5 7s. per cent. and Lloyds give a return of £5 5s. per cent.

A New Zealand Bank.

An increasing amount of attention is now being given to colonial developments. While sentimentalism in Empire matters may carry optimism beyond the limits of economic reality, there is good reason to suppose that by "getting together" the joint efforts of Great Britain and the Colonies can result in considerable material benefit to all concerned. One of the Dominions that is not so much in the limelight is New Zealand. That country has her own economic troubles and the position was very frankly and clearly stated at the recent meeting of the National Bank of New Zealand, by the Chairman, the Hon. W. Pember Reeves, who is incidentally one of New Zealand's leading scholars and economists. He pointed out that New Zealand is, not for the first time, suffering from unemployment and lack of cheap money for farm development, and many people were emigrating away from the Dominion, while the national debt is exceptionally heavy. The Hon. Pember Reeves is confident that New Zealand can solve these trouble as it has done in the past. Meanwhile, as so often happens, a period of general depression is one of banking success, and the National Bank of New Zealand, after paying a bonus of £11,800 to its staff, made a profit of £290,600, practically the same as last year, and the dividend at 12 per cent. and bonus at 2 per cent., both free of income tax, were unchanged. The bank's shares, which are well secured, can be obtained to yield £4 18s.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

RANGOON, CALCUTTA, and COLOMBO
TO BEIRA, DELAGOA BAY, DURBAN, EAST LONDON
PORT ELIZABETH, MOSSEL BAY, and CAPE TOWN.

The statutes of the new Albanian National (Orthodox) Church have been unanimously approved by a congress at Koritza.

The Port of Aden has been declared infected with smallpox as from June 30.

M. Neschitch, Yugoslav Minister to Bulgaria, returned to Sofia on July 2 after a long absence.

Bayreuth Municipality has decided to confer the freedom of the city on ex-King Ferdinand of Bulgaria, who for many years has attended the Bayreuth Festival.

At the first committee meeting of the International Red Cross Diplomatic Conference in Geneva on July 4 an Egyptian proposal to compel neutral States to permit the passage across their territory of convoys of sick and wounded was not accepted.

The Roumanian Minister of Agriculture, in the course of a recent speech, stated that the prospects of this year's harvest were very satisfactory. The following provisional estimate was given: Wheat, 258,150 wagons; rye, 31,770 wagons; barley, 248,600 wagons; oats, 124,330 wagons. The area under wheat was less than last year on account of the singularly unfavourable weather experienced during the spring, but in spite of this the needs of the country would be adequately covered. It was forecast that there would be a 9 per cent. increase over last year's harvest of rye, and an increase of 65 per cent. and 45 per cent. respectively for barley and oats. According to the estimates, over 180,000 wagons of barley, oats, and rye will be exported. Several foreign orders have already been received, especially for barley. The prospects for the maize crop are reported to be excellent.

Near East Markets

NEAR EAST MARKET REPORTS.

The current issue of the Monthly Review of Barclays Bank, Ltd., contains the following market reports for June:—

Egypt.

During the past month the cotton market has been weak in sympathy with American and local crop news. The general trend of prices has been downward and dullness has been in evidence, especially in the case of stapled cotton. The Egyptian crop, amounting to nearly 8,000,000 kantars, including 2,500,000 kantars of Sakels, has been ample for all requirements. The decision of the Government to dispose of its stock of approximately 340,000 kantars by public auction was received with mixed feelings, but, on the whole, it was regarded as a bearish factor, especially as there is very little demand. Uppers have been in steady request, but ample supplies have kept prices comparatively weak, the only fluctuations being in sympathy with American. Cotton seed has been weak, under the influence of outside markets, but premiums for spot have been well maintained. It is said that the small stock of seed has been sold, and, should this prove to be true, it is thought, in some quarters, that higher prices may be expected for the new crop. There have been no signs of any special demand and local consumption has been slightly below normal. The demand for cotton goods has been moderate and prices have shown an easier tendency. Importers, at present, are disinclined to enter into important commitments, as the future course of the market is undecided.

The spot market for sugar has maintained a steady tone and supplies are normal, with arrivals light. The demand for export and local consumption has been satisfactory. The Java new crop market has ruled quiet, at declining prices, in sympathy with the fall in producing centres. In flour, the nervousness of the wheat market has undermined the confidence of operators and much hesitation has prevailed, while prices have declined. The effect of this situation has been to cause a certain amount of selling, but present quotations are attracting business. During the past month arrivals came in steadily, but the demand was active. Rice markets have been irregular; the demand has been normal, but shipments are shortly expected to arrive, and, consequently, holders show a considerable desire to sell. The demand for gunnies has generally been very slow and prices have ruled weak, under the influence of Calcutta. The turnover of business in cabots has been poor, owing to the absence of demand for export, although, as a result of the steadiness of the producing market, holders, at the time of writing, are not anxious to sell, preferring to await the future course of prices.

The onion season may be considered as practically over. The market has continued depressed and reports from up-country districts state that about 20,000 bags are at the railway station, awaiting shipment to Alexandria. It is not possible to give any precise figures regarding stocks in the hands of cultivators and merchants, as owing to the long period during which they have been left out in the sun or under cover, part of them has been damaged. Holders of stocks are keeping their supplies in the hope of an improvement in quotations, but, failing a rise, it is stated that stocks will not be shipped to Alexandria, as it would not be a profitable operation at current prices. Arrivals in Alexandria since the beginning of the season amount to 2,950,000 bags, against 3,505,000 bags last year. The coffee market has been active and prices have advanced. Cereals have been neglected and quotations are lower, owing to the advent of the new crop, which is abundant for all varieties.

The Sudan.

As usual at this time of the year, business in the Sudan has been very quiet, but there has been some movement in cabots and in the salt trade for Abyssinia. The sesame market remains unchanged and prices are still £E17 for white and £E16 for red f.o.b. Port Sudan. The Tokar cotton crop, the season for which has now finished, has been disappointing, but fair prices have been obtained. The picking of the Gezira Sakel crop has been completed and the yield has come well up to the estimate. In the gum market, prices have shown an advancing tendency, as the supply continues to be somewhat small. There is little change to report in the import market, apart from cabots. Most of the old season's coffee stocks have now been sold and the first arrivals of the new crop are expected towards the end of June. The country is well stocked

with supplies of tea and flour and there has been no change in the prices of these commodities.

Palestine.

The general trade position remains unchanged. A commercial agreement has been concluded between Syria and Lebanon and the Palestine Government, under which it has been agreed to admit, free of duty, goods which are the produce, or partly the produce, of the contracting countries. Weather conditions continue to be extremely favourable and good reports are circulated regarding the prospects of the crops. Harvesting is now proceeding and should be completed in July. Both cereal merchants and cultivators are showing a tendency to conclude advance contracts, although prices are receding, owing to lower quotations prevailing in Canada and Australia. The forward prices of oranges on the tree range from 6s. to 7s. per case. No changes are reported in the market for Colonial goods, with the exception of imported flour. Owing to large arrivals of this commodity from France, prices have fallen heavily and large stocks are lying unsold at the ports.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at May 31, 1929, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully-paid shares of £10 each), £E2,025,000; Reserve Fund: Statutory reserve, £E1,402,500; special reserve, £E1,340,625; current, deposit, and other accounts, £E14,237,051; Egyptian Government, £E17,200,850; Sudan Government, £E254,672; Mixed Tribunals, £E2,187,050; bankers' accounts, £E379,476; cheques and bills payable, £E259,173; sundry other accounts, £E1,620,559—£E41,966,505. Assets: Government securities and securities guaranteed by the Egyptian Government, £E22,327,003; sundry securities, £E17,130; advances on merchandise, £E2,855,514; advances on securities, £E4,273,465; advances otherwise secured, £E1,385,015; sundry other advances, £E1,176,788; bills of exchange, £E3,076,026; buildings and furniture, £E220,414; money at call and at short notice, £E721,500; bankers' accounts, £E287,407; sundry other accounts, £E1,004,596; Cash: Notes, £E1,467,838; gold, £E296,178; silver, nickel, etc., £E304,812—£E2,068,828—£E41,966,505. Issue Department.—Notes issued, £E26,600,000—£E26,600,000. Gold, £E3,339,570; British Treasury Bills, £E9,960,430—£E13,300,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E1,500,000; British Treasury Bills, and British War Loan, £E11,800,000—£E13,300,000—£E26,600,000.

*By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

EGYPTIAN DELTA LIGHT RAILWAYS.

The gross receipts of the Egyptian Delta Light Railways for the year ended March 31, 1929, were £337,668. The average receipts per mile per year were £555 7s. 6d., against £514 17s. The passengers carried were 10,836,999, the gross receipts under this head being £202,893. The gross receipts from goods traffic were £127,210, and tonnage 641,070. The working expenses were £264,298, compared with £258,919. The ratio of expenses to gross earnings was 78.27, against 82.71. The net revenue was £73,369, which, with interest earned, £4,600, gives a total of £77,975. After providing for interest on debentures and for all fixed charges, and making provision for proportion of profits due to Egyptian Government, a balance of £34,873 remains, plus £32,285 brought forward. The board has decided to transfer to reserve against capital expenditure £5,000, and recommends a dividend of 2½ per cent. on the preference shares for the year, carrying forward £42,138.

BOMBAY, BARODA, AND CENTRAL INDIA RAILWAY.

The gross earnings of the Bombay, Baroda, and Central India Railway Company for the year ended March 31, 1929, amounted to Rs.11,90,51,173, the working expenses totalling Rs.6,88,59,916. The net earnings were Rs.5,01,91,257, against Rs.4,33,97,235, and after deduction of taxes the company's share of the surplus is Rs.8,32,454, against Rs.6,61,207. It is proposed to pay a final dividend of 1½ per cent., making 6 per cent.

The Yugoslav Free Zone in the port of Salonika was opened for traffic on July 1. A Greek Customs office has been opened at Ghevgheli.

It is anticipated that the export trade in Bosnian and Serbian prunes will not exceed 18,000 tons this year, compared with 25,000 tons last year, on account of last year's drought and the abnormal frosts early in the current year.

The production of crude oil in Roumania in May amounted to 387,277 tons, as against 359,463 tons in April, and 349,372 tons in May, 1928. The production of the principal districts of Roumania in May was as follows (in tons):—Prahova, 277,447; Dambovitza, 95,476; Buzau, 7,525; Bacau, 6,820.

Motors and Motoring.

(By Our Motoring Correspondent)

Motoring in East Anglia.

Last week-end was one of the finest we have had this year for motoring. In the Eastern Counties we just escaped rain on Friday evening, and from then to the time when the lights o' London were sighted on Sunday we had powerful, blinding sunlight and cloudless skies from sunrise to sunset. And what a glorious country is this side of England when the sun is shining.

There is Cambridge with its ancient colleges and modern cement and other mills; there is Ely, still with an atmosphere of Hereward and mail-clad Normans; there is Newmarket, to some extent of departed glories and, so far as some of us are concerned, of departed riches, and there is old Bury St. Edmunds with its magnificent ruins—every stone of which tells eloquently some story of the past. And there is quaint old Thetford, and I am not sure, but I think I like Thetford most of all the grey old East Anglian towns. What an impressive sight it must have presented before the Red Cock crew in 1539, and the soldiers of the King pulled down altars and tore down priceless tapestries and burned all the ancient books they could lay their hands on and flung down the effigies from their niches and seized, on a commission basis, everything of value for their sovereign lord King Hal. To have the sacking of two great abbeys and twenty-four churches and their possessions is an opportunity that comes seldom; no doubt the zealous reformers made the most of their chances in those days when the Modernist was really and convincingly "modern." They stand by the river, grey sentinels awaiting the dawn, do the ruined shafts and pillars of the Cluniac church, whilst, across the river are the ruins of the Church of the Holy Sepulchre, turned into a stable now.

Then there is the Castle Hill, described as one of the great mysteries of East Anglia, now no longer a mystery, thanks to half an hour's study of it from the top of its great mound. For these huge earthworks, easily the greatest in the Eastern Counties, rivalling Silbury in height and Old Sarum in extent, are merely the remains of a Norman castle, of the Motte and Bailey type, that was never completed! One sees the double line of banking starting on its encircling of the bailey, and the eye of the engineer can see where the work was stopped. It is true that an old map purports to show the banking compiled by one who saw more in his mind's eye than he saw on the spot.

Why the castle was started puzzled the mind. Some say it was to guard a ford across the Thet, which is simply rubbish, as the Thet is fordable anywhere, as also is the Ouse until much nearer the sea. Probably it was the attempt of some petty lordling to vie with the growing strength of the Church, and perhaps it was the monks of Thetford who ordered his work to cease. Or, as the castle was building, its lord may have been sent to the French or the Scotch wars and may not have returned. One thing is certain: it was not a stone-built castle, but a wooden erection that crowned the great motte—a fact which has utterly befogged those who, because they could find no stone foundations, assert that the mound was not a castle site but a place of mystery, thus allying themselves with those who declare it to have been built by the Danes, the Saxons, the Romans, or some gentlemen of Flanders who sought a firm foothold in the country.

Sand and heath and pine; what a country this is! The air is heavy and intoxicating with the scent of the gorse, the bracken, and the great Scotch pines that flank every hedgerow. The cattle seem to sleep, standing knee-deep in the rush-bordered rivers; a mass of yellow water-lilies and white, of mirrored skies and white flecked

clouds, and over whose glass-clear waters skim a myriad dragon-flies. The little by-roads, winding across purple heathland, are white with dust, but their big brothers are well tarred and as soundly made as any in the country. The hills are few, but the little villages, each with its square-towered church—we are a little way from the belt of round-towered churches that add so to the charm of North-East Suffolk—are many and beautiful; the land that is cultivated seems heavy with richness and lordly pheasants strut everywhere, side by side with frolicsome, playful rabbits. Black armies of starlings chatter deafeningly as the afternoon draws on; a few nagging gulls commence their flight back to the sea, and into the glorious sunny silence breaks the sound of a distant church bell. Such is Sunday in East Anglia, driving home from Thetford.

Motors and the Press.

It is difficult to see how the modern newspapers could manage without motor transport. Not only are motor lorries used to get the papers from the publishing office to the train and, later, from the train to the distributing points, but by means of the motor van papers can be delivered, practically, with the morning milk in places where, in the old days, they could only be delivered a day or so late. In order that the maximum amount of news may be in the papers, men are working on "copy," and rotary machines are running to the last moment. Where motors are available to rush the copies to the train, this "last moment" may be half an hour later than would otherwise be the case. Further, for short distance work, the motor scores every time, as door-to-door delivery can be made, if necessary. Motor vehicles are also, as Mr. H. J. Caveney said recently before the Institute of Transport, better suited for handling late news, and provide a duplicate delivery where trains are not available.

At all times newspaper transport is working against the clock and, should a breakdown occur in any department it is usually a simple matter to make up any lost time if a special fleet of fast cars is available for such an emergency.

Daily papers usually have their own fleets of motor vehicles and if a morning and evening paper is issued from the same office such fleets can be utilised to full advantage. Sunday newspapers, except in exceptional circumstances, cannot afford to run a fleet of distribution motor vans unless these vans are working on daily paper or other work during the week. Some of the biggest Sunday papers hire all the motor vehicles they use, and it pays commercial lorry owners, whose vehicles are at work all the week but idle on Sundays, to let out their lorries to such newspapers.

Where a newspaper motor service is well organised it should be possible for the manager to keep in touch with each and every vehicle whilst it is on the road. Should any break down, the driver has to report by the nearest telephone and await and act on instructions; even when everything is running right he has to make reports from the various towns through which he passes. Many Sunday newspapers print from two to three million papers between the hours of 6.30 p.m. and 5 a.m., and send them by road to places as far as 600 miles away.

JOHNSTON LINE

TANKER CHARTERING REVIEW.

Messrs. John I. Jacobs and Co., in their tanker chartering review for the half-year ended June 30, state:—

This period has witnessed an extraordinary change in the freight market. Whilst it was felt at the end of last year that the bottom of the depression had been left, it must have been few, indeed, who would have prophesied an appreciation of about 80 per cent. in freight rates. The tanker tonnage of the world received in 1928 an addition of approximately half a million tons deadweight yet the expansion of the petroleum trade is such that 1929 has already witnessed the marked improvement in freight rates mentioned above. The size of the oil tanker continues to increase, as witness the launching of several vessels up to 22,000 tons, whilst the supremacy of internal combustion engines for oil-carrying vessels is now unchallenged.

There are on order at the present time between 440,000 and 450,000 tons gross of motor tankers as against some 770,000 tons in 1927, just after the last boom period. A total of 646,851 tons of tanker tonnage was launched in 1928, of which rather less than 25 per cent. was steam-propelled. In 1914 the total tankers afloat did not exceed one and a half million tons, but by the end of 1928 this had increased to six and a half million tons.

In spite of the attempts which continue to be made to restrict the growth of the world's output of petroleum, it has risen during the last five years by 43,000,000 tons to 181,000,000 tons. The United States, whose increase for 1928 was very considerably below that for 1927, produces about 68 per cent. of the world's output, whilst Venezuela, with a production which has increased rapidly to over 15,000,000 tons, follows with 8 per cent., and Russia is third on the list with not quite 7 per cent.

It is worthy of note that cross voyages, especially for large boats, have markedly increased, and numerous fixtures have been made from the Gulf to South Africa, and from California to the Antipodes and the Far East, countries which until recently took the bulk of their supplies in packages. The engagement of tonnage, both chartered and otherwise, in these longer hauls, is one of the factors causing firmer freight conditions. If on so uncertain a market an opinion may be ventured, it looks as if there will be no return for some time to the conditions prevailing at the end of last year.

Time Charter.—The improvement has not been so marked as for voyage business. American charterers

have taken several motor vessels of about 13,000 tons d.w. to be built against a 10-year time charter, at a figure which averages 6s. 6d. on d.w., whilst British charterers have been fixing 11,000 ton motor tankers for 10 years at 6s. 7d. on d.w. For periods up to 24 months, the rate for steam tankers has risen from 4s. 9d. to 6s. 1½ per ton d.w., and Diesel vessels are now getting from 8s. to 9s. on d.w. During the whaling season tonnage is required for the Antarctic at considerably over these rates

NEWS FROM ALL SOURCES.

Negotiations are in progress for the establishment of a Czechoslovak-Roumanian Economic Institution at Prague and a Roumanian-Czechoslovak Institution at Bucharest.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended June 20 amounted to £E7,445, making the total from April 1 £E63,744, as against £E54,621 for the same period of the previous year.

The traffic receipts of the South Indian Railway Company for the week ended June 15 amounted to Rs.13,59,861, making the total from April 1 Rs.1,42,20,635, as compared with Rs.1,39,81,546 for the corresponding period of the previous twelve months.

Mr. Henry Bernard Turle, late senior partner of Messrs. Place, Siddons and Gough, stockbrokers, Calcutta, has joined Messrs. Cruickshank and Co., of Pinners Hall, E.C.2. The style of the firm will remain unchanged.

The gross profits of the National Bank of Yugoslavia for 1928 amounted to 123,137,704 dinars, an increase of 8,927,479 dinars compared with the previous year. The net profits were 79,150,341 dinars. The dividend of 400 dinars per share absorbs 24,000,000 dinars.

The Roumanian Ministry of Finance has issued an order permitting the weight of fittings, accessories, spare wheels, etc., to be deducted on weighing imported motor cars for the assessment of Customs duty.

On and from July 22 the address of the Agricultural Bank of Egypt (London Committee) will be Stone House, 128, Bishopsgate, E.C.2. Telegraphic addresses will be, for foreign telegrams: "Zerai, London" for inland telegrams: "Zerai, Ave., London," and telephone number, Bishopsgate 7552.

The Indian Store Department have placed orders for 20 locomotive boilers with Nasmyth, Wilson, and Co., Ltd., Manchester, and for 52 locomotive boilers for the Indian State Railways with the Hannover Maschinenbau, A.G., Hannover-Linden, Germany.

An Athens message states that the Greek Chamber has passed a Bill authorising the issue of an internal loan of 700,000,000 drachmæ (about £2,000,000) for the purpose of indemnifying the Greeks who suffered losses during the War.

The Westminster Bank announces a dividend of 10 per cent. on the £4 shares and the maximum of 6½ per cent. on the £1 shares for the half-year ended June 30. The dividends, 2s. per share and 1s. 3d. per share respectively, both less tax, will be payable on August 1. The rates are at the same level as last year.

It is announced that the board of directors of the Marconi International Marine Communication Company, Ltd., has appointed Marchese Guglielmo Marconi President of the company. The Rt. Hon. F. G. Kellaway, P.C., has been appointed Chairman in the place of Marchese Marconi. Mr. Kellaway will retain the office of managing director.

In connexion with the Zagreb Autumn Fair, which is to be held from September 6 to 17, there will be an International Exhibition of Medicine and Hygiene. This exhibition will comprise the following sections:—Hygiene; literature; surgical instruments, furniture for hospitals, etc.; apparatus for dentists, orthopaedic instruments and apparatus, Röntgen, etc.; pharmaceutical industry and specialities; chemists' shops and furniture; historical medical-pharmacy exhibition, old books, pictures, instruments, etc.

The domestic consumption of petrol products in Roumania for the first quarter of this year amounted to 374,550 tons, as compared with 33,460 for the corresponding period of last year, an increase of about 13 per cent. The details of consumption were as follows: Motor spirit, 17,878 tons; illuminating oil, 28,200 tons; lubricating oil, 7,860 tons; gas oil, 32,472 tons; and fuel oil, 108,015 tons. The stocks of oil products at the end of the first quarter of 1929 were as follows (in tons):—motor spirit, 150,037; illuminating oil, 107,131; lubricating oil, 87,792; paraffin wax, 68; fuel oil, 221,714, the total being 575,742 tons.

ADVERTISING IN "THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of *all* classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

Engineering Topics

(By Our Engineering Correspondent)

Low Temperature Carbonisation.

The utilisation of bituminous coal dust and smalls at the mines to give large-sized pieces of high-grade, free-burning, smokeless fuel, equal in value to graded lump coal, is of more importance to Great Britain than to any other country, while India with friable coal is also vitally concerned. Significant therefore is a "K.S.G." plant of one standard retort, 80 tons of coal per 24 hours throughput, now being installed in France at the well-known Mines de Lens, in the Pas de Calais area. The development of low temperature carbonisation and the possibilities as regards utilisation of the fines at the pit head, have been closely studied by the Lens coalowners, and it was decided that the "K.S.G." process offered the best possibilities, especially after extensive large scale tests with Lens coal carried out in 1927 on the "K.S.G." retort plant at the Karnap Collieries, Essen, which incidentally is now being greatly increased in size.

As a result a special Company, "Carbonia" has been formed with which is associated the Mines de Lens, Mines de Dourges, Mines et Houilleries de Marles, Mines de Sarre et Moselle, and the Mines de Vicoigne, Noeux, et Drocourt. This Company is erecting the "K.S.G." plant, and as usual the standard retort, with a throughput varying from 65-85 tons per 24 hours, is a rotary slightly inclined steel cylinder, 72ft. long by 10 ft. diameter, having an inner cylinder 85 ft. long and 5 ft. 6 in. diameter, while the speed is one revolution in 90 seconds, with 2½ hours heating and a maximum temperature of 925-1025 degrees Fahr. The yield follows the normal low temperature practice, from one ton of average bituminous coal of 25-35 per cent. volatile matter being 3500-5000 cubic feet of rich gas at 800 B.T.H.U., 3 gallons light oil scrubbed from the gas, 15-20 gallons low temperature tar, and 14 cwt. smokeless fuel with 10-12 per cent. volatile matter.

The site is at the Mines de Lens, and the gas will be mixed with coke oven gas and sold to the City of Lille, with the low temperature tar and smokeless fuel available as usual, the small coal to be used having only a value of about 80 francs per ton. Since the end of the War the devastated area of Lens has been completely reconstructed, the work having been commenced in 1921, and the Mines de Lens at the present time turning out with the latest plant and equipment about 4,000,000 tons of coal per annum.

There has been installed for example, 14 screening machines, 5 washing machines with a total capacity of 4,000 tons of coal per 8 hours, 331 coke ovens with complete by-product installations in three batteries, and an extensive equipment of briquetting machines, having a total capacity of 600 tons per day, and the use of low temperature carbonisation will enable a much increased

revenue to be obtained from the fines, at least double the present figure.

Wireless and Aviation.

The importance of wireless to aviation is demonstrated on the Marconi Stand at the International Aero Exhibition at Olympia. The wireless apparatus displayed ranges from long-range transmitters for use in aerodromes to light and compact sets for fitting in aircraft.

A new set that will interest sporting aviators, clubmen, and flying tourists has been designed along entirely fresh lines for use in light aeroplanes. This apparatus, which is a combined transmitter and receiver, will greatly simplify the problems of aerial touring for business or pleasure, and will enable amateur pilots to obtain very much the same weather and aerodrome report services as are available to commercial machines. It will also provide them with a means of position finding when they are flying over Europe or other parts of the world where there are aerodrome ground stations equipped with wireless direction finders.

The set is known as Type A.D. 22, and comprises a 75 watt transmitter for telephonic communication, and a receiver, combined in one light case. Telephone transmission is possible over ranges up to 75-100 miles, the receiver being capable of receiving telegraphy as well as telephony. The set can be mounted in any convenient part of the machine and easily operated through a remote control unit by means of Bowden wires. The A.D. 22, is designed for transmission and reception on a wave band of 850 to 950 metres, the international wave band, but a quick change switch is provided to enable the 600 metre ships wave length to be used in case of emergency. The total weight of the set has been reduced to about 60 lbs. including the microphone and telephones, generator and propeller, accumulator, aerial, and all other accessories.

Among other apparatus for aircraft displayed on the Marconi Stand is the popular and efficient "all purpose" telephone-telegraph apparatus Type A.D. 6H. Apparatus of this type is in use on aircraft in practically every country in the world. It comprises a transmitter of 150 watts power and a highly efficient receiver, and is suitable for both telephone and telegraph working to and from aerodrome ground stations up to distances of 100 to 300 miles. As in the case of all the Marconi aircraft sets, power is supplied by means of a wind driven generator, which may be also used to provide current for lighting the aircraft at night. The power supply may be arranged so that in the event of a forced landing the generator can be operated by the batteries or light petrol engine to enable communication to be established with the nearest ground station.

A long-range telephone-telegraph set is the Marconi Type A.D. 8, of 500 watts power, which has been specially designed for fitting in large types of aeroplanes, flying boats, and airships. With this set it is possible for aircraft to keep in touch by telephony or telegraphy with ground stations up to distances of 200 to 500 miles.

Company Meeting.

THE P. AND O. BANKING CORPORATION.

A Valuable Clientele.

Trade Conditions in India and China.

The Earl of Inchcape, Chairman of the P. and O. Banking Corporation, Ltd., presided on July 12 at the Corporation's ninth ordinary meeting.

The report and accounts have been taken as read, his Lordship said the shareholders would have observed that the result of the year's operations had been much the same as that of the previous year, and that the board recommended the payment of the same dividend—namely, 5 per cent. per annum, less tax. The balance-sheet showed that the principal variation in their figures was a decrease in loans payable, which stood at £3,493,000, against £6,405,000. In view of the monetary outlook in the opening months of 1929 they had felt it would be prudent to lighten their holdings of investments and bills, and there was accordingly an equivalent decrease in these items on the assets side of the balance-sheet, their holdings of securities and bills having been decreased respectively by £1,903,000 and £1,623,000. Current accounts and deposits showed only a slight change on the previous year's figures, and now stood at about £7,250,000. Against these liabilities they held in cash and in money at short call and short notice £1,479,065. Advances to customers showed a satisfactory increase from £3,509,065 to £4,220,000. The other items in the balance-sheet showed little change on the previous year's figures.

Trade both in India and China had not been brisk throughout the year, and still continued somewhat inactive, but a good monsoon in India should help things, and, given settled conditions in China, the trade of that country, with its teeming population, should improve.

The Allahabad Bank.

Their affiliated institution, the Allahabad Bank, had had a good

year, and its business showed a steady expansion. The profit had been more than maintained, the dividend being at the rate of 12 per cent., plus a bonus of 6 per cent. Like all other institutions operating in India, they had felt severely the depreciation in price of Indian Government securities, which, as an Indian bank with capital and rupee deposits, and under management in India, were a natural outlet for a considerable portion of their funds. Higher money rates all over the world had in India, as elsewhere, reacted on the price of fixed-interest-bearing securities. But this was a temporary phase, and a recovery from the present level was to be expected. He would like to express the board's thanks to their managers and staff, both at home and abroad, for the zeal and devotion they had displayed in their duties.

The bank had now, he said, a valuable clientele, and he was satisfied that it had a good future before it. Starting from scratch in 1920, it had now a considerable number of customers. Every care was being exercised to avoid risks, and, while they might, as all banks did, find themselves with a few unsatisfactory accounts, ample provision had been made for any potential losses, and all bad debts had been written off.

The reports and accounts were unanimously adopted. The dividend recommended was declared.

The retiring directors were re-elected and the auditors were reappointed.

Mr. E. T. Hargreaves said he was sure everyone present would like to thank the directors for the able way in which they had conducted the business during the past year and the admirable results they had placed before the shareholders.

He wished also to say how pleased they all were at the further honour which His Majesty the King had conferred upon the chairman. (Hear, hear.) He had great pleasure in proposing a hearty vote of thanks to the Earl of Inchcape and his colleagues on the board.

Mr. McPhail seconded the vote, which was unanimously accorded.

The Chairman, in acknowledging the compliment, said he could assure the shareholders that every attention was being given to the business of the Corporation, and he had no doubt whatever that, under the management of Mr. Gubbay, Mr. Preston, and others, the affairs of the bank would go on and prosper. He wished to thank Mr. Hargreaves for his kind congratulations.

The proceedings then terminated.

THE YUGOSLAV-ALBANIAN TREATY OF COMMERCE AND NAVIGATION.

The Treaty of Commerce and Navigation between Albania and Yugoslavia, which came into force last month, provides for freedom of commerce and navigation between the Parties. The subjects of the Parties are to enjoy most-favoured-nation treatment as regards freedom to travel in the territories of the other and national and most-favoured-nation treatment as regards taxation in respect of their commerce, industry, professions, or occupations, and as regards the carrying on of their business, either personally or by means of agents. They are similarly to be accorded national and most-favoured-nation treatment as regards the legal protection of their persons, property, rights and interests. Commercial travellers and their samples are to enjoy most-favoured-nation treatment. National and most-favoured-nation treatment is accorded to the companies of the Parties in matters of taxation.

As regards import, export, and transit dues and formalities, the goods of the Parties are to receive most-favoured-nation treatment. Such treatment cannot, however, be claimed in respect of benefits granted with a view to facilitating frontier traffic, or of those resulting from a Customs Union. National treatment is accorded as regards internal dues. Special tariff rates for certain classes and descriptions of goods are contained in the schedules appended to the Treaty. Reductions are made as regards goods of S.H.S. origin in the case of certain carpets of wool, mixed or not with other materials, in the case of walnuts, hazel nuts, chestnuts, lambs and kids, eggs, eels, and cheese.

The ships of the Parties are to enjoy national and most-favoured-nation treatment. The coasting trade and the right to fish in territorial waters are, however, reserved to the national flag. An agreement is to be concluded later regulating traffic on inland waterways. S.H.S. ships are to be allowed as hitherto to carry passengers and goods between Albanian ports. Special regulations regarding frontier traffic are contained in an Annex to the Treaty.

The National Bank of Bulgaria raised its bank rate on July 27 from 9 to 10 per cent.

The negotiations for direct railway tariffs between Yugoslavia and Greece have resulted in an agreement being arrived at on all points under consideration.

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 10:—

Egyptian Futures.

Sakel Contract.—With the exception of a moderate amount of support for new crop positions by Continental interests, trading in this market since we last wrote has been of a somewhat featureless character. During the earlier days of the week values showed a slightly hardening tendency, to ease subsequently to below last Wednesday's closing rates on poor Alexandria reports, the lowest being reached just prior to the publication of the American Bureau figures. Since this, a sharp recovery has been in progress, and whilst the weight of business put through has not been important, sentiment has been favourably affected by the firmer tendency displayed in other markets. In addition to this, we had the fact that the liquidation in progress during recent weeks, locally and in Alexandria, had left both markets in a position to respond rapidly to any outside developments. Without any particular support, values have moved quickly during the past two days, contracts have been rather scarce, and this rather gives occasion for thoughts of what might occur should trade interest start to develop. Unfortunately, at the moment there are no signs of this latter contingency; fears of a lock-out are curbing all enterprise, and spinners' purchases continue to be of a week-to-week character. Supply figures reveal a fairly strong statistical position, the local stock of desirable cotton, apart from Sudan Sakels being very restricted for this period of the season; near positions reflect this situation, as in spite of there being no carrying premium, July tenders so far only amount to 50 bales. The official condition report for July reads as follows:—**Lower Egypt.**—The high temperatures of June, although intermittently damp, were favourable to cotton plants. Lateness notified in May report remains about 10 days. Area in Sakellariadis and Zagora is approximately the same as last year. Pilon shows a slight decrease, whilst Maarad, Nahda, and Fouadi are slightly increased. Plants in general are in good condition. Some outbreaks of leafworm have been notified, but thanks to the rigorous measures taken damage is slight. Wilt has been more widely distributed than last year and attacks, especially on Sakellariadis plants, have been serious. Water has been sufficient and even abundant.

Upper Contract.—A much improved undertone has developed in this market during the past week. We ascribe this to two causes, the appreciation witnessed in the American markets since the Bureau report and to a much-improved demand for cotton out of the local stock. The Liverpool basis compares most favourably to offers coming to hand from Egypt, and the fuller realisation of this is attracting increasing attention from consumers in this and other countries. Should the "out of sight" figures continue on the present scale, the carry-over at the end of the season will be insignificant, and whilst a large new crop is at present in prospect we think present differences discount "bearish" possibilities for the immediate future.

Egyptian Spot.

More business has been done under this heading, and to this fact, coupled with a series of stronger futures markets, we owe a substantial all-round advance in prices. Whether or not the advance will be held remains to be seen and will depend almost entirely on the immediate action of the American markets. Since the publication of American acreage figures, our spot demand has shown a general improvement, but it has been in Uppers that the biggest increase in buying has occurred. Spot prices have been, and still are, very reasonable as compared with offers from Egypt, and buyers are taking full advantage of the fact at the present time.

Sakel.—A fair business has been done. Attractive cotton at within 200 points of the contract remains scarce, and full rates have had to be paid by buyers. The lower and top qualities have been somewhat quieter.

Uppers.—A good business has taken place, almost entirely at from 10 to 30 points on contracts. Supplies appear ample for the time being.

Pilon has been in good request at from 100 to 125 on July Uppers, but results have been rather disappointing. The better qualities have suffered from neglect.

Nahda, Maarad, and White.—Little demand has been met with. Sudan Sakel has moved off well. Most of the business has been done in the medium and lower qualities, but some improvement in the demand for the better qualities has been noted. Prices have been firm.

Tokar Sakel.—The demand for this cotton is practically non-existent and sales have been negligible.

C.i.f. business has been very quiet. Forwardings, owing probably to mill holidays, showed a falling off last week at 3,646 bales Egyptians and 1,528 bales Sudan. Estimated spot sales for the week, 3,800 bales Egyptians and 1,850 bales Sudan Sakel. Quotations of Sakel show an advance of 65 to 70 points. Uppers are 38 to 50, and Pilon 40 points higher on the week. F.G.F. Sakel to-day, 16:60d. F.G.F. Upper to-day, 11:35d. F.G.F. Pilon to-day, 12:40d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended July 4, state:—

Since our last report the futures market has been rather active, but the tone has been changeable. The week's summary of price movements is as follows:—**Sakellariadis:** July, 30.77 dollars, 0.78 dollars down; November, 31.27 dollars, 0.91 dollars down; January, 31.77 dollars, 0.89 dollars down; March, 32.17 dollars, 0.89 dollars down. **Ashmouni:** August, 20.39 dollars, 0.46 dollars down; October, 30.69 dollars, 0.56 dollars down; December, 21.18 dollars, 0.55 dollars down; February, 21.66 dollars, 0.52 dollars down; April, 22.06 dollars; June, 22.41 dollars.

Sakel.—After a firm opening prices once again fell away, and November was quoted as low as 30.85 dollars. The immediate cause of the decline was the publication of a fresh Government *communiqué* announcing that sales of the cotton held by them would be resumed. At the decline, some trade buying took place, which impressed the market favourably, and during to-day's session a part of the lost ground was regained. On Wednesday last the Government offered for sale 992 bales of Sakel, of which 645 bales found buyers. Taking into account the deterioration of the cotton, the prices obtained must be considered satisfactory. The demand from spinners, while still of only limited volume, has been more regular. It must also be noted that on the Liverpool spot market the figures of the daily sales have recently been appreciably higher. In spite of the undoubted improvement in the tone of the market at the close of the week under review, a rise of any importance seems unlikely for the present. The new crop is progressing satisfactorily; the stocks of Sakel both here and in Liverpool are far from being of negligible size, and, in addition, the dispute on the wages question in Lancashire are all factors which militate against a rise.

The Sakel Uppers straddle (November/October) this week stands at 1,058 points, against 1,093 points last week and 1,361 points at this time last year.

Against the first July tender, dockets for 16,500 kantars were issued.

Uppers.—This market has followed the fluctuations of the Sakel market, but the decline has attracted the attention of spinners and their orders have resulted in a fair number of trade purchases. Most of the interest in this variety has emanated from the Continent during the last few weeks. A slight accentuation of the narrowing of the difference between Ashmouni and New York is to be noted, and at one time the difference between the respective October deliveries fell to about 2½ dollars. At this difference some straddle position were opened by purchases in Alexandria against sales in New York.

The Ashmouni/American straddle (October/October) this week stands at 235 points, against 273 points last week and 614 points at this time last year.

The week's receipts amount to 3,227 kantars, against exports 71,856; the stock in Alexandria stands at 2,065,932 kantars.

Spot.—During the past week the market has been very quiet, without any noticeable change in the range of the demand. Of the total sales of about 6,480 bales, we estimate Sakellaridis 3,190 bales, Ashmouni and Zagora 2,780 bales, Pilon 440 bales, and White 70 bales.

Sakellaridis.—The premiums for Medium grades, even with average staple, continue to harden. The greater part of the week's turnover has been done in the grades Fully Good Fair/Good and Better at about last week's premiums. Generally there is more interest being shown in Sakel, but the market is somewhat difficult owing to the poor selection on offer.

Ashmouni and Zagora.—There is nothing new to report here, as the demand still remains between Fully Good Fair and Good about, with premiums inclined to rise. The selection of cotton on offer

is getting poorer; premiums for the other grades have been unchanged.

Pilon.—Fair market, but buyers are having difficulties in finding staple lots. Premiums are much the same as last week.

White.—There has been a very small demand at last week's prices.

Other Varieties.—Have been very neglected.

Crop, 1929.—There is nothing fresh to report. The progress of the plant is satisfactory; temperatures continue to be favourable and water is abundant everywhere. The attack by the leaf worm is decreasing, and the damage caused this year by this pest has probably been less than last year.

Bonded warehouses are to be established in all Yugoslav ports where a main Customs office exists.

The traffic receipts of the Suez Canal Company from June 22 to 28 amounted to 21,230,000 francs.

The directors of the Southern Punjab Railway Company have declared an interim dividend of £6 per cent. on the ordinary stock in respect of the year ending September 30, 1929, subject to English income tax at 2s. in the £, payable September 11.

It has been arranged that the P. and O. s.s. Ranchi, which is to leave Southampton on September 7, shall anchor in the Solent from 2 to 4 p.m. on that day in an officially assigned berth at the western end of the course in order that her passengers may see as much as possible of the race for the Schneider Cup before she proceeds on her cruise to the Cyclades and Dalmatia.

Notes of the Week.

King Fuad's Visit.

Although King Fuad's present stay in England is unofficial, the fact that His Majesty has chosen to visit this country a second time in three years is not without significance. As a reflex of the good relations existing between Egypt and Great Britain, it gains additional importance from the coincidence that both the Egyptian Prime Minister and the Minister for Foreign Affairs are in London at the same time, engaged in discussions which, it may be confidently anticipated, will advance the cause of Anglo-Egyptian friendship. When King Fuad came to the throne of Egypt, he had had no opportunity of making himself acquainted at first hand with Great Britain, and during the early years of his reign circumstances prevented him from leaving his own country for any length of time. His tour in Europe in 1927 has been followed this summer by official visits to other European capitals, and that he should again include England in his itinerary is an earnest of his Majesty's desire to make himself more fully acquainted with a country with which his own is so closely connected. No royal visitor to England at this particular time, we believe, can fail to be thrilled by the wonderful relationship that exists between the Throne and the people of this Empire; and King Fuad, we may hope, will be heartened by his experience here in his own self-imposed task of identifying himself with his people and the interests of his own country.

Ne Sutor Supra Crepidam.

Whatever views may be held on the relative merits of democracies and dictatorships, there can be no question that a group of Egyptian students studying in Great Britain can throw no useful light on the position in Egypt, nor are they doing themselves or their country any good by pushing Egyptian politics to the forefront in England. One of the serious blots on the Wafd régime in Egypt was the deliberate measures adopted to mobilise students as a factor in the mob pressure behind which the party sought to conceal its lack of statesmanship. The effect of these tactics of introducing politics by order into the class-room was seen in the sudden deterioration of

scholarship shown in examination results, and one of the steps that Mahmoud Pasha's Government found itself obliged to take was to forbid students during term-time to take any public part in political affairs. As this ban does not apply to England, the Wafd, continuing its attitude of complete indifference to the interests of the students themselves, would appear to have directed its attention to the Egyptians studying in London and to have arranged, through its Secretary-General, at present in this country, for the presentation of a petition to King Fuad, protesting against "the iniquities of the present unconstitutional Ministry, which had crushed their liberties under a relentless dictatorship and perpetrated among them a reign of terror for a whole year." The incident has clearly been stage-managed for the benefit of the British Government, which is credited, on the strength of the attitude of some of its extreme supporters, with a mentality on a level with that shown by the Wafd in its handling of Anglo-Egyptian relations.

Greco-Turkish Negotiations.

The protracted negotiations between Greece and Turkey for the settlement of the various matters connected with the exchange of populations, to which the two countries committed themselves in 1923, appear once more to have broken down. Only a single point remains at issue, as agreement has been reached on all the others. To what extent it is a vital question to either side is not clear; but to one or the other it serves as a useful *non possumus*. As a means of bringing pressure upon Greece during the negotiations the Turkish Government has seized property in Constantinople belonging to Greeks who left the city with duly authorised passports under the Sultan's régime after the establishment of the Angora Government. It now declares that the owners of these properties are not to be allowed to return, but the Greek Government refuses to accept this condition. Turkey's contention is that these Greeks are regarded as undesirable, and must, therefore, not be allowed to return; but it will be difficult to persuade the Greeks that Angora is not anxious to add to the country's impoverished exchequer the not unsubstantial amount of money that these

properties may fetch in the open market. The neutral members of the Exchange Commission have done their best to lead the two parties to an agreement, and there is no reason to suppose that they approve of the attitude now taken up by the Turkish Government. How the latter is to be turned from its decision, however, is not clear. It is not likely to accept arbitration on a question in regard to which it might find it difficult to enlist equity or common sense on its side. The Greek Government, on the other hand, is confronted with the dilemma that, whether it accepts the condition or does not, the result will be the same, that well-to-do Greeks will be deprived of valuable property in Constantinople. Time alone will bring the Turkish authorities into line with civilised nations in their attitude on the sacrificing of the future to the present. Already some of the more travelled of the Angora Government's staunchest supporters are discovering contradictions in Turkish policy. Under the heading "Inconsistencies," the Deputy-Proprietor of one newspaper laments the lack of character in the Turks that prevents them from doing things well. He is concerned for the moment with the tendency of officials to scrap anything that their predecessors may have started and then to do nothing themselves; but he is driven to generalisations and points out that even where the Turks are animated by good intentions, they show themselves incapable of carrying their wishes into effect. There can be no doubt that the Turkish Government desires to liquidate its quarrel with Greece; but it has not yet shown itself far-sighted enough to forgo present gains for the sake of the wider advantages that would result from a good understanding with its neighbours.

Yugoslavia and Bulgaria.

A further intensification of the strained relations between Yugoslavia and Bulgaria has been provided by another "affray" in the south-eastern corner of Serbia. Two men described in the Belgrade accounts as criminals, who had escaped from Macedonia ten years ago and had joined the Macedonian Revolutionary Organisation in Bulgaria, were shot near Shtip after they had wounded three Yugoslav gendarmes, two of whom subsequently died. It is typical of the state of feeling between the two countries that the incident should have evoked in the Belgrade Press articles against the Bulgarian Government, accusing the Bulgarian Prime Minister of giving assurances of his pacific intentions "at the very moment that he is secretly sending terrorist agents to perform acts of violence in Yugoslavia." Until the Yugoslav Government and people realise that the Macedonian Revolutionary Organisation is as great an enemy to Bulgaria as it is to Yugoslavia, and far more embarrassing, the Macedonian problem will never be solved. The published details of the Shtip incident leave many points vague. The town Shtip is forty miles from the nearest point on the Bulgarian frontier. If the Yugoslav gendarmerie had shown in this Macedonian "danger zone" the vigilance which enables them seventy or eighty miles to the north to kill unarmed peasant men and women for irregular crossing of the frontier, it is difficult to understand why the two alleged emissaries of the Revolutionary Organisation were allowed to wander so far into Yugoslav territory without being detected. The trouble between Yugoslavia and Bulgaria is rapidly becoming a serious problem for Europe to tackle. If justice is to be done in the matter, it is obvious that the Great Powers directly responsible for the Treaty of Neuilly or the League of Nations will need to examine the whole question far more closely than the peoples mainly concerned seem inclined to do. The attempt of the Belgrade Press to connect the Shtip outrage with the question of Bulgarian estates on both sides of the frontier, but situated in a different part of that frontier, can only prejudice the Yugoslav case, as it suggests a habit of loose reasoning that must invalidate other arguments from the same source. The best solution of the Macedonian problem was to be found in the joint co-operation of the Yugoslav

and Bulgarian Governments in dealing with a difficult and complicated matter. The suggestion had to emanate from Belgrade, and as it has not been made, it is left to other Powers to cope with what has become a nuisance to Europe.

Archæology in Iraq.

The movement to found a School of Archæology in Iraq is going steadily forward, and an appeal for funds may, we presume, shortly be expected. Perhaps we may remind readers that this movement, which is being led in England by Sir Edgar Bonham-Carter, was expressly foreseen and wished by the late Gertrude Bell, who, indeed, left in her will a sum of £6,000 towards the establishment of such a School. Manifestly it is a particular obligation upon Great Britain, who, after all, has been the pioneer in Assyriology—and what other nation can boast of such men as Rawlinson, Layard, Hincks, or Smith?—to preserve the relics and to explore the mighty past of Iraq. The political relations between Britain and Iraq are, moreover, such that this obligation is equalled by the opportunity. Already since the War there have been literally epoch-making discoveries in Iraq—discoveries which should interest Iraqis themselves as much as students all over the world. The Iraq Antiquities Law—a product, by the way, of Gertrude Bell's brain and enthusiasm—is operating satisfactorily, with its division, roughly speaking, of half of the objects discovered to the Baghdad Museum and half to the particular archæological expedition which made the discoveries. The prospects and conditions for such a School as is proposed are excellent. It only remains for subscriptions so to pour in as to make the School one worthy of the unique position of Great Britain in this regard and of Iraq as the possessor of peerless sites. For ourselves, we welcome with the greatest good will this attempt to set up for Iraq, and for the benefit of the whole world, such a cultural institution as is common enough where other nations are concerned but for which Great Britain too often relies upon individual effort and support. The interest of archæological students all over the world is assured for the project, but we should like to express the hope that Iraqis also, who very rightly are apt to concentrate upon their future, will, realising that the past has much to teach everybody, join in the movement with cordiality and eager support. Even now there is something in the complaint that the significance of archæological discovery in Iraq is not sufficiently explained to the average Iraqi, and we trust that, as this School is founded and its activities develop, the interests of the inhabitants of Iraq may be increasingly catered for.

The Trouble in Persia.

There are Persians, apparently, who fain would discourage all foreign reference to the revolt which broke out last month among the Kashgais and to its subsequent reactions upon other tribes. In calling attention to this revolt, therefore, THE NEAR EAST AND INDIA runs the risk of being called anti-Persian. There is another school of thought in Persia—though it may overlap with the first—which directly connects the recent efforts of the Teheran Administration to establish Persian prestige in the Gulf and to raise it in Southern Persia with the present tribal troubles. It is the British, in other words, who are charged with instigating the Kashgais and Bakhtiari to rebel. With such prejudiced people as these, who, it is to be hoped, are not in a majority in Persia, it is useless to argue: as we have said before, their attitude of mind is akin to that in Great Britain which blames the wicked Bolshevik for every sign of industrial unrest in the British Empire. As if industrial disputes did not long antedate the Bolshevik régime; as if tribal revolts in Persia did not long antedate the pretensions of Teheran in the South! No; it is not by silence when things go wrong in Persia and by fulsome praise when things go right that a British journal can show its esteem for the Persian people, its admiration for the immense achievements of the present Shah. We have no desire to denigrate Persia: on the

contrary, our enthusiasm is profoundly stirred, as the enthusiasm of every right-minded observer of the strivings of Persia must be stirred, by the endeavours of the Shah and of his people. But to suggest that there are no cogs on the wheels of progress, no flies in the ointment, that infallibility reigns for ever at Teheran, that the tribal instincts are necessarily and always inferior to those of the town-bred—that is not in our province, nor is it our intention. It is, indeed, if the right treatment of her tribal problem, as it is, for instance, with Iraq or the Hijaz, that the capital factor of Persia's progress reposes, and it is an obligation of any journal dealing with Persia to comment upon such aspects of this tribal problem as are prominently raised from time to time.

Syria and the League.

The report before the Permanent Mandates Commission at Geneva of M. Robert de Caix on the situation in Syria followed the lines generally anticipated. Political agitation, this spokesman of the French Mandatory Government stated, was now practically confined to the State of Syria itself, the Lebanon, the Jabal Druze, and the Alaouite country and Alexandretta now being quiet. Whether all these sections of Syria are in fact quieted or merely quiet, remains to be seen. M. de Caix had, of course, to point out that the High Commissioner had postponed indefinitely the establishment of a Constitution, nor did he throw any light upon when or how a way out of the *impasse* might be found. According to the reports of his speech, he contented himself with explaining the difficulty as being due to the pretention of the Syrian politicians that the mandatory system imposed on France only the duty of protecting Syria, without giving France the right of intervention in the government of the country. In one aspect, a definite advance was recorded. Economic progress in Syria was a fact, and there were signs of undoubted prosperity. This observation only shows with what care statements on either side, French or Syrian, must be examined. For quite recently, it may be remembered, there was reproduced in *THE NEAR EAST AND INDIA* the speech of a prominent Syrian Nationalist who asserted that the trade of his country was in ruins, and that all the nation's markets had been lost. It is good to learn, from M. de Caix, that increasing interest is being taken by the Syrian people in economic questions—though one would scarcely have thought that a new phenomenon—and that its opinion on tariffs and other problems will be consulted.

INDIAN NOTES.

India's Waterways.

The Federation of Indian Chambers of Commerce is to be congratulated on the representation which it has made to the Government of India on the subject of the development of the waterways of India. It has urged that a Central Committee should be appointed to undertake a comprehensive inquiry into the waterways problem. This is a thoroughly sound recommendation. Indeed, such an investigation ought to have been made years ago, in order that the railways and the waterways might have been developed simultaneously. And as the Federation rightly insists, it is for the Central Government and not for the Local Governments, to move. At present the Government of India take up the position that the question of the conservation and development of the waterways is one for the Local Governments. But this is surely a mistaken attitude, for the waterways cannot be rightly regarded as provincial. A river such as the Ganges runs through more than one province, just as any one of the great railways runs through more than one province. And if the railway administration is centralised, as it rightly is, then the waterways ought to be similarly controlled by the Government of India. It is no new suggestion that the Central Government should take up the problem. The Federation is not the first in the field with it. As long ago as 1903 a distinguished Bengal Public Works Department

engineer expressed the opinion in an official report that the time had come when the subject of the waterways "should be dealt with comprehensively by the Government of India. It is too large," he said, "for the unassisted efforts of the local Governments. On this side of India, Bengal is the province more directly affected, but Assam has an interest very nearly as great as Bengal, while the United Provinces cannot be unconcerned in any scheme which is to provide a freer outlet for its waterborne trade." To these three provinces there must now be added a fourth—Bihar and Orissa—which was carved out of Bengal in 1911, and through which the main stream of the Ganges flows. There are, therefore, four local Governments to be considered regarding the waterways of north-east India alone; and there are waterways in other provinces, notably, Burma, the Punjab and Madras. Obviously the problem is one for the Central Government to tackle. Water-transport should be considered in relation to other modes of transport. The waterways are a national possession, and they should be developed as the railways are developed. But this is precisely what is not done. Railway construction is promoted, while the waterways are neglected. For example, the condition of the waterways in Bengal is, as the Federation points out, deplorable. Then again, complaint has been made for years past that railways are sometimes built in those areas the transport needs of which can be supplied by the waterways. All these matters ought to be thoroughly investigated by a central investigating authority whose recommendations, it is to be hoped, would lead to the inauguration of a well-considered and comprehensive policy for conserving and developing the waterways.

PROMOTIONS, APPOINTMENTS, ETC.

The King has approved the appointment of Sir Howard William Kennard, K.C.M.G., C.V.O., his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Belgrade, to be his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Stockholm. He has served among other places at Teheran and Tangier, and has been granted allowances for his knowledge of Persian and Arabic. Since 1925 Sir Howard has been Envoy Extraordinary and Minister Plenipotentiary to Yugoslavia.

The following appointments have been made by the Secretary of State for the Colonies:—

Palestine.—Mr. S. S. Farragya, to be Telephone Superintendent, Posts and Telegraphs Department.

Cyprus.—Mr. R. N. Henry, to be Assistant Director of Education.

UNEASY DEMOCRACIES IN THE BALKANS.

A cynic, taking note of conditions in certain countries of South-Eastern Europe to-day, might be tempted to reflect that the "Ramshackle Empire" of Austria-Hungary had been broken up only to produce ramshackle kingdoms. The actual situation is, perhaps, not quite so bad as the epigram would suggest; but it remains a fact that neither the Roumanians nor the Southern Slavs have exhibited that instinctive unity of ideas and ideals which pre-War irredentist movements had led the world to expect when the component parts of Yugoslavia and Greater Roumania had been collected respectively within a single State. Whether the disruptive tendencies which have hitherto been so much in evidence in these countries imply a permanent incompatibility of temperament, or are merely the growing pains of a young State endeavouring to find itself, another decade will probably decide. Conditions in each case show a certain similarity. The old independent kingdom formed the nucleus of the new State, round which the liberated provinces hastened to group themselves, and in both instances this central unit has proceeded to consolidate power as much as possible in its own hands, under the conviction that such a course was essential to the stabilisation of the country. The over-centralisation that has resulted has been resented in the other sections of the amalgamation, and the feeling of national solidarity has given place to bitterness and a pronounced antagonism. If either country had been a democracy in the true sense of the word, it is probable that political power would have changed hands between the centralists and the decentralists early enough to prevent serious abuses on either side and to evolve a workable Constitution, within the four corners of which scope could be found for the progress of political thought. As things are, the centralists still hold the fort in Yugoslavia and bitterness among their opponents accumulates. It is only fair to the Dictatorship that longer time should be given it to bring about the readjustment which it has declared to be its aim; but the mere fact that it has had to resort to drastic measures to correct the abuses of the last ten years may tend to intensify sectional antagonism, and the prospects of unification do not become brighter, as the days pass.

In Roumania the shifting of political power came in the tenth year after the War on constitutional lines, but too late to prevent the intensification of political antagonism to a degree that threatens the smooth working of the Constitution. There is no reason at all to suppose that it is more than a coincidence that something in the nature of an armed plot should have been nipped in the bud by the Roumanian Government at the moment when the Opposition withdraws itself from Parliament as a protest against what it calls a treacherous attack on the part of the Government on the State and the national unity. A year ago the political party at present in power had also withdrawn from Parliament, on the ground that the Bratianu Government was in office unconstitutionally, as a result of electoral abuses, and that in no other way could the National-Peasant Party, confident in the support of the great majority of the nation, register the national disapproval by constitutional means. Some confirmation of the justice of this contention was forthcoming, when in

the ensuing election, under no duress, the electorate accorded an overwhelming majority to Dr. Maniu and his National-Peasant following. The present action, therefore, of the Liberal and other Opposition parties in absenting themselves from the Chamber and the Senate must be regarded mainly as an exhibition of the political bitterness of feeling in which the country is now involved as a result of the violence done to the democratic spirit during the previous ten years. The quarrel turns on the Bill for Administrative Reform that has been submitted by the Government to Parliament. This measure is based on the principles of decentralisation and local autonomy. The village is taken as the smallest unit for administrative purposes, a collection of villages constitutes a rural commune, and in ascending order in the scale come the district, the county (with a municipality as a separate administrative unit), and the province. Of the latter there are to be seven, each with its own special Administration, under a Director or Governor, with the rank of an Under-Secretary of State. The office of Prefect nominated by the Central Government—the sheet anchor of the centralist system—is to be abolished, and each county is to be administered under a President elected by the County Council. Each Province will have as its deliberative body a Council composed of county delegates and delegates from municipalities in the Provinces.

In view of the over-centralisation that has contributed so largely in the past to political bitterness between the Regat, or Old Kingdom of Roumania, and the new Provinces incorporated since the War, it is not impossible that the pendulum is now swinging too far to the other side and that the administrative reform proposed may in practice encourage separation or at least weaken the unification of the country. For any tendency, if it exists, in this direction, responsibility will attach to the predecessors of the present Roumanian Government, who drove home with such vindictiveness the centralist screw that it has now to be scrapped. In the circumstances, it might be thought, the Opposition would find it more consonant with statesmanship to attend the deliberations of Parliament, in order to bring reasoned argument to bear upon a subject of vital concern to the future well-being of the State. It is not on these lines, however, that party politics are as yet conducted in the Balkans. In the local autonomy now proposed the Liberals see the doom of the elaborate politico-economic system that they have built up over a long course of years. They might contemplate with indifference even a prolonged stay in the political wilderness; but Dr. Maniu's Government threatens the existence of that stranglehold on the nation's finances which, rightly or wrongly, they are supposed to have established. Both in Yugoslavia and in Roumania economic conditions help to embitter the political situation. The Serbs regarded it as a natural and reasonable state of affairs that they should be helped out of their own financial difficulties by the greater prosperity of the incorporated provinces. The Liberals of Roumania, or their all-powerful leaders, may have some far-sighted fiscal policy which, if capable of indefinite application without producing national bankruptcy in the process, might ultimately benefit the State as well as the authors, whose interests it will have served from the beginning; but during the first few years of its application the results have been disastrous to the country, for the present Government inherits arrears of payments amounting to over twenty million pounds, which will have to be met before the country's finances can be set on a sound basis. This unexpected financial burden necessarily renders the Government's position far more difficult than it had any reason to anticipate before it took office. With, therefore, the further insight afforded of the Liberal régime's mismanagement and the consequent aggravation of its own difficulties, the National-Peasant Party is the more minded to find in the Liberals a real danger to the State than merely opponents differing from it on this or that political theory. For Roumania also, therefore, unification may yet prove a long process.

'The Near and Middle East

From Our Own Correspondents.

Alexandria, July 12.

On the Ausonia.

The High Commissioner sailed for Europe on July 11 on board the s.s. Ausonia, and a large number of the leading British residents went down to the docks to say good-bye. The weather this week has been exceedingly hot and sticky, and, in view of this, Lord Lloyd decided that summer suits should be worn on the occasion. The High Commissioner's thoughtful decision was much appreciated, as top hats and morning coats are oppressively hot in the summer.

The Ausonia was very full, as the summer exodus has begun, and when the Residency moves down to Alexandria next week, Cairo will be empty.

A remarkable precedent was created yesterday, when a meeting of the Council of Ministers took place on board the Ausonia. The Minister of Finance was already on board when a cable was received at the Ministry from the Prime Minister, in Paris, to the effect that a member of the Egyptian Aviation Mission in England intended to fly back to Egypt and needed a grant of £E3,000, and the Prime Minister desired the Minister of Finance to approve the credit. When the Minister of Finance received the message on board the Ausonia, he saw that all the other Ministers were also present, and so a Cabinet Meeting was held then and there, and the grant approved. There is a pleasing lack of red tape about the affair, and it speaks highly for the present Government's determination to get on with the work, whatever it may happen to be.

Roads and Railways.

The decision of the Egyptian Government to build a new railway from Cairo to Suez has evoked a storm of protest and a general demand that the project should be abandoned in favour of proper repairs to the existing road, in order that reasonable facilities for motor transport should be provided. Egypt has not yet learned that road transportation is becoming a serious rival to railways, and unless railway companies, whether State-owned or belonging to private interests, run their own road services, someone else will do so, and the railway receipts will fall lower and lower. At the present moment such a course is almost impossible, owing to the disgraceful condition of Egyptian roads; outside the chief towns a good road is quite unknown. The Suez road is especially important, as the railway line is not direct and the journey takes at least five hours, whereas the actual distance between the two towns is only 120 kilometres, on a good road a matter of considerably less than three hours. On a recent day, when there was no reason why traffic should be exceptionally heavy, forty cars made the journey. In the winter this number is often greatly exceeded, as tourists often land at Suez, hurry to Cairo,

spend a day or so there, and then catch their ship at Alexandria or Port Said. Given a good road, this number could easily be trebled, and in view of the general demand for road improvement, the Government must sooner or later take action. The leading newspapers are daily receiving letters in large numbers from all over the country on this subject. Decent roads will prove a great boon to Egypt, both commercially and for the pleasure of residents, as at present one of the chief drawbacks to life here is the impossibility of getting away from the scene of one's daily existence.

Government Cotton.

The sales of Government cotton are producing gratifying results, for, notwithstanding the depressed state of the market, very good prices have been realised for the medium-grade holdings. It would appear, however, that the Government are following a mistaken policy in putting up such small quantities. Before long the new crop will be on the market, and then their hopes of getting rid of the whole of their holding will be small. When the news was first published that this cotton was to be sold, many rumours were circulated to the effect that the cotton had badly deteriorated. This has proved grossly exaggerated, but there is a slight reluctance on the part of spinners to purchase cotton which has been in store for several years. In view of this it has been suggested that the Government should consign a certain amount of their stock to markets abroad, so that the consumers could investigate it first hand before they make purchases. In this way they could avoid the necessity of flooding the market with large quantities of cotton, in order to effect sales before the advent of the new crop, and by allowing buyers to inspect the qualities offered, could counteract the rumours which have been spread, obviously by interested parties.

Egyptian Finances.

The Egyptian Stock Exchange is rapidly falling into its deep summer slumber, and the impression has been rather in evidence that conditions are more than usually depressed this year. The end of the first half of the year has made it possible for some useful comparisons to be made, and from these figures it has been proved that, generally, prices are not very much lower than is usual in the middle of the summer. State Funds, such as Unified and Preference Debt, are certainly a little lower than usual, and have both fallen roughly £4 in the last six months. The only other shares to register any appreciable difference are the Crédit Foncier Lottery Bonds. These have all suffered very severe attacks, and prices are lower than they have been for some years. The reason for this is to be found in the ruling prices of cotton, which at 31 dollars is ten dollars lower than at the end of June last year. Everything depends on cotton, and the tone of the Stock Exchange almost invariably follows that of the Bourse. The position is, however, not as bad as some pessimists would make out, and the market is expecting better things shortly.

Constantinople, July 9.

The New Customs Tariff.

It is becoming more obvious every day that the Turkish fiscal authorities, in drawing up and publishing the details of the new Customs Tariff, entirely failed to take into account one serious, though happily temporary, aspect of the projected measure, and that was the question of warehouse space in Constantinople and Smyrna. The inrush of goods imported subject to the old co-efficients has been so pronounced that every nook and cranny of warehouse accommodation have been utilised to the full. Matters have come to such a pass that goods weighing many hundreds of tons are lying water-borne for weeks in lighters moored in the Golden Horn, and the agglomeration of lighters has become so serious that traffic in that narrow waterway is being seriously interfered with.

There, under the shadow of cupolas and minarets, may be seen many old-fashioned craft—obviously mobilised for the occasion—laden with enormous cases marked "Ford—made in Canada," others of smaller dimensions bearing the superscription "Champagne—Epernay—tenir loin des chaudières," others again, whole lighter-loads of them, bearing such household names as Colman, Crosse and Blackwell, Reckitts, Morton, Lea and Perrins—all "made in England."

The whole of the ex-military depôts on the southern

bank of the Golden Horn, just without the outer bridge, have been allotted to imported motor-cars, chassis and spare parts, and in these picturesque surroundings may be seen pyramids of huge cases, mostly superscribed with the names of American manufacturers.

The Port Monopoly Administration, who are primarily responsible for warehouse accommodation and lighterage, have addressed an urgent message to the Ministry at Angora, stating that they are at the end of their tether and that they decline responsibility should goods continue to pour in by the shipload. They have also addressed a formal protest to the Constantinople Quay Company—an Anglo-French concern—for having failed to provide warehouse space ages ago in accordance with the terms of their concession. It is certainly too late for the Quay Company to remedy this defect at such short notice—even did the exiguity of the Galata and Stamboul quays permit of any such extensions, which, unfortunately, they do not.

The position, altogether, is an unenviable one for both the authorities and the mercantile community. One cannot help feeling that much confusion and trouble might have been avoided had time been taken by the forelock and had the competent authorities overhauled the existing machinery for discharging and storing merchandise before rushing through the new Tariff.

On the other hand, however, the crisis is scarcely likely to be of long duration, as the increased duties must almost inevitably have the effect of seriously curtailing imports into this country before many weeks have gone by.

Russo-Turkish Relations.

The controversy which has latterly arisen between Angora and Moscow over the interpretation to be placed on certain stipulations of the Russo-Turkish Trade Agreement has led, indirectly, to mutual recriminations in the Press of both countries. A trial has been proceeding for a week or two past in the Criminal Court at Smyrna against some twenty Turks and native Christians—some of them of good social standing—for communistic propaganda among the labouring classes. The prisoners are

PALESTINE RAILWAYS

TRAIN SERVICES BETWEEN EGYPT AND PALESTINE AND VICE VERSA

R. B. W. Holmes,
General Manager,
HAIFA.

indicted, *inter alia*, with utilising letter paper bearing the scythe and hammer as a crest. All cans filled with petrol imported into Turkey from Russia incidentally bear the same device!

The Moscow *Pravda*, on information with respect to this trial received through the Tass Agency, has definitely come to the conclusion that the Turkish proletariat must be so rapidly absorbing and assimilating communistic ideals that it behoves the Turkish bourgeoisie to look to their laurels, unless they are to be irresistibly drawn into the movement.

The Turkish editors have risen as a single man against the insinuations of their Russian *confrères*—and, to anyone knowing the country well, the Turkish editors are undoubtedly right. Whatever may be guardedly said with respect to any possible anti-republican or, rather, pro-religious feeling in this country, it is perfectly clear that Communism, as a political creed, is never likely to flourish—to begin with, because the tenets of the Third International are mere “caviare” to the Anatolian peasant and town-labourer; secondly, because there is a strong suspicion in the mind of the common Turk—the man in the street—that Lenin, Krassin, Trotsky and their colleagues, whatever good they may have done in other respects, have certainly been inimical to the religious faith of the Russian people and that they have done their best to stamp out religious sentiments among the younger generation.

The Turkish editors end by saying that Turkish nationalism and patriotism will ever be a sufficient counterpoise to any efforts which the Third International may think it worth their while to waste their time on in Turkey.

Foreign Banking Activities in Turkey.

Notwithstanding the persistent effects of the most acute economic and financial crisis which has been felt in this country for many years past, and in spite of the recent liquidation and withdrawal from this market of several foreign banks, other financial establishments, without any experience of local conditions, appear to be quite ready to follow in the footsteps of their predecessors who have failed.

The Banque Franco-Asiatique, and an Italian bank— notwithstanding the poor results shown of late by the two other Italian banking establishments operating in Constantinople—and a Czechoslovak institution are about to open their doors to the public. One can only hope that they will have better luck than those other establishments which, not finding the game worth the candle, have liquidated and withdrawn from this country.

SUBIH BEG NASHAT.

We much regret to record the death of Subih Beg Nashat, who died in Angora on July 19. Subih Beg, a prominent Iraqi politician, was appointed to be Iraq's Diplomatic Representative in Turkey about eighteen months ago—since which date relations between Turkey and Iraq have been most cordial. He served in the Turkish Army during the War, and after the Armistice took a leading part in the formation of the young Iraqi State. For a time he was Minister of Finance, before being appointed to Turkey.

In the interests of economy reductions are being made in the Roumanian diplomatic Service, and the *Frais de représentation* allowed to Ministers abroad have been diminished, except in the case of Legations in London and Paris.

Mr. Henderson, Foreign Secretary, on July 19 received a deputation from the Anti-Slavery and Aborigines Protection Society, which suggested that the temporary Slavery Commission should be revived by a decision of the next Assembly; and that when it had been revived, documents in the possession of the British Government concerning slavery in Abyssinia should be sent in by the Government to the Commission. Mr. Henderson promised to give favourable consideration to the proposal for a revival of the Commission.

NEWS IN BRIEF.

After an all-night sitting the Greek Chamber of Deputies adjourned on July 16 until October.

The Dowager Queen of Roumania left Belgrade on July 16 by special train for Bucharest.

At the Javer Villa, Belgrade, on July 21, King Alexander received in audience the new Albanian Minister to Yugoslavia, who presented his credentials.

M. Venizelos, Greek Prime Minister, is spending a holiday in Crete accompanied by the Ministers of Marine, Communications, and the Interior.

Mr. Hoare, Counsellor at the Residency, Cairo, returned to Egypt on July 17 to act as British High Commissioner during the absence on leave of Lord Lloyd.

A message from Aden states that locusts which have been doing much damage in the Yaman have appeared in the country of the Abdali Sultan of Lahaj, where it is feared that they are breeding.

New postage stamps, both ordinary and service, are expected to supersede the present series in Iraq towards the end of August, when air post stamps of definite design for use over the London-Karachi air line are also due to make their appearance.

The trial of the Turkish Communists in Smyrna ended on July 16: 24 of them were convicted of having organised a secret society and engaged in subversive propaganda and were sentenced to periods of imprisonment varying from 18 months to four years and a half.

Albania will shortly issue Red Cross postage stamps bearing the portrait of King Ahmed Zogu and a commemorative series of stamps in connexion with the tenth anniversary of the Roumanian annexation of Transylvania will appear in the near future.

An unusual feature of the Congress of the Women's International League for Peace and Freedom, to be held in Prague in August, will be the presence of women from the Balkan countries, representing the national sections of the League in Roumania, Bulgaria, and Yugoslavia, as well as those from Tunis and India.

The first organised Australian pilgrimage which has been visiting the war zone in Gallipoli, left Constantinople for France on July 21. There they will visit the battlefields and lay wreaths on the graves in Paris of the Unknown Warrior and of Marshal Foch. This party, which numbers eighty, landed on July 18 at Anzac Beach. They visited Anzac and other cemeteries, and laid on the tombs wreaths and sprigs of mimosa, which they had brought from Melbourne. The pilgrims were unanimous in their praise of the Turkish authorities, who gave them every possible facility, both at Constantinople and in the Dardanelles. A number of the pilgrims crossed over to the Haidar Pasha Cemetery to lay a wreath there.

KING FUAD OF EGYPT.

After a brief stay in Paris, King Fuad, who has been paying official visits to Berlin, Prague and Geneva, arrived in London on Saturday, July 20, accompanied by Mohamed Pasha Mahmoud, Prime Minister of Egypt, Dr. Hafiz

Bey Affi, Minister for Foreign Affairs, and Ahmed Hassanein Bey, Lord Chamberlain. At Dover his Majesty had been met by Abdel Malek Hamza Bey, Egyptian Chargé d'Affaires, and Sesostri Sidarouss Bey, who travelled with the Royal party to London. At Victoria Station King Fuad was met by the Duke of Gloucester, on behalf of the King, Lord Lloyd, High Commissioner of Egypt, Abou Seif Radi Bey and M. Georges Cattai and other members of the Staff of the Egyptian Legation. A detachment of Egyptian Boy Scouts acted as a Guard of Honour, and in the large gathering of Egyptians who were present on the platform were Tewfik Doss Pasha, Ismail Pasha, Dr. Ali Ibrahim Bey, Abboud Bey, Habil Doss Bey, Egyptian Minister in Washington, and Abdul Rahim Bey, Private Secretary to the Prime Minister. On alighting from the train King Fuad was greeted with the triple cry of "Long Live King Fuad I, King of Egypt!" from the Boy Scouts and the many students present. His Majesty was welcomed by the Duke of Gloucester and Lord Lloyd and, after shaking hands with some of the company, proceeded with the members of his suite to the Ritz Hotel, where he will stay while in London. A large crowd had assembled in the approaches to Victoria Station to witness King Fuad's arrival.

On Tuesday King Fuad was the guest of the Lord Mayor of London at Guildhall, and on Wednesday he was to attend a reception given by Sir Denison Ross at the School of Oriental Studies.

When he came to the Throne on October 9, 1917, King Fuad had been for many years prominently associated with the intellectual and moral renaissance of Egypt, rather than with its political development. At the age of ten he had left the country to be educated first at Geneva and afterwards at Turin, where he entered successively the International Institute and the Military Academy. In 1892 he returned to Egypt and became a General in the Egyptian Army. Subsequently he resigned his official duties in order to devote himself more completely to promoting the cultural development of Egypt. In 1906, as a result of the response to an appeal that he himself had launched, Prince Fuad founded the Egyptian University, and he remained its President-Rector until 1913. He was instrumental in gathering together a library of over 15,000 volumes, and he organised missions to this end to the Universities of England, Germany, France, and Italy. In 1911 he undertook a tour through Europe, visiting London, Paris, Berlin, Prague, Rome, Budapest and Vienna, collecting information, books and manuscripts,

and anything that could benefit the institution in which he has always maintained the liveliest personal interest. Most of the scientific bodies that exist in Egypt to-day either were founded by the present King, or are indebted to him for his personal interest in their welfare. The Royal Geographical Society of Egypt, founded in 1875, had led a precarious existence until Prince Fuad interested himself in it and made a live organisation of it. Thanks to his intervention the Ethnographical Museum was started, the exhibits duly classified and listed according to the most modern methods, the organisation of the Map Office overhauled, and the scientific investigation of the historical, linguistic and ethnographical problems of the Nile Valley was undertaken. Prince Fuad was also responsible for the foundation of the Institute of Applied Hydrobiology at Alexandria, for the Society of Political Economy, Statistics and Legislation (a vigorous body, which publishes *L'Egypte Contemporaine*), the International First Aid Society in Cairo and the Committee for the Preservation of Arab Monuments. The Egypt Promotion Association, which has for its objects the attraction of tourists to the Nile Valley and the improvement of facilities for their comfort, owes its initiation to Prince Fuad, who since he came to the Throne has remained its Patron. His Majesty in recent years has taken the leading part in making Cairo the centre for important international congresses, such as the International Geographical Congress, 1925, the Congress of Navigation, 1926, the Medical Congress, 1928, the highly important Cotton Congress of 1927, and the Statistical Congress, 1927. King Fuad, moreover, is convinced of the value of sport in forming national character and has interested himself in the construction of an Olympic Stadium at Alexandria.

King Fuad is now interested in the creation of an Arabic Academy, with a view to the preserving of the Arabic language and to deal with its easier transcription by the additional of capital letters and better punctuation. For suggestions on these subjects he has recently instituted a prize. He is also helping to gather each winter in Cairo the foremost writers in Arabic and poets, and a complete collection of the standard works of classic Arabic literature is being made. His Majesty is also anxious to create a Desert Institute both for scientific expeditions and research, including work in the folklore of the desert tribes, etc., and for sporting expeditions. He has for a long time been occupied with a scheme for the creation of an African Institute which will house in Cairo complete collections of exhibits relating to the African peoples. Specimens are being collected of everything produced from African soil, and in use by African tribes.

King Fuad was elected in 1927 "Membre Correspondant" of the "Académie des Inscriptions et Belles-Lettres," and during his present tour in Europe the Universities of Prague and Geneva have conferred upon him honorary degrees of Doctor in Philosophy and Political Science.

THE CENTRAL ASIAN "JOURNAL."

The last *Journal* (Part III., Vol. XVI.) of the Central Asian Society is an exceptionally attractive one. In addition to the full text of lectures delivered by Wing-Commander A. A. Walser on "Flying on the North-West Frontier of Egypt," by Dr. W. Filchner on "My Central Asian Expedition of 1925-28," and by Sir Denison Ross on "The New Middle East," there are entertaining and instructive articles on "A Trip to Alamut, Lahijan and Rasht," "The Bakhtiari Road," "A Noble Persian Author," and "The Trans-Desert Routes to the East." In the first of these is described a journey, organised by the late Captain G. J. Eccles, and undertaken last year to the Persian home of the renowned "Assassins" at Alamut. The article on the Bakhtiari road contains valuable material on the country lying between Isfahan and the Haft Kil oil-fields. Major Edmonds writes most amusingly on the history of the famous Walis of Pusht-i-Kuh, based on a book which he discovered, "Anis-ul-Musafir," by Ghulam Riza Khan, the Wali himself, and published at Bushire in 1911.

The review section, moreover, is strong and varied. For the expression of individual opinion alone it is well worth study.

CALCUTTA LETTER.*(From Our Own Correspondent.)*

Calcutta, July 4.

The Chelmsford Club Speech.

Lord Irwin, in his speech at the Chelmsford Club, spoke of those less concerned to examine the merits or demerits of any particular policy than "to use any argument—good, bad, or indifferent which may in the opinion of some bring discredit upon the Government." His Excellency might with equal justice have said a word upon the unreasonableness of people. In his speech Lord Irwin said in effect: "I am going to London, and there, as faithfully as it is in my power to do, I will represent to His Majesty's Government the different standpoints of those who can speak for Indian political opinion. Trust me." An Indian publicist, commenting on that, has gone so far as to say that the Viceroy should have added "other and unambiguous declarations as to the steps he will courageously advise the British Cabinet to adopt," adding, "In the absence of a definite declaration of this kind, Indian politicians would be less than human if they refused to be misled by Lord Irwin's manifest sincerity." As if the Viceroy, at this moment, with the Statutory Commission's Report still to be presented, could decide with what stick, to put it so, to stand over the British Cabinet; as if the Prime Minister, who is reported to have said that the appointment of the Statutory Commission "had been desired by all three of the political parties in England," would allow the Viceroy to stand over him with a stick. There is reasonableness and there is unreasonableness. In political India unreasonableness is to reasonableness as a mountain to a child's heap of sand on the sea-beach.

Sir Malcolm Hailey.

I had this in my letter of April 25: "The views of the officials are those of which the general public hears least. They either speak *in camera* before such bodies as the Statutory Commission, or they do not speak at all." That is so, and it makes any utterance of a leading official all the more interesting. If that official is Sir Malcolm Hailey, formerly Governor of the Punjab, now Governor of the United Provinces, the man among the officials to whom the Viceroy is believed oftenest to turn for advice, the interest is the maximum. Sir Malcolm Hailey has been addressing the Legislative Council in his Province. India has entered irrevocably, he said, on the path of the development of responsible government through representative institutions. There were some who in the past had hesitated about this process. Sir Malcolm may well have been one of them. One sometimes feels that representative institutions are an absurdity in the East. The doubts of those who had hesitated had now "narrowed down to a desire for assurance on two points—protection of the interests of the minorities, and the safeguarding of order." Those last words bring one or two of the other "events" of this week—a statement issued by the Working Committee to the Statutory Commission. But to begin another paragraph.

Minorities and Law and Order.

The statement of the Working Committee has some very plain speaking in it. "The mentality exhibited by Pandit Motilal Nehru," it says in one part, "... is much more than that of a dictator ... the Pandit has gone mad over what he thinks to be the most valuable document ever produced (the Nehru Report, that is) for the welfare of the people of India ... He does not realise that the Moslems of India are no less determined to reject any constitution which does not recognise the obvious rights of the Moslem Minority." It cannot be argued that the Pandit and the other Hindu leaders are making a very great effort to "convince the minorities that their interests are in no danger at their hands," to put the matter in Lord

Irwin's words of last week. One does not know what they may be doing in private to convince the Moslem leaders that they need have no fear. They make speech after speech in public in which no attempt is made to argue that the Moslems have no ground for fear. There is a Moslem party that publicly agrees that there is none, but I have gathered that in private those Moslems express as much anxiety as the other Moslems as to the Moslem position in an India that had been granted Dominion Status. As for the letter of the Associated Chambers of Commerce on the subject of Law and Order, it will be remembered that, giving evidence in Calcutta before the Statutory Commission, the spokesmen of the Chambers said they were not agreed whether the control of the police should or should not be vested in Ministers responsible to the Legislative Councils. They have now written: "The majority view is now quite definitely opposed to the transfer of the control of police administration to an elected Minister responsible to the Legislature." The Bengal Chamber appreciate the dangers attached to the transfer of the police administration, though they think that without it provincial autonomy cannot have a proper chance of fulfilment, and would not be averse from a postponement; the Bombay and Karachi Chambers oppose the transfer; the Madras Chamber favours it for Madras, and the Coimbatore and Coimbatore Chambers support this view. The Tuticorin, Cochin, Tellicherry and Calicut Chambers oppose it. The majority is, then, clearly against the transfer.

Lord Sydenham's Letter.

In his letter to the *Morning Post* of the other day Lord Sydenham drew attention to the need to be "mindful to the welfare of the masses" in India. One publicist has this as a comment; "Does Lord Sydenham seriously think that even a reader of the *Morning Post* believes that Lord Sydenham cares more deeply for the (Indian) masses than the Indian politicians who, after all, are of the same race, and speak the same language, as the people they represent?" All that sounds very well as a debating point, but it is not unknown to observers of human nature that you can combine being of the same race and speaking the same language with a tolerably big indifference to the interests of masses of men. It is not unknown to readers of economic and social history that, if you belong to a class more than a little tinged with greed, you can be blinded by your class interest to concern for the masses. The British manufacturers of the earlier half of the nineteenth century, who employed women and children in factories and in coal mines, where the conditions of working were wretched, are known to have slept pretty soundly in their beds. Lord Sydenham may or may not have as deep an interest in the Indian masses as he makes out. What my Indian friends and acquaintances, speaking of the Indian politicians, say is that their interest in their own advancement is by far the strongest interest they possess; if it is not in many cases the only one.

The Indian States.

There have been informal conversations at Poona between the Viceroy and representatives of the Indian Princes and Chiefs, and eight resolutions, passed unanimously at a Conference of the representatives of sixty States, resolutions covering most of the ground covered by the Butler Committee's Report, have been published. There is nothing, I think, in these resolutions that I had not reported; but this may be quoted as evidence of the continued determination of the Princes not to let it be assumed that they are ready to acquiesce in any transfer of paramountcy rights from the Crown to a self-governing British India: "... this Conference expresses gratification at the Indian States' Committee's recognition (a corollary of the true constitutional position of the States) that the relationship between the Paramount Power and the Princes should not be transferred, without the agreement of the Princes, to any third party."

Mrs. Besant's "Virtual Insurrection."

If Lord Sydenham's letter has not been allowed to pass without criticism, still less has Mrs. Besant's prophecy that, if India is not granted Dominion Status "within a period of months rather than years," there will be a revolt in India. (My newspaper had "revolt" in one part of its report, and in another the wool-gathering printer had got it as "resurrection") The *Pioneer* had a leader on the subject. The heading and sub-heading show plainly what that journal thought of it. They were: "Mrs. Besant's Foolish Speech. An argument that must be avoided." "The atmosphere of negotiation," it says, and every sensible man in India will agree, "must not be unduly heated, all bitterness must be put aside, and the wrongs of the past must be forgotten in the hopes of the future." I would add myself that it is far easier to speak in those general terms of the wrongs of the past than to put a name to particular ones. The British record in India is an exceptionally fine one.

The Age of Consent Committee.

The Report of the Age of Consent Committee is said now to be in the hands of the Government of India. I have had conversations with members of the Committee. They were appointed to make recommendations regarding the age of consent, but in their view it was no use fixing the age of consent, if they did not also recommend the penalising of marriage below certain ages; for, they argued, if marriage below the age of consent is allowed, the law as to the age of consent will be frequently broken. For one thing, what the law is on the point of the age of consent being very little known, that law is often violated. The Report, it is said, will be published at the end of this month.

Miscellaneous.

The Central Banking Committee is now at work. Sir Osborne Smith, speaking in Bombay at the Institute of Bankers, said: "I share the general regret and feel some disquiet at the cumbersome dimensions of the Central Committee." I put it very much more strongly myself.

The Bombay mill-owners, headed by Mr. H. P. Mody, took advantage of Lord Irwin's presence in Bombay to confer with him for an hour about the strike in the textile industry. Viscount Goschen and Sir George Rainy were also present. What with the questions of tariff and exchange entering into it, it is a very thorny problem for presentment to a man just about to take leave of absence, and to go on board ship.

It was suggested that there should be a Karachi-Bombay air service, bringing Bombay twenty-four hours nearer London. A Calcutta-Karachi service will be the next thing.

Sir George Schuster is seeking a new way of securing sterling remittances to meet the Home Charges. To myself there seems no harm in what he has done, but I have seen it described as "so extraordinary an experiment," and the Finance Member, it is argued, should first have consulted the Chambers of Commerce. People, those who understand banking and other such questions

no more than they may be expected to, think continually of this or that Government action as decisive in prices, exchange, etc., not knowing that things are controlled by great and partly hidden changes in the relation of supply and demand, and that, if the Indian export trade is not considerably in excess of the import trade, no Government can prevent the exchange from weakening. Just as little could a Government prevent umbrellas getting wet when it rains.

EAST INDIA ASSOCIATION.

Mr. Kikabhai Premchand, a member of the Indian Central Committee which is co-operating with the Statutory Commission, will read a paper at a meeting of the East India Association to be held on Wednesday, July 31, at the Caxton Hall, Westminster, on "The Economic Position in India."

Earl Peel, the late Secretary of State for India, will preside and a discussion will follow the reading of the paper. Mr. Kikabhai Premchand is the senior partner of the well-known Bombay firm of Premchand, Roychand, and is exceptionally well qualified to speak with experience and authority on the subject in question.

LADY CHATTERJEE.

The High Commissioner for India and Lady Chatterjee were at Home at the Indian Gymkhana Club, Oswestry, on July 16, when a cricket match between the Club and the M.C.C. was played. Among those who accepted invitations were:—

The Maharaja of Burdwan, the French Ambassador, the Belgian Ambassador, the Persian Minister, the Egyptian Chargé d'Affaires, the Belgian Commercial Attaché, the German Commercial Attaché, and the Italian Commercial Attaché, the High Commissioner for Australia and Lady Ryrie, the High Commissioner for New Zealand and Lady Parr, the High Commissioner for Southern Rhodesia and Lady Newton, the Agent-General for Quebec, the Agent-General for Victoria, the Agent-General for British Columbia and Mrs. Pauline, the Agent-General for Ontario and Mrs. Noxon, the Agent-General for Tasmania and Mrs. Snowden, the Marquess of Reading, Lord Harris, Lord and Lady Melchett, Lord Southborough, the Duchess of Atholl, Lord and Lady Peel, Viscount and Viscountess Burnham, Lord and Lady Lamington, Sir John and Lady Simon, Sir Arthur and Lady Bannerman, Sir Leslie Wilson, Sir Basil and Lady Blackett, Field-Marshal Sir Claud and Lady Jacob, Sir Zulfiqar and Lady Ali Khan, Sir Charles and Lady Bayley, Sir Louis and Lady Dane, Sir Clement and Lady Hindley, Sir Sankaran Nair, Mr. and Mrs. J. H. Whitley, Sirdar S. S. Uderoi, General Sir Havelock and Lady Hudson, Sir Maneckji and Lady Dababhoi, Sir Stephen and Lady Demetriadi, Sir Harry and Lady Brittain, the Dowager Lady Boyle, Sir Montague Barlow, the Nawab of Patudu, Sir Campbell Rhodes, Nawab Sir Umar Hayat Khan, Sir Trevor and Lady Dawson, Sir Reginald and Lady Clarke, Sir Alexander and Lady Murray and Miss Murray, Sir Norman and Lady McLeod, Sir Dorabji and Lady Tata, the Hon. Gertrude Kinnaird, Sir Phiroze Sethna, Sir Austin and Lady Low, Sir Binode and Lady Mitter, Mr. and Mrs. M. C. Rajah, Sir John and Lady Miller, Sir Walter and Lady Wilson, Sir Thomas and Lady Smith, Sir Edward and Lady Chamier and Miss Chamier, Mr. T. B. W. Ramsay, Sir Charles and Lady Wakefield, Sir Aruthur and Lady Knapp and Miss Knapp, Sir Hugh and Lady Keeling, Sir Selwyn and Lady Fremantle, Sir John Cumming, Sir Reginald and Lady Craddock, Sir George and Lady Forbes, Lieutenant-General Sir William and Lady Furse, Sir W. and Lady Foster, the Rani Sahiba of Sherkot, Sir Cowasjee and Lady Jehanghir, Munshi Iswar Saran, Colonel and Mrs. S. W. Paddon, Nawabzada Iftikhar Ali Khan, Sir Peter and Lady Clutterbuck, Dr. and Mrs. A. Suhrwady, Lieutenant-Colonel and Mrs. Stewart Patterson, Dr. R. P. Paranjpye, Mr. and Mrs. F. C. Goodenough, Sir Arthur and Lady Froom, Colonel and Mrs. Crawford, and Sir Dawson and Lady Miller.

18, OLD BROAD ST., LONDON, E.C.2

THE TRUE REFORMATION OF INDIA.*

By P. R. CADELL, C.S.I., C.I.E.

It is a commonplace, though it is often forgotten in practice, that the future of India depends on the improvement of the conditions of village life. Over seventy-five per cent. of the population lives in the villages, and from them come not only the people that produce the crops, but the greater part of the labour required for industrial enterprise in the towns and ports, and all the soldiers of the Indian Army, with the exception of those drawn from the equally rural population of the countries on the Indian border. All that is the best in India is centred in the villages; yet the conditions of village life are profoundly discouraging. These two little works, written by an Indian civilian who, with the assistance of his wife, has devoted himself to village uplift in one district of the Punjab, are of great value as indicating the lines on which the required regeneration can be arrived at if not attained.

The conditions of life in the ordinary Indian village are appallingly insanitary and archaic, and in particular the filth of the village houses, the dirt in which the children are brought up, and the inferior position of the female sex, from its earliest infancy. In one of the books under notice, the author casts his observations and suggestions into the form of dialogues which might have been held, could Socrates have visited a modern Punjab village. It may be objected that the dialectic triumphs of Socrates over the villagers are too easy, and that more might be advanced by them in their own defence; but the same objection could be brought against the Platonic original.

In any case the polite acquiescence of the villagers in their visitor's criticism, their ready agreement with the superiority of the changes which he urges, and the entire oblivion into which his advice is allowed to sink when he has left the village is certainly typical of Indian rural mentality. Mr. Brayne rightly emphasises the absence of any spirit of self-denial and public service in Indian schools and colleges; and the want of the class of helpers supplied for English villages by the Parson or the Squire or the retired professional man.

The only permanent adviser of the Indian village is the subordinate Government servant, and every beneficent activity of the local Government means an increase in the number of inspectors and subordinates. Too often these are entirely selfish, and are regarded by the villagers as enemies rather than as instruments of Providence. A perusal of these books may seem melancholy reading; but Mr. Brayne is the reverse of being a pessimist. The critic acquainted with Indian conditions would, in fact, be inclined to think that he is too sanguine on many points, such as, for example, the power of local co-operation to prevent the fragmentation of holdings. It is on co-operation that Mr. Brayne places his main reliance; and on the development of public spirit through the Boy Scout movement; and on the influence of the village school. The last, unfortunately, depends on the character of the village schoolmaster.

Education is now entirely in the hands of Indian Ministers, and, however excellent their intentions, no improvement in administration, or in the class of men forthcoming as teachers, is yet to be seen. The education of the girls is, as Mr. Brayne insists, a first necessity; in the absence of money to provide separate schools, and with the impossibility, in Indian village conditions, of obtaining schoolmistresses who will be free from the breath of scandal, however unjust that breath may be, Mr. Brayne is doubtless right in thinking that the only way of teaching girls, and of removing the inferiority complex of sex that so unjustly attaches to them, is co-

education in the boys' schools. Yet one cannot wonder that it appears to the villager a desperate remedy.

The great defect of the modern Indian legislature is a lack of courage in passing the necessary measures for social reform, and to an even greater extent a failure to provide money for the proper execution of such measures. Mr. Brayne has done a great work in his district; but it would be interesting to know what the result of his activities has been on the finances of the District Local Board. He himself has done his utmost by creating an Uplift Fund for the district; but it remains to be seen whether the Fund, and the bulk of the Uplift movement itself, will survive his transfer from the district. His books have, however, far more than a local interest; and it is pleasing to find that they have been published, and are apparently selling, in six Indian languages or scripts. No better introduction to the study of what is really India's greatest problem could be recommended for the English or for the Indian reader.

LIABILITY OF NON-RESIDENTS TO INCOME-TAX.

IN THE NEAR EAST AND INDIA'S issue of May 16 reference was made to an important statement by the former Financial Secretary to the Treasury on the liability of visitors from the overseas Dominions to income-tax during their stay in this country. Although Mr. A. M. Samuel stated that the many letters which had appeared in the Press had been written under a misconception of the position, his assurance that the circular issued by the Board of Inland Revenue on the subject in February was not capable of bearing the interpretation placed upon its provisions has by no means relieved the widespread feeling of dissatisfaction with the new regulations which is undoubtedly causing many people to spend their leave outside this country.

During the past week THE NEAR EAST AND INDIA understands that representations have again been made to the Board of Inland Revenue on the subject. In the course of a reply dated July 19, the Board states:—

"I am to remind you, first, that the circular recently issued by the Board on this subject was not a declaration of policy, but a statement of the law—as they understand it—and, secondly, that the Board are not the final authority: appeal lies to the Special or General Commissioners—tribunals entirely independent of the Board.

"To ask, as you do, whether there is a 'likelihood of relief being granted' is to ask whether the law is likely to be altered. That is a question on which the Board can express no opinion. The law is made and altered by Parliament, on the advice of H.M. Ministers. All that can be said is that the existence of the widespread feeling in India to which you call attention is a matter that would naturally be brought by the Board to the notice of the Chancellor of the Exchequer.

"I am, however, to add that evidence continues to reach the Board that this feeling is still largely—though admittedly not entirely—based on the mistaken idea, to which currency has unfortunately been given, that any Indian Civil Servant, Indian Army officer, or other person in business or employment in India who comes to this country on leave makes himself by so doing liable to British tax on his total income, whatever his circumstances may be and however short the period of his visit.

"It is perhaps worth while to repeat that this idea is quite unfounded. Such a person, coming home on leave every second or third year, incurs no liability whatever to British tax by spending his leave in this country if he has no place of abode here and is not here for six months in the year. And even if he has a place of abode here, or, having none, is in this country for six months or upwards in the year, the liability he may incur by coming home does not extend beyond the income that is remitted to or brought into this country or is received here."

THE WEEK AT HOME

London, Tuesday Morning.

The Heat-Wave.

It takes, they say, a good deal to upset the equilibrium of the Englishman: he does not like heat of any sort. But during the last week or so he has had to endure much of it, and has been decidedly uncomfortable. Discards of every sort have been indulged in—coats and hats and waistcoats—and if there had been anything more in man's attire that could have been dispensed with, that would have gone too.

In the Carlton Club, one hears, they played cards in their shirt sleeves; judges, of course, left off their wigs; one gallant fellow in a West End theatre appeared after the interval without his coat, only to be so frowned upon by the bare and low-necked women as to have to put it on again! Bus conductors and the like have been working in open-necked cricket shirts. And yet—Mr. A. J. Cook, asking for a meal at a restaurant while in his shirt-sleeves, was refused!

The fact is that, since we men cannot, it seems, change our dress (which we ought to do, poor weaklings that we are) we must change our manners. Unblushingly, that is to say (because it would make us hotter), we must allow ladies to gaze on manly forms in shirt sleeves. When, oh when, will the great reformer arise to make life possible without the tyranny of the collar-stud?

In these panting, gasping circumstances little attention, as may be imagined, has been given to politics, and the House will rise this week without a regret from the reading public. For what do we care, when drought is at hand and the heat still sizzling, what Mr. J. H. Thomas did or did not say about Mr. Guy Boothby, what overtures Mr. Churchill did make to Mr. Lloyd George to defeat the Government, what corrections the Chancellor of the Exchequer did provide to the Minister of Employment? All we do is to babble o' green fields (which are no longer green), and to think on thirst-quenching drinks (which do not exist).

The Drought.

The drought seems to be really serious—not so much because of the lack of rain experienced during the last month or so as because during the whole time since Christmas the rainfall has been below normal. In any case, the Metropolitan Water Board is rationing water supplies, and has already inhibited the use of water for such "luxury" affairs as sports grounds, gardens, motor-cars, and so on. The hose is, in fact, entirely prohibited in London.

As if to comfort us, it is officially announced as probable that we are in for a spell of dry summers. And, of course, the more we are forbidden to use water, the more we want it.

A Worker of London.

Just picture the plight of the average worker in London. After a stuffy, sleepless night, he travels up by the 8.15 from the suburbs, through increasing dust and soot to town. There, in varying degrees of perspiration, he puts in his allotted time, snatching what comfort he can from unenticing meals. Towards the evening, he makes his way to the railway terminus, where he finds that the train in which he travelled up and in which he has to return has been left standing in the sun all day. In this he has to journey, through tunnels as dirty and suffocating as though they had been conceived in Cimmeria, back towards his uncool home. On his faltering return, he finds his lawn parched, his flowers drooping dizzily, and, as likely

as not, a child out of sorts with the heat. This is the kind of purgatory he has been in for some days now. Who shall say that our London citizens are not heroes?

Another Merger.

Those who can travel by road of course do so, but the one really cool spot in a motor-bus is outside under a covered top. For the inside of uncovered buses is generally better than the outside.

Talking of trains and buses, I am interested to see that in Scotland, which is inhabited by so practical a race of people, a provisional agreement has been reached, between the Scottish Motor Traction Company (the biggest motor-transport concern in Scotland) and the L.M.S. and the L.N.E.R., that there shall be no competition between rail and road. The Railway Companies have agreed not to compete by way of passenger road services within an agreed area (the greater part of Scotland), but will co-operate with the Motor Traction Company, the conditions being that this Company shall be reconstructed and that the Railways shall acquire a substantial interest in the capital.

One wonders whether the Motor Traction Company will be like the young lady of Riga! One also wonders whether the thrifty Scots passengers will stand to gain or lose. Mergers are so very, very fashionable nowadays, but it would not be wrong, I think, to say that they create the greatest enthusiasm among those who direct them, not among the humble consumers who look on in amazement at the gigantic transactions, and then—pay the price. The latest move in favour of a merger, by the way, is being advocated day and night by Lord Beaverbrook, who wants Free Trade within the Empire—a dream which most people, apparently, regard as beautiful if practicable, but absolutely impracticable. It may be that Lord Beaverbrook is over-apt to judge the Empire by the opinions of Canada; certainly no very considerable encouragement for his proposals has so far been forthcoming from India or Australasia.

Trotsky.

I referred briefly last week to the Labour Government's refusal to admit Trotsky into this country. The Home Office has received increased criticism since I wrote. Two very powerful journals, for instance, have charged Mr. Clynes with a misreading of the traditions of England in connexion with political refugees, and for myself I should not be surprised, if all goes well from the Labour point of view with the negotiations with the Russian Government, if the man whom Stalin banished does eventually find a home, like Karl Marx himself, in the British Museum.

But certainly there will be an outcry if the Home Office does reverse its present attitude. The Conservatives, for example, assert that Trotsky is quite unique in the category of political refugees, and that to admit a man one of whose main aims for many years was alleged to be the disruption of the British Empire, would be criminal folly.

Charing Cross Bridge.

At last, it seems, after years of talk, we may get a bridge at Charing Cross worthy of the Thames and of London. For the L.C.C. have agreed with the Directors of the Southern Railway upon the removal of Charing Cross Railway Station and Bridge. The shareholders have now to accept the proposal that the cost of this removal shall be borne by the public, as also that of a fine road bridge in its place and of a new station, hotel, and railway works on a better site than the existing one.

It looks as though the shareholders of the Southern had an excellent bargain, and that the present generation of Londoners will be having to pay for the mistakes of their ancestors in authority. In any case, the scheme is one which is raising considerable enthusiasm, among both practical men and artists, to whom the present Charing Cross Bridge has always been an unescapable eyesore.

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

July 25, 1929 (New Style).

July 12, 1929 (Old Style).

Saphar 17, 1348 A.H., of the Muslim Calendar.

Tammuz 17, 5689, of the Jewish Calendar.

The Prince of Wales received the Yuvaraja of Mysore at St. James's Palace on July 17.

The Maharanee of Baroda, who has been staying at Grosvenor House, left London last week for Paris.

Lieut.-Colonel Sir John Chancellor (High Commissioner and Commander-in-Chief, Palestine) was received by the Prince of Wales at St. James's Palace on July 19.

Lord Lloyd, High Commissioner for Egypt and the Sudan, who arrived in London on July 19 from Cairo via Genoa and Paris, is staying at the Carlton Club.

Captain C. G. Prior has taken over the Political Agency at Bahrain from Lt.-Col C. C. J. Barrett, who is officiating as Political Resident in the Persian Gulf.

The Raj Rishi Shri Sewai Maharaj Dev of Alwar left London last week for a fortnight's tour on the Continent. He will return to London at the end of the month.

Sir Albion Banerji arrived last week at Whitehall Court from his prolonged tour in the Near and Middle East, Russia, Norway, and Sweden.

Mr. Philip Taylor, of the *Sphinx*, left Alexandria with Mrs. Taylor and their daughter on July 11 by the s.s. *Ausonia* for Genoa, whence they arranged to motor to Scotland.

The Council of the Egyptian University has nominated Dr. Copland, Professor of History of the Middle Ages at Liverpool University, to the same Chair in the University of Cairo.

The Egyptian Association of Great Britain were at Home on July 22 at the Hotel Metropole, Northumberland Avenue, to meet the delegates to the Egyptian Congress.

Sir Jagadis and Lady Bose left London last week for Geneva, where Sir Jagadis is taking part in the session of the League of Nations Committee on Intellectual Co-operation.

Sir John Simon, Chairman of the India Commission, entertained his colleagues of the Commission and members of the Indian Central Committee at lunch at Wadham College Hall, Oxford, on July 19. Sir John is a Fellow of Wadham.

Sesostri Sidarouss Bey will leave London at the conclusion of the visit of King Fuad to London, to take up his new post in Athens, where he has been appointed Egyptian Envoy Extraordinary and Minister Plenipotentiary.

A dinner was given by his Majesty's Government at the Carlton Hotel on July 16 in honour of Dr. Refik Bey, Turkish Minister of Health. Mr. Arthur Greenwood took the Chair. The guests present included the Turkish Ambassador, Sir Arthur Robinson, Assim Ismail Bey, Mehmet Ali Sevki Pasha, Lord Monk Bretton, Sir George Newman, Sir Arthur Stanley, Sir Ronald Lindsay, Feridun Bey, Lord Monteagle, Sir Malcolm Belevingne, Dr. Andrew Balfour, Sir Edward Harding, Sir George Buchanan, Mr. G. W. Rendel, Mr. J. S. Pearse, Mr. James Morgan, Dr. M. T. Morgan, M.C., Mr. A. K. Helm, Mr. W. L. C. Knight, Major E. N. S. Crankshaw.

Dr. Affi Bey, the Egyptian Minister for Foreign Affairs, left London on July 18 for Paris.

Sir Robert and Lady Waley Cohen arrived at Caen Wood Towers, Highgate, on July 22 on their return from New York.

Mohamed Mahmoud Pasha, Egyptian Prime Minister, and Dr. Affi Bey, Minister for Foreign Affairs, who left London on July 16 for Paris, returning with King Fuad last Saturday, gave a dinner, followed by a reception at the Egyptian Legation on July 23.

At a dinner given by the Turkish Ambassador and Mme. Ferid Bey at the Turkish Embassy on July 17, to meet Dr. Refik Bey, Minister of Health to the Turkish Republic, who arrived in London on July 14, the guests included the Belgian Ambassador and Mme. de Cartier de Marchienne, the American Ambassador and Mrs. Dawes, Mr. and Mrs. Arthur Henderson, Mr. and Mrs. Arthur Greenwood, Lady Moira Combe, Lady Dawson, Lady Peacock, Mrs. Philip Snowden, the Hon. Sir Ronald Lindsay, Mr. Neville Chamberlain, Mr. John Walter, Mr. Helme, Dr. Assin Bey, and Sevki Pasha.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Conditions in Roumania.

The difficult position with which the Maniu Administration is confronted was the subject of detailed comment at the meeting of the Bank of Roumania last week. Trade in 1928 was unfavourable on account of the partial failure of the harvest and the currency shortage. Then the revenue receipts up to the end of December last fell far short of the estimates, the deficit to be covered being $7\frac{1}{2}$ milliards of lei. For 1929 the estimated receipts are slightly lower than in the previous Budget, and the Government has endeavoured to meet the position by increasing certain taxes and creating new ones. There was an adverse trade balance on the year of five milliards of lei, as against a favourable balance of four milliards for the previous year. This, of course, was due in the main to the bad harvest, which has coloured all Roumania's activities. It is very satisfactory to know that so far the prospects for the current harvest are excellent, and that it is expected to be the best harvest since the War. Roumania badly needs a series of good harvests to bring about a recovery from the effects of the War. Another unfortunate factor in the past year was the world oil situation, which had a serious effect on the Roumanian industry and prevented it from being of the assistance to the country that it would otherwise have been. It is fortunate for Roumania that at this juncture she should possess a Government which realises the needs of the country, has an adequate policy to meet the situation, and is determined to carry out without delay the necessary measures. But the work of reconstruction is bound to be long and arduous even if in the next few years the conditions are really favourable for the country. The task before the Government can be estimated from the fact that the improvement of the railways alone will entail an expenditure of about £26,000,000.

Egyptian Market Possibilities.

On a number of occasions I have criticised our manufacturers for not showing more enterprise with regard to the Egyptian market, which should be of particular interest to them as it is not only developing but also, as I have pointed out in recent weeks, has in various ways changed its character since the War. An instance of this change is given in the current issue of the *Monthly Journal* of the British Chamber of Commerce of Egypt, which points out that while in the past it was practically impossible to buy English silverware and cutlery in Egypt, there has been an improvement in the local taste, with the result that there is now a demand for British goods. While it is very satisfactory to know that the Egyptians have begun to appreciate the merits of our silverware and cutlery as compared with the commodities which have been imported from European countries, one would like to see this demand reflected to a greater extent in the trade figures than it is, and it will be the duty of our manufacturers to endeavour to bring that about by paying the necessary attention to this highly promising market.

Albanian National Brewery.

At the statutory meeting of the Albanian National Brewery last week Sir Harry Eyres was able to give a satisfactory account of the progress of the installation work. Contracts were signed in April for the supply of

the requisite brewing and refrigerating plant, and it is anticipated that the whole plant will be installed before the middle of next month. The work of constructing the brewery premises at Scutari is proceeding rapidly, and should be completed by the late autumn. A condition of the concession was that brewing should start not later than December 31 next, but to provide for contingencies application has been made for an extension of the period, and the Albanian Government has agreed to extend the date to May 31, 1930. An important point to which Sir Harry Eyres referred is that the enterprise enjoys the support of the Albanian Government, the local Press, and the people of Scutari so that the company will enter on its undertaking in the most favourable auspices.

The Indian Market for Cotton Goods.

The announcement that the Government of India have decided to appoint Mr. G. S. Hardy, Collector of Customs at Calcutta, to examine the possibility of substituting a system of specific duties for the existing system of *ad valorem* assessment of cotton piece-goods, gives a very clear indication of the lines on which the Government consider that further useful aid can be given to the Bombay cotton industry. The salient facts with regard to the cotton goods market in India are that in recent years the outlet has declined while the imports from foreign countries have increased. Thus the Japanese trade in grey and coloured printed or dyed piece-goods amounted to 352,000,000 yards for the year ended March 31 last, as against 241,000,000 yards for 1926-27. The effect of these two factors on the Bombay mill industry has been disastrous, and it is not surprising that there should have been a demand for further protection for the home market. The question which is now to be examined was raised before the Tariff Board, when doubt was expressed as to the consequences of specific duties with regard to the consumer, and it was pointed out that such a scheme could only be worked out by an expert with a very close knowledge both of Indian and imported piece-goods. A system of specific duties would affect Japanese and other foreign imports, but would touch Lancashire hardly at all as the Lancashire trade is in the higher grade goods with which the Indian mills do not compete.

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 23.

Nothing unforeseen occurred this week to relieve the expected dullness of the stock markets. Indeed, such new factors as the week produced were mainly of a nature calculated to induce caution. Further gold withdrawals and the weakness of sterling exchange maintained the anxiety over the monetary outlook to the discomfort of the gilt-edged market, which was also inclined to be uneasy over the unrestricted proposals of Mr. Thomas to lend Government credit for unemployment schemes. Possibility of war in the Far East did not help matters, although it was not taken very seriously. In the industrial sections public interest is at a very low ebb indeed, and the speculative spirit seems for the time being to have been effectively scotched by the bad experiences which hosts of speculators have suffered during the past eighteen months. The holiday season now being upon us, there seems no reason to expect the markets generally will emerge yet a while from the doldrums. The flicker of interest in some leading industrials caused a week ago by New York buying proved to be very slight and transient.

Industrial Company Profits.

The *Economist's* quarterly analysis of the profits of British joint stock industrial undertakings shows for the first time for two years a decline, the profits of 639 companies whose reports appeared during the past three months recording a decrease in the aggregate of 0.7 per cent. The period covered by the majority of these reports is the calendar year 1928. During the twelve months the reports of 1,742 companies were analysed, and these showed an increase of 1.8 per cent. in aggregate net profits. This compares with the increase of 5.8 per cent. disclosed twelve months ago, from which it would appear that there has been a definite downward trend in industrial company earnings. The figures, however, include rubber, tea, oil and nitrate companies, which cannot be taken as representative of the British industry, and a classification of the figures into groups shows that the first three of the four groups mentioned recorded declines of 44.1, 21.4 and 3.8 per cent. respectively. Of the total net profits disclosed in the past quarter, 60.4 per cent. was distributed in ordinary dividends, 23.1 per cent. in preference dividends and 16.5 per cent. was reserved. The average rate of ordinary dividend for the past year works out at 10.3 per cent. as against 10.5 per cent. a year ago, conspicuous declines being recorded by the rubber and tea groups, namely from 112 to 6.2 per cent. and from 28.4 to 22.2 per cent. respectively.

The Royal Mail Affair.

Royal Mail Steam Packet ran into a squall last week. The first cloud on the horizon was seen over a month ago when the auditor referred to the book values of investments in allied companies, and to depreciation of the fleet having been allowed for at a lower rate than usual. The Royal Mail accounts and balance sheet are far from being very informative, especially for a company with such ramified interests. It was not unnatural therefore that weakness developed in the company's ordinary

shares. A further fall occurred last week, and from various quarters a re-assuring statement was asked for from the chairman, Lord Kylsant, but this was not forthcoming, although the general manager did definitely deny the truth of the rumour about a reconstruction of the company. The further weakness was apparently due to the knowledge of a disagreement between the chairman, Lord Kylsant, and his brother, Lord St. Davids, a trustee of the first and second debenture shareholders. Lord St. Davids in a circular to stockholders said that in the appointment of a successor to his joint trustee, Lord Abercorn, he was not consulted, and that his request for an interview with the auditor was refused and that the issue of the second debenture stock with which his name was associated was made without his foreknowledge, and he thought the position in which he found himself as trustee for two different securities of the company an undesirable one, and he was anxious about the resignation of the auditor. The resignation of the auditor has since been explained and is not a serious matter, but the other points have received no reply. However, at the second debenture stockholders' meeting the two brothers, to the delight of news hunting editors, nodded to each other and eventually left the meeting together. The R.M.S.P. has now entered calmer waters, and its shares have rallied. Last year the company made a profit of £457,216, showing a reduction on the previous year of £32,654 only partly accounted for by the additional debentures. The earning on the ordinary shares was 4.4 per cent., but 5 per cent., as in the previous year was paid. There was no allocation to reserve, and the carry forward was £26,284 less than the year before. The ordinary shares, assuming the same dividend, can be brought to yield £10 per cent. and the 5 per cent. second debentures give a return of £6 4s. per cent.

Tin Producers Association.

Elements of rationalisation are at last manifest in the tin industry. A month ago a powerful £1,000,000 capital company was formed, the British-American Tin Corporation, to deal in tin and to finance tin producers, and last week directors of British companies, representing an annual production of about 170,000 tons, formed the Tin Producers Association. The formation of the association is the outcome of a movement for co-operation in the tin industry, the case for which was vividly set out in a letter to a London newspaper a month ago. It was then pointed out that for April and May of this year the price of tin had been round about £200 a ton or £65 below the average of the last five years, that the sources of supply, which are limited in number, are being depleted while the need for tin is increasing, and also that price fluctuations are as embarrassing to the consumers as they are to producers. These reasons are more than enough to justify co-operation, but it is yet too early to say whether co-operation of all producers—including foreign producers—will be forthcoming, and it should be remembered that the British producers in Malaya where working can be carried on at a profit even at recent prices which has meant loss to others, may see no reason to join any price fixing movement. Price improvement and stability will be attempted, if it can be agreed upon, by restriction of output. If this occurs investors in tin companies will gain, but the failure of the rubber restriction scheme makes onlookers cautious, if sympathetic.

A P. AND O. INNOVATION.

Third-cabin to Australia.

The P. and O. Company announce the introduction into their mail steamships Mongolia and Moldavia, each of 10,500 tons gross, of third-cabin passenger accommodation. In these vessels second saloon passengers will no longer be carried, and the arrangements for third-cabin travellers consist in the conversion to their use of the former second-class accommodation, including existing and additional cabins with two berths or four berths and a few six berth cabins; the former second-class dining, smoking and music rooms; and the former second-class promenade deck. Third-cabin fares to Australia have been fixed at £38 and £50, and there is to be in these ships a new minimum first-saloon single fare of £100 to Australian ports. The necessary work on the Mongolia is well in hand, and she will sail from London to Australia, via Marseilles and Ceylon, on September 6. The Moldavia will enter the new service in April next.

This innovation has followed rapidly on the recent internal reconstruction of the five 13,000 ton P. and O. Branch Line steamers of the Baradine class and the fitting of those vessels with auxiliary turbines on the Bauer-Wach system, with resulting extra power and speed which, incidentally, has admitted of their employment, at certain seasons of the year, as mail carriers working conjointly with the vessels running under contract with H. M. Government. Among the concerns which provide regular liner services between the United Kingdom, Mediterranean ports and the Commonwealth, the P. and O. has, ever since the institution of "Steam to Australia," occupied a foremost place, and the company's improved arrangements for third-class passengers may be regarded as a reflection of the higher standards of comfort which, in these later years, people have learned to enjoy. It will be no disservice to the need of an increased volume of overseas movement that such measures as those outlined above have been so quickly undertaken.

In March last 36 motor cars and 13 motor trucks and omnibuses were registered in Iraq.

It is reported that fruit crops in Bulgaria are on the whole good. Apples are particularly promising and heavy quantities are expected to be available for export. Apricots are also promising, but plums are expected to be only average, although quantities of both these fruits are expected to be exported. Cherries, raspberries, as well as dried plums, apples, and pears will also be available for export. Table grapes are expected to give the best yield this year in spite of the severe winter, and in North Bulgaria as well as Plevna, Leskovitz, Goma, and other districts record crops are expected.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Boiler Feed Pumping and Filtering Plant.—The Egyptian Ministry of Public Works invites tenders for the supply, delivery, and erection of boiler feed water pumping and filtering plant. August 7. (D.O.T.)

Electric Lighting Installation.—The Ministry of the Interior, Cairo, invites tenders for the supply and erection of an electric light installation and distribution system for the town of Kafr-el-Cheikh (Gharbieh Province). September 23. (D.O.T.)

Humidifying and Ventilating Plant.—The Egyptian Prisons Administration at Delta Barrage, near Cairo, invites tenders for the supply of a complete humidifying and ventilating plant, and a few miscellaneous items comprising belting, wooden spools, paper tubes, etc., for a cotton spinning factory. August 27. (D.O.T.)

Steel Pipes, Etc.—The Ministry of the Interior Municipalities and Local Commissions Section invites tenders for the supply of steel pipes, sluice valves, hydrants, and drinking fountains. September 16. (D.O.T.)

Machine Tools, Etc.—The Prisons Administration, Ministry of the Interior, Cairo, invites tenders for the supply of machine tools, engines (Diesel and semi-Diesel), boilers and electric batteries, etc. September 28. (D.O.T.)

Jetty.—The Director-General, Posts and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the construction of pilgrim jetty at Tor as per conditions specified in the cahier des charges obtainable from Secretariat Department (Arsenal) against payment of five Egyptian pounds per complete set. October 1.

Paper, Etc.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper Bristol and binding materials required by the Government Press. September 14.

INDIA.

Bucket Elevators.—The Indian Stores Department, Engineering Branch, Simla, invites tenders for the supply and delivery of power-driven bucket elevators suitable for handling surki in a dry and finely pulverised form. August 12. (D.O.T.)

THE SUDAN.

Touring Cars, Etc.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for the supply of 3 four-wheeled touring cars complete and of 2 four-wheeled lorries, chassis without bodies, up to 30 cwt. capacity. August 10.

TURKEY.

Galvanised Iron Wire.—The Department of Posts, Telegraphs, and Telephones invites tenders for the supply of 250 tons of galvanised iron wire as follows:—245 tons 4 m.m., 2½ tons 2 m.m., 2½ tons 1.5 m.m. September 1. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, August 6) (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Macharda for Calcutta (Birkenhead, July 30); s.s. Maihar for Calcutta (Birkenhead, August 8).

Bibby Line.—S.s. Yorkshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, August 7).

British India Line.—S.s. Margha for Colombo, Madras, and Calcutta (London, August 10); s.s. Masula for Bombay and Karachi (London, August 10).

Cunard Line.—S.s. Brescia for Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement offers (Glasgow July 26, Liverpool and Swansea July 27); s.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Brindisi, Bari, Venice, Trieste, Fiume, also at Palermo, Messina, Catania, Corfu and Gruz if sufficient inducement (Liverpool August 3, Swansea August 7); s.s. Bantria for Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement offers (Liverpool, Glasgow, and Swansea, August 31).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 3).

P. and O. Line.—S.s. Bhutan for Calcutta (London, August 2); s.s. Rawalpindi for Bombay (London, August 2).

Prince Line.—S.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 3); s.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus (London, August 21).

Ellerman and Papayanni Lines.—S.s. Volturno for Malta, Alexandria, Jaffa, and Haifa* (Liverpool, July 31); s.s. Andalusian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 8); s.s. Oporto for Gibraltar*, Algiers*, Malta*, Patras, Smyrna, and Constantinople (Liverpool, August 10). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syra and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

THE AERO EXHIBITION.

A Wonderful Display.

(From Our Own Correspondent.)

The number of flying events in Great Britain this year, ranging from the opening of the England-Egypt-India service and the display at Hendon to the coming Schneider Cup Race, combine to make 1929 a landmark in aviation, and it is peculiarly fitting that this should have been the period chosen for the International Aero Exhibition at Olympia. It is nine years since the last exhibition in London, and in the interval the progress in the science of aviation has been remarkable. The exhibits at Olympia show the latest chapters in the history of the development of flying, and, it may be said at once, are a veritable revelation of the triumph of an industry which is only about twenty years old, if one goes back to its really serious beginnings. The Exhibition is naturally attracting crowds, but it is not yet drawing the multitude that it will when flight has really caught the public imagination. What is said of the Motor Show that it fills London will be said in subsequent years of the Aero Exhibition.

So far the progress of flying has been on very much the same lines as the development of motoring (which, be it added, only dates from the 'nineties) with this exception that the advance in aviation promises to be much more rapid. It was not until recent years that the motor manufacturers began to produce the cheap machine. The aeroplane manufacturers are already treading this road, and machines are on view at the Exhibition at no greater price than £370, and no doubt in subsequent years prices will be steadily reduced until the point is reached when every person who can now afford a motor-car can turn to flying instead. It may be said that the day of popular flying is still far off, perhaps a generation or two. To that view I can only reply that it is impossible to visit Olympia and seriously maintain such a proposition. If the Exhibition demonstrates anything, it demonstrates beyond argument that aviation has now passed the stage when only the specialist could participate in it, and that it is nearing the point when it will be as popular a pursuit as motoring is at the present time. It is very probable indeed that aviation has in store for it in this country

at any rate a greater measure of popularity than is possible for motoring.

Some of the exhibits are dealt with elsewhere in this issue by our Engineering Correspondent, and I shall therefore confine my remarks to some of the outstanding features of the Exhibition. The exhibits lend themselves to the broad division of military aircraft and machines for commercial purposes, and the former naturally catch the eye more prominently at Olympia because their construction has the greater popular interest. The fighting machines are of all types from the huge Handley Page "Hare" Day Bomber to the single-seater fighters and seaplanes. Among the single-seater fighters are the Fairy Firefly II. and the Hawker Hornet, which are members of a class which is still on the Secret List of the Air Ministry. Both machines have the new Rolls-Royce F engine. Of commercial machines there is a wide variety, ranging from enormous passenger-carrying aeroplanes to light machines. In this class special interest attaches to the cabin of a new forty-seater air liner of a type shortly to be used by Imperial Airways, which is shown on the Handley Page Company's stand. Only the cabin is shown, as space is not available for the wings of this aerial monster to be shown, but a small scale model of the complete machine is on view and enables a very good idea to be obtained of the power and grace of the machine and of the impressive sight that it will present in the air. The machine is a biplane of all-metal construction, and has four air-cooled radial engines totalling approximately 2,000 h.p. Handley Page automatic slots are incorporated in the design of the wings. The biplane, which has been specially designed for the England-India service, will have a crew of three. It may be mentioned that the largest passenger aeroplane at present in use only carries twenty passengers, so that the introduction of this new type constitutes a very appreciable advance.

The stand of Imperial Airways contains a number of most interesting features. There is a section of the cabin of an Argosy type air liner, enabling the public to test the seating accommodation while watching through the cabin windows a panorama of scenes taken on the England-India route. Another feature is an "Automatic Guide to Air Travel," which gives information about any air journey in Europe by depressing a push button. Samples of the varied types of merchandise carried by Imperial Airways are also shown to illustrate the important part played by this concern in commerce. Another stand of particular interest is that of the Gloster Aircraft Company, who, besides showing a single-seater and other machines, exhibit the Gloster "Survey" twin-engined all-metal biplane which is designed as a land plane specially for survey and photographic work, but is readily adaptable as a seaplane. The biplane has two Bristol "Jupiter XI" air-cooled radial commercial type engines. There is a special photographer's cabin, and there are three separate camera positions, providing for photographs at all likely angles. At the stand of the Dunlop Rubber Company a complete range of Dunlop wired type tyres for aeroplanes are shown as well as Dunlop well base wire wheels. It is an interesting fact that Dunlop tyres fitted to aeroplanes equal all other makes put together and that of the total wire tyres fitted 91 per cent. are Dunlop.

The Greek Government is to send a second Note to the Turkish Government on the subject of the alleged seizure of Greek property in Constantinople.

From telegraphic information received from H.M. Ambassador at Constantinople the Board of Trade understand that the new Turkish Customs Tariff will come into operation on October 1 next. Pending the enforcement of the new tariff, however, it is expected that provisional increases in the present tariff rates will be enforced from the end of August, by way of increase of the co-efficients applicable to the basic tariff duties. It is understood that a co-efficient of 8 will be applied in cases where the present co-efficient is 5, and that a co-efficient of 15 will be applied in cases where the present co-efficient is 9 or 12.

Company Meeting.

BANK OF ROUMANIA.

Unfavourable Trade Conditions.

The annual general meeting of the Bank of Roumania, Limited, was held on July 17 at Winchester House, E.C., General the Hon. Sir H. A. Lawrence, G.C.B., presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The year 1928 has not been good for trade in Roumania, owing to the continued bad harvests and the shortage of currency, which has been particularly noticeable among the rural population. The straitened circumstances which resulted, with the inevitable reaction on trade in general, are reflected in a diminished banking business. Profits for 1928 show a decrease and the balance available is £11,162 14s. 2d., as compared with £12,223 in 1927.

Since the close of the fiscal period covered by the accounts now presented, conditions in Roumania have not improved. Many firms have sought the shelter of a moratorium and the outlook is very uncertain. In view of the prevailing state of affairs the directors have deemed it advisable not to declare a dividend and to carry the surplus for the year 1928 to a contingency account.

The rate of exchange remained stable until towards the end of November. The pound sterling at the beginning of last year was 792 lei, and until the end of November fluctuated between that rate and 807. At the beginning of December the leu had a set-back and in Bucharest the rate reached 835 lei to the £. Thanks to the intervention of the National Bank of Roumania on the home and foreign markets the leu rapidly returned to its former level of 807 to the £, where it was maintained until the end of 1928. In February, 1929, the leu was stabilised at 813.6 to the £.

The National Bank of Roumania during 1928 has endeavoured to help all branches of national enterprise by making the best possible use of the means at its disposal. The fiduciary circulation, previously limited to 21 milliards 71 millions of lei, amounted to 21 milliards 211 million five hundred thousand lei on December 31, 1928. In accordance with the agreement concluded with the Government on October 31, 1928, the National Bank was authorised to purchase foreign currencies with the lei resulting from the increased issue.

Treasury receipts from January 1 to December 31, 1928, amounted to 30½ milliards of lei. The estimated revenue in the State Budget of 1928 was 38½ milliards of lei. Thus, up to the end of December last, there was a deficit of 7½ milliards of lei, due partly to the extremely poor maize crop, which caused a reduction of revenue from export duties, and partly to revenue falling short of Budget estimates. This deficit will be reduced by receipts to come in during 1929 on account of the 1928 Budget, estimated at 2½ milliards of lei. The remaining deficit will be covered by bringing in the credit of 75½ million marks resulting from the settlement of outstanding debts with Germany, and by other resources.

The Budget estimate for 1929 amounts to 37½ milliards of lei; and amongst measures taken to provide for this, the Government has eliminated certain expenditure and has revised the system of taxes, augmenting some and creating others. It must be added that the following are excluded from the general State Budget:—Railways, 13½ milliards of lei; posts, telegraphs and telephones, 2 milliards of lei; pensions, 3½ milliards of lei. All obligations arising out of loans, whether pre-War or post-War, have been recognised by the Government and have been arranged for on an agreed basis.

An adverse trade balance of over 5 milliards of lei is shown for 1928, while in 1927 there was an excess of exports over imports of 4 milliards of lei. The exports in 1928 totalled 27 milliards of lei, against 38 milliards of lei in 1927. The imports amounted to 32 milliards of lei, as against 34 milliards of lei the preceding year. The exports from Roumania to Great Britain during 1928 were valued at £1,752,500, while in 1927 they totalled £2,376,000. The imports into Roumania from Great Britain in 1928 show a slight increase, amounting to £2,859,000, as compared with £2,683,000 in 1927.

According to official statistics maize provided the worst crop since the War. Official statistics show that during last autumn the superficial area for all crops was augmented, except that under wheat, which showed a marked diminution. It is, however, understood that steps have been taken by the Ministry of Agriculture to make up the deficiency in wheat by spring sowings. A telegram has just been received from our Manager in Bucharest stating that:—"Present indication estimated surplus available for export barley oats 30,000, maize 200,000, other crops 45,000 wagons. Too early accurately estimate maize but crops showing well. Anticipated best harvest since War."

For the year under review circumstances were not favourable to the oil industry. There was an increased production, but a continued fall in prices in world markets. With regard to refining, fresh progress is shown in the quality of the products, thanks to new installations for cracking, and to the improvement of the system already in use. The total production for the year 1928 reached 4,265,194 tons, and the export of petroleum products in 1928 amounted to 2,340,000 tons, valued at 8 milliards of lei.

During 1928 progress has been made in renewing rolling stock so that transport by railway has been better than in former years. Large sums in the general State Budget were earmarked for this renewal; but the available resources proved insufficient for completing the network of railways and for linking up the junction lines between Transylvania, Bucovina, and Bessarabia with the Old Kingdom as well as with the Danube and Black Sea ports. At present Roumania has only 11,000 kilometres of railway lines, which is not sufficient to carry the normal traffic of the country. To carry out the work necessary for making railway transport equal to the demands of the country would entail an expenditure estimated at 21½ milliards of lei, or about 130 million dollars. The funds needed for this work were expected to be raised by means of a foreign loan.

It must be borne in mind that, from the point of view of our banking development, the economic structure of Roumania has considerably altered since 1916—the year of entry into the War. Former recognised channels of employment for funds have diminished and new ones have to be employed. In such circumstances it is necessary to approach with caution departures from well-tried and established practice. The period of transition has its difficulties, and banking progress must consequently be slow.

Since the conclusion of the financial year to which the last Budget related, a loan of 101 million dollars has been floated, the main object of which was the stabilisation of the currency. Part of the proceeds are to be devoted to work on the railways. The achievement of this, as well as the realisation of the programme of the new Government, can have only a beneficial effect on the economic life of the nation; and given a succession of good harvests—so vital to the country—an important stage will have been reached in the adaptation of Roumania to the changed conditions which she has to face as a consequence of reforms introduced to meet the demands of the rural population and as a result of the acquisition of new territory.

Lieutenant-Colonel Sir Albert Stern, K.B.E., C.M.G., seconded the motion, which was unanimously carried.

SUDAN GUM ARABIC SHORTAGE.

Messrs. Boxall and Co., of Khartoum, in their report dated June 30, state:—

Arrivals in Kordofan Stations (El Obeid, Nahud, and El Odaiya only, all other stations having completely given out) amounted during the month of June to 795 tons, about half of which was rain-damaged gum, as against 856 tons last year—a shortage of 61 tons, or about 7 per cent. This month's arrivals have been the lowest recorded since 1923, during which season commenced the series of crops averaging 20,000 tons. It is noteworthy that arrivals during the month have been constantly decreasing from week to week, the arrivals of the last week being 140 tons, as against 200 tons for the first week.

The shortage in Kordofan and Tendelti this season to date as against last season remains about 4,500 tons; with the shortage of inferior Hashab estimated at about 2,000 tons, the total shortage in Hashab gums as against last season would amount to date to about 6,500 tons.

The month's prices at El Obeid have been characterised by violent and almost daily fluctuations. From the 1st to the 6th prices gradually fell, the fall amounting to 4s. 9d. per cwt. From the 9th, when the market reopened, to the 20th the turn the market took was on the whole an upward one—with the exception of one or two falls on the 10th and 17th which changed to still wider rises on the following days—the total rise during that period equalling 12s. 9d. per cwt. Since then, gradual and almost daily falls to the extent of 6s. on the total have set in. The net increase during the month amounts, therefore, to 2s. per cwt.

Demand has been greatly curtailed by the exceedingly high prices which have been ruling for gum for some time. On the other hand, arrivals are small and there is no real excess of supply as against demand at the present time.

Talha.—The total increase in price during the month equalled 4s. per cwt.

To the end of May exports of Hashab are down 2,200 tons. Bleached exports are 20 tons less, whilst Talha is up 660 tons against the first five months of last year. The net difference on all qualities is about 1,580 tons down. The shortage in arrivals will show up to a greater extent in the export figures for the coming months. Last year as much as about 7,700 tons of Hashab were shipped from June to November, the bulk of which was made up from stocks in the country, whilst this year present arrivals are no more, but rather less, than those of last year, and there can be no doubt that stocks are almost non-existent in the country.

Engineering Topics

(By Our Engineering Correspondent)

The Aero Show.

The Aero Show at Olympia, certainly the most representative yet held in any country, is filled with interest from an engineering point of view. With one or two exceptions, which the general public is not supposed to know about, the latest products of engineering skill are on view and one is able to see, with a technical eye, the great strides that have been made since the War. Everything at the exhibition was in a complete state and every machine could have been taken away and flown without adjustment; every appliance could have been fixed in place and used in its proper manner. So far as I could see there were no oddities included; nothing of a freak nature. It is evident that the authorities made up their minds that nothing should be shown that was not of the highest grade.

From an engineering point of view I was very much taken with the excellent workmanship embodied in the A. B. C. Robin, a small, saloon bodied, single seater monoplane, with a two-cylinder engine, giving out, I should say, about 30 h.p., at 2,000 r.p.m., and which is about the same engine as is put in the A. B. C. cars. At its price of under £400, it is a really good proposition and as it should attain a speed of about 100 m. p. h., and be as easy to manage as a motor cycle, one can picture quite a number of young sportsmen taking a fancy to it. It is a striking contrast to some of the giant bombers that are on view, and in comparison looks much as a baby two-stroke motor cycle would look against a Leyland "eight," but it represents a decided step in the right direction. Perhaps the Aero exhibition would have appealed more to the general public had more exhibits been of that character; the machines and parts that were on view rather conveyed the idea that the future of aviation was in the direction of bombing towns wholesale and that passenger-carrying work and "joy-flying" was more or less a dream. Actually that is far from being the case; private flying is the pastime that offers a real prospect to the industry.

The de Havilland Moth series were also of the highest class, although they were evidently production work. They are none the less soundly designed and constructed; indeed, I think that were I ever to attempt to fly, I would prefer to take my chance on a production-made bus rather than on a specially made machine. I have given my reason for preferring mass production products and so need not return to that subject. Amongst other fine machines may be mentioned the Blackburn Bluebird, the Parnall Elf and the Westland Widgeon two-seater. All these might be regarded as being in the touring machine class, and as such appealed to a very high percentage of the visitors. Amongst the big fellows a word of commendation must be given to the Avro Five which, viewed simply from the point of view of its body work strikes a very high note. The big liners, so far as body work is concerned, are becoming more and more elaborate every day. They seem to be the last word in comfort, if not actual luxury, and it is difficult to see what refinements can be added to next year's models. The armchair type seats that are used seem to me to be just the thing for the motor coach, as they are more comfortable and are certainly lighter than the metal seats with upholstery. This weight-saving in big aeroplanes seems to me to be a move in the wrong direction, and that any disadvantage accruing from having such things as seats, fittings, controls and so on fairly heavy and so, broadly speaking, more reliable, could easily be off-set by adding a trifle more to the engine power. I remember we did that sort of thing during the War; made little brass cups to hold all the neat little brass screws that embellished the nicely French-polished woodwork of our machines, whilst the Huns

made their flyers out of corrugated iron and old dog-kennels, with the engines hefty enough to drag them anywhere. Still, there are differences of opinion on this point, and weight-saving just now is being practised in every direction in the aviation field.

So far as accessories, supplies and so on are concerned, we have the British Petroleum Company, Ltd., who display their "B.P." aviation motor spirit, the new "B.P." motor spirit, and the "B.P." commercial motor spirit. At this stand are exhibits showing the various methods of refining, storing, and distributing these products. Shell-Mex, Ltd., show a remarkable firm that gives a condensed, but at the same time extraordinarily complete, history of twenty-five years' flying. As one of a little band of journalists who was growing rather weary of waiting for a certain gentleman to fly the Channel during a warm July, away back in 1909, I was literally fascinated with the incidents shown in connection with Bleriot's historic flight. Actually, I found I had forgotten almost everything regarding male and female costumes. Can it be possible that we were the fellows who looked so quaintly dressed and were those fantastically attired young ladies, the fairy-like damsels who sometimes shared our lonely Channel watch. Then, also amongst the accessories and components, I found K. L. G., the makers of the sparking-plug which has always given such consistently fine results. If there should be, amongst my readers any airman, motorist or motor cyclist who does not know the good points of the K. L. G. plug, I strongly advise him to lose no time in getting particulars. The Superflex fuel piping people make a good show and I should think their piping would be just the thing for car work. Bendix-Perrot brakes also made a good show, and ought to be better known. When one comes to think of it, a set of thoroughly good brakes is quite as essential on an aeroplane as on a car, especially when landing in a restricted space. Other interesting stands were those of Auto-Auctions, Ltd., and of S. T. Lea, and even at the risk of over-running my space, I must mention the Auto-Giro, which is, I suppose, classed as a light or passenger carrying plane, although it looks rather heavier, with its luggage compartment, than I imagined it would.

Sewage Treatment.

Quite a lot has been written of late regarding small sewage plants, and it may be as well to remind readers that there are so many factors upon which results depend, that it is not only a difficult matter to compare one system with another, but such comparisons would also be unfair, unless every condition was similar. Just lately, reports have arisen of nuisances being experienced at certain activated sludge plants, and in common fairness it must be mentioned that there are a large number of similar plants in connection with which no complaints have ever arisen. A committee appointed to inquire into this matter has reported that from the observations of its members, no odours or objectionable conditions develop up to the point of disposing of the sludge. There is no nuisance

Contractors to British, American, French and Italian Admiralty.

connected with the treatment of the sewage, and if due precautions are taken in the final disposal of the sludge or residue, no complaints whatever are likely to arise. The report says that the sludge drying beds usually used are apparently inoffensive, and that it is the lagooning process, often carried out where local conditions are suitable, that occasionally causes odours to arise. The working up of the sludge into fertiliser is at times accompanied by a marshy odour which is not seriously offensive, and which apparently can be kept under such control that the plant cannot be charged with creating conditions any more objectionable than those attending many other industrial works. As everyone knows, or should know, the manufacture of fertiliser from activated sludge requires a good deal of technical skill, and it also requires a good deal of educational work and propaganda before a ready market can be found for the cake. Considerable capital outlay is required for plant and advertising purposes, but the inherent value of the material is such that the revenue from sale will quickly offset the cost of manufacture and, before too long a period elapses, begin to show a handsome profit.

Road Making.

In view of the extensive road making programme which it is believed may be inaugurated shortly in this country it is interesting to note that a well-known civil engineer with more than usual experience of his subject, has been carrying out a number of investigations with a view to standardising road making as far as possible. He says, as a result of his inquiries, that on hard surface roads the crown should be very light, about one inch for roads 18 or 20 feet in width, and so on in proportion. This hardly seems sufficient to many engineers and in all probability, no disadvantages but some advantages might be reaped from having it quite double that figure. The pavement surface, he says, should be free from humps and hollows, with a tolerance of not more than $\frac{3}{4}$ inch in the longitudinal distance of 10 feet. The pavement should be finished with a belt of wood float, giving it a granular surface, whilst the shoulders should be well constructed and maintained level with the edge of the pavement, with a slope away from the pavement not so great as to cause a vehicle to overturn if driven on to it nor such as would prevent a vehicle from returing easily to the pavement. No doubt a good many engineers will be grateful to this gentleman for so kindly giving them such valuable information.

Mechanical Stokers for Small Water Tube Boilers.

Very interesting in steam generation practice is the progress that is being made by the smaller water-tube boiler in fields where hitherto practically no advance has been recorded, that is both the ordinary industrial establishment and the Mercantile Marine, as distinct from large Power Stations and the Navies of the World. In this connection a striking paper was read at the recent World Power Conference (Fuel Conference) 1928 by H. T. Bakker of the Koninklynke Paketvaart Maatschappij of Amsterdam, which gives much new information concerning the "Underfeed Type E" Stoker.

It appears that this Steamship Company, well known in the East and chiefly engaged in inter-insular traffic in the Dutch East Indian Archipelago, have 136 ships with a gross tonnage of 266,000 of which 10 are Diesel engine

vessels and 126 steamships. Of the latter 27 vessels, representing 47 water tube boilers and a consumption of 40,000 tons of coal per annum, are being operated with great success by the "Underfeed Type E" stoker.

The essentials of the matter are that with ordinary hand firing and smaller water-tube boilers the average results obtained by the Koninklynke Paketvaart Maatschappij are 58.5 per cent. steam generation efficiency, while with the stokers this figure is 80 per cent., representing an enormous saving, the CO₂ for example averaging 12 per cent., and the funnel temperatures 480-570 degrees Fahr. (250-300 degrees). In addition there are many other advantages, including no smoke, far better labour conditions in the firehole, and steady steam pressure.

Very interesting also is that the Koninklynke Paketvaart Maatschappij has a total consumption of 400,000 tons of coal per annum, of which about 60 per cent. comes from their own mines in East Borneo. This coal is of tertiary or semi-lignitic character, averaging 50-52 per cent. fixed carbon, 34-38 per cent. volatile matter, 2-3 per cent. ash, and 7-10 per cent. moisture, with 11,700 to 12,600 B.T.H.U. per lb. In spite of such figures, however, it is extremely difficult to burn this semi-lignitic coal with ordinary hand-firing, but there has been no trouble at all with the stokers, and further ships are to be fitted.

It will be remembered that the "Underfeed Type E" stoker is specially designed for industrial conditions on small water-tube boilers of any size up to 2½ tons or say 45,000 lbs. of water evaporated per hour, the essential principle being a grate with a trough in the centre at right angles to the front of the boiler, containing a steam driven ram. The grate slopes down on each side, that is parallel with the front of the boiler, being composed of hollow firebars with a slight reciprocating motion, and the air supply—by means of a forced draught fan—is on particularly ingenious lines. Part of this goes direct into the trough through tuyeres and the rest down through the inside of the bars and then into the wind-box below, and up between the bars in a highly pre-heated condition, thus giving most efficient combustion to the coked material in the latter stages, the final ash and clinker being taken from dumping places at each side, while the bars are also kept cool.

PROPOSED REVISION OF INDIAN CUSTOMS TARIFF.

The Government of India in a *communiqué* issued on July 22., announce that they have decided to appoint Mr. G. S. Hardy, Collector of Customs at Calcutta, to examine the possibility of substituting a system of specific duties for the existing system of *ad valorem* assessment of cotton piece goods. The *communiqué* adds they have also decided that, in order to give effect to the promise made by His Excellency Lord Irwin when he received a deputation from the Bombay Mill-owners' Association at Poona that their representations would be considered, Mr. Hardy should simultaneously ascertain and report what changes have taken place since the Tariff Board reported on the volume of imports, classes of goods imported and the extent and severity of external competition with products of Indian mills.

Those interested in either branch of the inquiry are requested to communicate with Mr. Hardy direct. Such communications may be addressed to the Cotton Tariff Officer, Custom House, Calcutta.

Barclays Bank (Dominion, Colonial and Overseas) announce that they have received the following cable from their Cairo branch:— "The Statistical Department of the Ministry of Finance announces that the total imports for Egypt for the month ended June 30 are £E4,009,004, against £E3,982,049 for the corresponding month last year and exports £E3,185,501, against £E4,119,026 for June, 1928. Cotton exports were £E2,566,466, against £E3,395,474."

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 17:—

Egyptian Futures.

Sakel Contract.—During the sessions immediately following our last report, conditions in this market continued to be quiet, with a somewhat heavy undertone ruling, values at that time inclining to the easy side, owing, in part, to the disturbed trade outlook, and also to the then declining tendency in both the Alexandria and American markets. At the lowest, the November option ran back to 15.50d., but, at this figure, more outside support started to be shown, both local and Continental speculative sources furnishing buying power. With good recoveries since in operation in Alexandria and America, our market has taken a strong upward turn, to-night's closing rates showing gains of 22 points for near and 20 to 34 points for new crop positions on the week.

Whilst developments in the trade dispute have taken a more favourable turn, inasmuch as negotiations on the wages question will now probably be commenced, the general outlook remains far from satisfactory in the fine count section. Sakel values are generally admitted to have been held at too high a level during the present season, and we rather hold with the spinners' standpoint that any material advance at the present juncture would be prejudicial to the return of a normal flow of business. The latter might readily be experienced with the removal of present complications and the establishment of an economic level in the value of the raw material. From this point of view it is to be hoped that the markets will be free this season from any form of Government intervention, and on this account it is rather disturbing to hear rumours of purchases of new crop contracts against recent sales made out of their old stocks. Most of the speculative buying recently attracted to our market has concentrated on new crop positions, January especially being favoured; in spite of this the current position continues to move up, and with an absence of adequate supplies of the tenderable qualities we are quite prepared to witness July closing in to a parity with Novembers before the end of the month. Private crop reports confirm the satisfactory progress outlined in last week's official communication.

Upper Contract.—Only a moderate amount of business has transpired in this market during the past week, and values have been governed by the fluctuations witnessed in the American markets. A steady demand for cotton out of the local stock continues to be experienced, and although a further hardening in basis has taken place, we remain well below prices quoted for similar qualities in Alexandria. Crop reports are still very satisfactory, and whilst it is yet early to form any definite opinions, reports from private sources are beginning to hint at a record yield. Weather conditions in America will probably govern prices in our market for the time being, and until clearer ideas of the staple crop from that country can be obtained we do not care to advise commitments.

Egyptian Spot.

There has been a material falling off in the demand during the past week, all sections of the trade adopting a waiting policy owing to the uncertainty regarding the labour position. In some quarters a strike is regarded as inevitable, but it is encouraging to note that the Ministry of Labour is trying to initiate negotiations, and it is hoped that between now and the 27th inst. some means will be found to obviate a general stoppage. In the meantime, until a clearer view of the outcome can be obtained, it appears useless to anticipate any expansion in business in actual cotton.

Sakels.—The demand for this variety has been very moderate and sales have been mainly confined to odd lots ranging in value from 100 to 200 on contracts.

Uppers.—The bulk of the week's business has been confined to this cotton, prices paid generally being in the neighbourhood of 20 to 40 on. The basis for G.F. to Strict G.F. continues to harden, and supplies of these in quantity will probably be difficult to find in few weeks time.

Pilion continues in steady request, and good stapled lots of this variety are becoming increasingly difficult to pick up.

Nahda, Maraad, and White have been slow of sale, only very few local spinners utilising these cottons at present.

Sudan Sakel is receiving more attention from both local and Continental spinners. Actual business has not been important, but there are signs that this cotton would move off freely given normal trading conditions. The lower grades in particular appear very reasonable in comparison to Sakel values.

C.i.f. business has again been very quiet. Forwarding to spinners amounted to 7,219 bales Egyptians and 1,883 bales Sudan. Estimated spot sales, 1,900 bales Egyptian and 1,550 bales Sudan Sakel. Quotations of Sakels are unchanged to 15 points advance; Uppers 4 points, and Pilion 10 points advance on the week. F.G.F. Sakel to-day, 16.75d. F.G.F. Upper to-day, 11.39d. F.G.F. Pilion to-day, 12.50d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended July 1, state:—

Since our last report the futures market has been exceptionally active, with irregular fluctuations, and at the close to-day the tendency was undecided. The week's summary of price movements is as follows:—Sakellaridis: July, 31.60 dollars, 0.83 dollars up; November, 32.07 dollars, 0.80 dollars up; January, 32.62 dollars, 0.85 dollars up; March, 33.02 dollars, 0.85 dollars up. Ashmouni: August, 20.67 dollars, 0.28 dollars up; October, 21.04 dollars, 0.35 dollars up; December, 21.55 dollars, 0.37 dollars up; February, 22.03 dollars, 0.37 dollars up; April, 22.46 dollars, 0.40 dollars up; June, 22.86 dollars, 0.45 dollars up.

Sakel.—We have had a succession of active markets. The trade for some time past has not taken any interest whatever in this market, which is but natural considering the indifferent attitude of spinners regarding fresh business either in new or old crop. The Government has resumed its sales, and a fair proportion of the cotton offered has found buyers, at prices which we consider satisfactory to the Government.

The publication of the first American Bureau report giving 48,457,000 acres as the area planted with cotton, against 46,695,000 acres last year, was below the figure anticipated by the market, and this was a big contributing factor to the rise in prices towards the close of the week. In our opinion, this acreage estimate should not be construed as bullish, for, reverting to seasons 1925-26 and 1926-27, we find that the average of the acreage for these two seasons was about equal to the estimated acreage for the current season, and the average of the 1925-26 and 1926-27 crops was over 17 million bales. Naturally, the final figure of production of the crop now in the ground depends on weather conditions and boll weevil damage during the next three months; nevertheless, the possibility of a crop as large as the average of the two seasons mentioned above cannot be dismissed.

We give below the statistical position of Sakel in Egypt as at the

end of June:—Stock Alexandria, 900,000 kantars (including the Government cotton). At the same date last year, the stock of Sakel in Egypt was 950,000 kantars. We would add, for purposes of comparison, that exports of Sakel for the period July to August last year amounted to about 380,000 kantars. The stock of Egyptian Sakel in England at the end of June was 61,000 bales, and of Sudan Sakel 94,000 bales, against 56,000 bales and 45,000 bales respectively at the same time last year. All things considered, the position seems rather heavy and the probability is that prices will decline further.

The Sakel/Uppers straddle (November/October) this week stands at 1,103 points, against 1,058 points last week and 1,366 points at this time last year.

Uppers.—Price movements in this market have been less pronounced, speculators as usual preferring the Sakel market for their operations. The trade demand has not been a prominent feature. We give below the statistical position of Ashmouni and Zagora in Egypt at the end of June:—Stock Alexandria, 740,000 kantars. At the same date last year the stock of Ashmouni and Zagora in Egypt was 710,000 kantars. We would add, for purposes of comparison, that exports of Ashmouni and Zagora for the period July to August last year amounted to about 460,000 kantars.

The Ashmouni/American straddle (October/October) this week stands at 259 points, against 235 points last week and 521 points at this time last year.

The week's receipts amount to 1,080 kantars, against exports 116,286 kantars; the stock in Alexandria stands at 1,950,726 kantars.

Spot.—The past week's markets have been very quiet indeed and the total sales only amount to about 5,300 bales, of which we estimate

2,140 bales Sakellaridis, 2,725 bales Ashmouni and Zagora, 290 bales Pillion, 90 bales White, and 55 bales Nahda.

Sakellaridis.—The demand has moved towards the higher grades a little and there has been a fair turnover in the grades Fully Good Fair/Good and Good. Buyers are paying big prices for medium grade cottons, which are still in great demand. Premiums are much the same for the other grades.

Ashmouni and Zagora.—There is a good demand for anything between Fully Good Fair and Good, but offerings are very poor; premiums remain unchanged.

Pillion.—In fair demand, and most of the business has been for Fully Good Fair/Good and Good. Premiums have not altered as compared with last week's.

Crop, 1929.—Crop information received this week shows practically no change from that of last week; the continual fine weather is favouring the normal growth of the crop, and there is now little fear of any further damage from the leaf worm pest. Water is plentiful. If the prevailing favourable conditions are maintained, it is probable that the present crop will give a yield per feddan higher than that of last year; this remark applies equally to the fields of Lower Egypt as to those of Upper Egypt.

The number of passengers carried by the Hellenic Electric Railways Company, Ltd., in May was 3,033,746, an increase of 144,487 on the corresponding month of 1928. For the first five months of this year the passengers numbered 13,949,195, an increase of 677,941 on the 1928 figures, while the gross receipts were £93,404, an increase of £3,913.

Notes of the Week.

Methods and Men.

St. Paul's injunction that all things should be done decently and in order can hardly be said to have been followed by the British Government in its method of effecting a change in its representation in Egypt. It must, therefore, not be surprised that the circumstances of Lord Lloyd's resignation have been held to suggest over-anxiety to secure an effect which had been denied Ministers in the realm of domestic politics. It would almost seem as if the new Foreign Secretary had said to himself: "Here is a prancing Pro-Consul. We really must show the world that we at least have nothing to do with such things." Hence the early telegram "of such a character that I think most people would have accepted it as an invitation to terminate his position." The gravamen of Lord Lloyd's offence was that a wide divergence of view had been revealed, by a perusal of Foreign Office papers, between the position taken up by the previous Foreign Secretary and that taken up by the High Commissioner in Egypt. The latter had argued too fully and pressed the point of view of the "man of the spot" too much. Altruism in party politics is so rare that full credit must be given to the present Government for its efforts to accord posthumous peace to Sir Austen Chamberlain; for Mr. Henderson was careful to state that he had nothing personally against Lord Lloyd and that there had been no discussion with him of the present Government's policy in regard to Egypt. Even if Mr. MacDonald's Cabinet scented in the air a certain incompatibility of temperament between itself and Lord Lloyd, it might have recalled the fact that it was dealing with a distinguished public servant, who had held the post of High Commissioner in Egypt for four years. During that period Egypt had presented the striking spectacle of an Eastern country enjoying complete freedom from internal unrest and undisturbed by Communist doctrines. As a successful Administrator Lord Lloyd has a strong record.

Cui Bono?

It is to be hoped that the negotiations with the Egyptian Government will not be rendered more difficult, or, perhaps, entirely abortive, by the encouragement which Lord Lloyd's resignation will have given to the extremists of the Wafd in Egypt. For many years now they have been instilling in the ears of those Englishmen who listened to them how much they hated Lord Lloyd and what an obstacle he was to an harmonious understanding between Egypt and Great Britain. For the past year, however, they have hated the present Egyptian Government much more, and they may now be inconsiderate enough to believe that, as they have got rid of Lord Lloyd—for it may be taken for granted that Mr. Henderson's concern for Sir Austen Chamberlain's troubled hours will be represented by the Wafd as a triumph for the propaganda work of their agents in England among the Labour Party—they may still hope to be rid, somehow or other with the help of the British Government, of Mahmoud Pasha. The latter, in spite of marked achievements during his year of office, has still a difficult furrow to plough, and it would be a signal disservice to the man with whom it is hoped to negotiate a final settlement of the Egyptian question, if precipitate action over what may be regarded as a side-issue, should stultify his own work of appeasement in Egypt and so retard the development of Anglo-Egyptian friendship and co-operation.

Treaty Discussions.

Mr. MacDonald in his contribution to the debate in the House of Commons on Friday wisely left alone any considerations of the methods adopted to secure Lord Lloyd's resignation, and set himself to reassure public opinion on the subject of the conversations now in progress with the Egyptian Prime Minister in London. The situation, he explained, is being explored. There are the four Revised Points, and in connexion with each one of them there have been many proposals as to how they should be

handled. The Sarwat Treaty provided for a revision of the military occupation of Cairo at the end of ten years, and this matter was at that moment being examined by the heads of the three Service Departments. "All other points of the same difficulty and the same variety of possible solutions are being treated in the same cautious and the same careful way, and not until everything has been explored, and not until the best proposal that can be made has been devised, will the instrument, which is vital, which is living and to which the Government will commit itself, make its appearance." From the British side nothing better could be desired. The Egyptian side, however, must not be lost sight of, if the two Governments are to advance in common to the single goal. There can be no question that it was not the intention of the present Egyptian Government to raise at this moment the matter of a full settlement of the points at issue between Egypt and Great Britain. The Egyptian Parliament is suspended; Mahmoud Pasha has been in office for a little more than a year, and there has not been time for the Egyptian people to rid themselves of the habit of instinctive surrender to intimidation that characterizes them and of which the Wafd extremists made such wide use in obtaining their hold on the country. There is reason to hope that the people can gradually be weaned from this abject and ignorant subservience and acquire self-respect and a more independent spirit. Three years, however, were earmarked for the process. In any conversations regarding an Anglo-Egyptian Treaty Mahmoud Pasha, no less than Sarwat Pasha two years ago, must base his attitude on the terms for which he considers it possible to win acceptance in Egypt. To this end, if a document should be drawn up in London, within the next few days or weeks, elections would have to be held in Egypt and they would turn on the Treaty or no Treaty. The Wafd has made it clear that the latter is still its slogan. It will be heartened by the prospect of an early restoration of Parliament, and many of its numbers who were screwing up their courage to leave the Wafd will now postpone action to see how things go. The good intentions of the British Government in proposing settlement with the Egyptian Government are above challenge, but it remains to be seen whether it is thereby serving the real interests of Egypt in the long run.

Yugoslavia and Bulgaria.

In the interest of friendly relations between all the Balkan States we cannot but regret that the Yugoslav Government should have considered it necessary to lodge a formal protest in Sofia against the amnesty accorded to Dr. Radoslavoff, who as Bulgarian Prime Minister at the outbreak of the War was responsible for Bulgaria's co-operation with the Central Powers, and to follow up this action by denouncing the Pirot Conventions. By the terms of the Treaty of Neuilly Bulgaria was required to hand over to Allied tribunals for judgment persons accused of acts contrary to the laws and customs of war. It is held in Yugoslavia that Dr. Radoslavoff comes within this category on account of Bulgarian excesses in Serbia and that Bulgaria was allowed to deal with him on behalf of the Allies; and that consequently she has no right to amnesty him without the previous consent of the Allies. There may be enough in the contention to enable international jurists to range themselves on opposite sides and to argue convincingly to their briefs; but a far more important point for the consideration of Belgrade is whether it was worth Yugoslavia's while to raise the matter at this stage, in view of the fact that the granting of an amnesty to Dr. Radoslavoff, who is seventy-five years of age and a broken, discredited man, can do no harm to anybody, unless it be to the Bulgarians by recalling the part that they played in the War. Europe is wearied of Balkan petty-mindedness, which is continually seeking causes for quarrelling and making mountains out of molehills. What is required is for one country to set an example of superior mentality, and so to try to remove from the Peninsula the reproach that has given rise to the term "Balkanisation."

Yugoslavia must regard it as a compliment that she is expected to set this example. She would find more general readiness to listen to her constant complaints about Bulgaria, if she had shown herself at any time since the War really superior to her neighbour. Europe cannot remain for all time divided into Allied and enemy camps, and be expected to regard the Allies as always in the right and the enemy States always in the wrong. There is far too much stone-throwing in the Balkans, and Dr. Radoslavoff is at best a poor target. The Allies would have risen as one man to help Yugoslavia to deal with the *komitaji* nuisance, if there had not been the uncomfortable feeling that Yugoslavia herself was gravely to blame for initial maladministration in South Serbia. An attempt has now been made to improve the state of affairs in that region, and if a more dignified attitude could be adopted towards Bulgaria's minor shortcomings, Yugoslavia would find Europe more ready to sit in judgment when a serious offence is committed or threatened. As things are, there is a tendency to dismiss every incident as "six of one and half a dozen of the other" and to anathematise both countries for their continual "scrapping."

Greco-Turkish Relations.

The protracted negotiations between the Turkish and Greek Governments over the exchange of populations, with its various ramifications, have finally broken down, and Turkey now declares herself free to complete the seizure of Greek property in Constantinople, valued at £400,000. This is a goal that, as far as can be judged from the Turkish Press, the Angora Government has long had in view. The rupture in the negotiations has taken place over the refusal of Greece to admit Turkey's right to forbid the return to Constantinople of Greeks who left during the Allied occupation with Ottoman passports, and whose property is now to be seized. The question is clearly one for arbitration, if Turkey seriously considers that she stands to suffer from the return of these people. Greece has suggested arbitration, and, if Turkey refuses, she will have already condemned herself. The seizure of the Greek property might serve a useful purpose in the country's present straits, but in the long run it will only render more difficult the recourse to foreign financial help that sooner or later Turkey must have, if she is to prosper.

The Situation in Southern Persia.

If the report be correct that the situation in Southern Persia is much improved, no one will welcome the fact more than the British, who, though they are supposed in unintelligent circles in Teheran to be the villains of this particular piece, are obviously vitally interested in stable government in Persia. We have done our modest best to scotch this ridiculous rumour of British backing to the revolt of the Kashgais and Bakhtiari, and we are glad to see that the opportunity has been taken in the House of Commons finally (as is to be hoped) to dispel this story of British malevolence towards the Teheran Government. The statement from the Secretary of State for Foreign Affairs we reproduce elsewhere in this issue. On the actual situation in Southern Persia news still remains scanty, but we welcome the report, published by the Persian Legation in London, which records the hope that further military steps will not be necessary. The seriousness of an expedition against such a powerful tribe as the Kashgais is adequately realised in Teheran, even if their susceptibilities are not at all times adequately considered. When reasonable terms of submission for the "rebel" chiefs have been discovered, it is profoundly to be hoped that a new orientation of policy towards the larger tribes of Persia will be made by Teheran. The attempts to "Teheranise," that is, to tyrannise, these tribes can never be successful; a different approach altogether must be made if they are to become, what they might very well become, a firm buttress of Persia's new and greater order. If there is for any length of time smouldering discontent among the tribes, it would not be difficult for the large class of merchants, who are already inclined to

groan under taxation, and for the partly neglected clergy to add fuel to a dangerous fire. There is, as we have pointed out before, no positive side to this revolt that can be discovered; it is for the Teheran Administration to see that none develops out of the negative attitude now being displayed by certain tribes.

The Tribes of Teheran.

As was remarked in an interesting article in *The Times* of July 26, the question of controlling the tribes in Persia is the most important of the moment. It is, of course, a problem by no means peculiar to Persia. In many other countries in the Middle East the chief difficulty of statesmen is presented by the precise way in which nomadic tribes, an integral and essential part of the population, shall become settled on the land and at peace with their neighbours. For without question the process, whether in smaller or greater degree, of Westernisation, which most of the Middle Eastern rulers have inaugurated or have encouraged in their domains, is incompatible with the complete conservation of tribal habits. Lamentation there may be over the passing of the picturesque nomad, but, if Western forms of governance, and, to a certain extent, Western ways of living, are to prevail, that passing is certain. But only if Western forms of governance are to prevail! If, in the name of democracy, the old kind of autocracy is indulged in—which perhaps as often as not means tyranny; if centralisation implies, in the East, corruption, oppression, and aggrandisement on the part of the stranger; if new taxation be devoted to projects in which the tribes can have little interest—then may tribal resistance to absorption in the body politic be long and vigorous. There are signs that Teheran has mis-handled this particular problem in Persia. The treatment by the Central Government, or by its local officials, of certain of the tribal leaders has sometimes been calculated to have but one result: the upspringing of a hundred other leaders, even more resolute against the Government, to take their place. But it is yet to be hoped that the Government will have learned a lesson from its experience during the last few years with the tribes. It is not very intelligent, after all, always to ascribe these repeated ebullitions against the Government authority to foreign intrigue, and we trust that Persia will henceforward look inwards rather than outwards for the source of her internal troubles. She has in abundance the intelligence and tact to solve her problems; let her, instead of applying wholesale doctrinaire formulæ, now and constantly use them. An amazing difference would very soon be noticeable—of that we are convinced.

An Earned Promotion.

We cannot let the departure from Iraq of Mr. B. H. Bourdillon, Counsellor to the High Commissioner, who, as we have already recorded, has been selected for appointment as Colonial Secretary of Ceylon, pass without some comment upon his remarkable record, both in the pre-Sharifian Mesopotamia and in monarchical Iraq. For twelve long years Mr. Bourdillon has faithfully served the interests of the British and of the Iraqis. His name has not, perhaps, been so much in the public eye as has that of other Englishmen in the East, but there are few who have so stoutly upheld at once the prestige of the Briton and the true interests of the inhabitants of Iraq as this unassuming Counsellor. His ability was proved time and time again. Often, it may be recalled, he had to act as High Commissioner, and frequently during the absence of the High Commissioner, decisions of the utmost importance both to Iraq and Great Britain were taken. They have all been justified by the result. Unquestionably it is to Mr. Bourdillon more than to anyone else that the smooth relations between the Residency and the Iraq Government have been due. His popularity with all sections of the Baghdadi community, nay, of Iraq's population, has been very considerable, and he will have left the country with the feeling that a worthy work has been worthily performed.

The importance of his new post in Ceylon is likely, we believe, rather to increase than to diminish, and in wishing him well in his new sphere, we have little doubt, in our own minds, that those abilities which were so conspicuously placed at the service of Anglo-Iraqi relations will soon be shining refulgently farther East.

The Process of Zionism.

It must generally be admitted that there are few more interesting studies in the recent history of international affairs than that of Zionism, the main creator of which, Herzl, died almost exactly twenty-five years. Herzl foresaw vividly a Jewish State in Palestine, under the British ægis if possible. At least he was trying, in the 'nineties of last century, to gain British support for his ideas. But although his was by no means a voice crying in the wilderness, and although the torch he held high has been waved, fitfully or faithfully, by an increasing number since his death, it is beyond question that the nature of the Zionism which he advocated has largely changed. For one thing, his advocacy of a Jewish State in Palestine was a direct protest against the anti-Semitism of Europe: the present Jewish movement in Palestine derives from no such impulse. For another, his whole ideal of a "Jewish State" is, if present indications of how the Sixteenth Zionist Congress, now in session at Zürich, will vote, are correct, destined to be banished. For the non-Zionists who are to be admitted into the Extended Jewish Agency will have no truck at all with Jewish Nationalism, and it is scarcely a rash prophecy that they will give a powerful impetus to the movement, already visible even among Zionists, for making of Palestine rather a spiritual and cultural centre than a purely Jewish "home." This change in Zionism—though, admittedly, you will find numerous Jews who will never admit that the ideals of Zionism can ever change—has not been lost on the Arab population of Palestine, who are now far less afraid than formerly of Jewish numerical domination. Unquestionably there has been a toning-down—a watering-down, as those Jews who are opposed to the conduct of Dr. Weizmann like to call it—of Jewish intentions in the Holy Land, and it is for this Sixteenth Congress to confirm the change. Whether the present state of Zionism will long endure, or whether, twenty-five years hence, there will be as great a difference from to-day as to-day there is from the death of Herzl, no man can foretell. Greater elasticity has come into the movement; whether that is capable, as the Zionists hope, of indefinite expansion throughout the world of Jewry, or whether, being of the nature of elastic, it is doomed to perish—as the gloomy ultra Jewish Nationalists think—remains to be seen.

THURSDAY, AUGUST 1, 1929.

LORD LLOYD'S RESIGNATION.

Three separate issues are involved in Lord Lloyd's resignation: his own record as High Commissioner in Egypt, the relations between the British Government and its representatives overseas, and the relations between Egypt and Great Britain. It seems unfortunate that progress in regard to the third, which is eminently desirable, should be considered attainable by his Majesty's Government only by impugning the value of Lord Lloyd's services to Egypt and to the Empire, and by challenging the established interpretation of the duties of representatives of the Crown. The dropping of a pilot is a normal occurrence when a ship puts out to sea; if, however, he is unceremoniously pitched overboard, uneasiness is apt to be created in the minds both of the passengers and of the crew. Lord Lloyd went to Egypt in October, 1925, with a definite mission. In November, 1924, the assassination of Sir Lee Stack had marked the zenith of the controversy with Great Britain. The unlooked-for severity of the British method of dealing with this crime had shaken the confidence of the Wafd, and Zaghloul Pasha was content for a period to leave the administration of the country in the hands of his political opponents. There was no indication, however, that he or his followers had abandoned their policy of uncompromising hostility to Great Britain; rather were they preparing to indulge it in more subtle ways than by crude murder, and for this reason the protection of foreign interests might well call for a higher degree of vigilance and an intimate knowledge of Egypt. Lord Lloyd, there can be little doubt, was selected for the post, which Mr. Baldwin has described as one of the most difficult posts to which an Englishman can be sent, on the strength of his special qualifications and previous record. To reach the desired goal in Anglo-Egyptian relations, a treaty of friendship, alliance and co-operation, he had to forestall any mischief contemplated by anti-British elements, lest further embitterment of those relations might ensue, and at the same time he had to support those Egyptians who showed themselves willing to co-operate with Great Britain, while always pointing the way to administrative efficiency and progress as the surest foundation for the treaty in view. When the draft Treaty that had been accepted by Sarwat Pasha was summarily rejected by the Wafd, Lord Lloyd contrived to bring home to the Egyptians the disadvantages under which they laboured by sacrificing good government to the obsession of mere anti-British tactics, that led the country nowhere. The outcome of his policy was the establishment of Mahmoud Pasha's Government, which decided to eliminate political controversy until such time as Egypt should acquire the administrative efficiency which Lord Lloyd had consistently held in view, to justify a satisfactory treaty with Great Britain. Up to this point, therefore, Lord Lloyd's policy had had the effect of strengthening the better element in Egyptian public life and of enabling it to assert itself against the strongly anti-British extremists of the Wafd. The relations between the late High Commissioner and the present Egyptian Government were correct; if they had been too cordial, it might have proved an embarrassment to Mahmoud Pasha and a disadvantage to Egypt.

The Secretary of State for Foreign Affairs has justified his action in dispensing with the services of Lord Lloyd in Egypt on the ground that he found in the Foreign Office papers dealing with the period of his High Commissioner-ship evidence of a very wide divergence of view between the position taken up by his predecessor, Sir Austen Chamberlain, and Lord Lloyd. On the five occasions specified by Mr. Henderson, when the differences of opinion were most marked, there would seem to have been a lengthy exchange of views between the two men, that testified to the conscientiousness with which each discharged the duties of his office—Lord Lloyd at pains to press the point of view of the man on the spot, Sir Austen Chamberlain no less anxious to understand or to criticise, until he could pronounce the Government's final verdict, to which it became Lord Lloyd's duty to give effect. The importance of Egypt's relationship to the British Empire can be held to render such a procedure essential in the interests of the two countries. There has been no time for any difference of opinion to arise between Mr. Henderson and Lord Lloyd, for the former had had, indeed, no opportunity of expounding to the High Commissioner the new Government's policy in regard to Egypt. In these circumstances, it might be thought, a more conventional method could have been adopted with advantage of announcing Lord Lloyd's resignation than by means of question and answer in the House of Commons—a method that showed little consideration for the high office held by Lord Lloyd or for his services to the Empire. Behind much of the angry comment to which Mr. Henderson's action was subjected in both Houses of Parliament lay the evident concern lest the new Government should be committing itself to the doctrine that the man on the spot is not asked to think for himself or have views of his own, but is merely to pass on decisions that have been taken in England without reference to any opinion that he may have formed.

More important than any personal aspect of the controversy that has arisen over Lord Lloyd's resignation is the question of the future relations of Egypt and Great Britain. It is an axiom with both parties that there can be no final settlement which is not ratified by both Parliaments. The Egyptian Parliament has been suspended, because it was a negation of constitutional government, and the object of Mahmoud Pasha's Ministry is to direct the attention of the Egyptian people to the benefits of material progress and efficient administration, until they are weaned from the oligarchic traditions associated with the Wafdist régime. For the time being, therefore, the Egyptian Government had no thought of raising the question of a treaty with Great Britain, but was prepared to be content, if it could obtain a modification of the Capitulations. When, therefore, the new British Government proposed to link up with the latter question the wider subject of an Anglo-Egyptian treaty, the Egyptian Prime Minister and Foreign Minister, who are in London, could only fall in with its desire that they should formulate their views on the future of Anglo-Egyptian relations. Although the spokesmen of the Wafd maintain that Egypt will have nothing to do with any treaty negotiated by Mahmoud Pasha's Ministry, there can be little doubt that, if the treaty conforms closely enough with Egyptian aspirations, it might serve as a useful electoral issue for the restoration of Parliament. It remains, then, to be seen whether the British Government is able to offer the Egyptians a sufficient advance on the terms of the 1927 Draft Agreement to justify Mahmoud Pasha in going to the country on a new treaty. The 1927 Agreement might have fared better, if it had not insisted upon a hard and fast ten years' military occupation of Cairo. Egyptian *amour propre* will be met by a withdrawal of the British troops to the Canal Zone, and it will come as no surprise, if the British Government is now found willing to acquiesce in this scheme. None of the other points at issue present insuperable difficulties, when once the crux of military occupation has been arranged in a manner that will safeguard British interests without too patent an affront to Egyptian susceptibilities.

'The Near and Middle East

From Our Own Correspondents.

Alexandria, July 19.

The Wafd's Agitation.

The Arabic Press has been extremely agitated this week on the subject of the proposed Anglo-Egyptian negotiations. Certain of the local newspapers received cables from their London correspondents stating that negotiations between Mohamed Mahmoud Pasha and the British Government were imminent, and although nothing official has been announced, that was quite sufficient to set up a stream of articles and interviews on the subject. The Wafd has been doing an immense amount of propaganda, both in England and here in Egypt, and the deluge of telegrams which have been sent to London newspapers, the British Government and the Egyptian Prime Minister, in London, have been directly inspired by the Wafdist Committees. *Al Balagh*, the Wafdist organ, during the early part of the week was issuing special editions as fast as they could be produced. Some of their leading articles are so incredibly stupid that one cannot imagine what Egypt's fate would be should the Wafd get back to power, but as their propaganda is primarily aimed at the entirely ignorant fellah, it is no doubt fairly efficacious. On the other hand, their methods, including the inspired telegrams, newspaper articles, interviews, and so forth, are so amazingly obvious that a certain number of their more intelligent supporters are turning away in disgust.

Prince Omar Tousoun, who is very popular with the more fanatical classes, and whose opinion carries a certain amount of weight, gave a long interview to *Al Ahram* this week, in the course of which he said: "My personal opinion is that negotiations on questions relating to Egypt should be preceded by a settlement of the Sudan question. Negotiations which take place before Egypt's rights in the Sudan are established would be putting the cart before the horse."

There is a general impression that parliamentary life will be resumed as soon as the Elections Law is modified. The alleged modifications will take the form of putting elections on the two degree basis, as opposed to the present open form. This reform is bitterly opposed by the Wafd, who, on the present method, would undoubtedly be returned to power, but whose chances would be considerably lessened were the electorate to be composed of the more intelligent classes only.

Wireless Telephones.

Negotiations were begun some months ago between the Marconi Company and the Egyptian Government with a view to the installation of a wireless telephone service between Egypt and England, capable of extension to other European countries at a later stage. One of the local newspapers has now published the news, which it states it has obtained from a very reliable source, that these negotiations have been completed and that the Egyptian

Government has approved the project. It states that the service will be inaugurated in the near future and that the following rates will obtain:—PT500 (five pounds sterling) for the first three minutes, with a charge of PT150 (one pound ten shillings sterling) for each additional minute. The Government to receive PT10 (two shillings) for each minute taken. There is bound to be a certain demand for this service, especially between Alexandria and Manchester, for the rumoured charges are not excessive when compared with the present cost of urgent telegrams to England.

Wireless does not as yet play a very important part in life in Egypt, although certain of the European newspapers are obviously obtaining a large portion of their news "from the air." As there are no laws governing wireless in Egypt, there is nothing to stop them; the only people to suffer are those news agencies which broadcast for their Indian stations.

The New Customs Tariff.

The Egyptian Customs Administration is working extremely hard in order to prepare its officials for their duties in connexion with the new Customs tariff, which will be inaugurated at the beginning of next year. Some time ago it was decided to send missions to France, to study the working of their system, and three delegations were sent. It is now thought that the officials who have already visited France are in a position to teach their more ignorant brethren, and so a series of lectures have been proposed, to be delivered by members of the missions sent to France and senior officials of the Customs Administration. It has also been decided to form a museum of samples of all articles imported, excluding such articles as engines and machinery, for the instruction of Customs Estimators. There is certain to be a considerable amount of confusion at first, but the authorities are doing their best to prepare their staff for a type of work which will be entirely new to them.

ROUMANIA.

Bucharest, July 21.

Administrative Reform.

During the last fortnight there has been great activity in internal politics. The Administrative Law, one of the fundamental measures pressed for by the National-Peasant Party while in opposition, was placed before Parliament and caused a great commotion. The National-Peasant Party announced that the basis adopted in this Law was the only one capable of stimulating into activity the political life of the country, by a distribution of responsibility and a better choice of the local administrative organs. Ever since they came into power it has been the main preoccupation of the National-Peasant Party to proceed as soon as possible to put into practice the policy that they had always upheld. After long reflexion and consideration the draft Bill was drawn up, with the approval of the Regency, and submitted to Parliament.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania,[†] Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

Some politicians, however, had thought that it would be advisable to proceed first to measures of economic and financial reconstruction with the tacit approval of the Opposition parties, rather than to excite their resistance by introducing a Law which ran entirely counter to all their views, and the worst fears of these wiseacres were realised. The Liberal Party made a violent declaration that they refused to apply the proposed Law, not only in regard to the reforms that it introduces, but also to the whole of the measures it comprises.

The publication of this declaration of protest, however, caused a split in the ranks of the Committee of the Liberal Party. M. Duca considered that it was a premature step to take against a Government which was in a very strong position, not yet weakened by a long tenure of power or by the discontent of the masses at the necessarily slow re-establishment of the economic situation, or at the taxation that would be necessary to balance the Budget. M. Vintila Bratianu required all his authority to obtain at least the tacit support of his partisans to this measure, which they judged ill-timed. M. Duca, in loyalty to his Chief, was obliged to read the declaration to the Chamber of Deputies, although it was against his better judgment, and the absence of M. Argetoianu in the Senate, when the declaration was read, was significant.

This declaration drew forth from M. Maniu, Prime Minister, a masterly indictment of the Liberal policy—an utterance which has long been expected of him—in which he emphasised the deplorable situation in which the finances of the country had been left by M. Bratianu, but which he had so well succeeded in masking. The President of the Council declared that his Government intended to adopt a clear and straightforward financial policy, to balance the Budget and to introduce democratic reforms which were wise and necessary in the country's interests, in spite of the recriminations of the Liberal Opposition. The latter, he said, stigmatised as Bolshevistic the institution of village Councils in villages having under 600 inhabitants (these they call Soviets) and the election (not the nomination by the Government) of the administrative officials and fiscal agents. The Opposition also considers injurious to the national unity the creation of County Councils with their Diets, which, they say, will too greatly intensify provincial activities. They further consider onerous the appointment of regional administrators—or Governors—and they say that the upkeep of the staff required by these officials will more than swallow up all the economy effected by the suppression of the regional Ministries (Bessarabia, Bukovina, etc.) under the new Law.

On the other hand, the Minorities protested against certain measures in connexion with the administration of the municipalities and communes, which they claim to be disadvantageous to the minority population, and they threatened to withdraw from Parliament, as the members of the Liberal and Averescan Parties have done. The Opposition hoped in this way to checkmate the Government, for, if they persist in their policy, in spite of the Opposition protests, a bad impression will be created abroad, whereas, if they give in, the country itself will become alarmed. Meanwhile, M. Maniu, in the name of his party, is resolved to carry out his programme to the letter, in an honest attempt to achieve the aims which have long characterised the National-Peasants' policy.

The Religions Bill.

Another Law has roused sharp divergencies of opinion, and that is the law of M. Aurel Vlad, Minister of Cults, on religious exercises. The Jews protested against the paragraph which deals with the Jewish religion, because it provides the right to organise several Jewish communes in each town. Up to the present there has been only one, in which was centralised all the Jewish power with the support of the Government. If then the central commune reserves the right to subsidise any of the others that it chooses, this, say the Jews, will introduce political considerations into their communities to the detriment of

the interests of the Jews themselves. Several meetings of protest have been held on this account. In the end, however, the Legislative Council, with the assent of the Jewish deputies, modified two of the obnoxious paragraphs, in accordance with the wishes of the Jews, for, as M. Aurel Vlad said, the Government is anxious that no one should have any justifiable complaint against them in matters relating to religion.

An Abortive Plot.

An attempt has been made in some quarters to attach the importance of a rising against the State to a movement which was confined to a few vague agitators and persons of no influence or importance. The incident has left the population utterly indifferent, and, indeed, its ineffectiveness is more ludicrous than anything. Some unfriendly foreign papers tried to insinuate that it was a Carlist plot, but no one believed this, even before the publication of Prince Carol's indignant refutation of such a charge in which he gave every assurance of his loyal sentiments.

Belgrade, July 25.

Frontier Incidents.

The return to Sofia of M. Neshitch, Yugoslav Minister, and his pacific interview with M. Liaptcheff created an excellent impression, and it was believed that the tension between Yugoslavia and Bulgaria was ended and that the Pirot Conventions would soon be ratified and brought into operation. We were counting, however, without the Bulgarian *komitaji* organisation, which has no desire to see relations improve and the frontier incidents on which they live made impossible. Within a few days, as if in answer to Yugoslavia's pacific gesture, two *komitajis*, alleged here to have been sent from Sofia, were seen by an agent in Shtip and asked to show their papers of identity. In reply they fired at the agent, severely wounding him. He managed to kill one of them, but the other escaped and fled towards the frontier. The peasant militia turned out and aided the police in finding the second assassin, who was finally surrounded and killed after a fierce fight, in which he threw two army pattern bombs and fired many rounds from his automatic pistol, but without injuring anyone, fortunately. The men's arms were of Bulgarian army pattern and their underwear bore the name of a Sofia shop. Both were men who fled from Yugoslavia some nine years ago, after committing offences against the law and refusing to do military service, and joined the Macedonian Revolutionary Organisation in Bulgaria to get a living. During the fight in Shtip two gendarmes were killed and two agents were wounded.

A few days later, after a long period of peace, a band of Albanian *katchaks*, bandits who live in the forests in summer and rob the villagers in the plains and any chance passers-by, crossed the frontier near Struga and tried to drive off the cattle of several neighbouring villages. The police were informed and caught up with the bandits in the thickly forested frontier region, where a running fight began, which lasted two days. Several gendarmes and one peasant were wounded in the fray, but the *katchaks* managed to carry off all their wounded and, aided by night and the thick forests, to make good their escape. Great activity has been shown in the Albanian frontier districts by *katchaks* and also by *komitajis* hail-

ing from Bulgaria. The Yugoslav-Bulgarian frontier is now so well defended, that it is with increasing difficulty that *komitajis* manage to steal across unseen. Attempts are, therefore, being made to concentrate action on the less defended frontiers of Albania and Greece. The recent visit of Mihailoff, the Macedonian Revolutionary leader, to Rome and the apparent wealth he now enjoys would seem to lend colour to the suggestion that Italy is financing the work of the *komitajis* in keeping the Balkan States in a state of tension and so preventing their peaceful development politically, socially and economically. So long as such action continues and no action is taken by the Bulgarian Government to prevent it, Yugoslavia regards it as absurd to talk of the ratification of the Pirot Conventions or the establishment of normal and friendly relations between these neighbour States.

Yugoslavia and Bulgaria.

In addition to *komitaji* action, the entertainment of Croat renegades, Press and other attacks on Yugoslavia freely allowed in Sofia and throughout the country, the Bulgarians have committed what is at least the very tactless action of amnestying a number of war-guilt prisoners, including the former Prime Minister, M. Radoslavoff, General Jekoff, and others who were responsible for issuing the orders for the extermination of Serbian intellectuals, teachers, priests, civil servants and others, in South Serbia and Macedonia during the Bulgarian occupation. These men were tried in accordance with the terms of the Peace Treaty between Yugoslavia and Bulgaria, but were allowed to be tried by a Bulgarian Court. They are not, however, ordinary criminals, and their amnestying is not a purely internal affair, as the Bulgarians state. The step is regarded as a deliberately offensive act by the Yugoslavs, and that it should be made just at a time of crisis shows, it is suggested, either complete lack of tact and political wisdom or a definite desire to stimulate ill-feeling and to prevent all attempts to improve relations between the two States made by the new Belgrade Government.

The Question of Reparations.

In preparation for the meeting on Reparations soon to be held, M. Spalaikovitch, Yugoslav Minister in Paris, M. Juritch, Minister in London, and M. Boshkovitch, permanent delegate to the Reparations Commission, have been called to Belgrade and are holding a series of meetings under the presidency of M. Ouzunovitch with a view to working out a policy for the country. Yugoslavia is not satisfied with the suggestion that her share of reparations should be cut down, since she suffered far more severely than any other State during the War and has a far more real need for the materials which she has been receiving by way of reparations than most of the other Allies.

The King's Tour.

King Alexander returned to Belgrade a few days ago after a long tour of the Adriatic Coast. Everywhere he was most loyally and enthusiastically received, and it is to be hoped that such tours of the new provinces, which do much to bring the people together and to encourage a sense of duty, will become more and more frequent.

The New Agrarian Bank.

Over 550,000,000 dinars worth of shares of the Privileged Agrarian Bank having already been subscribed, the subscription list is now closed and the first general meeting of shareholders will be held on August 15 in the Belgrade University. Before long it is hoped that the bank will be at work—in time to deal with the needs of the peasants during the movement of the crops, which will begin very soon now. The wheat and barley crops everywhere are now safely harvested and have given an excellent yield—in the dry limestone districts such a harvest is a record for some sixty years. The maize promises well, as do also the vines; but fruit has not been a great success this year.

CYPRUS.

Nicosia, July 16.

The King's Recovery.

Thanksgiving Services for the King's recovery were held on July 7 at St. Paul's Church, at Nicosia, and the Garrison Chapel on Mt. Troodos. Services were also held in the Greek Cathedral Church at Nicosia, and in those of the Armenian and other communities.

The Governor.

It is not known yet at which port Sir Ronald Storrs will land. He will, it is said, pass the remainder of the summer not, as expected, on Mt. Troodos, but at Kyrenia, on the picturesque northern coast. Kyrenia is a charming little district, possessing many attractions, and a favourite resort. It is only 16 miles from Nicosia, and faces Asia Minor, with its lofty Taurus range, looking across 40 miles of sea.

Death of Ex-King Husain's Wife.

The wife of the venerable Ex-King Husain, Hatiji Adité Hanem, passed away on July 10. A service was held in the Mosque of Ayia Sophia, and was attended by a large number of Muslims, including members of the family and leading notables. The body was taken to Larnaca for burial in the Tekké Khalat es-Sultan, a few miles from the town, on the border of Salt Lake, a shrine which is held in great honour, and much visited by Muslims, being the burial place of Um Haram, of the family (some say Aunt), of the Prophet. The sons of the Ex-King, the Amir Abdullah of Trans-Jordan, and the Amir Ali, have paid visits to him in the present month.

The Locust Campaign.

The season for fighting the swarms, which hatched out chiefly in the Eastern districts of the Island, ended on June 15. Over 80 tons of the pest were destroyed, and about 260 acres (English) were sprayed with the poisonous mixture now in use.

The English Language.

Examinations in the English language held annually show that the number of candidates that present themselves continues to increase. In an examination held recently 47 candidates passed with distinction, and 115 succeeded in the more ordinary test. It may be mentioned that a Turkish officer of the Police, Faiz Bey, has been lately called to the Bar in London, and also a Greek of Nicosia, C. E. Glykys.

General News.

From July 19 steamers of the Eastern Mediterranean Express Line will, it is said, touch at Limassol, and will connect the Island with Marseilles, Piræus, Syria, and Egypt. The agents in Cyprus are Messrs. N. P. Lanite and Co.

Mr. P. S. Walsh has been appointed President of the District Courts of Nicosia and Kyrenia.

The price paid for sparrows is now half a piastre—rather over ½d.

PERSIAN SELF-TAUGHT

By SHAYKH HASAN.

In Roman Characters, with English Phonetic Pronunciation.

Containing the Persian Alphabet, Transliteration and Pronunciation. Outline of Grammar with Persian Characters; Classified Vocabulary and Conversations; Travel Talk; Trade and Commerce; Persian Hand-writing; Money, with English and American Values; Weights and Measures; Illustration of the Persian Coinage.

Red Cloth, 4/- net; Blue Wrapper, 3/- net. Postage 3d. extra.

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25.
London: E. MARLBOROUGH & CO., Ltd., 51 & 52, OLD BAILEY, E.C.4

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 11.

The King's Speech.

A sigh of relief went up from many here, when it became known that there was nothing about India in the King's Speech—no rash commitment of the new Government in Great Britain about the course to follow in Indian affairs. Mr. Fenner Brockway, then, is not to dictate to the Prime Minister in that field of politics? That is to the good. Mr. MacDonald, after all, could not but feel bound to honour the bill of confidence that Sir John Simon and his colleagues drew on all the British parties, when they accepted their onerous task. One may regret that the Statutory Commission was composed as it was; one may think that its leadership, for all Sir John's great ability, was far from perfect; that, for instance, the Commission inquired in India into far too many details. One may believe that the findings of the Commission will probably err too much on the side of caution to follow far, or, in other words, that the Commission, in effect, will have finally to be dropped; but it must be seen that the Prime Minister can do nothing until it has reported. He can only act with the Report in his hands, even if then he is to stand with his hands behind his back.

The Prime Minister and the Pandit.

The most welcome part of the Prime Minister's speech in the course of the debate on the Address was undoubtedly this: "Again I feel it my duty to ask representatives of Indian opinion to re-open the doors of their minds and consider whether they may not now come to help us and give a happy and beneficial solution of this very difficult question." It has not, unfortunately, been welcomed by Pandit Motilal Nehru, the leader, as President for the year, of the Congress Party. He has just said—after, that is, two days or so in which to reflect—that the Prime Minister's speech has added insult to the injury of the Commission. That is not true: there is not a word in the speech that any sane man could construe as insulting; but Indians are a people who live all their lives among words, yet never attain to any exact sense of what they mean. Or rather of what English words mean: they do better in their own tongues.

"Adding Insult to Injury."

"Mr. MacDonald's speech," Pandit Motilal has said, "adds insult to injury. The Labour Party having, before they came into power, committed themselves to the appointment of the Simon Commission, were not expected to have the courage to confess their mistake and begin on a clean slate. But apart from taking part in the high-handed policy of forcing the Commission on India against her will, Mr. MacDonald must be presumed to be well aware of the humiliation to which the country was subjected by brutal assaults on peaceful demonstrators, which included some of its highly respected citizens. After this, to talk of the situation created by the Commission as one that is going to bring 'peace, happiness and dignity to India' is nothing short of an outrage on India's sense of honour." It would have been far better if the Pandit had thought of India's sense of humour. In politics she may not have much: she has a glimmering. Almost every word in the above offends one's sense of humour, or rouses it into activity. The Prime Minister cannot have said, and did not say, that the Commission had created a situation. No Commission can do that. A Commission is appointed, whenever one is, because time has created a situation that needs looking into by a public body. Some action is called for in the time-created situation—what action? The public body is to answer that question. It is perfectly true that the Indian situation, one that existed before the Statutory Commission was appointed, promises, if wisely handled, to bring 'peace, happiness and dignity to India.' It will

whether the Pandit and his Party help or refuse to help. It would smooth matters somewhat, if they would help: that is all the difference it would make.

Public Words; Private Words.

One could forgive him, if the Prime Minister, on reading the cabled text of Pandit Motilal's reply to his House of Commons speech, should have said, "what an utterly impossible people!" They are not utterly impossible: often they say very different things in public and in private. In public they are being listened to by many claimants to their thrones: they have to toe the Party line, or their thrones will be toppled over. I was walking recently with an Indian, one of the judges (it was not in Calcutta). He was in politics before his elevation to the Bench. He knows all about them. He knows how far words are put into their mouths by those who mean to lead revolts in the Party, if the words are not spoken. The judge confessed that he had himself "never been left alone for a minute for introspection." His picture of Pandit Motilal Nehru, for it was of him that he was speaking, was of a man almost harried into saying too much. He did not excuse the Pandit, but condemned him, saying that at another time it might not have mattered so much, but that at this time of crisis it did matter. This was a time when the leader of the Congress Party *should* lead, and not suffer himself to be driven from behind. "Furthermore," said my friend, "this talk of Dominion Status for India is absurd. India never can be *one* Dominion, or one anything; there is much too much diversity of race in India." "I suppose there is," I interjected, "as much diversity between the men of the south of India and those of the north as between, say, Frenchman and Hungarian." "There is more," said the Judge; "the French and the Hungarians have at least their colour in common. The people of Madras and the people of the Punjab haven't even that."

Words, Words, Words.

There is, then, this difference between words said in public and those they say in private. Furthermore, as I have already remarked, words are commonly used in India with only half their meaning. The Prime Minister need not think it a hopeless case. He need not, nor need the new Secretary of State for India. All may yet be well. If Pandit Motilal Nehru has used too strong language—too strong, that is, if the words are to be taken as having in India their sense in England; but words never have—he has merely talked of the Prime Minister as the members of the Congress Party talk of each other. I have just been reading a column by a member of that Party on the question, who should be President of the Congress next year? Mr. Gandhi, Pandit Jawaharlal, or Mr. Vallabhai Patel? This is a morsel from it: "The acid test of leadership, they say, lies in the success of such a struggle and not in a mere *flair* for talking big like Pandit Jawaharlal Nehru, even though with transparent honesty and conviction." No one on earth but in India, this land of half meanings of words, is ever thought of as talking big "with honesty and conviction;" there is an element of bluff always in talking big. No one can have a *flair* for talking big. All the critic of Pandit Jawaharlal meant is that that politician is better than most at "building the lofty speech"—that, and that he is not much use at anything else. We knew that already.

Communalism and Education.

While Pandit Motilal Nehru is magnifying Mr. MacDonald's appealing to the Indian leaders, while he knows that the presence of Sir John Simon and his colleagues in India led to some broken heads—not so very many, though, and it was much the fault of the bearers of those heads—while the Pandit is magnifying that for his followers into an "outrage on India's sense of honour," his conduct and that of others lead to things that neither he nor they ever take to heart as they should. The Director of Public Instruction of the Bombay Presidency

has such things as this to say in his quinquennial report: "The chief result of the reforms is the emphasis they have given to differences of religion and caste owing to the system of special representation which they have set up, and nowhere have the evils of communalism been more conspicuous than in the administration of primary schools by local authorities." The private lives of schoolboys and college students in India are always more deeply affected by political movements and their excitement than any other lives in India. You hear that Mr. MacDonald or Mr. Baldwin has addressed a political meeting. You think of grown men and women as forming the bulk of the audience. In India it would be schoolboys and college students.

Another thing in the Director's report, but this has nothing to do with communalism, is that the "continual increase in secondary education means a continual lowering of the standard, since the new recruits represent generally lower intellectual strata." That is it: educational work in India, because the best brains in India are never given to it, grows yearly worse.

The Mandi Hydro-Electric Scheme.

There is interesting information, in a speech of the Minister for Agriculture in the Punjab, Sir Jogendra Singh, about the Mandi Hydro-Electric Scheme. Use is to be made of the snow-fed water of the Uhl, a tributary of the Beas. The water is to be diverted through a tunnel $2\frac{1}{2}$ miles long, located in rock, and then dropped 1,800 feet to a power-station, where 36,000 kilowatts could be generated. This is the first stage of the scheme only. In the second a dam will be constructed, on a site that might, the Minister said, have been provided by Nature for that special purpose. This would enable the supply to be increased to 70,600 kilowatts. There is still a third part of the scheme, but this part may not be carried out in this generation.

INDIA'S WATERWAYS.

(From a Correspondent.)

It was mentioned in a recent issue of THE NEAR EAST AND INDIA that efforts are being made by commercial interests to persuade the Government of India to undertake an inquiry into the problem of the development of the Indian waterways. Insufficient attention has been hitherto paid to this problem, and an investigation, if it were comprehensive and thorough, could hardly fail to be productive of useful results. The local Governments look after the interests of the waterways, while the railways are under the control of the Central Government. This unsatisfactory arrangement has created a feeling that the interests of water transport are sometimes subordinated to the interests of rail transport. Indeed, for years past complaints have been made of unfair railway competition; and it has been alleged that railways have been constructed in areas which are adequately served by waterways. One of these cases is under discussion in India at the present time, and it has formed the subject of a strong criticism by the Bengal Chamber of Commerce.

Bengal is bountifully provided with navigable rivers, particularly in the eastern part of the province; and railway extension in Eastern Bengal certainly cannot be regarded as a pressing need. There are many other parts of the country where new lines are much more urgently wanted, as the transport requirements of Eastern Bengal can be adequately supplied by the waterways and the existing railways. Nevertheless, the Government of India has decided to build a new line in this part of the province. This railway—which will run from the district of Narainganj to a point opposite Goalundo—is estimated to cost Rs. 203 lakhs, of which Rs. 27 lakhs have been provided for the current year. The area to be served is largely bounded by the Dhalleswari river on the one side, and by the Padma on the other. The line will necessitate the construction of a bridge across the Dhalleswari and the pro-

vision of a wagon ferry across the Padma to Goalundo, where it will connect with the mail line of the Eastern Bengal Railway.

It is not surprising that this project should have aroused criticism. The line must depend to a large extent for its revenue on the share of the jute and coal traffic which it can attract. Raw jute is carried from the districts which the railway will serve to Calcutta, while coal is carried in the other direction from the Bengal and Behar mines to Narainganj, Dacca and elsewhere.

Both the jute and the coal traffic are adequately catered for by the existing river steamer services. Of the jute a large proportion goes to the Calcutta mills, who prefer to have it delivered to them from the river rather than from the railway. In fact, their representative organisation, the Indian Jute Mills Association, strongly opposes the new line, and deprecates the expenditure of public money upon it. This being the position, it is questionable if the line will be used to any appreciable extent for the carriage of jute to the Calcutta mills. Similarly there seems to be but little likelihood of the railway carrying much coal, except, of course, for its own consumption. For many of the scattered places on the rivers where the coal is wanted will not be accessible to the new line.

There is no other class of traffic available in sufficient volume to make the line a paying proposition. In fact, the Bengal Chamber of Commerce has confidently asserted that it will not be able to show even the smallest return on the capital invested in it unless it can succeed in attracting traffic which is already adequately provided for by the river steamer services. There is another point which should also not be overlooked. During the busiest part of the jute season each year congestion occurs on the main line of the Eastern Bengal Railway. It is sometimes impossible to obtain wagons for extended periods, and large quantities of jute are consequently held up at the dispatching stations. It is, as has been shown, very unlikely that the new line will carry appreciable quantities of jute. But should it do so, the result will be that this annually recurring congestion will be intensified.

How in such circumstances the scheme was ever sanctioned is difficult to understand. The Bengal Chamber complains that insufficient opportunity was given to the public to express their views upon it. And the Chamber goes on to urge that all proceedings in connexion with the line should be suspended forthwith and a public scrutiny instituted. This would seem to be sound advice, as it is clearly unwise to spend a large amount of public money on a line which is unlikely to be remunerative, and which will interfere with private enterprise.

As is well known, the State has to find all the capital which is required for railway development in India. And, as was admitted recently in the Council of State, it will not be easy to raise all the money which will be required for this purpose if railway development is to keep pace with the needs of the country. The Government spokesman in the Council debate went on to say that it is therefore very important for the State to encourage private enterprise to provide the capital required for the development of other forms of transport. This is, of course, quite right; but such a statement makes it more than ever difficult to understand why the Government should want to build a railway which must compete with another form of transport provided by private enterprise.

A John P. Saunders Memorial Fund has been opened at the King's School, Peterborough, to perpetuate the memory of the young officer of the Indian Police who was assassinated when on duty on December 17 last, during the disturbances which took place on the occasion of the Simon Commission's visit to Lahore. The fund is intended to provide a memorial leaving scholarship and a tablet in Peterborough Cathedral, with a replica in the school. A memorial and benevolent fund is being raised in India in honour of Mr. Saunders and of Charan Singh, the Sikh police clerk who was shot while attempting to arrest the assailants of Mr. Saunders. It is probable that identical tablets will be put up in Lahore and Peterborough Cathedrals. Donations may be sent to the Headmaster of King's School, or to the Midland Bank, Peterborough.

THE STATUTORY COMMISSION.

The Joint Free Conference, comprising the members of the Statutory Commission and the Indian Central Committee, resumed its sittings on July 23, when Sir Atul Chatterjee, the High Commissioner for India, gave evidence regarding the work and administration of his office, with particular reference to the quasi-diplomatic functions which he is called upon to exercise in that capacity. Sir John Simon presided.

On July 25 Sir Arthur Hirtzel, who has been Permanent Under-Secretary of State for India since 1924, was orally examined on a memorandum relating to the administrative functions of the India Office, including the future of the India Office.

The Joint Free Conference also reassembled the following day to hear the evidence of a delegation from the Indian Civil Service (Retired) Association, headed by the Chairman, Sir Reginald Craddock, a former Governor of Burma. A summary of the Association's written representation to the Statutory Commission appeared in the issue of THE NEAR EAST AND INDIA of December 13, 1928.

INDIAN NOTES.

The Assam Floods.

According to the latest information it would seem that about 48,000 people are in need of relief by reason of the floods in Assam. The districts affected are Cachar and Sylhet in the Surma Valley Division of the province, and Nowgong in the Assam Valley Division. In Nowgong the floods were caused by the rapid rising of three rivers which by June 12 had spread out over the countryside. It was not until about ten days later that the water began to subside; and by that time some 30,000 people had been driven from their homes. Fortunately there was no loss of human life, and comparatively few cattle were drowned. In the Surma Valley the floods were on a more extended scale. In Cachar an area of about 1,900 square miles was inundated, and in Sylhet the greater part of the district (some 5,000 square miles) was similarly affected. The Surma Valley floods were caused by a storm burst in Manipur coinciding with heavy rain in the hills surrounding Cachar. By June 15 many villages were completely under water, the flood level being considerably higher than was recorded during the great inundation of 1916. Enormous damage was done to crops in Cachar, and some of the tea gardens also suffered more or less severely. In Sylhet the whole of one subdivision, the greater part of another, and a large proportion of a third were badly damaged. For more than a week many villages were under water the people being compelled to live in the trees, or in boats, or in any other available places of refuge. The rice crops, which were due to ripen in the autumn, were mainly destroyed; the cattle mortality was very heavy; and innumerable houses were washed away. Relief measures seem to have been promptly organised, and it is satisfactory to see that the Swarajists worked in harmony with the Government officials. The Government of Assam and the Government of Bengal co-operated in dealing with the situation, the first-named sending money for distribution by the district officers, while the Government of Bengal forwarded considerable quantities of rice. The district of Cachar is said to have suffered most, as regards immediate damage. But it is anticipated that a food crop may still be raised there in November after re-sowing. The prospects are really more gloomy in Sylhet, as in that district large areas cannot be replanted until March or April next. Relief measures will require, therefore, to be in operation for some considerable time; and appeals for funds have accordingly been made in Calcutta and throughout the two provinces. The Government of Assam would seem to be doing all that is possible at the moment, but it is very desirable that their efforts should be supplemented by the general public.

THE LATE SABIH BEY NASHAT.

[Last week we were able only briefly to record the regretted death of Sabih Bey Nashat. For the following appreciation we are indebted to a Correspondent who knew the late Iraqi statesman well.—ED.]

Sabih Bey Nashat, the Iraq Minister in Angora, whose sudden death occurred on July 19 in the Turkish capital came of an old Iraqi family. After being educated in Baghdad and Constantinople, he entered the Turkish Army and soon gave proof of his quality. During the Balkan wars he rendered great services on Enver Pasha's staff, notably in the advance on Adrianople, when he was largely instrumental in enabling the Turks to recapture that city. During the Great War he served in Syria, but having expressed his views on the Turkish aggression against the Arabs too strongly for the ruling clique, he was removed, and shortly afterwards, in 1916, was retired.

After the Armistice he came to Iraq, where his abilities at once marked him out for advancement. He was chosen as Minister of Communications and Works in the first Iraqi Cabinet and held in successive Ministries the portfolios of Defence and Finance. A hard-working, intelligent and thoroughly modern statesman in his outlook, he brought a sound and ready judgment to public affairs. Besides his ministerial appointments he took part in the negotiations with King Ibn Saoud at Ojair, and it was at his suggestion that the device of a neutral zone was accepted by the parties. In 1924 he joined, as Iraq delegate, the Commission sent out by the League of Nations to investigate the frontier question between Turkey and Iraq, and he rendered great services in facilitating an understanding between its members.

In private life he had many friends and no enemies. His humour endeared him to all, while no one was ever offended by his outspoken frankness. He was a fine linguist, having a ready command of seven languages; he read widely, and, like many other statesmen, found in bridge a solace from graver matters. Being an old school friend of Mustapha Kemal Pasha, he was received at Angora by the Ghazi with great cordiality. His death is a serious loss to Iraq, where men of his calibre are, unfortunately, only too rare.

THE SITUATION IN SOUTHERN PERSIA.

In the House of Commons on July 25, in answer to Mr. Norman Angell (Labour, Bradford), who asked whether the Secretary of State for Foreign Affairs could make any statement concerning the situation in Southern Persia, the Under-Secretary of State for Foreign Affairs, Mr. Dalton, said:—"His Majesty's Government have received reports concerning tribal disturbances in Southern Persia. They have also been informed of certain rumours current in Persia to the effect that these risings are being instigated by British agents, and I am glad to have the opportunity of stating that these rumours are devoid of any foundation, and that the policy of His Majesty's Government remains one of strict non-intervention in Persian internal affairs. The Secretary of State is confident that the Persian Government, who have had ample evidence during the past few years of the friendly attitude of Great Britain, realise that in their present difficulties with their disaffected tribes, they may count on the sympathies of His Majesty's Government, whose one desire is to see Persia prosperous and peaceful under a strong and independent Government."

The Roumanian Parliament passed a Bill on July 23 modifying the religious law so as to extend to the Old Kingdom the greater liberty of organisation enjoyed in Transylvania.

It is reported from Athens that a cemetery of the Mycenaean epoch has been discovered near Marathon.

The Yugoslav Ministers to France and Great Britain last week arrived in Belgrade to discuss with the Government the attitude of Yugoslavia during the coming conference on Reparations.

According to *Al Mokattam* the Egyptian Minister of Communications has approved of the proposed transfer of the contract for carrying Egyptian pilgrims to Mecca to and from the Hijaz from the Khedivial Line to the Egyptian Navigation Company, which is subsidiary to the Bank Misr.

PERSONAL AND GENERAL

TO-DAY

August 1, 1929 (New Style).

July 19, 1929 (Old Style).

Saphar 24, 1348 A.H., of the Muslim Calendar.

Tammuz 24, 5689, of the Jewish Calendar.

The Aga Khan left London last week for the Continent.

The Maharani of Indore left London on July 28 for Paris.

Prince Paul of Greece arrived last week at the Hotel Metropole, Blackpool.

Sir Leslie Scott left England on July 26 for a fortnight's cruise to Norway in the Arcadian.

The Duchess of York received her Excellency Madame Hadji-Mischeff at 145, Piccadilly on July 25.

Ex-King George of Greece was the guest of Viscountess Dunedin at a luncheon party which she gave on July 24 at 42, Lower Sloane Street.

King Fuad of Egypt, attended by Ahmed Mohamed Hassanein Bey, visited the Queen at Buckingham Palace on July 22. His Majesty dined with the Prince of Wales at St. James's Palace on July 25.

Mr. Rushbrook Williams, who went out to India to take part in the informal conferences of Indian Princes and Ministers in Bombay on the findings of the Butler Committee, returned last week to St. James's Court.

Mr. H. Charles Woods, who was assisted in receiving his friends by Mrs. Woods, gave a large tea party at the Carlton Hotel on July 24. There were about sixty guests, who included the Turkish Ambassador, the Bulgarian Minister and Madame Hadji-Mischeff, the Latvian Minister, the Lithuanian Minister, Viscountess Falkland, the Dowager Lady Swaythling, the Hon. Lady Norman, Lady and Miss Horder, Edith Lady Bradford, Sir Arnold Wilson, Lady Scott Moncrieff, Major and Mrs. McCallum, Miss Marian Bower, Mr. H. V. Cobb, Mrs. Seton Watson, Miss Parsons, Colonel and Mrs. Cunliffe-Owen, Mrs. W. L. Courtney, M. de Villari, Mrs. Arthur Strauss, Mr. and Mrs. E. H. Carr, Canon Douglas, Miss Lucy Kemp-Welch, Mr. A. C. Wratislaw, Mr. E. D. Madge, Mr. and Mrs. de Venelitsky, Mr. and Mrs. Joseph King, Mr. and Mrs. Percy White, and Miss Sylvester-Samuel.

THE EGYPTIAN PRIME MINISTER.

Mahomed Mahmoud Pasha, Prime Minister of Egypt gave a reception at the Royal Egyptian Legation on July 23. A very large number of guests was present, and a feature of the evening was a performance given by members of the Russian Ballet (now at the Royal Opera House) on a stage erected on the wide terrace overlooking the Legation garden. Violin soli were played by Mr. Deltmar Dressel, who was accompanied by Mr. Ivor Newton, and subsequently dancing took place in the reception rooms on the first floor.

Ex-King Inayatullah of Afghanistan arrived in Teheran on July 25 with his family.

The International Diplomatic Conference in Geneva has completed a convention governing the treatment of prisoners of war.

The Yugoslav Minister of Commerce, Dr. Mazhuranitch, tendered his resignation to the King, who accepted it. Dr. Shverlyga, Minister of Finance, is temporarily acting as Minister of Commerce.

Ratifications of the Kellogg Pact for the Renouncement of War were deposited at the State Department of Washington on July 22 by Austria and Bulgaria.

KING FUAD IN ENGLAND.

During the first week of his stay in England, London has provided King Fuad with a full programme. On July 23 his Majesty was the guest of the Lord Mayor and Lady Mayoress at the Mansion House to luncheon, at which eighty guests were present. On the following morning he received the Duke of York at the Ritz Hotel, and in the afternoon of the same day the King took tea with Sir Denison Ross at the School of Oriental Studies. In the evening his Majesty was present at the performance of the Russian Ballet at the Royal Opera House, Covent Garden. On July 25 King Fuad attended the Queen's Garden Party at Buckingham Palace and in the evening was the guest of the Prince of Wales to dinner at York House. During the week-end his Majesty was the guest of the Hon. Mrs. Ronald Greville at Polesdon Lacey.

At the School of Oriental Studies.

On July 24 King Fuad accepted the invitation of Sir Denison Ross to take tea at the School of Oriental Studies, with a view to inspecting the Library and to meet the members of the Governing Body of the School, distinguished Orientalists and others. His Majesty was accompanied by Dr. Hafez Bey Affi, Egyptian Foreign Minister, Hassanein Bey and other members of his suite, and by the Staff of the Egyptian Legation. After the inspection of the Library, with its collection of manuscripts and old editions, Sir Denison Ross's guests were presented to the King, who spent in all an hour at the School. In particular he had long discussions with Dr. H. R. H. Hall, Keeper of Egyptian and Assyrian Antiquities at the British Museum, Professor Dodwell of the School of Oriental Studies and Sir Thomas Arnold, Professor of Arabic. Among others present were:—

Mr. A. M. Blackman, Dr. C. O. Blagden, Sir Edgar Bonham Carter, Mr. A. G. Ellis, Dr. M. Gaster, Mr. H. A. R. Gibb, Dr. Lionel Giles, Sir Wolsley Haig, Dr. H. R. H. Hall, Professor Margoliouth, Mr. Montague Bell, Mr. Sutton Page, Mr. St. John Philby, Mr. Francis Rodd, Sir Harry Stephen (Chairman of the Governing Body), Sir Montagu Turner (Hon. Treasurer), Sir Charles Wakefield, Sir Oliver Wardrop, and Sir Arnold Wilson.

On July 29 King Fuad took lunch with Princess Mary and Lord Lascelles, and dined at the Swiss Legation with M. and Mme. Paravicini. His Majesty expects to leave London next week on a tour of the North in the course of which he will visit Newcastle, Glasgow, and, it is hoped, Edinburgh. If possible, a brief stay will be made at Stratford-on-Avon for a visit to the Shakespeare Memorial Theatre, towards the re-building of which, it will be remembered, King Fuad gave £500.

THE WEEK AT HOME

London, Tuesday Morning.

The Government's Position.

On the whole, I think, the Government ended the five weeks' session last week rather more strongly than they entered it. Largely this was on account of the quite fortuitous incident of Lord Lloyd's dismissal. It is not for me to say anything about this, except to remark that it was handled by the politicians in such a way as to enable the Labour Party to "score."

Mr. Winston Churchill, who, whatever his faults, does not forget his friends, unfortunately put his foot into it; or, rather, his heart was more in evidence during the debate than his head. And when Mr. Churchill makes a mistake, the delight of and the benefit to the Labour Party are doubled. From a purely Party point of view, then, this incident over Lord Lloyd has served the Government well.

Nor in other matters have Government spokesmen been slow to show that they have both ability and a nice sense of tactical advantage. The Prime Minister has so far been masterful without being irritating, Mr. Snowden also. Mr. J. H. Thomas, who has, perhaps, the most important, or at least the most closely scrutinised, task of all, certainly did forget himself once, but he is not the sort of man against whom one could long harbour a grudge. And all the other members of the Cabinet have done quite well enough to warrant the Liberals' support and to deserve the polite attention of the Conservatives. As a matter of fact, by far the most serious criticism of the Administration has come from the Socialist back-benchers, whose mordant sincerity is like a cutting wind to the responsible heads of the Labour Party.

Safety First.

There is manifestly to be no rushing to fulfil election pledges, and whether it is unemployment, education, or financial matters, exhaustive inquiries are to be made before any great change is to be embarked upon. In other words, the Socialists' present guide, though not their motto, is "Safety First." They are not going to work transformations merely because they said they would, but, before taking action, will get the advice of expert committees.

So far, therefore, no considerable ill-will has been engendered towards the Labour Party—it is, indeed, having

an extraordinarily sporting run. The main source of discontent relates to the uncertainty of the trade position as affected by the fiscal system—for nobody knows exactly what the Government are going to do in the coal industry, in Safeguarding and analogous duties, in Imperial Preference, and so on. What they would like to do is, of course, much better known, but there is every indication that the biggest men of the Party are not going to be so doctrinaire as to ignore facts, some of which may be alterable, but some of which are permanent.

Railways.

After a period of sleep, depression, and apparent despair, the railways of Great Britain have really pulled themselves together. They have shown in many directions most praiseworthy enterprise—particularly in regard to passenger traffic—and their reward is reflected inevitably in their dividends.

For all the Big Four railways the interim dividends are much more satisfactory than had been generally anticipated. The G.W.R. Ordinary, for instance, are up from $1\frac{1}{2}$ to $2\frac{3}{4}$ per cent.; the L.M.S. from $1\frac{1}{4}$ to 2.

This improvement is, admittedly, largely due to economies, but cheaper fares have played their part. The public has been quick to take advantage of the reduced fares offered, and it seems very probable that if this process is continued, the railways may soon—in respect of passenger traffic at least—approach to their former proud position. Of goods traffic, which is the basis of railway prosperity, it is, however, possible only to speak with hope. The revival of British trade is being a terribly slow job.

Roads.

But if the condition of the railways is improving, what shall be said of the roads? Last year there were caused in road accidents 6,000 deaths and over 160,000 injuries. Cars constantly increase on the roads. Each licence issue represents, therefore, another potential accident. Something, obviously, must be done to check this appalling slaughter.

Fortunately, the report of the Royal Commission on Transport shows the way. It declares, indeed, that delay in putting its recommendations into effect will be "disastrous." These recommendations include vastly heavier penalties for dangerous driving. The Commission suggests a penalty of £50 for the first offence, £100 for the second, with imprisonment as the alternative and automatic suspension of the licence. The criterion of a driver's "drunkenness," moreover, will not depend on the quantity of drink he has consumed. Penalties will also be imposed for failing to observe a road sign. Dimmers or dippers will be compulsory. The speed limit for motor-cars and motor-bicycles will be abolished. And so on.

Some of these recommendations are obviously at once practicable. The public in general will look to the Government to see that they are soon given effect.

The End of the Drought.

I never remember rain which was so generally welcomed in England as that which fell on Sunday. Just in time, and just the gentle sort which was wanted, the heavens sent the rain. Gardeners, golfers, tennis-players, and even, for the most part, the farmers all rejoiced. But it has probably come too late for the cereal crops.

Undoubtedly things in many places had reached almost the straining point. In some villages, particularly in Northern England, water had to be carried long distances, and had actually to be purchased by the bucketful. It must be many years since such an experience was undergone.

Of course the water supply is still far below the normal, and much more rain will have to fall before the perished fields resume their happy green appearance. But the infallible meteorologists seem to suggest that the main danger is now over, although they have not hinted that it is as yet advisable to stop using one's bath water for sprinkling the roses.

A SURVEY OF WAHHABI ARABIA.

Mr. St. John Philby lectured to the Central Asian Society on July 22 upon "A Survey of Wahhabi Arabia: 1929." Admiral Sir Herbert Richmond presided.

The lecturer began with a reference to the wide interest shown to-day in Arabian affairs. He suggested, indeed, that the Central Asian Society, which was founded at a time when Anglo-Russian rivalry in the East was intense, had "removed caviare and vodka from its sessional menus in favour of a simpler diet of locusts and wild honey." He instanced, as a measure of this interest, the lecture recently given in Arabic to the Society (reported in our issue of July 11) by H.E. Shaikh Hafidh Wahba, and he spoke of the remarkable past which this Egyptian diplomatist had played in the creation and development of the Wahhabi State. Hafidh Wahba, who offered his services to Ibn Saoud at Riyadh in 1922, when the future of Arabia was still in suspense between the Wahhabi and Sharifian dynasties, was one of the small band of distinguished men who would loom large in history. He was, for one thing, the pioneer of motor transport in Arabia. In January, 1926, there were four motor-cars in the Hijaz; now, after three years, there were about 1,500. This development had been an immense boon to the 420,000 pilgrims from overseas—or to that half which had used cars.

Security and comfort for the pilgrims had been the watchwords of Wahhabi policy in the Hijaz, and those two assets constituted the great difference between the Wahhabi régime and the Turkish and Sharifian régimes.

In no country in the world was the standard of personal security and safety higher than in the Hijaz and in Wahhabi Arabia generally. This result, moreover, had been achieved with a surprisingly small expenditure on military or police organisation.

Mr. Philby then turned to the state of affairs in the countries to the north of Wahhabi Arabia, referring particularly to the "story of a rather unnecessary misunderstanding between Arabia and Great Britain and of its lamentable consequences." He went back to 1921 and 1922, when the British Government was concerned to secure some agreement on boundaries with Ibn Saoud. Ibn Saoud saw no need for the establishment of boundaries—a revolutionary development so contrary to the Badawin sentiment of countless ages, and he foresaw that, whatever arrangement was arrived at by the responsible rulers of the various spheres, difficulties of a practical nature would arise as soon as a shortage of rain or pasture forced the tribes on one side or the other to cross a boundary which had no existence except on maps. The lecturer told the story of the Treaty of Muhammarah and of the Protocols of Uqair, in 1922—which, he said, worked well enough until 1927, when the Iraq Government established a fortlike building at the wells of Busaiyah, on the Iraq side of the frontier. The raising of that fort, and the subsequent anger provoked on either side of that frontier were recounted. The lecturer suggested that the matter was eminently one for arbitration—seeing that the two sides had committed themselves to conflicting interpretations of the very simple wording of the Uqair Protocols. The dispute turned, of course, on the exact meaning of the words *Atraf al hudud*.

Another difference between Wahhabi Arabia and Great Britain, Mr. Philby continued, concerned the Aqaba-Maan district—that also might be made the subject of arbitration, together with the question of the proper ownership of the Hijaz Railway. It was highly important to have settled all the outstanding differences between Ibn Saoud and Great Britain and the Allies.

It was satisfactory to notice that the French had recently shown a disposition to reach a solution of their Syrian problem in consultation and perhaps in co-operation with the element of greatest stability in Arabia, namely, Ibn Saoud. There were influential Frenchmen, visitors to the Hijaz and in Paris, who advocated a settlement of Syria along Wahhabi lines. It might be said, in short, that both Great Britain and France had so re-

oriented their Middle Eastern policy as to bring the Wahhabi State fully into the picture.

Mr. Philby then made two other suggestions. Germany, he said, had recently introduced into Arabia an element of healthy commercial competition, and if British business men did not take care, German enterprise would go ahead in Arabia as it had done in Persia. What was needed was the organisation of a system of credits. First, all political difficulties should be removed between Arabia and Great Britain, and then commercial openings could be found, through the use, for example, of the Trade Facilities Act.

Moreover, in view of the fact that three-quarters of the political and diplomatic work of the Wahhabi State was conducted with Great Britain, Consular representation was inadequate. The lecturer welcomed heartily the indications that a Minister or a Chargé d'Affaires would be appointed to Jidda. It would be an excellent plan, he continued, if an Ambassador could be appointed to both Egypt and Arabia. These two fields were more closely related than might be supposed. Such an Ambassador could have a Counsellor permanently at Jidda.

In his concluding remarks, Mr. Philby touched on the Wahhabi-Egyptian dispute over the *Mahmal*, and on the nature of Ibn Saoud's governance. It was a mistake, he said, to suppose that the administration of the Wahhabi State was a beneficent and benevolent tyranny. Ibn Saoud, though he certainly dominated the situation, ruled only through possessing the entire approval of the people. He would fall at once if he displeased his people—for the Arab character was probably the most completely democratic in the world. Still less could the administration be called an hereditary tyranny, because the question of the succession in Arabia had not yet been fixed. The Heir Apparent, who would probably be the Amir Saoud, had yet to be acclaimed. Ibn Saoud was, in short, the most democratic of men, as was proved by the arrangement of an Elected Advisory Council in the Hijaz and the installation of a "complaints-box" in Mecca.

After the lecture, Sir Arnold Wilson congratulated Mr. Philby on his display of partiality, which was much needed in these days of colourless comment by students of international affairs. He referred particularly to one or two of the lecturer's points. Of the Hijaz Railway he said that it was all very well to describe it as a "religious railway," but were not 95 per cent. of the funds to construct it compulsorily contributed? Again, in regard to diplomatic representation at Jidda, King Ibn Saoud might like one Foreign Minister, but was he prepared to have one from each of the sixty-seven nations which had signed the Kellogg Pact? As for arbitration, it was the habit of H.M.G. to offer to arbitrate only when it was morally certain to win the case. Nine-tenths of the cases submitted to The Hague by Great Britain had confirmed the British view. The crux of the commercial question in the Hijaz was: what could it export? If German commercial penetration of Arabia was no more successful than it had been in Persia, moreover, there was not much to fear.

Lieutenant-General the Hon. Sir Frederick William Stopford, K.C.B., K.C.M.G., K.C.V.O., of York Terrace, Regent's Park, N.W., who saw service in Egypt, West Africa, and South Africa, and was Commander of the 9th Army Corps at Suvla during the Great War, who died on May 4, aged 75, left estate of the gross value of £85,015, with net personality £78,705.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Meeting Road Competition in Egypt.

The Egyptian Delta Light Railways was adversely affected in 1927 by the existing conditions in Egypt and by the competition of motor traffic. The improvement in the results for 1928 reflected the improvement in the financial and economic position of the country and the successful efforts which the company has been making to meet competition from the roads. At the general meeting, a report of which will be found elsewhere in these columns, Sir Montagu Sharpe dealt in detail with developments during the past year. Motor car competition has been met by more frequent train services and by the reduction of fares and rates, and the provision of facilities for the transport of goods from the villages to the stations. These measures have been very successful. There has been an increase in the number of passengers of about 25 per cent., and Sir Montagu Sharpe stated that the public are returning to the habit of travelling by railway. Then the increase in the goods traffic was about 22 per cent. The result was that the gross earnings totalled £337,668, an increase of £24,640 as against an expenditure of £264,298, an increase of £5,379. It is very satisfactory to know that the results for the current year show a further improvement, and it is evident that the prompt measures taken by the railway to meet the motor car competition are achieving the desired results.

Sudan Trade Progress.

The improvement already recorded in the trade of the Sudan this year has so far been steadily maintained. For the first four months the volume of trade via the Red Sea ports and Wadi Halfa totalled £E6,722,399, an increase of £E1,538,128 on the corresponding period of the previous year. There was a more or less substantial increase in every one of the main headings, but it has been the great expansion of the exports, for which cotton, of course, is responsible, which has been the chief factor in this large increase. The value of the imports was £E2,213,244, an increase of £E184,260, to which public imports contributed £E147,179. Exports on the other hand rose by £E1,318,005 to £E4,305,141 owing to the marked increase in both the quantity and the value of cotton exports. This year's figures bring home very plainly the extent to which the cotton crop has become the predominant factor in Sudan commerce. Undue dependence on one crop is, of course, to be regretted, for it carries with it obvious dangers, but for various reasons cotton is a peculiarly suitable crop for the country, and the extension of the cultivation of Sakellarides has been the means of furthering the economic progress of the country in a way which could not possibly have been achieved through any other medium. So far the influence of the prosperity in the Gezira on the rest of the Sudan is limited, but it is tending to spread, and as the realisation of the full cotton growing programme comes within sight it will become more and more pronounced. The Sudan to-day is an object lesson for the rest of the world as to the transformation that can be effected by the

introduction of a really suitable crop. What can be done with cotton in the Sudan may possibly be done with other crops, and it may well be that the science of the future will give the country not one but two or three basic crops on which to promote its economic welfare.

Oriental Carpet Manufacturers.

The report of the Oriental Carpet Manufacturers for 1928 shows a marked improvement on the results obtained in the previous year. The net profits amounted to £104,388, an increase of £12,599, despite the fact that business was interrupted for a month by earthquake damage at Smyrna. An allocation of £40,000 is made to a special reserve fund, the dividend is maintained at 5 per cent., and the carry forward is £1,367 as against £938. It is interesting to note the statement that trading in Persia, Turkey, and Greece continues to be satisfactory, and that the company has now extended its operations to Algeria. The extent of the field it covers adds greatly to the strength of the company's position, and the fact that it was possible to obtain such good results at a time of world trade depression should be a source of great encouragement to the shareholders.

Furness, Withy & Co.

As usual the meeting of Furness, Withy and Co. was marked by a most interesting review of the situation by Sir Frederick Lewis. Dealing with the position of the company, he said that they were faced with the paradox as they had made an increased profit despite a reduction in the profits derived direct from the trading of the vessels. The company has this year set aside a larger sum for depreciation in view of the continued depression of shipping, but it was clear from the Chairman's remarks that it was not regarded as really necessary, but is merely a measure of precaution. Sir Frederick Lewis pointed out that the dominant factors in the satisfactory results achieved by the company are the conservative financial policy which has been followed, the fact that the business is so spread that there are a number of sources of revenue, and the concern of the company in various trades which in some respects are not subject to the vicissitudes of the world freight markets.

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

CORRESPONDENCE.

REPARATIONS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The suggestion has been made, and is being urged in letters to the Press, that Great Britain should hand over to Germany the surplus of between £10,000,000 and £14,000,000 left from the value of Germany property liquidated after paying British private claims against Germany and German nationals. The suggestion, it seems to me, has been made without the giving of consideration to the subject that it warrants. It is quite true that out of the liquidated German property in England claims for debts under Article 296, and claims for compensation under Article 297 of the Treaty of Versailles have been paid in full with appropriate interest; but the fact must not be lost sight of that many thousands of British nationals who sustained damage at the hands of Germany and her Allies outside German territory, have only been compensated to a comparatively small amount of the damage sustained by grants, *ex gratia*, from what is known as "Lord Sumner's Commission." This Commission distributed a sum of something under £5,000,000, provided by the British taxpayer. In addition to the sum distributed by Lord Sumner's Commission, a further sum became available for damage sustained by British nationals in Ottoman territory; but here again, the fund was sufficient only to pay a fraction over 50 per cent. of the awards made for the damage sustained. It would, therefore, appear much more equitable that the surplus, which is stated to amount to something between £10,000,000 and £14,000,000, should, in the first place, be utilised for reimbursing the money found by the British taxpayer, and the balance should go some way towards affording just compensation for the damage sustained by British nationals outside German territory.

It is very difficult for the "man in the street" to understand why an Englishman, whose business was sequestered in Germany should receive compensation in full plus interest, but for a similar type of damage sustained outside German territory should only be compensated to a very small percentage.

With regard to the damage sustained in Turkish territory, this is exactly on the same lines, as, although in most cases the damage was at the hands of the Turks, it will be remembered that in the Treaty of Versailles, Germany undertook full responsibility for the acts of herself and her Allies.

The argument, based on the provisions of Article 297 (i) of the Treaty of Versailles, by which Germany undertook to compensate her expropriated nationals, that in practice Germany has not been able to do this except to a fractional degree, appears to call for some comment. One would have thought that such provision in a Treaty in the case of any self-respecting Power would have been unnecessary, but how necessary the provision was, is proved by the fact that Germany has paid only a small

fraction of compensation to her own nationals. The question as to whether she has or has not been able to pay more can be very easily ascertained by reference to her budgets for the past few years, which will show that very large expenditure has been made in connexion with matters which were unnecessary.—I am, etc.,

BRITON.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, July 26.

The Sliven Strike.

The strike of weavers at Sliven, to which the manufacturers replied by a general lockout, did not last as long as the Communists who inspired it desired. The strikers had finally to capitulate and ask the masters to reopen the factories. As the textile industry is at present passing through a serious crisis (which has been particularly marked during the summer which has become a dead season), the manufacturers, without refusing to reinstate all the workers, have only consented to take back again for the time being as many as will enable them to dispose of their products.

Railways and Ports Reorganisation.

The new law for the reorganisation of Bulgaria's railways and ports, which was recently passed by the Sobranie, came into force on July 15. This reform is based on three fundamental principles adopted by the railways in many European countries—nationalisation, financial autonomy, and state control. This reorganisation is similar to that of the Swiss railways, that is to say it does not represent complete autonomy but only decentralisation. The Bulgarian railways and ports continue to be controlled by the Minister concerned. There will be a consultative Council which will deal with questions of tariffs, time-tables, the construction of new lines, etc. This Council will include representatives of the different productive classes of the population. As regards the personnel of the railways a good training and examinations will be enforced; compulsory insurance of the personnel will be introduced.

An innovation introduced by this law is that in future the greater part of the railway receipts will be reserved for the needs of the lines. A modern system of accounting will be introduced. A special reserve will be created for the renewal and upkeep of the stock and rolling material of the railways. The Budget of the railways will be drawn up by the Minister and will continue to be submitted annually to the vote of Parliament, but only as to the principal heads and not the details. Thanks to the new organisation the network of railways will be gradually extended without increasing the expenditure of the State, so that all the centres of production in the country will be linked up by lines.

EGYPTIAN STATE RAILWAYS

A pleasure trip to Egypt, the Land of Eternal Sunshine, is now within the reach of nearly everybody.

Combined Steamship, Railway, Sleeping, Restaurant and Pullman Car Tickets, from Marseilles to Egypt, including accommodation at the Leading Hotels, from 1st November, 1929, to 31st January 1930, are available as under :—

1st Class throughout. }	A. Stay of 18 days in Egypt	...	L. Stg.: 72.10.
	B. Stay of 25 days in Egypt	...	L. Stg.: 81.10.

A Supplement of L. Stg. 5 will be charged for November departures.

ECONOMIC CONDITIONS IN GREECE.

Hambros Bank, Ltd., in their weekly market report, give the following details of conditions in Greece:—

The yield from the various crops, such as wheat, maize, barley, etc., seems to be better than it was anticipated. This is noticed throughout the whole country. The tobacco crop is very promising, and the tobacco exports for May have amounted to 2,173,686 kgs., which, with the 22,235,062 kgs. exported during the four previous months, makes a total of 24,408,748 kgs. for the five months of this year. They are mainly distributed among the following countries:—Germany, 1,198,118 kgs.; Italy, 305,036 kgs.; Belgium, 156,280 kgs.; U.S.A., 199,156 kgs.; Poland, 101,604 kgs.; Egypt, 54,943 kgs.; Aden, 26,714 kgs.

In spite of the glut which is evident in the production of the artificial silk, there has been a good demand for silk cocoons from Western Europe, with the result that prices have risen from 50/55 drs. to 68/75 drs. per kilo.

At an extraordinary general meeting of the shareholders of the National Bank of Greece, the two agreements with the State concerning the settlement of the differences on the "covers" and the establishment of an agricultural bank have been approved. Authorisation has also been given to the Governors to give the bank's guarantee up to a sum of £500,000 in favour of the National Mortgage Bank of Greece for the purpose of the latter's obtaining short-term credits abroad.

An agreement has been in principle concluded between the Government and the "Societe Generale Hellenique," by virtue of which a representative of the Government will sit on the board of the Company. His mission will be to take knowledge of the decisions adopted by the directors, and generally to serve as a link between the State and the Company for the friendly arrangement of all questions that may arise. As regards the claim of the Government to exercise a control on the administration of the "Societe Generale Hellenique," it will be referred to an arbitration, in accordance with the stipulations of the respective contract.

Imports of merchandise for the first five months of 1929 amounted to 1,143,588 tons, of a value of 5,541 million drachmæ, and exports to 269,954 tons, valued at 3,246 million. For the same period of 1928 imports totalled 961,752 tons, with a value of 5,398 million, and exports 225,141 tons of a value of 2,393 million drachmæ.

Reports from Kavalla state that the crop of tobacco for this year in Eastern Macedonia and Western Thrace is anticipated to be excellent both as regards quantity and quality.

According to figures furnished by the Statistics Department of the Ministry of National Economy the area cultivated in 1929 with cereals in the whole country was 8,865,619 stremmata (1 stremma equals one-tenth hectare). Of these, 5,567,391 stremmata with wheat, 1,809,878 stremmata with barley, and 1,106,902 stremmata with oats.

Exports of currants up to the end of June are 32,000,000 Venetian pounds less than last year. This deficit is attributed to the high prices of last year and the competition of Californian currants. It is possible that prices will be reduced to face this competition. Favourable prospects of tobacco crop are strengthened. This year's production is anticipated as higher than last year's. The quality also is considered to be very good. Cotton production is also a little higher than last year.

The traffic receipts of the South Indian Railway Company for the week ended June 29 amounted to Rs.12,61,550, making the total from April 1 Rs.1,68,60,106.

The net profit of the London and Eastern Trade Bank for the year ended June 30 last was £38,787, after making provision for all charges, rebate, income-tax, etc. With £23,008 brought in there is available £61,795. The directors recommend a dividend of 4 per cent., compared with 3 per cent last year, and after placing £10,000 to the reserve for contingencies, the carry-forward is £32,595.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Steel Pipes, Etc.—The Ministry of the Interior, Municipalities and Local Commissions Section, invites tenders for the supply of steel pipes, sluice valves, hydrants, and drinking fountains. September 16. (D.O.T.)

GREECE.

Drains.—The Municipal Council of Salonika invites tenders for the laying of certain drains. August 26. (D.O.T.)

INDIA.

One 5 k.w. Oil Engine Driven Generator Set for Military Engineering Services, Belgaum, Bombay Presidency.—The Indian Stores Department, Simla, invites tenders for the supply and delivery of one 5 k.w. oil engine driven current three wire generating set for the Military Engineering Services, Belgaum, Bombay Presidency. August 5. (D.O.T.)

ROUMANIA.

Agricultural Machinery.—The Ministry of Agriculture and Domains is likely to be in the market in the near future for the purchase of sowing, fanning, grading, and other types of agricultural machinery. (D.O.T.)

Supply Metres.—The Municipality of Oradea Mare invites tenders for the supply and delivery of 400 single phase supply metres 150 volts 42 periods (cycles) 3 amperes; 200 single phase supply metres 150 volts 42 periods (cycles) 5 amperes. August 9. (D.O.T.)

TURKEY.

Galvanised Iron Wire.—The Department of Posts, Telegraphs, and Telephones invites tenders for the supply of 250 tons of galvanised iron wire as follows:—245 tons 4 m.m., 2½ tons 2 m.m., 2½ tons 1½ m.m. September 1. (D.O.T.)

YUGOSLAVIA

Electrically-driven Mining Winch.—H.M. Consul-General at Sarajevo (Mr. C. A. Greig) report that a local firm desires to receive tenders from British firms for the supply of an electrically driven mining winch. August 4. (D.O.T.)

Motor Rollers.—H.M. Consul at Sarajevo (Mr. C. A. Greig) reports that a local firm of engineers and contractors is desirous of receiving quotations from British manufacturers for the supply of a naphtha motor roller of approximately 10 tons without ballast. August 5. (D.O.T.)

Brass.—H.M. Consul at Sarajevo (Mr. C. A. Greig) reports that a local firm of engineers and contractors are calling for tenders for the supply of brass in bars (round), plates and wire. August 7. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia¹ for Bombay (Birkenhead, August 6) (For passenger sailings and dates see advertisement.)

Anchor Brockbank Line.—S.s. Mailhar for Calcutta (Birkenhead, August 8); s.s. Mathura for Calcutta (Birkenhead, August 15).

Bibby Line.—S.s. Yorkshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, August 7).

British India Line.—S.s. Margha for Colombo, Madras, and Calcutta (London, August 10); s.s. Masula for Bombay and Karachi (London, August 10).

Cunard Line.—S.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Brindisi, Bari, Venice, Trieste, Fiume; also at Palermo, Messina, Catania, Corfu and Gruz if sufficient inducement (Liverpool August 3, Swansea August 7); s.s. Bantria for Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement offers (Liverpool, Glasgow, and Swansea, August 31).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 3); s.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 7).

P. and O. Line.—S.s. Bangalore for Calcutta (London, August 16); s.s. Rajputana for Bombay (London, August 16).

Prince Line.—S.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 17); s.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus (London, August 21).

Ellerman and Papayanni Lines.—S.s. Andalusian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 8); s.s. Oporto for Gibraltar*, Algiers*, Malta*, Patras, Smyrna, and Constantinople (Liverpool, August 10). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syra and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS. MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*ELYSIA ...	Aug. 6	†ASSYRIA ...	Sept. 27
*ICASTALIA ...	Sept. 10	†BRITANNIA ...	Oct. 11

*First class passengers only. †Specially low fares. ‡Calls Port Sudan.
‡First and Third class passengers.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA. 17,000 TONS, carrying FIRST-CLASS and THIRD CABIN passengers, sails from LIVERPOOL, Oct. 22, MARSEILLES, Oct. 28. All 1st class staterooms are fitted with Punka Louvres and with Fans. This vessel has exceptionally fine 3rd cabin accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 30.

After a quiet opening the Stock markets have experienced a better week. There was some liquidation before the opening of the new three week's account, but from Tuesday onwards the general tone improved appreciably, opinion turning about the likelihood of a rise in Bank Rate. The Chancellor's speech at the Banker's banquet on Wednesday proved encouraging, while the unexpectedly good interim dividend announced by the directors of the London Midland and Scottish Railway on Thursday was an additional fillip to markets generally and to home rails in particular. The L.M.S. dividend of 2 per cent., which compares with $1\frac{1}{4}$ per cent. a year ago, exceeded the most sanguine market expectations, since gross traffics showed a decline of over £500,000. Substantial economies in expenditure, however, have been achieved, the disclosure of which has breathed fresh life into the Home Railway market which had lapsed into a very dormant condition. L.M.S. ordinary rose nearly 4 points in the day and substantial rises were recorded by the other group stocks. The absence of a change in Bank Rate reassured the gilt-edged market, but there has as yet been no appreciable return of investment demand, nor can this be expected until after the holiday period which has now started.

South African Securities.

As usual, the speech of the Chairman of the Standard Bank of South Africa, Mr. William Stuart, at the annual meeting contained a review of economic conditions in the Dominion. On the whole, he said, the year was a good one and the drought appears now to have been definitely broken. Sheep farming continues to make headway, improved methods and the extension of the area exploited both being noticeable, and the mohair industry is recovering from the drought. The maize crop was fair, but that of 1929 is expected to give a higher yield. Dairy farming benefits, though more slowly than sheep, from improved methods, and production will soon outstrip the local demand. Gold production exceeded the high figures of 1927 and amounted to £44,000,519, and although dia-

mond figures for 1928 show a decline, the statistics do not include the output of the rich Namaqua land deposits which is calculated for a different period, and would more than compensate for the reduction shown. As regards the Union finances, Customs, Excise, and Income Tax all exceeded estimates, a surplus of £1,700,000 being realised in place of an estimated deficiency of £1,072,000. The outlook for South Africa is therefore doubtful, although the custom of granting excessive credit, and the higher levels at which land is being bought may prove dangerous if a depression should occur. The 5 per cent. inscribed stock of the South African Government, redeemable 1945-75, yielding £4 19s. per cent. is a Trustee stock, while the £20 ordinary shares, of £5 paid of the Standard Bank of South Africa, which return £5 8s. per cent. also have attractions as a security of investment merit.

British Celanese.

Another and even more disappointing year's trading result is revealed by the report of British Celanese issued this week. The gross trading profit for the year ending last February was £1,238,905 as against £1,643,210 for the previous year, and after deducting overhead expenses and increased debenture charges, the net profit is £326,910 which compares with £864,890 for the preceding twelve months. The net profit for the year appears exceptionally small in relation to an issued capital of over £8,460,000. Including the amount brought forward £756,270 is available for distribution. Of this sum First and Second Preference shareholders receive £272,800, only £200,000 is placed to reserve against £378,260 last year, and an undivided amount of £259,720 is thus carried forward compared with £429,360 brought in. The reserve fund now amounts to £1,200,000. Shareholders have continually been told of the large profits obtainable from such a company as theirs, only to be presented with disappointing results at the end of each year. The directors now state that whereas last year the company was faced with a difficult market and derived practically no benefit from large expenditure on buildings etc., since the issue of the current report monthly profits have increased. Shareholders are also informed that the next financial year will end in June, so the next accounts will be for a period of sixteen months, and meanwhile the annual meeting has been postponed to September. The 7 per cent. first preference yields £10 per cent., $7\frac{1}{2}$ per cent. second preference yields £8 14s. per cent. and the first debentures give a return of £6 16s. per cent.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

RANGOON, CALCUTTA, and COLOMBO
TO BEIRA, DELAGOA BAY, DURBAN, EAST LONDON
PORT ELIZABETH, MOSSEL BAY, and CAPE TOWN.

MAURITIUS—Adam & Co.

LONDON—ANDREW WEIR & CO., 21, Bury Street, E.C.8.

Imperial Tobacco Interim.

The interim dividend announcement of the Imperial Tobacco Company is of a nature to give considerable satisfaction to its fortunate shareholders. The dividend is to be 7 per cent. free of tax, on the ordinary shares, which compares with $7\frac{1}{2}$ free of tax last year. It must be remembered, however, that the ordinary capital was increased in February last by a bonus distribution of one share for every four held, and it was not to be expected that the rate of dividend would be fully maintained. The present distribution is equal to $8\frac{3}{4}$ per cent on the old capital, and required £2,620,772 against £2,246,377 needed for last year's interim dividend. In view of the conservative financial policy invariably pursued by the Imperial Tobacco Company, it may be taken for granted that profits, although undisclosed, show an increase on those for the corresponding period of 1928. This tradition of sound finance, largely accounts for the justifiable popularity of the securities of this concern with many small investors, but the Company's extending prosperity in recent years is another favourable factor. Profits last year reached the record of £9,599,796, compared with £9,227,797, in the preceding year, and £6,574,733 in 1920-21 since when there has been an increase each year. On the assumption of an ordinary dividend of $21\frac{1}{2}$ per cent. for the current year, the ordinary shares yield £4 6s. per cent., while the very well secured $5\frac{1}{2}$ per cent. "A" cumulative preference shares return £5 3s. per cent.

Motors and Motoring.

(By Our Motoring Correspondent)

Road Making.

There seems little doubt that in the near future a more or less extensive road-making scheme will be embarked upon by the powers that be. It is quite certain that any proposals of the kind will receive the whole-hearted support of a number of well-meaning people who will neither stop to ask whether the roads are really necessary nor to ascertain where the money is really coming from to pay for them. If anyone raises the first point he will no doubt be met with the reply that the present main thoroughfares of traffic are badly congested. If he raises the second, the answer will probably be that the motorists, through the Road Fund, are able and willing to foot the bill. As regards congestion, any motorist will be able to point to the condition of our main roads leading from London to the sea on any Sunday morning or evening, and he will say, and with perfect truth, that they are practically choked with vehicles going seaward or returning townwards, as the case may be. In so saying, however, he will merely be raising the old point of the "rush-hour" traffic. In regard to the second answer, he will be forgetting that previous Chancellors of the Exchequer have found it necessary to use a certain percentage of the Road Fund for other purposes, and he will be quite unable to advance any argument which will show that, if that percentage be used for road work instead, the balance, previously abstracted, can be made good from any other source without an increase in either special or general taxation. If, going further, he seeks to show that there will be a vast increase in motor traffic if more and wider roads are provided, and that in consequence there will be more motorists to pay into the Fund, he will be

faced with the fact that more motoring will mean more road congestion and he will be firmly caught in the toils of a vicious circle from which there will be no escape.

If we are going to spend vast sums in constructing new, and widening and improving existing roads, to cope with a rush-hour week-end traffic, we shall be proceeding on uneconomical lines, as any accountant will agree, in that our new roads will only be in use for limited periods each week; in other words, we shall be in the same position as the electrical engineer who has to lay down plant to cope with a short "peak" load, and has it standing idle, eating its head off with maintenance and overhead charges, for the greater part of its life. As everyone knows, overhead charges have to be met, and sound finance would say that, in the case of roads, a special tax or charge would have to be levied on those who used them during rush hours, or a special rebate made to those who only used them at times when they were not congested with other traffic. Such a course would obviously be impossible, and consequently, if we do embark on this extensive road construction scheme, either the general or the motoring public have got to pay for it, over and above the amount they pay at present.

Wider Roads.

I see that a writer has been raising the point that some of our new roads are of insufficient width for the traffic. That may be the case, but in regard to that I would raise a point that I have been driving home, in and out of season, in these columns and elsewhere, for the past five years or so, and that is that our roads are sufficiently wide for all purposes if motorists would only keep close in on their own side of the road instead of hugging the crown of the road on every possible occasion. However, there may be something in what is said, the contention being that a 60 feet wide roadway is what should be aimed at, for such a carriage way provides for six lines of traffic and does away with a great part of the congestion and many of the risks that are so pronounced on roads of less width. What is meant is that such roads would permit six vehicles to pass one another at a given moment, and in reply I would say that here again we are making a proposal to widen roads, or to construct wide roads, at a great cost, merely to deal with a minor rush-hour problem, the problem of six cars all unable to wait a second, but feeling it absolutely essential for their comfort and well-being that they should pass six abreast! A road that will take four vehicles abreast is wide enough for anyone; one that will take three abreast is good enough for all practical purposes, and to saddle or seek to saddle the general public with a huge bill for road widening just because six motorists feel they cannot possibly slow up even for a moment when they arrive at some given point is not only pitiable, but is also ludicrous.

As a matter of fact, in constructing roads with the assistance of grants from the Road Fund, there is a little contribution of nearly one-half the cost which has to be found by the local authorities, and they, not unnaturally, and knowing a good deal more about their requirements than any motorist or body of motorists, feel that they are entitled to have a word in the matter. As a result the roads are built to meet the necessities of the case and not to conform to the views of enthusiastic journalists who would like to see roads everywhere wide enough to allow six cars to pass abreast without either slackening speed or changing position.

Cars for the East.

I was particularly struck with some remarks made in a letter to the Press by Mr. J. B. Norton, of Ain-Sefra, North Africa. He says something about private car touring in the Sahara district, and points out that for-

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

WESTMINSTER BANK
LIMITED
HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

certain tours it is necessary for two or more cars to travel together, otherwise a wireless transmitting system has to be installed, by regulation of the French authorities. He gives some details as to the essentials of cars intended for use in North Africa—details gained, I gather, from a lengthy and extensive experience. These are as follows:—The car must have a minimum clearance below the lowest part of the chassis of from 20 to 25 cm., whilst the tyres should be the largest balloon type that it is possible to fit. The body may be of any ordinary type fitted on a very strong chassis and the engine should be of from 15 to 20 horse power, English rating, as a minimum. A mechanical type pump should be carried, with two spare wheels, several inner tubes, and as complete a tool kit as can be carried, nothing that is likely to be of service being left out. The car should have a large radiator, and as regards transmission, should have a very low first gear or a reduced back axle ratio, whilst a four-speed gear-box is preferable. There should also be a reserve fuel tank capable of holding sufficient petrol for, say, a journey of 1,000 km. He advises a 150 litre tank under the chassis, but says that spare tanks on the running-board will answer the purpose.

Engineering Topics

Low Temperature Carbonisation.

Obviously new methods in the iron and steel industries are badly needed, and typical of future developments is that the Lukens Steel Company of Coatesville, Pennsylvania, famous for boiler plate and flange steel, are now erecting a large "K.S.G." plant at their works, which will be running by the early part of 1930. There is included six standard retorts each with a through-put of 80 tons of coal per 24 hours, that is about 3,500 tons per week for the complete setting, the estimated capital cost being about £500,000.

The site is in Valley Township, about $1\frac{1}{4}$ miles west of Coatesville, and the rich gas from the process will be taken from a large gas holder by means of a supply main of 5,000 feet to the steel works furnaces for use in place of dirty producer gas. The Lukens Steel Company have proved conclusively—largely because of experience with natural gas—that clean gas is superior to ordinary producer gas and obviously one of the most important fields for low temperature carbonisation in this connexion is the Iron and Steel Industries, utilising the rich and clean gas for the purpose, while the smokeless fuel is available for steam generation.

The plant will be operated by the International Combustion Engineering Corporation, with a contract over many years for the sale of the gas to the Steel Company, while the low temperature tar will be worked up on the usual lines. Further, we understand that arrangements have been made to double the plant in the near future, that is by the addition of another six retorts to make a total installation of 7,000 tons of coal per week.

It will be remembered that in the "K.S.G." process, controlled in Great Britain by Coal Oil Extraction, Ltd., of London, the retort has a throughput of 65-85 tons of coal per 24 hours, and is a rotary slightly inclined steel cylinder 72 ft. long by 10 ft. diameter, having an inner cylinder 85 ft. long and 5 ft. 6 in. diameter, while the speed is one revolution in 90 seconds. Also the period of the travel of the charge, through both cylinders in turn, is approximately $2\frac{1}{2}$ hours, while the maximum temperature is 925 to 1,025 degrees F. with external heating by means of a firebrick setting but operated on special lines as regards re-circulation of the combustion gases and the continuous maintenance of a reducing atmosphere to eliminate corrosion. Further, the yield follows the usual practice, that is from one ton of 25 to 35 per cent. volatile matter being 3,500 to 5,000 cubic

feet of gas at 800 B.Th.U., 3 gallons light oil scrubbed from the gas, 15 to 20 gallons low temperature tar, and 14 cwt. smokeless fuel with 10 to 12 volatile matter.

This makes the fifth large "K.S.G." plant now in progress of erection, the others being at the South Metropolitan Gas Company's plant in London (80 tons per day), the Mines de Lens plant in France (80 tons per day), the extensions of the Karnap Collieries at Essen (160 tons a day), and the 640 tons per day installation in New Jersey started up last March.

CYPRUS CROP PROSPECTS.

The report on Cyprus crops for July states:—

Threshing of wheat continues. There are good offers but a poor demand. Prices have fallen since last month to 5s. to 5s. 7d. per bushel.

Threshing of barley is nearly over. There are abundant offers, but practically no demand. A small quantity has been shipped to Greece. The price is from 2s. to 2s. 3d. per bushel, on downward tendency.

Threshing of oats continues. The production is expected to be low owing to the lack of rains during the spring. Prices range from 2s. to 2s. 3d. per bushel.

Harvesting of potatoes is still in progress. The production is estimated to be less than that of the corresponding season of last year. Prices are rather low: from £5 to £6 per ton. Growers are storing in the hope of getting better prices later. Exports for June amounted in value to £18,796.

So far the weather continues favourable for cotton and the crop prospects are promising. The stock of lint is nearly exhausted.

The production of carobs, as was foreshadowed in the last monthly report, will be smaller than that of the last year, but the quality is expected to be better. Prices are from £5 to £5 10s. per ton.

Tobacco harvesting is in progress. The weather is favourable and the production is expected to be good in both quantity and quality.

Not only was the area covered by the aniseed crop less than last year, but blossoming has been adversely affected by hot winds and therefore the production will be further diminished.

Prospects of the olive crop continue to be promising. If the weather and other conditions continue favourable the crop may be expected to be heavier than that of the last few years.

The almond crop on the whole is expected to be good, although it has been adversely affected by hot winds and insect pests.

The production of hazelnuts is expected to be very moderate, due to unfavourable weather conditions. Fresh nuts are already on the market.

IVORY IN GOOD DEMAND.

Messrs. Hale and Son report that the quarterly ivory sales, held on July 23 and 24, comprised 37 tons (against 32½ tons same time last year and 29 tons in April last), viz., 23½ tons Zanzibar, Bombay, Mozambique, East African, Rhodesian and Siam, 2½ tons Abyssinian, 1½ tons Egyptian (Alexandrian description), 6½ tons West Coast African and Congo, and 3½ tons land carriage, also 2½ tons mammoth tusks, 1½ tons sea horse tusks and boars' tusks, and 8 cwt. rhinoceros horns; total, 41 tons 8 cwt. There was a good attendance of buyers, and generally a good demand throughout the auctions. America and the Continent bought freely, and the home trade took a fair proportion. The quantity catalogued was in excess of that offered in April last, there being a larger supply from East Africa; from other quarters the supplies were small. Prices were irregular, soft tusks being about steady to £2 to £3 per cwt. lower, although some exceptional lots realised firm rates. Hard was steady to £2 to £3 easier. Ball ivory was strongly competed for, billiard ball pieces showing an advance to from £10 to £20 per cwt. Ball scriveloes were firm to rather dearer.

Most of the offerings of Abyssinian were bought in, the lots selling realising steady to rather lower prices. Ball scriveloes were firm. Only a small quantity of Egyptian was catalogued. Soft large and medium tusks were irregular, being generally steady to £2 to £3 per cwt. lower. Hard was steady to £2 to £3 per cwt. lower; scriveloes steady, ball scriveloes firm.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended July 18, state:—

Since our last report the futures market has undergone heavy fluctuations, but the tendency has been for higher prices. The week's summary of price movements is as follows:—Sakellaridis: July, 32.83 dollars, 1.23 dollars up; November, 33.36 dollars, 1.29 dollars up; January, 33.82 dollars, 1.20 dollars up; March, 34.17 dollars, 1.15 dollars up. Ashmouni: August, 21.11 dollars, 0.44 dollars up; October, 21.45 dollars, 0.41 dollars up; December, 21.87 dollars, 0.32 dollars up; February, 22.34 dollars, 0.31 dollars up; April, 22.74 dollars, 0.28 dollars up; June, 23.14 dollars, 0.28 dollars up.

Sakel.—After a weak opening, prices moved sharply upwards as a result of heavy purchases for account of a group of "long" operators, and these purchases continued throughout the week, causing November to be quoted as high as 33.70 dollars. The movement, while being purely speculative, received real support through the reaction in New York, where, during the last two days, an advance in prices of about 1 dollar has taken place. Another supporting factor has been some reports from the Interior concerning alleged damage to the crop due to the weather conditions being less favourable than one could have desired. The trade has not relinquished its more or less indifferent attitude. At the high levels, some sales were effected against fixing of prices of new crop purchases up-country. The interest of Lancashire spinners for fresh purchases remained negligible, we presume as a result of the fear of a lock-out in the near future. American, Continental, and Japanese spinners seem to have adopted a waiting policy, and are only buying what is absolutely necessary—which does not amount to a great deal. To advance an opinion regarding the future course of prices is rather difficult; it appears, at least for the time being, that our market will be practically governed by the fluctuations of New York. The stocks of Sakel in Egypt and England and in the world's textile centres are far from being negligible, and, taking everything into account, the new crop is progressing normally, with prospects for a production about the same as that of last year. Therefore from the point of view of supply, the position is reassuring. The Sakel/Uppers straddle (November/October) this week stands at 1,191 points, against 1,103 points last week and 1,210 points at this time last year. Against the second July tender, dockets for 4,250 kantars were issued, which brings the total tendered since the beginning of the month up to 20,750 kantars.

Uppers.—This market has followed the fluctuations of Sakel, but, as usual, to a much less pronounced degree. Speculators have, for the time being, kept out of the market, their activity being concentrated on Sakel; the business put through has therefore been of a purely commercial character. A slight decline in the volume of the demand from spinners is to be noted. The difference with American at one time widened out to 3 dollars, but at the close to-day stood again at about 2½ dollars. Even more so than for Sakel, it would appear that the future course of prices of Uppers will be governed by the movement in New York. The Ashmouni/American straddle (October/October) this week stands at 250 points, against 250 points last week and 521 points at this time last year.

The week's receipts amount to 564 kantars, against exports 181,948 kantars; the stock in Alexandria stands at 1,760,342 kantars.

Spot.—During the week under review, we have had very quiet markets with poor offerings and very little buying interest. Of the total sales of about 4,000 bales, we estimate 2,300 bales Sakellaridis, 1,050 bales Ashmouni and Zagora, 280 bales Pilon, and 70 bales White.

Sakellaridis.—Here all business has been restricted, owing to the shortage of medium grades, to the better qualities, and sellers have been moderately easy. Premiums are unchanged.

Ashmouni and Zagora.—Decent staple medium grade Uppers have almost entirely disappeared from the spot, and whatever business has been done has been for cotton grading round about Good. Premiums, owing to the poor offering, have been maintained very firm.

Pilon.—Has had a moderate market at fairly good premiums.

Other Varieties.—Have been entirely neglected, with the exception of a small turnover in White cotton. Premiums are unchanged.

Crop, 1929.—With the exception of a few cool, damp nights, the temperature during the past week has been favourable to the growth of the cotton plants. The leaf worm has almost entirely disappeared; on the other hand, in the Delta the pink boll worm has made its appearance, but for the time being, the attack is very light. Both in the Delta and in Upper Egypt the crop shows a slight delay in comparison with last year's crop at the corresponding time. Water for irrigation is abundant.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 24:—

Egyptian Futures.

Sakel Contract.—In spite of adverse trade conditions, more business has transpired in this market during the past week, apparently the broadening tendency in the American departments inducing more speculative interest in other directions. Most of the buying in operation has come from Continental sources, later new crop deliveries especially being in demand from this quarter. Contracts have been furnished by profit-taking operations, so that on balance little alteration has taken place in the level since we last wrote, the advance in the earlier days being partially wiped out by the minor reactions in progress during the past two sessions. The trade situation remains obscure; efforts are still being made to avert a general stoppage at the week-end, but, at the time of writing, it is impossible to forecast the issue. In the meantime, little or no trade support is coming into the market, and business in both spot and forward cottons is practically at a standstill. The chief feature in the Alexandria market has been the erratic fluctuations shown during the daily sessions; evidently trading there must be very narrow with professional manipulation predominant. Crop reports are still favourable, and, as a review of the statistical position shows a larger carry-over than at one time appeared probable, we do not think any appreciation from the present level will be consolidated unless helped by the development of a healthier trade outlook and increasing "bullish" sentiment in other markets.

Upper Contract.—Quiet markets with fluctuations mainly governed by the prevailing tendency in American values have been the general experience during the past week. A small amount of end-of-the-month calling has tightened up the near position slightly, the July November difference now standing at 25 points; any further contraction will probably attract cotton, especially should a mill stoppage take place. Private reports regarding a very large yield continue to come to hand, and it appears that old ideas of comparative values against American and other varieties will have to be revised. We are rapidly approaching the stage when values will reflect more directly our own crop possibilities; in the meantime, for the next two or three weeks, price movements will probably continue to move in sympathy with the American markets.

Egyptian Spot.

We have had a very dull week in this department; the trade demand throughout has been moderate, and any improvement cannot be looked for until the present wages dispute reaches a settlement. At the moment, endeavours are being made to find a basis for negotiations, and it is hoped that a stoppage may be averted. In spite of the lack of business, values have held at a steady level throughout the week, the advancing tendency in the American markets counteracting, for the time being, the depressing effects of the poor trade offtake. Present conditions are probably causing a good deal of business to accumulate, so that once the trade outlook clears we may witness a sharp, if perhaps only temporary, increase in spinners' activities.

Sakels.—Only isolated sales have been effected, the general run of the demand being for cotton ranging from 50 to 220 on contracts.

Uppers.—The demand has fallen off considerably, although comparatively more business has been done in this cotton than any of the other varieties. Prices paid generally range from 20 to 40 points on Pilon has only been in retail request.

Nahda, Maraad, and White.—No business has been reported. Sudan and Tokar Sakel have been inquired for, but business is held up for reasons stated previously. C.i.f. business has been negligible. Forwardings to spinners amounted to 6,091 bales Egyptians and 870 bales Sudans. Estimated spot sales, 1,600 bales Egyptians and 400 bales Sudan Sakel. Quotations of Sakels are 25 to 45 points, Uppers are 18 points, and Pilon 15 points higher on the week. F.G.F. Sakel to-day, 17.00d. F.G.F. Upper to-day, 11.57d. F.G.F. Pilon to-day, 12.65d.

It is reported that the Greek Government has authorised the Minister of Public Works to negotiate a new loan of £500,000 for carrying out urgent irrigation schemes. The loan will be issued probably in New York.

During the first five months of this year 46 joint stock companies were created in Greece, with a total capital of 329,670,625 drachmæ, of which about 200 millions were paid up. During this period three companies reduced their capital by 6,397,600 drachmæ, and 13 companies, representing a capital of 55,674,600 drachmæ, were dissolved.

A circular has been issued by the National Bank of Roumania to all banks in Roumania authorised to deal in foreign currency, regarding dealings in exchange at higher prices than those fixed by the Stabilisation Law. In this circular a strong appeal is made to the banks on no account to sell lei for pounds sterling at more than 817.50 lei to the £. Should the supply not meet the demand the National Bank authorises the banks to sell for its account at the above stabilised rate.

Company Meetings.

FURNESS, WITHY AND CO.

Increased Profit.

The thirty-eighth annual general meeting of Furness, Withy and Co., Ltd., was held on July 24 at Furness House, Leadenhall Street, E.C.

Sir Frederick W. Lewis, Bart., who presided, said that the capital account remained unchanged at £5,500,000, divided into 1,500,000 five per cent. Preference shares and 4,000,000 Ordinary shares. The general reserve account also remained at £2,000,000. Sundry creditors, credit balances and bills payable amounted to £2,308,688 compared with £2,717,313 a year ago. The item included provision for taxation and also for the dividend on the Preference shares, which was paid on May 1, and also for the final dividend on the Ordinary Shares, which they were proposing that day. There were also included amounts due to subsidiary companies, as well as the various creditors of their branch offices all over the world. The item of £2,308,688 covered the only active liabilities as shown by the balance-sheet, the remaining item on that side being the profit and loss account.

Turning to the assets, they had followed the practice which they had adopted two or three years ago of separating the assets into various sections so that it might be seen to what extent their assets were employed in the shipping business, and in other sections of industry. Shipping property, which included investments in Associated Shipping companies, etc., amounted to £5,148,877. That amount was stated after writing off depreciations, and compared with £4,916,168 a year ago. British Government securities and general investments, also less depreciation, stood at £3,244,168 compared with £3,361,264 last year. Freeholds, dock and wharf property, etc., less depreciation, showed a slight increase, sundry debtors a decrease of about £300,000, and the final item, bank balances, Treasury bills, and bills of exchange on hand, amounted to £633,520 compared with £853,143 a year ago.

The balance-sheet was stated clearly. There were no dead items among the asset items, and depreciation had been amply provided. In addition, the balance-sheet was sufficiently liquid, consistent with the nature of their business, apart altogether from the fact that there was no charge in the nature of debentures, or loans, upon any part of their property. It might be of interest to shareholders for him to state that investments in subsidiary and associated companies stood in their books at much below their actual value. There were one or two guarantees in existence in connexion with their subsidiary companies, but in each case the guarantee was amply covered by the assets of the company concerned, and had only been given in order to secure advantageous terms of finance. Those guarantees, with one small exception, were in respect of new tonnage which had been constructed for their various companies. None of them caused the company the slightest anxiety, and from their point of view were more or less nominal liabilities.

With regard to the profit and loss account, he was faced with the paradox that they were primarily a shipping company and were in the pleasing position of being able to present a profit and loss account showing an increased profit, and yet it remained a fact that the shipping industry had had a very difficult year, and the profits derived direct from the trading of their vessels showed a reduction, notwithstanding that they had more vessels under their ownership than in the previous year. At any rate, for the moment they were more concerned with the fact that their profits amounted to £653,392, an increase of £25,642. As they brought into account from the previous year a sum of £241,564, they were able to recommend that in addition to the usual dividend on the Preference shares and a continuation of 10 per cent. on the Ordinary shares, an increased sum of £250,000 be placed to depreciation, leaving £264,957 to be carried forward, or £23,393 more than was brought into the account from 1928.

As he had complete confidence that shareholders would confirm their recommendation that the amount to be retained for depreciation be increased from £200,000 to £250,000, he did not hesitate to say that this additional allocation was not really necessary, but in view of the continued depression of the shipping trade they thought it was desirable, and they were therefore utilising the amount to write a substantial sum off the cost of the new motorships which had recently been delivered to them, as well as allocating such sum as they thought desirable towards writing down the rest of the vessels and other assets.

He had referred to the difficult years which the shipping industry had again experienced, and he was afraid they had all become so accustomed to the statement of that fact that it ceased to carry as much weight as it should. It was not his custom to say that conditions were difficult simply from force of habit, and then seek for the means to justify the statement. On the other hand, it was folly to adopt the contrary ostrich-like attitude. He was very conscious of the fact that one might be so close to realities that the distant view might be obscured, but at least they had practical experience of current conditions, and he just wanted to say that he was thankful for three things:—(1) For the careful and conservative financial policy they had always followed in the past—(hear, hear)—(2) that their business was so spread that they had a considerable number of sources of revenue; and (3) that they were engaged in various trades which in some respects were not subject to the fluctuating conditions which

governed the general freight markets of the world. These three things were the dominating factors in the satisfactory results which they had had the pleasure of submitting to them to-day.

The report was adopted.

EGYPTIAN DELTA LIGHT RAILWAYS.

Improved Conditions.

The annual ordinary general meeting of the Egyptian Delta Light Railways, Ltd., was held on July 26 at Winchester House, Old Broad Street, E.C., Sir Montagu Sharpe, K.C. (chairman of the company), presiding.

The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said:—You will remember that I had to inform you at our last meeting in July, 1928, that the improvement anticipated in the financial and commercial prosperity of Egypt had not been realised, the result being a lean year for the company. I am now glad to be able to report that during the year under review a considerable improvement has been experienced, not only in the results from the working of our railway, but in the general prosperity throughout Egypt.

The principal factors which have led to these improved conditions, and it is to be hoped they are improving ones, are a more stable form of Government, a quieter political atmosphere, a good cotton crop, the introduction by us of the "Sentinel" tractors, and the adoption of a policy of intensive measures to meet the motor road competition in passenger and goods traffics, which has been so detrimental to our revenues.

It has become obvious that motor-car competition could only be met by running more frequent train services and by the reduction of fares. We have been able to inaugurate a greatly improved service by the introduction of the "Sentinel" tractors, which are being run at an economical cost, and we have lowered our rates to discourage motor-car competition.

When we met in July last year I informed you that in that month reductions in fares had been introduced and that the results were so far satisfactory. The subject of rate reduction has given your directors and the management in Egypt some anxiety, for there is always considerable doubt as to whether the numbers carried will compensate for reductions made, but after the most careful consideration the conclusion has been reached that if reductions were not made throughout the system our receipts would certainly continue to fall, and it was therefore arranged during the year that passenger fares should generally be reduced to pre-War level.

From this, satisfactory results have been obtained, and have up to date entirely justified our policy, for the numbers of passengers carried have increased by 2,142,088—namely, from 8,694,911 during the year 1927-28 to 10,836,999 for the year under review, equal to about 25 per cent.—the receipts being £202,893, an increase of £8,854 over the previous year.

This increase may appear small by comparison with the large numbers carried, but the steady falling-off in receipts has been stayed; further, the motor-car competition has been largely eliminated, and, what is equally important, the public are returning to the habit of travelling by railway.

We have also been faced with the necessity for concentrated action to meet road competition in goods traffic. To this end we have, where necessary, reduced our goods tariffs, and have introduced facilities for conveying goods from the villages to our stations by the employment of lorries, carts, and camels. We have also started an intensified canvassing for traffic in all directions.

During the year a total of 641,079 tons of goods were carried over our lines, as compared with 523,228 tons in the previous year, an increase of 117,851 tons, equal to, say, 22 per cent., the gross receipts being £127,210, against £111,084, an increase of £16,126.

There is no doubt that the employment of lorries has been of great value to us, as it has enabled the collection and delivery of goods in a manner which we were not previously in a position to undertake, and, as I have already mentioned, I would emphasise the fact that a good cotton crop considerably assisted the better results obtained.

The aggregate gross earnings from all sources amount to £337,668, as compared with £313,028 during the previous year, an increase of £24,640.

Expenditure as a result of the increased traffics was necessarily greater, being in the aggregate £264,298, as against £258,919, an

MICA AND ALL ELECTRICAL INSULATING MATERIALS

Contractors to the British, American, French and Italian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

So far as the current year is concerned, I am glad to say our aggregate passenger and goods traffic receipts show an improvement at

The resolution was unanimously approved.

The gross earnings of the Shahdara (Delhi)-Saharanpur Light Railway Company for the half-year ended March 31, 1929, were Rs.5,44,482. The net profit was Rs.96,690, against £1,10,979, plus the balance brought forward Rs.6,16,204, against Rs.4,90,705. The dividend is Rs.6 per share (at the rate of 12 per cent. per annum), free of tax, the balance forward being Rs.5,22,894.

Notes of the Week.

The Egyptian Negotiations.

The exigencies of printing require these Notes to go to press before the publication of the proposals "for a lasting and honourable settlement of the Anglo-Egyptian question" that have received the approval of the British Government and of the Egyptian Prime Minister. Enough, however, is known of the points that formerly proved a stumbling-block to the conclusion of an agreement between the two parties to indicate the lines on which an understanding has now been reached. It may be taken for granted that on neither side has there been any complete surrender of the position previously taken up. Although in Egypt a certain section of public opinion clamoured for the evacuation of the country by British troops, no responsible persons have imagined that this claim would be conceded within a foreseeable period by the British Government. On the other hand, expert opinion on the degree of military support that must be pre-dicated for the adequate protection of the British Empire's lines of communication is necessarily liable to change. For an Egypt as bitterly hostile as it proved itself during the early years after the War, or as intractable as it was at any time under a Wafd régime, a substantial margin of safety had to be provided, and the British Government's technical experts, who have nothing to do with politics, cannot be blamed for insisting upon the retention of British troops in Cairo. The function of these troops would not be to defend the Canal, but rather to guard the rear of the forces guarding the Canal Zone. Happily, thanks to the new régime under Mahmoud Pasha and the potentialities that it has opened up, there is no longer the same reason for measures of ultra-precaution. The occupation of Cairo Citadel by British troops might not unreasonably be held to constitute an affront to Egyptian susceptibilities. There are, however, a sufficient number of Egyptians able to appreciate Great Britain's need for safeguarding her Imperial interests and her responsibility in regard to the protection of foreign interest in Egypt. If there had been no Wafd régime, if foreigners in Egypt had not been murdered at the instigation of Egyptians in authority, the same amount of stress on the need for protecting foreign interests could not have been laid. The

mischievous, however, has been done, and Egypt has to suffer. The compromise of a withdrawal of the troops from Cairo to the Canal Zone, while the Royal Air Force continues to be stationed near the capital, would appear to be a serviceable one and honourable to both parties. Within the compass of the four Reserved Points of the Declaration of 1922 there is ample room for similar adjustments to meet legitimate Egyptian aspirations without sacrificing legitimate British interests. As in Turkey and Persia, the halcyon days of Capitulations are inevitably doomed, but with this important difference, that the advantages that they brought will be surrendered voluntarily, as of justice, and will not be abruptly terminated at the bidding of the country concerned. The British community in Egypt, we may hope, will know how to make the most of this distinction, and will see to it that any alliance between Egypt and Great Britain will be no mere formal arrangement, but will find expression in the reciprocal attitude of the two peoples in their daily contact.

Yugoslavia and Bulgaria.

Whatever object the Bulgarian Minister for Foreign Affairs may have had in view in paying a hurried visit to Paris, his mission would appear to have borne no fruit in the way of deterring the Yugoslav Government from the line of action on which it was already resolved. It has formally notified the Bulgarian Government that it does not see its way to ratify the Pirot Convention, and it invites Bulgaria to fresh negotiations on the subject of Yugoslavia's proposals regarding a frontier settlement. The inference is that the Belgrade authorities do not wish the matter to be referred to arbitration, and that they have not yet given up hope of being able to persuade the Bulgarians to accept their suggestions for the prevention of further frontier incidents. The suggestions are, first, that there should be a compulsory exchange of properties belonging to inhabitants on the other side of the frontier, in such a way that Yugoslav subjects owning property across the frontier in Bulgaria should surrender these lands and receive a similar property in Yugoslavia, and *vice versa*, their surrendered properties being used

to compensate Bulgarian subjects who have been required to give up land in Yugoslavia, secondly, that for the whole length of the Serbo-Bulgarian frontier a neutral zone ten kilometres wide should be fixed, and that within this zone rights of permanent domicile should be restricted to owners of property, their employees and frontier guards. All others who may desire to live in this zone are to be required to be furnished with special permits signed by both the Yugoslav and the Bulgarian officials concerned. The Yugoslav contention is that only in this way can the presence on the frontier of undesirables who endanger the good relations between the two countries be avoided. The remedy proposed is a desperate one for a desperate disease. It is not difficult to understand why the Bulgarian Government is unwilling to accept it, or why the Yugoslav Government is so concerned to press it. Its adoption would mean that the injustice of the territorial adjustments of the Treaty of Neuilly would be confirmed for all time and cease to be an injustice. No Bulgarian Government is anxious to be responsible for such a settlement.

A Turkish Trial.

For the second time Kadrie Hanem, a Turkish woman, has been tried after a long term of imprisonment on the same charge, and has been acquitted. The trial has vindicated the justice and independence of the Turkish Courts, but constitutes a severe indictment of Turkish administrative methods. Kadrie Hanem applied for an interview with the President of the Republic, in order, according to her own version, to ask him to intervene on her behalf to secure for her a certain sum of money due from her divorced husband, an Egyptian subject. Having arrived at Mustapha Pasha Kemal's residence, she failed to satisfy someone in the Ghazi's entourage of her *bona fides*, and she was arrested. A revolver was found on her—probably not an unusual occurrence in Turkey—and forthwith officials and Press scented a plot of wide ramifications to assassinate the President. At the first trial Kadrie Hanem was declared innocent and acquitted, but a few weeks later she was re-arrested on the ground that fresh light had been thrown on the "conspiracy," and she has remained in gaol until her acquittal at Smyrna last week. The incident would call for no comment, were it not for the fact that it serves to emphasize the state of "nerves" from which official Turkey suffers. Every possible device has been employed in the Press to prejudice the case, but fortunately Turkish justice is jealous of its reputation, and Kadrie Hanem has been acquitted. The blot on the Turkish escutcheon consists in the fact that the woman could have been incarcerated for so long, when obviously there was little chance of bringing any valid evidence against her. It is unfortunate for the material progress of the Republic that official Turkey is still apt to discover an enemy in every foreigner and in a large number of its own nationals. The Kadrie Hanem incident suggests that fewer people in Turkey than the Government gives the nation credit for are concerned to see any change in the existing régime, just as the vast majority of foreign countries are anxious to maintain friendly relations with a stable and progressive Turkey under any régime that suits the people.

Cyprus.

In view of the fact that fresh attempts are to be made to bring the Cyprus question to the fore again, it is satis-

factory to know that Sir Ronald Storrs has returned to the Island completely restored to health. During the absence of the Governor it was almost inevitable that those who are reluctant to accept the present status of Cyprus as a unit of the British Empire should have persuaded themselves that their cause was making headway, and the return to power of a Labour Government has encouraged them to renew an agitation on which the firm stand taken by the last British Cabinet and the tactfulness of the Governor had had a depressing effect. Whether the general attitude of Mr. Ramsay MacDonald and his Ministers on British Imperial affairs will have served to confirm this encouragement remains to be seen. Fortunately, in no direction do the leaders of the Greek Cypriots receive support for any other action than the presentation *ad nauseam* of memoranda and petitions. While, therefore, they busy themselves with this form of agitation, it is to be hoped that they realise that the interests of the Island still call for the co-operation of all in an effort to advance the material prosperity of Cyprus, its inhabitants, and that they will rally round the Governor whatever the future may have in store.

Rebels in Persia.

Even at the risk of wearying our readers, we cannot refrain from reiterating our opinion that the Teheran Government, in its own interests, would have been wiser to issue some *communiqués* on the important anti-Government movement among the Kashgais and the Bakhtiariis. In the absence of genuine information wild rumours are inevitable, and reports of successes of insurgents or of Government troops are accepted in Persia with equal facility. First it is said that the columns operating from Ispahan have met with a serious reverse, then that the Bakhtiariis have been overwhelmingly defeated at Saif id Dasht. Similarly with the Kashgais around Shiraz: contradictory rumours abound. What the truth of the situation is the Persians themselves, and still less outside observers, have no means of knowing. It may be that the tribesmen of Southern Persia are destined to receive such proof of Governmental authority as, for instance, was demonstrated a few years ago by the Angora Government to the rebellious Kurds of Eastern Turkey; all that can safely be said at present is that signs of such a manifestation are wholly absent. The Teheran Government shows no reticence, on the other hand, in making known its conquest over the brigand of Khorasan, Zulfu, who a few days ago was publicly hanged in Meshed. Yet between the two operations of Government troops there was no comparison. Zulfu was an ordinary brigand who represented nobody but himself and his own ambitions, and the crushing of him was an unqualified benefit to Persia in general and to the province of Khorasan in particular. With the tribes of the South, however, it is a very different matter. They represent a permanent force, which might, as we have said before, be employed, if wisely exploited, to the immense advantage of Persia as a whole. Presumably the Teheran Government is waiting until the rising in the South is completely over before making an official statement on the subject. But such delay can only give rise to suspicion or anxiety among the well-wishers of Persia. When the Press of Teheran, with a praiseworthy courage, protests against the silence of the Persian Government over this rebellion, the inference is only too obvious.

Persian Representation in London.

Few foreign countries can have been represented in London during the last two years by so brilliant an intellect as that possessed by H.E. Hohvannes Khan Mossaed, the Persian Minister in London, whose resignation has just been announced. There have arisen during his tenure of office as Minister here one or two delicate situations in the relations between Persia and Great Britain, and it is not extravagant to say that it is very largely owing to his courtesy, graciousness, and comprehensive grasp of the situation—a grasp which is the result

of the working, through many years, of a power of a shrewd observation of men and events—that the present degree of Anglo-Persian friendship has been reached. Without question there has been a marked improvement in the relations between the two countries during the retiring Minister's régime. A life-long lover of England himself—and what Oriental scholar has done so much as he to communicate that love to the East?—he has greatly contributed to the fact that an increasing number of Englishmen are now aware of the qualities of the Persian character and of the ambitions of her people. A sweet reasonableness, indeed, has pervaded the diplomacy of Hohvannes Khan Mossaed; he has most worthily served his country. If, as may be hoped, he devotes the remainder of his life to the interpretation of "his dear Shakespeare" to his fellow-countrymen, both the world in general and he himself may well be content. The retirement of such a man, therefore, makes one examine all the more eagerly the personality of his successor, H.E. S. H. Taghizadeh, formerly Governor-General of Khorasan. It is interesting to know that M. Taghizadeh has the reputation of being strongly imbued with the Nationalist ideals now actuating the Teheran Administration, and in wishing the new Minister a most happy stay in London, we may confidently express the hope that, the more sincerely and the more clearly the wishes and aims of the Shah and of his people are interpreted, the more closely will be bound the historic ties knitting Great Britain to Persia.

The Wailing Wall Again.

The hopes that were widely expressed of an early and amicable settlement to the vexed question of the Wailing Wall in Jerusalem seemed doomed to disappointment, for the problem has been allowed to become, in effect, a political problem. We shall not here repeat the views which we expressed, and to which we still adhere, upon the last "incident" at the Wailing Wall on the Day of Atonement, but it is quite obvious that that incident has been impressed deeply into the consciousness of Jewry. Ever since that time Jews, Orthodox and otherwise, and Muslims have regarded each other with apparently increasing suspicion. Building by Muslims in the proximity of the Wall has been going on, and not all the repeated protests of the Jews to the Palestine Government have been sufficient to stop it. It is, indeed, an exceedingly delicate problem, whether the Muslims are within their rights in acting thus. It would appear that legally they may have a good case; in any case, the matter has now been taken out of the hands of the Jerusalem Administration, to be dealt with by the Colonial Office itself. Certainly the Palestine Government would not have allowed the susceptibilities of Jews so to be wounded if the Muslims had not some legal justification. But the Jews are not letting the matter rest. A resolution was passed by the Zionist Congress at Zurich last week to authorise a delegation to go to London to ask the British Government for the fullest rights to be given to Jews to carry out their religious observances at the Wailing Wall. These rights, the Jews allege, have been seriously compromised by the construction of a new passage from Muslim buildings to the Wailing Wall, and by the interruption of services at the Wall, through the singing and dancing of adjacent Muslims. For the majority of those who take sides in this matter, the problem has, of course, gone outside the religious sphere: it is now one of national prestige. The propaganda that has been indulged in, particularly on the Jewish side, over this Wailing Wall affair has been tremendous. This fact must be recognised, if the problem is to be viewed in its proper proportions.

The Government and the Jews.

Once more the readiness of certain Jews to attack British officials in Palestine as possessing anti-Jewish prejudices is to be deplored. It is not incumbent upon Zionists to see both sides of the question (though the wisest of them attempt to do so), but if the British officials did not make it their capital and permanent duty to do so, a very

dangerous situation would arise. The rights and wrongs of this Wailing Wall are by no means so clearly established as certain protagonists would lead one to suppose. When feeling was at its height over the sad affair on the Day of Atonement, a Jewish Professor in the Hebrew University, who put the truth as he saw it above all things, is said actually to have suggested that the Jews had no rights at all at the Wailing Wall! That was courage of a high order, and although it cannot be supposed that many Jews will accept his diagnosis, we do wish that a greater number of influential Jews would look at the other side of the medal. As things are, it is becoming so easy to jibe, as a famous American traveller in the East has been heard to jibe, at the politically-minded Jews, who, he said, have all these hundreds of years been mourning and praying that they might return to Jerusalem, and, now that they are back there, still want to go on lamenting. That sentiment, of course, proceeds from a somewhat perverse view of the situation. But it must be emphasised that the matter has not become less difficult through the fact that it has to a considerable extent been taken out of the hands of the religious Jews, whose feelings have been cruelly exacerbated by antagonistic, if possibly legally justifiable, Muslim safeguards, and placed in those whose sympathy with the lamenters at the Wall is purely racial, or political. It is when one remembers the existence of such factors in the situation in the Holy Land as this Wailing Wall that the great dream of the British Government, the creation of a Palestinian nationality, which shall be neither predominantly Arab nor predominantly Jewish, seems incredibly far from possible realisation. For something that touches both the Arab and the Jew to their hearts—and this question of privilege and additional privilege at the Wall does unquestionably stir Arab and Jew to their very depths—will not readily die. All the less is there hope of its disappearance now that the trumpets of publicity have been blowing forth from both sides. In the circumstances, calmness, consideration, and constancy are more than ever desirable in British officials. Nor will they fail to show them.

INDIAN NOTES.

A Discredited Policy.

At a meeting last week of the All-India Congress Committee a resolution was proposed by Mr. Gandhi, and carried with four dissentients, declaring that the time had arrived when the national effort should be concentrated upon the preparation of the country for the campaign of non-violent non-co-operation after December 31 next, and

THURSDAY, AUGUST 8, 1929.

GREECE AND TURKEY.

The last rupture of the negotiations between Greece and Turkey over the exchange of populations, to which the two countries committed themselves at Lausanne in 1923, is in keeping with the stormy and chequered history of the negotiations during the intervening years. It was, indeed, only a belated sense of shame, which overtook both the Governments towards the end of last year when they realised that the negotiations after several years showed no sign of being concluded, that prompted a more wholehearted effort to reach a settlement a few months ago. How long the sincerity of the effort was maintained on both sides it would be difficult to say. At least, the delegates were understood to have received from their respective Governments orders to come to an understanding, and for a time the prospect of an agreement was brighter. The old reluctance to give way on either side, or to explore common ground, soon reasserted itself, and the neutral members of the Exchange Commission were again busily engaged in reconciling differences and removing friction between the Greek and Turkish delegates. Finally a solution was evolved by the neutral members from the Greek and Turkish proposals and was submitted to both parties as a settlement to which both could agree. The Greeks, it is understood, accepted the Neutrals' proposals in their entirety; the Turks had certain reservations or emendations to make, and in the end so modified the Neutrals' scheme that it became unacceptable to the Greeks. This, at least, would seem to have been the course of the negotiations. It has been, however, exceedingly difficult to follow all the ramifications of the dispute. Neither the Greek nor the Turkish Press has been at pains to acquaint itself with the details of the discussions; each has merely vilified the other side and attributed to it, without any evidence, the sole responsibility for any deadlock, actual or threatened. Nor has the foreign observer received much help from the representatives in London of the two States in their effort to elucidate the deadlock for the benefit of the British public. The version of the Greek Minister is as follows: "The neutral members proposed many solutions, which Greece accepted in their entirety. Turkey, instead, has agreed to such proposals as she considered to be in conformity with her interests, but has made reservations in important matters of detail . . . it is the refusal of Turkey to admit their (the neutral members') suggestions . . . that is the cause of the standstill in the negotiations" The Turkish Ambassador, on the other hand, has a different version:—"Turkey," he writes, "has always been inspired by the most conciliatory sentiments and has never ceased to make continual sacrifices in the cause of peace. Thanks to this good will, to which the neutral members of the Mixed Commission have paid tribute, a project was elaborated binding in an inseparable whole the solution of all the pending questions. The rejection of this scheme by the Greek Government was the course of the recent rupture of the negotiations."

Between these two diametrically opposed versions the reader is left to make his choice. As to the question which led directly to the interruption of the negotiations there is, however, no doubt. The Turkish Government refuses to permit the return to Turkey of certain Greeks who left during the Allied Occupation of Constantinople, provided with passports supplied by officials of the Sultan, under whose jurisdiction Constantinople then was. If the Turkish Ambassador's version of the deadlock is correct, we have to infer that the neutral members of the Exchange Commission were responsible for, or have agreed to, the Turkish claim to refuse to the Greeks in question the right of return to Constantinople. No statement to this effect has been made in Turkey, and it seems unfortunate that the neutral members did not at once make the point clear. If they endorse the Turkish claim, it must be because they consider it just or reasonable, and a grave responsibility would rest on the Greeks for rejecting it. On the other hand, it would be interesting to know on what the neutral members base their alleged approval of the Turkish claim, which appears to be at variance not only with specific clauses of the Convention concerning the Exchange of Greek and Turkish populations, but also with the spirit of the whole understanding between the two countries, and in particular of the Declaration of Amnesty, with its Protocol, signed at Lausanne on July 24, 1923.

By the irony of fate, while the Turkish Government was repudiating the undertakings entered into at Lausanne, celebrations of the sixth anniversary of the signature of the Treaty of Lausanne were taking place in Turkey. The occasion was one for flamboyant speeches and much self-complacency. The Treaty, one writer declares, is the turning-point in Europe's relations with the Turks. "We accepted nothing of all that the Powers dictated and forced on Germany, Austria, Hungary and Bulgaria. It is thanks to our firm attitude that while these countries are still struggling to extricate themselves from a painful situation Turkey has progressed calmly and tranquilly;" and the suggestion is made that every European should welcome the present reorganisation of Turkish national life, "which has set Turkey among the great nations of the West." Europe, however, has little time to-day to dwell in the past; it must needs be more concerned with the present. Turkey scored her points at Lausanne and no one is minded now to begrudge her the measure of success that she then achieved. Equally, however, no one is going to be misled into supposing that an infinite capacity for bargaining implies greatness or is an adequate foundation of itself for a successful State. The view of Europe is that Turkey with all her resources and her advantages should have made far greater progress in six years than she has done. Within this period Greece has absorbed a million and a quarter refugees and is all the richer for the additional man-power and intelligence that she thereby acquired. What has Turkey done for her exchanged population, and to what extent have they enriched the country? The Turkish Press would be more usefully employed in following up that line of thought than in patting itself on the back over Lausanne, and in imagining that Turkey has already taken her place "among the great nations of the West." In spite of her fourteen million population she is being left behind by Greece with seven millions and even by Bulgaria with five millions. If Greece has also held her own in the negotiations over the exchange of populations, her tenacity has not prevented her from dealing with the problem of her refugees. Turkey has haggled and four hundred thousand immigrants the while have had little or nothing done for them. It may be that, realizing this aspect of the problem late in the day, the Angora Government is trying to make amends to these unfortunates by laying hands on the property of the Greeks whom it is forbidding to return to Constantinople. If it does this, however, it is more likely to lose face in Europe thereby than to benefit its nationals.

'The Near and Middle East

From Our Own Correspondents.

Constantinople, July 24

Breakdown of Greco-Turkish Negotiations.

After months of protracted and laboured discussions at Angora, and after repeated exchanges of views between the Turkish and Greek Cabinets through their respective diplomatic representatives, the Greco-Turkish negotiations have at last definitely broken down. The *primum mobile* in bringing about this regrettable state of affairs would appear to be the stubborn attitude taken up by the Turks with respect to the return to Constantinople of Hellenic subjects who left the country during the Occupation with their papers in order. This statement requires a little explanation.

Following upon the re-occupation of Smyrna by the Turkish forces and the almost total destruction of that city by fire, the native Christian elements of Constantinople, notwithstanding the presence of the Allied Forces of Occupation, suffered from a very severe attack of "nerves." All those who could afford it left the country, and very many seemed able suddenly to raise the wherewithal, who before had appeared to be in penury. Great numbers of these fugitives, being Turkish subjects, were almost destitute of "papers" and, sad to relate, for a variable fee, plus a *douceur* to subordinate officials, they were enabled to procure from certain Allied Passport Departments, sufficient proof of foreign nationality to enable them to pass the Turkish police. There were many "pukkah" Hellenic subjects, on the other hand, who had only to apply to the Greek High Commissioner in Constantinople to have their passports *visé*, in order to leave Turkey in entire conformity with the laws of the country, implying the right to return at their leisure. An appreciable proportion of these Hellenic subjects were not only of good social standing, but were also possessed, in many instances, of valuable property in the most populous and wealthiest parts of Pera.

It is over these fugitives travelling under the protection granted them, for a consideration, by certain Allied "Passport Bureaux" and the bona-fide Hellenic subjects that the trouble has arisen which has wrecked the negotiations. The Turkish Cabinet definitely declines to differentiate between these two classes of persons who hurriedly left Constantinople in those trying days immediately following upon the Smyrna conflagration. The Greek Delegates have laid no claim to the return to this city of any Greek of Turkish nationality who left Turkey with foreign passports. They have been consistently fighting, however, for the access to Constantinople of all Hellenic subjects who left the country with their papers in complete order.

It is by no means an easy matter for an outsider to judge of the merits of the case as presented by both parties. The fact nevertheless remains that, as an outcome of the breakdown of negotiations, the Turkish authorities have ordered the sequestration of the pro-

perties of the Hellenic subjects to whose return to the city there would appear to be no legal impediment but merely bad faith on the part of the local authorities. Many of these properties are of the finest in Pera.

Charges of Corruption.

Some three or four years ago, a company was formed in Turkey, almost entirely with French capital, with the object of exploiting one of the numerous State monopolies which have sprung up like mushrooms in the last few years. The foreign enterprise was, in this instance, to provide for the output of gunpowder, small-arms ammunition and high explosives. So far as it was possible to ascertain, matters were progressing favourably until about a fortnight ago, when very serious charges were brought against some of the original administrators of the company. Amongst the latter figures, is one of the leading lawyers of Constantinople, a certain Nessim Mazliah Bey, who was a Deputy under the old Unionist régime, but who, although now out of office like many of his former Unionist colleagues, has managed, by a diplomatic attitude, to keep on good terms with those now in the saddle. Whatever may be said of him, he has never so far been regarded as a suspect. The charge against the chairman and directors of the company is one of bribery and malversation, and Nessim Mazliah Bey, ex-Deputy, is accused of having received £150,000 as a *Rushvet* or *Douceur*, as a consequence of which he has been placed under arrest. Nessim Bey, as his name implies, is a Jew, and his co-directors, the well-known Frescos of Constantinople, co-religionists of his, are also under lock and key.

Financial undertakings in present-day Turkey where foreign capital is involved are of so delicate and intricate a nature that it will ill become the outsider to apportion blame for indelicacy, where, perhaps, blame is not due. If this were a solitary instance of speculation on a large scale in undertakings of this nature, the less said perhaps the better. But one cannot help recalling to mind a very similar case which occurred some two years ago in connexion with the French contract for the repairs to the Sultan Selim (ex-Goeben), in which both a Cabinet Minister and an Under-Secretary of State were involved. The painful circumstances which attended that inquiry led to the recall from Turkey of the French Ambassador and to his eventual death through a broken heart, although the diplomatist in question was the very last person against whom any charge of even disinterested collusion for his country's sake could possibly have been levelled.

Sofia, July 26.

Precautions Against August 1.

The Bulgarian police to-day took extraordinary measures to forestall the plans of the Executive Committee of the Communist International of Moscow, which had ordered Communists to make manifestations on August 1. They redoubled their watch over Communist groups here; they demanded from employers the names of all their workmen who were to be absent on August

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

1; they made sudden perquisitions in the provincial towns; they expelled all who could not justify their stay therein and arrested all those who could not produce an identity card. They forbade, moreover, all public meetings and particularly manifestations in the streets.

Union of the Liberals.

For a long time the profound necessity has been felt for a regrouping of the very scattered political forces in Bulgaria, where the numerous but unimportant parties are constantly weakened by bitter feuds. For years there has been talk of a concentration of parties, the only means of securing a stable and respected Government. It was in answer to this sentiment that the Democratic Entente was constituted, after the *coup d'état* of 1923. But events which followed this *coup d'état* did not allow this group fully to develop; valuable elements soon detached themselves from it or led a separate existence within it.

The idea of concentration persisted, however, and it has just had a new and powerful impulse through the decision of three or four Liberal fractions, dating from before or during the War, to make common cause among themselves and become a single party. These sections had undergone some evolution, so that it was no longer possible to distinguish the Stamboulovists of Ghenadieff or of his adversary, Dobri Petkoff, nor the scattered partisans of Tontcheff, nor even always the faithful friends of Radoslavoff. For the Liberals had departed far from their first principles. In any case, the Liberals now declare themselves to be a completely new party, directed by an executive committee without a titular head.

Thus reconstituted, the Liberal Party, which has a great number of supporters in the country, may have a considerable future, if it succeeds in keeping united after the return of M. Radoslavoff, who, now that he is amnestied, would appear to wish to return to active political life and to press his claims to leadership, if not of the whole group, at least of his personal supporters. For it is not believed that he will allow himself to die politically, although he has no longer a chance of being able to play a rôle of any importance.

The Serbo-Bulgarian Tension.

No appreciable improvement is noticeable in the relations between Bulgaria and Yugoslavia. The Bulgarian newspapers continue to publish stories of the murder of Bulgarians, on the Yugoslav frontier, by Serbian soldiers and gendarmes, and the Yugoslav papers continue their violent attacks on the Bulgarian Government. This

Government only demands the application of the arrangements already agreed upon in the famous Pirot Conference (concerning the régime of dual properties, the formalities of crossing the frontier, and the constitution of a permanent Mixed Commission to investigate and to settle all future incidents); whereas the Yugoslav Government makes the condition, unacceptable to Bulgaria, that there shall be a final liquidation of all the dual properties and also the institution of a neutral zone along ten kilometres of the frontier (five each side) which nobody other than frontier guards and the indigenous population would have the right to enter, unless provided with special authorisation.

Great Britain and France intervened at Belgrade and Sofia, and in this connexion M. Bourroff, who was taking the cure at Vichy, was despatched to Paris to prepare the ground for a direct understanding with these two Great Powers. Bulgaria asked for the immediate ratification of the Pirot Agreement, declaring herself ready to negotiate with Yugoslavia for the settlement of her demands, having already accepted at the end of the Pirot Conference an exchange of bilateral properties in cases where the proprietors concerned would give their consent and the establishment of a neutral zone of one kilometre, along five hundred metres of the frontier. Great Britain immediately recommended this solution to the Yugoslavs, but France refused to suggest to Belgrade the necessary ratification—at which the Yugoslavs took courage and even proceeded to launch a diplomatic offensive against Bulgaria.

As the controversy was becoming embroiled, the Bulgarian Government published in Sofia and abroad the following statement on the Pirot Conference:—

"As is known, the Pirot Conference reached a successful conclusion. On the basis of its decisions and in accord with its Government, the Bulgarian delegation elaborated three rulings:—one relative to the movement of persons owning property astride the frontier, the second relative to the nomination of a Mixed Commission of Inquiry which would have a permanent character, and the third relative to police measures, for the purpose of facilitating passage of the frontier between the two States.

"To proceed with the application of these rulings, approved by the Sofia Government, we waited for the approval of the Belgrade Government. It is regrettable that such approval has not yet been accorded.

"The news appearing in certain organs of the foreign Press according to which Bulgaria has been unwilling to proceed to the ratification of certain decisions of the Pirot Conference, is untrue. The Bulgarian Government has ratified all the decisions of the Conference.

"Moreover, there is no truth in the statement, contained in certain foreign journals, that the Conference has not finished its labours, and that, in consequence, its decisions cannot be ratified before proceeding to the conclusion of an agreement on two other problems relative to the liquidation of properties astride the frontier and the creation of a frontier zone. These two problems were abandoned by the Conference, to be examined by the respective Governments, not only because they did not appear in the programme of the Conference, but also by reason of their complexity.

"The Pirot Conference performed its task in reaching agreement on the problems set down for it. The decisions on these problems have found application in the respective rulings which have been already mentioned and which await the approval of the Yugoslav Government, after having been approved on the Bulgarian side."

The Yugoslav Government has attempted to counteract this Bulgarian *communiqué* by inspired articles in the Belgrade Press, trying to prove that the Pirot Conference had not fulfilled its programme and that before proceeding to the ratification of the rulings agreed upon it was necessary to obtain a ruling also on the two questions in suspense. And as this thesis rests on a fundamental contradiction; namely, the absolute contradiction existing between the agreement provided for on the

facilities of exploitation of bi-national properties and the demand for the radical liquidation, by expropriation, of these same properties, the Yugoslavs have had recourse to a diversion, by sending to Sofia a formal protest against the amnestying of Radoslavoff.

Actually, however, the Yugoslav Government has not protested against the amnestying of Radoslavoff—it could not reasonably do so—it contented itself with asking the Bulgarian Government to explain how the amnesty recently voted by the Sobranje agreed with Articles 118, 119, and 120 of the Treaty of Neuilly, all the stipulations of which it means strictly to enforce. This *démarche*, in the possibility of which no one in Bulgaria believed, has been loudly criticised in all Bulgarian circles, Government and Opposition, who have seen in it a revival of the spirit of ten years ago, of the Peace Treaties, when Mr. Lloyd George wished the Kaiser to be hanged! Moreover, the Articles cited concern only the sanctions to be applied to "persons accused of having committed acts contrary to the laws and customs of war"—whom the Allies, acting either collectively or separately, had the right to seize, and whom Bulgaria was obliged to deliver up. Such a demand for the "coupables" was made by the Serbians in 1920; but it was not persisted in, and judgment of Radoslavoff and of his colleagues, responsible for the national catastrophe, was made in the Bulgarian High Court independently of the Yugoslav claim. Now, ten years after the signing of the Peace Treaties, there is to be an amnesty. The Radoslavoff Cabinet and the ex-Generalissimo Gekoff have been amnestied since 1924. No objection was raised to this amnesty. The amnesty which the Sobranje recently voted had in mind the personal acts of the former President of the Council and of his principal and Germanophil collaborator, Tontcheff, whom the 1924 amnesty had not touched—as a result of which permission was given to them, especially to Radoslavoff, to return and to die peacefully in the country in which they naturally possess no moral standing. What have the Articles 118, 119 and

120 to do with this? The Yugoslavs know perfectly well that their protest to Sofia can have only a platonic value. It will have aggravated the tension and will for a long time have rendered impossible a direct entente between Bulgaria and Yugoslavia.

As a consequence of this protest Bulgarian Nationalist circles are making furious attacks against the Yugoslavs. Nor are the Moderates any less energetic in their attacks on Belgrade. As for the partisans of Serbo-Bulgarian reconciliation, they are profoundly affected by this new manifestation of hostility between the two countries.

Alexandria, July 26.

Lord Lloyd's Resignation.

All other matters in Egypt this week have been totally overshadowed by the news of Lord Lloyd's resignation, which caused as great a sensation here as apparently it did in London. Apart from certain well informed political circles, very much in the minority, the news came as a complete surprise and has been received with very mixed feelings. The main question asked is, does the fact that the Labour Government asked Lord Lloyd to resign foreshadow a drastic change in their policy towards Egypt, and if so, what form will it take?

R. B. W. Holmes,
General Manager,
HAIFA.

There is a certain jubilation amongst the Arabic Press, especially the Wafdist section, and the resignation was, in every paper, translated as dismissal. Great hopes had been put in the Labour Government, but when at first they stated that their policy towards Egypt would not differ at all from the Conservative Party's policy, these hopes seemed likely to be frustrated. This new move has, however, reawakened the hopes, and the view is held that, as the avowedly Conservative High Commissioner has been dismissed, it follows that the Conservative policy will also be entirely changed. The newspapers are not committing themselves, and are eagerly awaiting Mr. Henderson's statement in the House of Commons. The Wafd, however, does undoubtedly feel considerable relief at Lord Lloyd's departure, if only on the ground, as one of the local newspapers stated, that he regarded himself as Egypt's supreme ruler, despite the fact that Egypt had been proclaimed an independent sovereign State. Lord Lloyd always maintained public security in a most firm manner, and it is thought that his departure may be made the occasion for a revival of disturbances, which the intensive Wafd propaganda now taking place could easily stir up.

There is a slight feeling of uneasiness among the European communities. Their sole interest in the political situation lies in the Capitulations, and they feel that Lord Lloyd's resignation may imply a drastic change in the Capitulatory laws. The news of the resignation, which came on top of all kinds of very contradictory statements concerning negotiations, has led them to believe that the departure of the High Commissioner is only the first step in an entire change of British policy.

However Lord Lloyd's resignation may be viewed by the other communities in Egypt, British inhabitants as a whole feel a very deep regret. Lord Lloyd has had a most difficult period to deal with, and if he has erred, he has erred on the side of British interests. Conditions in Egypt when he arrived four years ago were not at all happy, and he has the satisfaction of knowing that he has effected very considerable improvements during his High Commissionership. It is felt that the coming winter will, politically, be a very difficult time, and Lord Lloyd's intimate knowledge of local conditions would have been invaluable. The feelings which Lord Lloyd inspired are

best illustrated by the following telegram, which the British community in Alexandria sent to him on the news of his resignation:—

Members of the British community in Alexandria desire to express to you their great regret at the news of the severance of your connexion with Egypt and their keen appreciation of the constant energy and enthusiasm of your efforts in their interests during your tenure of the post of High Commissioner.

A similar telegram was also sent from Cairo.

Egyptian Hotels' Profits.

Closely following the publication of the report of the Egyptian Hotels Ltd., for the last year and the news that they are paying a dividend of 35 per cent. plus a bonus of 4s. per share, a bitter attack was made by an Arabic daily on the foreign hotel companies in Egypt, on the grounds that they charge excessive prices, which have the effect of nullifying the efforts which are being made to attract foreign tourists, and thus pay unreasonably high dividends. This diatribe is entirely unwarranted and is erroneous on its two main points. First, although prices charged at hotels such as the Semiramis, Mena House, Shepherds, and others, are high, in comparison with English, American and Continental hotels of equal standing, they are by no means out of the way. These Egyptian hotels are amongst the finest in the world, and their reputation and name is such that certain tourists, especially Americans, would pay anything merely to be able to state that they had stayed there. This is proved by the fact that during the season before last, when, owing to the fact that boats were unable to proceed up the Nile, there was an immense congestion of visitors in Cairo, and rather than stay at equally good but less famous hotels, people were sleeping in bath-rooms, on floors and on the billiard tables at Shepherds, while the Heliopolis Palace Hotel, which as far as the actual premises are concerned is one of the finest in the world, was almost empty. Then as regards dividend. For the first seventeen years of its existence the Egyptian Hotel Company paid no dividend at all. The Directors followed the far-sighted policy of putting the profits back into the business, and by rigid economy and hard work built up what is now an extremely flourishing concern. Therefore, original shareholders have received dividends averaging about five per cent., and as the £1 share to-day stand in the region of £7, purchasers obtain a return of roughly 7.75 per cent. It seems rather obvious that the attack was inspired, with the intention of speeding up the Government in their intention of building a new State-owned hotel, which they are planning to construct on the banks of the Nile at Gezira.

Oil from Suez to Cairo.

The Shell Company, who have large refineries at Suez, have lately approached the Government with the object of obtaining their permission to construct a pipe-line from Suez to Cairo, so that they could transport their oil at a much reduced cost and also at a considerably greater speed. This application was referred by the Ministry concerned to the Egyptian State Railways for their opinion. They have now recommended that the application should be refused on the following grounds: That it would mean a large loss of revenue to the State, which they estimate at about £450,000 per annum. That if the Shell Co. lay down a pipe line, other companies must follow suit, and a further loss of revenue would follow. That the complaints of the time and distance of the present Cairo-Suez railway, which runs through Ismailia, will soon be without basis, as it is intended to construct a new direct line. These arguments are countered by the contention that a considerable revenue could be collected as dues from the oil companies, with the added advantage that considerably cheaper petrol would be on sale to benefit the community. The discussion is linked up with the opposition to the new railway project, on the ground that an improved road from Cairo to Suez is more urgent.

EGYPTIAN GOVERNMENT.

EGYPTIAN UNIVERSITY.—FACULTY OF SCIENCE.

APPLICATIONS are invited for the Post of ASSISTANT LIBRARIAN. The salary offered is from £E400 to £E600 a year (about £410 to £615) according to qualifications, and the appointment will, in the first instance, be on contract for three years, and subject to cancellation by three months' notice being given on either side.

If the applicant appointed is resident in Europe, an allowance equal to one month's salary will be paid to him for travelling expenses on arrival in Cairo.

Applications, with copies of not more than three recent testimonials and giving the names of not more than three persons to whom reference may be made, should be addressed to the Director, Egyptian Education Office, 30, Victoria Street, London, S.W.1, and the envelopes marked "Post of Assistant Librarian."

Application to be sent so as to be received not later than August 15, 1929.

EGYPTIAN GOVERNMENT.

EGYPTIAN UNIVERSITY.—FACULTY OF SCIENCE.

APPLICATIONS are invited for the Post of TAXIDERMIST. The salary offered is from £E300 to £E400 a year (about £307 to £410) according to qualifications, and the appointment will, in the first instance, be on contract for three years and subject to cancellation on three months' notice being given on either side. If the applicant appointed is resident in Europe, an allowance equal to one month's salary will be paid to him for travelling expenses on arrival in Cairo.

Applications, with copies of not more than three recent testimonials, should be addressed to the Dean of the Faculty of Science, Egyptian University, Abbassia, Cairo, so as to be received not later than August 15, 1929.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 18.

Boycotting the Legislatures.

On July 5 the Congress Working Committee met in Delhi, under the chairmanship of Pandit Motilal Nehru, to consider the request of members of the Congress Party in several Provincial Councils for permission to attend their Councils, and to participate in the transaction of business. After a five hours' discussion, the following resolution was passed:—

"This Committee, having considered the several communications from members of the Central and Provincial Legislatures with respect to the resolution of the Working Committee regarding abstention from attendance at meetings of the Legislatures and having regard to the circumstances placed before the Working Committee, is of opinion that it would be in the interests of the Swaraj movement to advise the members of the various Legislatures to resign their seats. In view, however, of the importance of the question, the Committee considers that a final decision should be taken by the All-India Congress Committee. It, therefore, resolves that a special meeting of the All-India Congress Committee be convened for this purpose at Allahabad on July 26.

"Walk-in, Walk-out."

So, orders having been issued that the Congressmen were to refrain from attending the meetings of the Legislatures, and these orders having called out "communications" from several Provinces, the Committee, to show its temper, would go one better, and order wholesale resignations; but that it does not quite dare. It would, if it dared, but it dare not. So, a clear lead having been given to the larger body, if only it will take it, that larger body is to decide. The policy of non-attendance at meetings until further orders is generally spoken of as the "walk-in, walk-out" policy, and the easier it is to talk about a matter in India (giving a thing a handle for one to call it by makes it easier to talk of), the sooner will it be talked to death. A politician with whom I was talking the other day in Lucknow is probably right. His opinion is that the Allahabad meeting will turn down the resignation policy. I noted from the way the phrase "walk-in, walk-out" came off this man's tongue, that the mere phrase had decided him on which side to be. He was making no effort to see how much logical force underlies the wish of Pandit Motilal Nehru and the others at Delhi that the Congress Party should persist in this its answer to the Viceroy's act in not dissolving the Central Legislature, even to the point of their all resigning.

The Congress Party's Logic.

In 1919 the British Parliament said: "Here is a new Constitution for India. Under it will be created a number of legislative bodies, with in each a majority of elected representatives of the people. It transfers the control of certain Departments to Ministers responsible to these bodies, Ministers who shall be chosen from among the elected members. Work it for all it is worth, and, in working it, evolve a stable political order." The Congress said that it was no use; that such legislative bodies were no use; that until all the departments were transferred, nothing was any use; they would either not attend the

meetings of the Councils, or would do so only to criticise, and to pass resolutions calling upon the British Parliament to knuckle down. That was easier to do than to say. This or that individual member of the Party would introduce a private member's bill, being too hot on, say, social reform to remember all the time that "nothing was any use." For a Council through which a private member's bill can be passed, say one on the subject of child-marriage, is clearly that much use. There is no denying it. The tendency of the bulk of the members of the Congress Party is to forget their Party's logic. Not only are they deeply interested in a quantity of privately promoted legislation, but they also strongly desire to have their share in shaping certain official bills. In other words, in effect they would work the existing Constitution for what it is worth, thus contradicting the Party's assertion that it is worthless. One sympathises with the leaders, except that one knows that neither do they really believe that the existing Constitution is "no use."

The Child Marriage Bill.

I have mentioned the subject of child-marriage in India in passing. The attention of all those in Great Britain who are really interested in India, may be called to the chances of Mr. Sarda's Child Marriage Bill soon becoming law. There is just the possibility that the Simla Secretariat, a notoriously cowardly body, one terrified of taking any responsibility upon itself, may muddle things, as by not giving days enough for the discussion of the Bill, to the point of the Bill not passing. The situation is, that the Bill has twice been considered by select committees; has twice been circulated for opinion; was hung up pending the submission of the Age of Consent Committee's report. That Committee has now reported, and in favour of the prohibition by law of child marriage. Nothing can now be publicly stated as a reason why the Bill should not be pushed on. Nothing can be stated; but Simla knows well what a heavy mass of inert fear and superstition in the country would be gratified by the news that the Bill had been lost, and that children may for centuries to come still be gaily married. So one suspects and distrusts Simla. It is sometimes called "dead dog."

Miscellaneous News.

The application for the transfer to Allahabad of the Meerut Conspiracy case has been rejected by the Chief Justice of the Allahabad High Court. One notices that your Graham Poles and Fenner Brockways, the hot-hearts who are so little fit to lead in Imperial affairs, have been plying the Secretary of State for India with questions regarding the trial. If they but show the same amount of interest in the question of child marriage!

A proposal for an All-India Medical Council has been turned down. Rightly, I imagine; but I have not yet had an opportunity of asking any doctor for his opinion. Most things in India have good names, but are bad things. Things are corrupted in India.

The English headmasters of schools here all insist on their children going up for the Cambridge Local examinations. They say that no examinations would be good that were conducted by an Indian body; no, not if all the Governments and secretariats were behind it.

The weather here to-day is such as to make a man's working with his head almost impossible. The climatic conditions in India are at times terribly against us.

THE ECONOMIC POSITION IN INDIA.

Earl Peel, the late Secretary of State for India, presided at a largely attended meeting of the East India Association at the Caxton Hall on July 31, when a interesting paper was read by Mr. Kikabhai Premchand, M.L.A., on "The Economic Position in India." Mr. Premchand is a member of the Indian Central Committee which is co-operating with the Simon Commission, and is senior partner of Premchand, Roychand and Sons, the well-Bombay financial house.

Welcoming the lecturer, the Chairman said that it was an open secret that successive Finance Members in India, like Sir Basil Blackett and Sir George Schuster, had been grateful for the advice which Mr. Premchand, who was an acknowledged authority on Indian finance and currency questions, had tendered to them from time to time.

Mr. Premchand, after paying a tribute to the advantages India had derived from the British connexion, said that the bonds between India and the British Empire had become so closely interwoven through the passage of time that it would be not merely painful but highly injurious to either if a partnership from which each had derived such substantial benefits were dissolved. He regretted the unfortunate impression which seemed to be entertained in some quarters that there was actually a conflict of interests between the two. It was only by the cultivation of mutual knowledge, sympathy and understanding that such perverted ideas could be removed and a sound and sympathetic statesmanship evolved that took into due account the vital consideration that in its political and economic life India's standards are steadily advancing and approximating more and more towards those of Western countries. On that ground it was highly desirable that moderate and sober-minded Indian opinion should be given more weight in the settlement of Indian questions than had been the case in the past.

"You know," he continued, "that the greater political rights India received after the War included the convention, at least on paper, that in fiscal matters in which the Government of India and the Legislature were agreed, the Secretary of State would not ordinarily interfere; that his intervention would be limited to the matters affecting the wider imperial interests. India has adopted a policy of discriminating protection by means of a permanent Tariff Board, to which the Government refers applications from industries claiming protection within the well-defined limits laid down by the Fiscal Commission. In 1924 the first and most important step in this direction was taken by the protection of the iron and steel industry, which had been built up at Jamshedpur, and which was established in time to render service of immense value to the Allied cause in the Great War by providing the rails and other materials so urgently required in various Eastern theatres of conflict. These vital necessities could not have been obtained from England and other countries except at the cost of serious curtailment of the no less urgently needed supplies of munitions and food. When the protective tariff on steel, at first laid down for three years, was renewed in 1927, provision was made for a basic duty to be paid by all imports, with an additional duty levied on foreign steels not coming up to the British specifications.

"Have we not here a striking example of a method of fiscal adjustment which may be applied to other industries under certain conditions agreed to by India? For example, could not the cotton-mill industry of India be protected from crippling foreign competition on these lines? I feel confident that the more such questions are fairly faced in an unprejudiced spirit and with understanding of mutual needs, the more ready will the Legislature be to protect Indian industries by such methods. I doubt whether this facility for adjustment has been adequately recognised by the Foreign Office, to say nothing of other Departments in Whitehall. It is the failure to make provision of this kind which has given rise to the idea largely entertained by my countrymen that, although India enjoys fiscal autonomy on paper, she is not actually

free to protect her industries in the way that she might desire."

Dealing with India in relation to British unemployment, Mr. Kikabhai Premchand said:—

"This brings me back to a proposition made, by inference at least, when I began my remarks, that in the wide sense of the term there is no real conflict of interest as between the two countries. A prosperous India is of enormously greater advantage to the British manufacturer and working man than an India drifting to restlessness. With cogeny Mr. Snowden, who is now again Chancellor of the Exchequer, pointed out a few weeks ago that the raising of the purchasing power of the average Indian to a very limited extent would be of enormous benefit to British trade. He suggested in the House of Commons on July 9 that the doubling of the purchasing power of the Indian people would increase the export trade of this country by £87,000,000. It is perfectly true that India would purchase more merchandise, and it is an economic factor to which the closest attention should be given. But I think we must go beyond generalities and ask to whom, under the present fiscal arrangements, this trade is most likely to go. I must remind you that foreign countries have a keen eye on the Indian market, and, as I have pointed out, in the case of textiles, have made very serious inroads into it. Unless, therefore, we pursue the policy of preference which, whilst leaving India free to develop her own industries to the maximum of her capacity, will facilitate the trade in those articles which she does not produce herself, Great Britain may find that even after the most strenuous efforts have been made to develop the Indian trade, the commercial benefits have gone to foreign competitors."

It was to be regretted that in the excitement arising from the appointment of the Statutory Commission, the much-needed Reserve Bank for India which was so carefully and ably planned by the late Finance Member, Sir Basil Blackett, failed by a narrow majority to receive legislative sanction. It was to be hoped the present inquiry would result in a great extension of banking and credit facilities in the country, and thus lay the foundations for a central banking institution as independent of political interference and control as the Bank of England. He believed that before many years are over there would be a central bank independent of political pressure and conducted on that strictly business and economic basis which can alone ensure success.

"One great advantage of the development of banking facilities which may be expected to result from the present inquiry will be the stimulation given to the investment of Indian capital. There has already been striking progress. I am amazed when I compare the amount of Indian capital available for investment to-day with the relatively small amount of money that could be obtained when I first entered my father's business in the year 1900.

"The figures, so far as they are available, are so remarkable that it is surprising to find that they have aroused so little attention and comment, but to those of you who would care to pursue this study further, I would invite attention to the illuminating speech made by the former Finance Member, Sir Basil Blackett, when at Delhi, shortly before his retirement, when he gave an impressive record of the growth of the financial strength of India. I can look back on the time when the Government of India, after having raised a loan of Rs. 5½ crores in a year, thought it had achieved something unparalleled. Contrast that with what we see to-day, when a subscription of between Rs. 30 crores and Rs. 40 crores, raised in the current year without any special advertising or propaganda, passes almost without notice, as though it were an ordinary event.

"Provided that the work of the Banking Inquiry Committee leads to the complete mobilisation of the capital resources of India, even now largely inert despite the progress which has been made, I look forward with confidence to the day when India will not only supply all the

capital required for her state and other industrial enterprises from her own resources, but will gradually become a considerable investor in overseas concerns. We already see the process at work in the increasing tendency of India to buy back her foreign debt. Unfortunately exact figures are not available, but if they were the extent to which India has purchased her sterling securities would surprise many of you and would furnish an impressive testimony to her increasing financial strength.

"Your Association has had its attention drawn to recent legislative proposals implying some discrimination between Indian owned enterprises and those which are based mainly or wholly on British capital. If these ideas are unfortunate it must be remembered that they have come to birth in a time of severe depression of Indian industries, and in the keen anxiety to help them. Rightly or wrongly they are due to a belief that in the past some British conductors of large enterprises have not always been so ready as they should to help Indian interests. It is not unnatural that the Indian business man should have some misgiving as to the growth of large and monopolistic interests not based on Indian capital. I may be permitted to observe that if there is to be forbearance it must be forbearance on both sides, and that the British and Indian conductors of industry and commerce should work together as partners with a single eye to the advancement of India's economic prosperity.

"I would correct an impression which I find to exist in some quarters in this country that what may be termed vocal Indian opinion desires severance from the British Empire. Will all the force at my command, I would impress upon you the fact that the overwhelming majority of the people, and not least the Indian commercial community in general, have not the slightest desire to see the Imperial partnership brought to an end. What they really want is to promote by every legitimate means the economic advancement of India, and they urge that to this end she should control her own fiscal policy without any interference.

"The tendencies I have indicated seem," Mr. Premchand concluded, "to me to indicate the rapid growth in the financial and economic strength of India, despite certain weaknesses which must exist in any country of such magnitude and diversity. But, at the same time, they show that, provided the whole of our capital resources are brought into productive use by the creation of an effective means of liquifying our inert capital and by the steady development of our industries through a discriminating fiscal policy, we are assured of the rapid and sustained progress.

"Those of us who are engaged in the work of the Statutory Commission have only one object in view: it is to suggest a political organisation which, whilst satisfying the wholly reasonable demand of the Indian people for the ultimate control of their own affairs within the Commonwealth, shall maintain, unimpaired, the majestic fabric of law and order, peace and security, which are indispensable to our national prosperity. We are convinced that if we, or others, succeed in this aim we shall be building up a fabric which will induce the greater strength not only of India herself, but of Great Britain and of all the partners in the Commonwealth.

"Personally, may I say, I hope earnestly to see our Imperial fiscal policy so planned and developed that the increased purchasing power of India, arising from an economic growth, shall be expressed in terms of wider Imperial trade than trade without the orbit of the Commonwealth. To these questions I have ventured to invite your attention, and I would only say, in conclusion, that their careful and unbiased prosecution must be the means of adding not only to the prosperity of India but the Commonwealth and the world."

Lord Peel said that he was in agreement with the substance of most of the lecturer's remarks. He hoped that the Royal Commission under Mr. Whitley would make a very useful contribution to the overcoming of the labour difficulties of which in recent years India had had

such bitter experience. In connexion with India's ratification of the Washington Labour Convention so many years before Japan had done so, he thought that care was necessary in regard to the ratifying of international conventions of this kind. Simultaneous ratification by all the countries concerned would be the best course, and he would like to have some common denominator to which the varying interpretations put upon such conventions by different countries might be reduced. Mr. Premchand had suggested that the convention of non-interference by the Secretary of State when the Indian Government and its Legislature were in agreement on questions of fiscal policy existed "at least on paper." He could recall no instance in his experience at the head of the India Office when, with such agreement existing between Government and the Legislature, there was interference by the Secretary of State. He had known some prominent Indians to suggest that preference would be given to Great Britain if India obtained responsible government, but he resented the suggestion that there could be any amenability to a bribe of that kind. The question of preference, like that of further constitutional advance, must be judged on its own merits. He believed its adoption would be a huge economic benefit to both countries.

A letter was read from Lord Melchett supporting the views of the lecturer. The securing of a just balance between agriculture and other industries was one of the great questions of the development of the Empire on a unified economic basis. The ideal of making the Empire a single economic unit was practicable and attainable. Only by its creation could we hope to put the Empire in its rightful place in international trade and industry, and only so could we combat and defeat those disruptive and Communistic tendencies of which the lecturer had spoken. The ideal of the Empire as an economic unit was not a political cry: it was fundamentally a great conception of a very serious business proposition which should be thrashed out by representative business men from various parts of the Empire with us at home.

INDIAN NOTES.

(Continued from page 147)

agreeing with the Working Committee's view that all Congress members of the Central and Provincial Legislatures should resign their seats in order to give effect to the Congress policy. At the same time—and the rider is more significant than the resolution proper—the Committee also resolved, in deference to the views expressed by a considerable body of Congress members, that the question of withdrawal from the Legislatures should not be finally settled until the forthcoming Congress at Lahore in December. The resolution was described by its mover as a compromise between the Pandit Motilal Nehru and himself, and it serves to demonstrate anew the sharp difference of opinion among Congressmen on the "independence" and other issues. While the decision, or rather absence of one, is undoubtedly a wise one from the standpoint of the Swarajist party, for any other course would unquestionably have led to a serious revolt in the Congress party at a most critical juncture in its fortunes, it can scarcely be regarded as a happy augury for the success of the new campaign. Meanwhile the Swarajists will presumably continue to function in the Legislatures until January, and it is plain that, as we have always contended, a large number of Congress nominees recognise the futility of the boycott of the Legislatures if they are to play any part at all in the remodelling of the Constitution.

It is stated in Teheran that Ain al-Mulk, who, as we recorded in our issue of July 4, has recently been negotiating with the Wahhabi King for an agreement between Persia and the Hijaz and Najd, has submitted his report to the Government, and that the Hijaz Government has decided to send to Persia a delegate to arrange for friendly relations between the two countries.

KING FUAD OF EGYPT.

King Fuad of Egypt paid a visit on August 2 to the Royal College of Surgeons, and was made an Honorary Fellow of the College. Lord Moynihan, the President, on presenting the diploma, referred to the close connexion of the Royal College of Surgeons of England with the Egyptian School of Medicine. Dr. Aly Ibrahim, the present Dean of the School, had recently been made an Honorary Fellow of the College, and within recent years nine Egyptians, trained in the school at Cairo, had become fellows by examination of the Royal College of Surgeons of England.

King Fuad, having signed the roll of honorary fellows, inspected the museum and other parts of the building.

His Majesty honoured Baroness Wentworth with a visit at Crabtree Park, Three Bridges, Sussex, during last week-end, and inspected her stud of Arab horses. He concluded his visit to London on August 6, when he left for Paris, accompanied by Sir Ahmed Hassanein Bey, Lord Chamberlain, and other members of his suite.

THE ENGLISH ZIONIST FEDERATION.

A deputation from the English Zionist Federation, consisting of Mr. Paul Goodman, Chairman of the Political Committee, and the Rev. M. L. Perlzweig, Chairman of the Propaganda and Education Committee, has been received by Sir John Chancellor, K.C.M.G., D.S.O., High Commissioner for Palestine, who is at present in England.

The deputation, having congratulated the High Commissioner on the steps taken to encourage the economic development of Palestine, and on the marked improvement in the economic situation achieved since his appointment a year ago, conveyed to him the views of British Zionists on Immigration, the Employment of Jewish Labour, Land Legislation, the Jewish Community Regulations, and a number of political questions.

Sir John undertook to give careful consideration to the views expressed by the delegation, and said that his Administration would always be guided by the principles embodied in the Mandate. He added that he was satisfied that considerable progress had been made during the past year, and that there was now a feeling of stability and security in Palestine such as the country had not experienced for some years.

PALESTINE EXPLORATION FUND.

The *Quarterly Statement* of the Palestine Exploration Fund contains interesting articles on "Excavations at Ophel, 1928," and "Jerash, 1926," by Mr. J. W. Crowfoot, "Notes on Monastic Records in the Judean Wilderness," by M. Michael Marcoff and Mr. D. J. Whitty, "The Immovable East," by Mr. P. J. Baldensperger. In addition there is a full account of the sixty-fourth annual general meeting, at which Dr. E. W. G. Masterman delivered a lecture on "The History of Ophel Hill."

Notes exchanged between the British and Turkish Governments for the establishment of a commercial *modus vivendi* have been published by H.M. Stationery Office. [Cmd. 3366; 2d.]

Dr. Christomanos, Greek Under-Secretary for Health, and General Manettas, Under-Secretary for War, have tendered their resignations, the former owing to his candidature for the mayoralty of Athens, and the latter owing to disagreement with the Government on military policy.

Vice-Admiral Kelly, commanding the First British Battle Squadron, who arrived in Phaleron Bay on board H.M.S. *Revenge* on July 23, paid a visit the following day to the Greek Minister of Marine.

Dr. Walko, Hungarian Minister for Foreign Affairs, and Mr. Petroff-Chomakoff, Bulgarian Chargé d'Affaires in Budapest, on July 22 signed a treaty of conciliation and arbitration between Hungary and Bulgaria. The treaty is valid for five years.

The Sayyid Muhammad Zaabara, confidential adviser to whom the Zaidi Imam Yahya of Sanaa, in the Yaman, entrusted the negotiations with King Hussain in Mecca and, later, those with the Wahhabi King, is now staying in Cairo.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

NEWS IN BRIEF.

The Persian Parliament will reassemble on August 8 (Mordad 17).

It has been decided in Teheran to double the aerial service, run by the Junkers Company, between Bushire and the capital.

General Jevitch, Military Governor of Belgrade, died on July 30 after a short illness.

The damage done by recent floods near Tabriz, in Persian Azerbaijan, is estimated at 2,000,000 tomans (£400,000).

A woman known as Kâdrie Hanum and eight other persons were last week found not guilty, for lack of evidence, of conspiring against the life of Kemal Pasha.

Instructions were sent last week to M. Neshitch, Yugoslav Minister in Sofia, to inform the Bulgarian Government that Yugoslavia had denounced the unratiſied Pirot agreement.

The Roumanian Cabinet and many Deputies left Bucharest on July 30 in a special train for Badacini, in Transylvania, to attend the funeral of the Prime Minister's mother, who died the previous day at the age of 85 while Dr. Maniu was engaged in proroguing Parliament.

A Royal Decree has been promulgated appointing Sir Robert Hyde Greg, formerly British Minister at Bucharest, as British Commissioner of the Egyptian Caisse de la Dette Publique, in place of the late Mr. H. Farnall. The appointment dates from September 1.

A message at the end of last week stated that, as the unrest among the Baharlu Tribe had made the roads between Kerman and Yazd and Kerman and Bandar Abbas unsafe, the four garrisons from Persian Baluchistan had been marched into the Kerman area, and the Beluchi Sirdar Idu Khan had been entrusted with the maintenance of order in their absence.

Sir Victor Murray Coutts-Trotter, of Madras, India, Chief Justice of the High Court of Madras since 1924, formerly Deputy Professor of Greek in Liverpool University and Lecturer in the Law of Evidence to the University of Oxford, who died on May 12, left unsettled English estate of the gross value of £8,940, with net personalty £4,974.

Lord Headley, President of the British Muslim Society, was married to Mrs. Catherine Bashford, widow of Major Lindsay Bashford, on July 28. There were two ceremonies, one at the Registry Office at Fulham and the other at the Muslim Mosque at Woking, Lord Headley being of the Muhammadan faith.

A law was recently passed by the Teheran Majlis to engage twelve French Professors, in the service of the Ministry of Public Instruction. The Persian Minister in Paris, M. Ala, was given instructions to negotiate for the services, which are said to be urgent, of these Professors.

We learn from the *Sâtarch-yé-Djehane* that, with a view to preventing smuggling in the Persian Gulf, particularly in regard to sugar and tea, the Persian Minister of Finance has asked the Minister of Public Works for the construction of a road between Bushire and Bunder Abbas. The Finance Minister believes that the losses which the Treasury sustains are bigger than would be the cost of the construction of such a road. The project is now being considered.

Brigadier-General Sir Gilbert Clayton, High Commissioner for Iraq, paying his first visit to Mosul, arrived by air on July 23 and was entertained by the municipality. The following day he inspected from the air a large area of the Liwa, including the frontier districts, and returned to Baghdad by aeroplane on July 25.

It is stated from Khartoum on July 25 the heaviest rains known for fifteen years had fallen throughout the Sudan. The railway from Atbara to Halfa, in the Anglo-Egyptian Sudan, was impassable through washouts, and there had been no mails from Cairo and Europe. In the emergency one mail had been carried by the Royal Air Force to Halfa.

The Greek Government has decided to introduce a Bill when Parliament meets again for constituting a Ministry of National Defence, which will absorb the existing Ministries of War and Marine. In the new Department there will be three Under-Secretaries of State—for War, Marine, and Naval and Military Aviation.

The law for the protection of the social régime in Greece against Communism, which was recently voted in the Greek Chamber and the Senate, became operative on July 24. The promulgation of the law was expedited owing to the necessity of taking preventive measures against the Communist demonstrations being prepared for August 1.

It is announced in the *London Gazette* that the King has appointed Brigadier-General Sir Gilbert Falkingham Clayton, K.C.M.G., K.B.E., C.B., to be His Majesty's Consul-General for Iraq, to reside at Baghdad (with effect as from June 5, 1929).

PERSONAL AND GENERAL

TO-DAY

August 8, 1929 (New Style).

July 26, 1929 (Old Style).

Rabia 1, 2, 1348 A.H., of the Muslim Calendar.

Ab 2, 5689, of the Jewish Calendar.

Sir Leslie Scott will return to 20, Egerton Terrace to-morrow (Friday) from Norway.

Lord and Lady Irwin arrived at Garrowby Hall, their Yorkshire residence, on August 1.

Mohamed Pasha Mahmoud left London on August 6 for a short visit to France, before returning to Egypt towards the end of the month.

Sir Phiroze Sethna left Southampton on August 3 for a cruise to the Norwegian fjords.

Sir Charles and Lady McLeod left London for Scotland on July 31, and will be away for six weeks.

The Prince of Wales received Lt.-Col. C. O. Harvey, Military Secretary to the Viceroy of India, at St. James's Palace, on July 30.

Anayatullah Khan Samiji (Modabered-Dowleh) has been appointed to be Persia's representative in Iraq, and has taken up his post in Baghdad.

Mr. G. A. Mounsey, who has been appointed Assistant Under-Secretary of State has served the Foreign Office, among other places, at Constantinople.

Mr. A. S. Kirkbride, Assistant British Resident, Trans-Jordan, is Acting as British Resident during the absence on leave of Lt.-Col. C. H. F. Cox.

Miss Edith Guest, M.A., M.D., has been appointed Honorary Assistant in Egyptology at University College (London) for the forthcoming session.

The Rev. Henry Hacking, who has been nominated by the Archbishop of Canterbury Vicar of Emmanuel Church, West Dulwich, was recently a Chaplain in India.

Prince Arfa, who has on several occasions represented Persia in foreign countries, has had conferred on him by the Shah the decoration of the Order of Homayoun, First Class. Prince Arfa, who is the first recipient of this distinguished decoration, is making another journey to Europe.

The marriage took place on July 31 at St. Michael's Church, Chester Square, of Lieutenant William Josceline Clowes, R.N., youngest son of the late Lieutenant-Colonel S. A. Clowes, of Norbury, Derbyshire, and of Lady Storrs, only daughter of Mr. and Mrs. Senior of 1, Nevern Mansions, Earl's Court. The Rev. John S. Holden, great uncle of the bride, officiated, assisted by Canon Mitchell, and was followed by a reception at 2, Upper Cheyne Row (lent by Mr. and Mrs. John Inglefield).

Lieutenant-Colonel G. F. Stanley (Governor-designate of Madras), Sir James Crerar (Home Member, Government of India), Lady Simon, Sir Jagadis Bose, Nawab Sir Zulfiqar Ali Khan, Sir Alan Pim, Sir Phiroze Sethna, Sir Cowasjee Jehanghir, Sir Leonard Adami, Sir Louis Rieu, Sardar Bahadur S. S. Uberoi, and Mr. R. S. Sarma have been elected members of the East India Association.

The Prince of Wales received at St. James's Palace on July 24, on behalf of the King, the chairman (the Honourable Sir Sankaran Nair) and the members of the Indian Central Committee. His Royal Highness subsequently received Lieut.-General Sir E. Peter Strickland (General Officer Commanding British Troops in Egypt) and Nawabzada Muhammad Iftikar Ali Khan of Malor Kotla.

Lord Sinha, who has left for Davos, does not expect to be back at Queen Anne's Mansion, S.W.1, until September 17.

Captain and Mrs. Duncan McCallum left Cheyne Walk on August 2 for Italy. They will be away from London for three or four weeks.

His Highness Raj Rishi Shri Sewai Maharaj Dev of Alwar arrived in London at the beginning of this week from the Continent, and is staying at the Hyde Park Hotel.

The King has given authority to Major Charles Gordon Ross to wear the Insignia of the Order of Saint Sava (Fourth Class) conferred on him by the King of the Serbs, Croats and Slovenes.

THE PERSIAN MINISTER IN LONDON.

The Persian Minister in London, Hohvannes Khan Mossaed, who has held office here since August, 1927, has resigned his post for reasons of health. He is succeeded by M. S. H. Taghizadeh, late Governor-General of Khorasan. Before he left Meshed, H. E. Taghizadeh was entertained by the British Consul-General. He left Teheran on July 20, and has now arrived in London.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Roumanian Market.

The report of Mr. Humphreys on conditions in Roumania, extracts from which are given elsewhere in this issue, should be read by all British manufacturers interested in the development of foreign trade. It is an unfortunate fact that there are many traders in this country who have come to view the Near East markets as a whole or at any rate the Balkan markets—with considerable distrust. Certainly the experiences of some of them in that region after the War were very unfortunate, but in weighing the importance of what happened it is necessary to take into the fullest consideration the extremely unsettled conditions which existed over a long period. The short-lived post-War boom did the greatest possible disservice to British trade enterprise in the Near East. Now at long last economic conditions in that region are beginning to show signs of steady improvement, and the prospect at length exists for the gradual development of trade. It will be the fault of British merchants and manufacturers if the expansion of this country's commercial relations with the Balkan markets does not keep pace with that of its rivals. For various reasons the situation in Roumania has been more difficult than in many other countries, but, as we know, the outlook has been profoundly modified by the prudent measures undertaken by the new Administration. Last year, as Mr. Humphreys points out, economic conditions in that country were unfavourable owing to the failure of the crop for two years in succession, and it is significant in the circumstances that British trade with that country improved, the value of the exports at slightly over £3,000,000 showing an increase on the previous year's figures of nearly £300,000.

Openings for British Trade.

Mr. Humphreys points out that if Roumania has an abundant harvest this year the openings for British trade will be much more important. Fortunately this seems likely to be the case, as, according to the latest reports, the indications are that Roumania is likely to enjoy the best harvest since the War. British trade can only benefit from the expansion of the market that will result from the increasing purchasing power if our traders take steps now to enter the market. Greater activity on their part is the more essential because of the intenser competition which is foreshadowed in the market, and is indeed in evidence in every Near East outlet, for our competitors have never laboured under the handicap of under-estimating the value of Near Eastern trade. The scope for trade with Roumania is wide, as the country is mainly dependent on agriculture, and here, too, there should be scope for the development of trade in commodities not at present in favour. Mr. Humphreys gives some useful advice as to the methods for dealing with this market. They are quoted elsewhere, and I will therefore only say here that he emphasises the value of visits to Roumania for the purpose of co-operating with local agents and of getting to know the customers; and he advocates also the establishment of selling agencies in Roumania in cases where the trade is likely to be considerable.

The Turkish Exchange Weakness.

The Turkish exchange has tended gradually to weaken of late, and now stands at 1,023½ for sterling. Of the causes for this development one, to which I have already

referred, is the harvest failure of last year with the consequent lack of exports and the need for importing grain and flour to make good the shortage of home supplies. Another cause, which has been in operation in the last month or so, has been the great increase in imports with a view to anticipating the new Customs Tariff which comes into operation in October. A development of imports inevitably accompanies any pending tariff changes, but it appears that in the case of Turkey, owing no doubt to the heavy increases in duties, the imports have been on a particularly large scale, with the result that the existing warehouses at Constantinople have proved quite inadequate for the storage of the commodities. In view of existing conditions in Turkey these large imports must occasion no little apprehension, for the market has been in a depressed condition for years and it is difficult to see how in present circumstances it will be possible easily to dispose of the stocks.

Chemical and Wood Industries.

At the statutory meeting last week of this company Lord Bledisloe, the Chairman, gave some interesting details of developments since its formation in the spring to take over, through a controlling interest, a Yugoslav undertaking, for the purpose of developing chemical works and important timber concessions in Bosnia. Dr. A. J. V. Underwood has been appointed general manager in Yugoslavia, and has taken steps to reorganise the wood distillation works at Teslic. Lord Bledisloe stated that the output of the factory has been increased, and it is now working at full capacity. On account of the existing position of the artificial silk trade it has been decided not to take steps at present with regard to the erection of the artificial silk factory. Lord Bledisloe referred to the cordial relations between the company and the Yugoslav Government. As he rightly pointed out, the company is a pioneer in the field of industry in Yugoslavia. The Government has shown in this instance its desire to associate English capital with the development of the country, and it may be taken for granted that the success of the company will go a very long way towards promoting much closer financial and economic relations between the two countries.

COMMENTATOR.

BANK OF ATHENS

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Atlas of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

THE WEEK'S FINANCE.*(By Our Financial Expert.)**London, August 6.*

The past week in the Stock Markets has been almost featureless, apart from activity in certain international stocks, under the lead of Hydro-Electric and the two margarine issues—Union and Unie. The latter were supported from Holland and elsewhere, on reports of an agreement with an English house and of a coming issue of bonus shares. The continued efflux of gold was a depressing factor in the gilt-edged market, but the absence of a change in Bank Rate was a steadying influence. Last week's brief interest in the Home Railways appears to have evaporated and the market has again relapsed into an idle condition. In the industrial market the volume of business was inclined to shrink still further, though there was a slightly better feeling towards the end of the week. No immediate revival can be looked for, in view of the holiday season. Moreover, all sections of the Stock Exchange are dominated just now to a greater or less extent by the monetary situation and a return of confidence depends on the ability of the Bank of England to replenish its stock of gold.

The Eagle Twins.

The results of the Mexican Eagle Oil Company for 1928 have just been published and reveal, after deducting 8,697,000 Mexican dollars for depreciation, a loss of 518,399 Mexican dollars which, deducted from the balance brought forward from last year, leaves a balance of Mexican dollars 237,899. The associated company, Canadian Eagle, on the other hand, shows a good result, for the same period, namely, a net profit of 1,838,178 Canadian dollars, of which all but 108,068 dollars was distributed in dividends. When the two companies combined, some years ago, the shareholders of Mexican Eagle were obviously well advised to retain their interest in both companies. Future prospects appear to be brighter for the Mexican Eagle, since the decrease in production which was largely responsible for the loss has ceased, and production for the first six months of this year shows an average increase of 10,000 barrels a day. Both companies' balance-sheets reveal a strong financial position, and if, as the directors point out, the Mexican Eagle is now faced with better market conditions, and is reaping the benefit of the expensive exploration outlay which last year was all charged to revenue account, then this company too should show a considerably improved profit and loss account in future years.

Motors.

Commercial motor vehicle companies received a severe setback after the War, and in the subsequent years several

of them passed their dividends. The last two or three years has seen their position considerably improved, and this is certainly apparent in the case of the four leading companies, Leyland, Dennis, Albion and Guy Motors which between them produce 75 per cent. of the heavy motor vehicles of this country. They have paid off arrears on the 7½ per cent. preference, and built up reserves, and their earning capacity in relation to capital in each case appears good. The heavy vehicles have not suffered severely from foreign competition, and with the railway companies launching into passenger motor transport and better roadway facilities their prospects are considerably brightened. Private motor car companies will no doubt have to face increased foreign competition if and when the 33½ per cent. import duty is removed next year. Besides foreign competition British producers have suffered from keen competition among themselves, but there are signs that they are at last setting their house in order and a merger of Rover, Standard, Swift, Arrol-Aster, Crossley and A.C. cars is possible in the near future. Meanwhile investors would be well advised to confine attention to companies with sound profit-earning prospects like Morris Motors whose cumulative preference yield £5 10s. per cent. and Rolls Royce with ordinary shares yielding £6 14s. per cent.

Introductions.

Capital received by a company can be raised either directly by an appeal to the investing public or by the subscriptions of private individuals. In both cases the company can and usually does apply to have its shares dealt in on the Stock Exchange. The less usual but by no means new method of raising capital by private subscriptions and later "introducing" the shares on to the Stock Exchange has been growing of late, and it has been estimated that about 20 per cent. of the new capital raised in the first six months of this year was made available to the public in this way. This method has several commendable features, the chief of which, perhaps, is that it ensures the required capital being raised without risk of a public issue which might be neglected by the public. When, however, as was the case with the introductions in the first half of this year, the private subscribers eventually sell to the public via the Stock Exchange at an average profit of about 33 per cent. it is obvious that the public and the companies concerned are paying very dearly for the advantage of the "introduction" method of raising capital. It has been suggested that the public information issued at the time of introducing the shares should state the original price paid for them, a suggestion which the Stock Exchange Committee might usefully consider.

Yugoslavia's imports for the first six months of 1929 amounted to 730,000 tons, of the value of 335,687,331 gold dinars, as compared with 712,648 tons and 347,230,311 gold dinars for the corresponding period of last year.

During the first five months of this year 923,000 tons of timber products were exported from Yugoslavia, as against 890,000 tons for the corresponding period of 1928. The value of these exports amounted to 858 million dinars, as against 708 millions last year.

In view of the increasing importance of the traffic and the number of passengers travelling between Baku and Pahlavi, the Navigation Company of the Caspian has put into service a new steamer called the Zinoviev. The vessel will make two voyages a week.

*The Persian Minister of Public Works, M. Djim, has been touring in Azerbaijan. He visited Tabriz, which was recently stricken with storms and floods, and is continuing his journey to investigate the navigation on Lake Urmia and the exploitation of the Julfa-Tabriz railway.

THE BULGARIAN FILM MARKET.

It will doubtless be some time before Bulgarian production of motion pictures will reach a stage of commercial importance, although several attempts have been made by local concerns with small capital to produce films (says the American Vice-Consul at Sofia, Mr. Samuel Green, in a recent report). So far as known only three have been made in the Kingdom, and the small success they have made in the Kingdom, and the small success they have achieved has been due exclusively to the interest of the public in seeing domestic-made films with local characters and scenes. There are no film studios in Bulgaria, but it is understood from the proprietor of the Modern Theatre, the largest cinema concern in Bulgaria, which supplies about 50 per cent. of all films displayed in the country, that this firm contemplates the production of a large national film, the subject of which will deal with Bulgaria during the time of the Turkish domination, the story to be taken from the writings of one of the country's most noted authors.

There are about 136 motion-picture houses in the entire Kingdom, with an average seating capacity of 300 to 500. Of this total number, 26, or about one-fifth of all the theatres in the Kingdom, are located in Sofia, the capital. The average price of admission ranges from 5 to 20 leva for Sofia, Varna, and Rustchuk, and from 5 to 15 leva for the rest of the Kingdom. Usually a motion-picture programme consists of but one feature film, with a preference for films showing a great deal of action. Often comedies are shown, but the general preference is for dramas or tragedies. Western or detective films are not allowed and the ordinary comedies are not popular. Oriental films and pictures of Russian life, showing suffering and much tragedy, have been generally favoured during the last two years. Usually the programme is changed twice a week, except in features, which run for a full week. It was estimated by some importers that during 1928 the average rental charge for films was about 20 per cent. of the price paid for the film, and the charge for exclusive right was from £10 to £120 per film.

The importation of films into Bulgaria has been increasing annually. Data from the Customs section of the Ministry of Finance show that during 1926, 4,234 kilos of films were imported; for 1927, 7,294 kilos; and for 1928, 7,469 kilos. The values were: 1926, 7,321,230 leva; 1927, 22,731,610 leva; and 1928, 12,726,010 leva. The large decrease in 1928 from the preceding year was the result of a general reduction in prices and the importation of cheaper films, which came mostly from Germany and Austria. It is estimated that at least 55 per cent. of the films shown in Bulgaria were produced in Germany, 18 per cent. in France, 18 per cent. in the United States, and the remaining 9 per cent. in other countries.

Eight new motion-picture theatres were built during 1928. The estimated seating capacity of these new theatres is about 500 for Sofia and 300 to 400 for the rest of the country.

The works now being built at Marathon (says the American Commercial Attaché at Athens, Mr. Gardner Richardson) include the construction of a dam near the village of Marathon to impound the waters of the Rivers Haradra and Varnava, together with a tunnel, aqueduct, reservoirs, and distribution system. The dam is a solid concrete wall, 47 metres wide at the base and 4½ metres on top. It is 285 metres long and rises 54 metres above the river bed, and 225 metres above sea-level. This dam is the only mosaic marble-faced dam in the world. The structure will contain 178,000 cubic metres of concrete and masonry, requiring 40,000 tons of Portland cement and 10,000 tons of Santorin earth. A roadway will be built on top to permit traffic across the valley. In connexion with the dam a spill-way is being built, over which will flow the surplus or storm waters of the river when the reservoir is full. When completed, the dam will capture the waters of the Haradra and Varnava Rivers and form the new artificial Lake of Marathon, which will have an area of 2,400,000 square metres and in places will be 50 metres deep. It will have a capacity of 41,000,000 cubic metres of water.

(By Our Engineering Correspondent)

Street Lighting.

The new scheme of lighting on the Thames Embankment is undoubtedly a success, and one wonders why a much needed improvement has been delayed so long. It may be suggested that the equipment might, with advantage, be more artistic, and it is curious to reflect, in that connection, that when electric lighting first made its appearance everyone concerned seemed to be doing his best to make everything connected with it as beautiful as possible. It is true that each had his own standards of beauty and it is equally true that what seemed artistic at that time would not appeal to us at the present date, but that is beside the point. What is to the point is that the advent of the metal filament lamp seemed to usher in an era in which light, rather than effect, was aimed at; in which we sacrificed practically everything that we had formerly considered essential in order that we might obtain as crude and as glaring a light as possible. There are distinct signs of a revulsion of feeling and a demand is evident not only for better street lighting but also for lighting equipment which is not only efficient but which is attractive when viewed during the daytime. To all intents and purposes the arc lamp standards once so admired are now obsolete and, in their place, attractive street lighting fittings carrying the latest types of gas-filled lamps are being installed.

An engineer on the staff of the Illuminating Engineers Department of the Westinghouse Electric and Manufacturing Co., recently pointed out that many factors enter into the problem of providing adequate street lighting for modern municipalities. In the days of the old-fashioned type of arc lamp little or no consideration was given, he

says, to the aesthetic appearance of streets. Traffic conditions also were of almost negligible importance, and the relation between lighting and safety was but little understood. As one who had a great deal to do with such work at the time he mentions I am not completely in agreement with him in regard to the first indictment. We did endeavour, so far as our knowledge went, to eliminate any feature which we considered would or might disfigure the streets, and we did endeavour to make everything, lamps and standards alike, as artistic as possible. But let that pass, there is a great deal in what is said regarding other features.

We do, at the present time, give all such matters as he mentions, very earnest consideration, and we are quite aware that paved streets, zoning requirements, and the modern tendency towards what we call, possibly somewhat vain-gloriously, "architectural harmony," determine to a great extent the type and character of the equipment for lighting modern thoroughfares. Lamps and lighting accessories have been designed for meeting the lighting requirements of all classes of streets, and for supporting these a wide variety of ordinary fittings is available, and many of the more enterprising municipalities have had special fittings, etc., designed for their own use.

In too many cases, however, there is a manifest tendency to plan an ornamental street lighting system without much regard to the other items of street furniture that may be encountered. For instance, as he says, in many cases standards are placed in fairly close proximity to tramcar trolley poles or telephone or telegraph posts. This results in a multiplicity of supporting structures which certainly has a disfiguring effect on the appearance of the street. To obviate this, and at the same time to meet the constantly increasing demands for greater strength to resist accidental collisions for street-using vehicles, combination light-carrying and trolley supporting standards have been developed lately. The columns of these are of reinforced concrete construction, and in those of the best class crushed granite is used for aggregate. It is not easy to see why this material is used in preference to any other hard crushed aggregate. Crushed Whinstone, or coarse river gravel would probably be just as good. These standards are formed by spinning and are commonly called "hollow spun" granite standards. Now that coloured cements are obtainable there seems no reason why these poles should not be made to suit the general character of the buildings in the streets in which they are used.

Engineers will be interested to hear that in manufacturing these, cast iron moulds are first prepared. A steel reinforcing structure consisting of longitudinal rods of high quality steel, spirally wrapped with wire, is first placed in the mould and spaced therein by spacers, or short pieces of metal wedged between the wire structure and the mould. These are invisible in the finished product. The moulds are then filled with concrete, mixed fairly dry with only just sufficient water content to render the concrete sufficiently plastic to move, and then revolved at a moderate and gradually accelerating speed. During the spinning process the concrete is forced away from the centre of the mould by a centrifugal action caused by rotation, and during this a hole is left in the centre of the pole through which all cables, etc. needed can be carried after the pole is erected. After the necessary lapse of time which varies according to the quality of the cement used and the amount of water present in the mixed concrete, the poles are removed from the mould, cured in steam and hydrated according to modern practice.

When Ciment Fondu or Ferrocete is used the time taken in manufacture and drying is very short, compared with that taken when ordinary cement is used. The centrifugal action—a somewhat similar method is used in the manufacture of concrete piping of large diameter—gives a strong durable concrete, free from voids, uniform and with a perfectly smooth surface.

There is no limit to the size and type of standards that can be manufactured in this way, and they can be designed for various heights and to carry loads from the smallest to the largest likely to be needed in actual practice.

As a rule provision is made for clamping ornamental brackets, supports and lighting units at any height that may be found necessary, and the necessary wiring, as already mentioned, is taken up the centre hole and out to the brackets through a hole specially drilled in the post. A finial is provided for the top of the pole and the necessary attachments for the trolley wires can be either cut into the concrete and fixed to steel stays within its interior or they can be made as a part of the framework and so fixed in position during the manufacture of the pole. An earthing section of metal is spun integral with the pole during manufacture. This is several feet long and serves as a bedding portion which can be grouted down into a socket and fixed in the usual way. To determine the strength of a combined electric light and tram trolley standard, flexure tests have been made and the data on deflection and strength obtained. It seems that a 26 ft. pole designed for a pull of 1,000 lb. with a maximum loading of 2,000 lb. was loaded and released, the load being applied about 1 ft. 6 in. from the top. Under load this pole was deflected about $5\frac{1}{2}$ in., and, on release, sprung back to its original position, thus showing an unexpected degree of elasticity in the concrete.

Low Grade Fuel for Steam Generation.

In connexion with the substantial economies to be effected in the operation of many industrial boiler plants by utilising any lower grade fuel that may be available a striking example is the results now being obtained at a well-known colliery in the North of England. The normal method of working was to burn unscreened lump coal in the "Lancashire" boilers, with cold feed water and no economisers, and long continued tests showed the average performance was an evaporation of 5.2 lb. of water per 1 lb. of coal. The plant was then equipped with "Turbine" forced draught furnaces, and the results were, as shown by a further series of records all carried out by the colliery staff themselves, an average of 7.60 to 7.96 lb. of water per 1 lb. of coal, a great improvement. Subsequently however, the plant was overhauled generally and the boilers scaled, with the result that a much cheaper fuel, smalls from the washery plant, was used instead of unscreened lump coal. The full supply of steam was supplied as before, since the lowest quality of fuel is easily burnt by the "Turbine" furnace, and the results average 8. lb. of water evaporated per 1 lb. of coal, being an enormous net saving as compared with the original figure of 5.2 lb. with more expensive coal. In most collieries the quality of the coal used under the boilers is unnecessarily good, but apart from this the average thermal efficiency of the consumption of the coal is too low, irrespective of the quality, and it is just as important to-day, for the boiler plant in collieries and iron and steel works for example, to be operated at high efficiency, as the ordinary industrial establishment or power station. In Great Britain for example about 7 per cent. of the coal raised, say a consumption of 17,500,000 tons per annum out of a total production of 250,000,000 tons, is required to provide the necessary power, this being approximately the average figure throughout the world, partly dependent of course on the amount of water to be pumped.

There are of course other directions in which steam generation economies may be obtained, quite apart from the burning of the coal, two of the most important being softening of the feed water combined with exhaust steam

heating and proper lagging of all the boilers and steam pipes, including the flanges and boiler fronts, while the plant ought to be operated with a feed water meter to keep a constant check on the performance.

The Maentwrog Hydro-electric Scheme in North Wales.

We have now been able to obtain some detailed information concerning the interesting Maentwrog 18,000 K.W. Hydro-electric Scheme of the North Wales Power Company, Ltd., supplying electricity over an area of 4,080 square miles in North Wales, including Carnarvonshire, Denbighshire, and Flintshire, as well as part of Cheshire. In 1906 a smaller hydro-electric station of 6,000 k.w. was started up by this company at Cymdyli Beddgelert and ever since has operated at 1,130 feet head, with great success, additional 2,000 k.w. plant being added in 1913. Since the passing of the Electricity (Supply) Act of 1919, however, the Company has greatly extended its operations, resulting in the Maentwrog Scheme, the consulting engineers being Sir Douglas Fox and Partners of Westminster.

The present plant installed in the Maentwrog power house consists of three horizontal impulse type turbines of 9,000 b.h.p. running at 333 revolutions per minute and 650 feet head, the largest in Great Britain, each direct coupled to a 6,000 k.w. alternator, 660 volt 50 cycle three phase. These turbines are driven from a 72 in. high pressure pipe line, each having a 36 in. diameter branch pipe provided with a "Glenfield" 36 in. hydraulically operated cast steel sluice valve designed to operate at 60 feet head.

The reservoir is formed by damming the River Afon Prysor, the catchment area being 23 square miles, in height varying from 650 to 2,600 feet, and holds when full 7,500,000,000 gallons of water. In all, four dams have been built, the main Maentwrog Dam and three other "cut-off" constructions. On the up-stream face of the main dam is a 10 ft. diameter high pressure steel delivery pipe, having near the face an 8 ft. diameter "Glenfield" self-closing, cast steel, balanced disc valve for sixty feet head operation, connexion being made to the 10 ft. diameter penstock by taper reduction and expansion pieces. This arrangement was adopted on account of the great difference in capital cost between an 8 ft. 6 in. and a 10 ft. diameter valve, the loss in head due to throttling being negligible.

The function of the valve is to shut down automatically the penstock in the event of a sudden abnormal flow due to a burst pipe, blown joint in the pipe line, racing of the turbines, or any other cause, and includes all the latest improvements that have been introduced by Messrs. Glenfield and Kennedy, Ltd., for valves of this character. Also with regard to the transmission lines, the original installation was 80 miles of overhead line, generally at 6,000 and 10,000 volts, in connexion with the hydro-electric plant at Beddgelert, but since 1922 a great extension has been made, including 95 miles of overhead lines at 66,000 volts, 115 miles at 35,000 volts, and 75 miles at 11,000 volts. Some of the main towns supplied in the area include Abergelle, Bangor, Bethsada, Carnarvon, Colwyn Bay, Llandudno, Mold, Oswestry, Rhyl, Ruabon, Sandbach, Wrexham, Nantwich, and Crewe.

The address of the marine department of the Royal Exchange Assurance is now 37-39, Lime Street, E.C.3.

British Consular Reports

III.—ROUMANIA.

The following extracts are taken from the report on the financial and economic conditions in Roumania for the year ended April last of Mr. R. J. E. Humphreys, Commercial Secretary, H.M. Legation, Bucharest:—

The year 1928 will be long remembered in Roumania as one of great difficulties, both economic and financial—in some respects the worst for trade since the war. Nevertheless, the turning point may be said to have been reached and signs are not wanting of a change for the better. The most important factor in Roumania's economic life is agriculture, and it is upon the harvest that all hopes are concentrated from the early spring onwards, as it affects not only the revenues of the country, but the livelihood of over three-quarters of the population. In 1928 the cereal crops, especially maize, proved a comparative failure for the second year in succession.

During the year the protracted nature of the negotiations for a stabilization loan contributed in no small degree to the depression in trade which was so noticeable in the later months of the year. It is true that in spite of all difficulties certain financial agreements were reached which were a necessary preliminary for ensuring the stabilization that was to be made. These agreements included an arrangement with Messrs. Henry J. Schroeder, by virtue of which all bonds of the 1913 4½ per cent. Roumanian loan which had passed through the London Stock Exchange were to be recognised by the Roumanian Government; an arrangement to pay Roumanian "Rentés" purchased in France and, finally, in November after protracted negotiations, an agreement signed in Berlin, by which Germany was to pay to Roumania 72½ million Gold Marks in full settlement of all outstanding claims, while Roumania on her part was to recognise German owned pre-War bonds.

In November the Bratianu Government suddenly resigned, and after a slight delay the Regency asked M. Juliu Maniu, the leader of the National Peasant Party, to assume the direction of affairs. One of the first actions of the new Government was to abolish the censorship on Press telegrams. This step was looked upon as an earnest of the openly expressed desire of the Government to restore confidence in the country. A further step in this direction was the announcement by the Government that they would endeavour to remove restrictions on the entry of foreign capital into Roumania by modifying the Mining Law of 1924 and the Law for the Commercialisation of State Enterprises, both of which were acknowledged as having placed foreign capital at a disadvantage. The Minister of Finance publicly stated that the Government desired to collaborate with foreign capital in a spirit of equality. Other reforms were foreshadowed. In March, 1929 the Legislature sanctioned the amendments to the Mining Law.

As this report will show, trade during the last twelve months has suffered from depression. Nevertheless, as far as the import of British goods is concerned the Board of Trade figures register a decided improvement in comparison with those of 1926 and 1927 and the total value of exports from the United Kingdom to Roumania in 1928 amounted to over £3,000,000—an increase of nearly £300,000 on the previous year. In what manner can these imports be further increased? Roumania is an agricultural country, and therefore, an importer of manufactured articles, and, as has been stated, the economic policy of Roumania is governed by this fact, and all other branches of production depend on the state of agriculture. In spite, therefore, of the loan and stabilization, the

volume of imports to Roumania and her capacity of payment for these will always be governed to a great extent by the results of the crops. Nevertheless, now that a period of greater financial security has been reached it well behoves British merchants to intensify their efforts to obtain a full share of the expansion of imports which is expected to occur in the succeeding years. This can only be done by personal acquaintance with the needs of the market whether financial or otherwise.

Banking.

In spite of the commercial and industrial depression during the year under review, banks were able to pay approximately the same dividends as in the previous year by making use of reserves which had accumulated during better times. Most of the banks confined their activities to purely banking business, withdrawing from industrial investments. These had become necessary to them after the War, owing on the one hand to the Agrarian Reform and on the other to the fact that the country had acquired important industrial territories offering profitable investments, and the Government encouraged participation in them. During 1928, however, the banks subscribed very little towards the formation of new companies.

The financial situation of the larger banks is sound, as they have sufficient funds to carry them through the present period of trade depression, and they are exercising care in regard to their clients, keeping constantly in view the possibility of bankruptcies. As a further measure of precaution they have also begun to grant only short credits, usually one to three months. Many depositors withdrew their money from the banks in the spring of 1928 in order to use it for speculation in shares, and later because the banks reduced their rate of interest, but at the end of the year the total deposits at the banks had again increased.

According to the figures published by the Institute of Statistics showing the general balance sheet of all existing banking institutions (limited companies) in 1927, the total assets and liabilities were balanced at 98,394 million lei as against 90,122 million lei in the previous year. In the safes of the banks at that date there were 3,180 million lei, while available funds amounted to 2,811 million lei. Bills were discounted for 18,075 million lei and re-discounted stocks are shown at 3,341 million lei; current debit accounts, 24,231 million lei, current credit accounts, 14,110 million lei; money at call and short notice, 25,158 million lei (as against 20,582 million lei in 1926); reserve fund, 2,085 million lei representing 25 per cent. of the capital, and other funds, 1,128 million lei. The net profits of the banks amounted to 1,783 million lei, or 21 per

cent. of the capital. (The National Bank of Roumania is not included in these figures.)

The stabilization of the currency will limit the profits on exchange, based previously on frequent and sometimes considerable fluctuations in the value of the leu, but it will assist the banks to obtain credits from abroad on longer terms and at cheaper rates of interest, provided, of course, the stabilization proves a success and is fully maintained with the assistance of an abundant harvest. Under these circumstances the local banks would be able to reduce their rates of interest and to increase their turnover, which would greatly aid the economic development of the country.

Trade.

Both imports and exports considerably diminished during the year 1928, and the following figures have been compiled on the basis of declared values:—

	1927. Lei	1928. Lei	Decrease in 1928. Lei
Imports ...	33,428,546,982	32,145,101,188	1,283,445,794
Exports ...	37,703,177,742	26,919,256,503	10,783,921,179
Balance ... +	4,274,630,760	— 5,225,844,625	

These figures are given as provisional. In spite of the heavy deficit in the trade balance of the last year—the first serious set back since 1922—British exports to Roumania have continued to increase. In the absence of recent figures showing the articles imported and their country of origin (the last available are for 1925) it is impossible to detail the commodities in which an increase has taken place in imports from the United Kingdom, but it is believed that an improvement has been registered in machinery, motors, steel tubes for the oil industry, gramophones and records, comestibles, tyres and to a slight extent motor vehicles and other technical goods.

The financial situation of the country in 1928 rendered trade, especially on a credit basis, a matter of great difficulty. Even some sound and honest merchants find that their reserves do not suffice to tide them over the present crisis and it is rumoured that many of them will apply for prolongations of payment as they have been unable to dispose of their stocks of goods. Such postponements have already frequently been made. Roumanian trade generally is suffering at present from acute depression as a consequence of the reduced purchasing power of the population, and the incidence of taxation, import duties and rents. All these factors have constrained the importing firms to curtail their orders abroad. A sign of this depression is to be found in the increasing number of bills protested during the year 1928, especially towards the end of the year, while in the first quarter of 1929 trade conditions were even worse.

Should Roumania have an abundant harvest in 1929 the openings for British trade will assume a greater importance and it is for this reason that this country should not be neglected by British business circles. In any case the time has arrived when the competition for the Roumanian market will become more intense, and indeed, trade circles maintain that this is already the case, and it thus behoves British manufacturers who are already represented here, as well as those intending to do business in this country, to be very active in examining the possibilities of the market, not merely by making inquiries, but by personal visits to probe the situation on the spot.

There is no question that it would be of the greatest assistance in promoting British trade if the heads of

British houses were to visit this market at regular intervals, to find out its particular needs and to see what their foreign competitors are doing, to look after the business of sales personally and to establish personal relations with their clients. The agents, if not regularly visited, have no encouragement to look after the interests of their principals and are apt to devote their energies to the business of those competitors who make them understand that their efforts are being carefully watched.

In other words, British firms should not rest content with the mere fact that they have appointed an agent, but should co-operate with the latter in organising their sales, sending out circulars, price-lists, show cards and other advertising material (printed in French or German). They should get to know their customers and study the needs of the market and see what their foreign competitors sell, always watching, on the one hand for any new fashions and on the other for any possibilities of a change in the economic situation of the country. As regards quality, British firms compete successfully with both foreign and local products and they demand lower rates of interest, so that if they were willing to grant longer credit than their competitors the United Kingdom could undoubtedly secure a larger proportion of the import trade of this country.

When the business of a home firm is likely to extend to large proportions it may be advisable to set up a branch business or to form a Roumanian selling company, the head of which should be a man selected from the house in England. This branch or company would be able to carry such stocks in Roumania as circumstances might require. This method would eliminate the necessity of granting long credits to individual customers. The employment of an agent, branch, or selling company to represent several British firms producing similar categories of goods would have the advantage of reducing overhead expenses. For instance: selling agencies could with advantage be established for the following groups of manufactured goods: (1) Yarns—woollen, cotton, silk, artificial silk, jute, etc. (2) Textile piece-goods—woollen, cotton, etc. (3) Gramophones, records, radio, apparatus and spare parts. (4) Motor vehicles, oil motors, motor cycles, bicycles, tyres, inner tubes, sports goods, etc. (5) Colonial goods, spices, beverages and other foodstuffs. (6) Metals, sanitary goods and ironmongery, and so on.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows under date July 31:—

A feeling of uncertainty accompanied by lack of confidence is at the moment being fostered by the unsatisfactory industrial conditions, and the financial stringency which is just now giving rise to considerable anxiety. These factors unquestionably create a state of apathy on the part of the buyers, and determine them to continue their policy of buying only for definite requirements.

Currants.

Greek.—The conditions prevailing throughout the month, both as regards volume of trade and the prices ruling, show very little alteration. Slightly more business was transacted in the early days of the month in better qualities, but the lower and medium grades were neglected and offered at slight reductions in value. Sales comprise: Amalias, 44s. to 45s.; Zante (smalls), 45s.; Patras, 46s. to 47s.; Gulf, 48s. to 50s.; Vostizza, 48s. to 55s. S.S. Polo, Brescia, and Bosnia arrived with very small cargoes. Quotations:—Pyrgos, 44s.; Amalias and Patras, 44s. 6d. to 46s.; Gulf, 48s. to 50s.; Vostizza, 48s. to 55s. The Central Currant Office has fixed the retention of the 1929-1930 currant crop at 45 per cent., against last year's 50 per cent. The minimum buying price has also been arranged and there is a reduction in the export tax.

Sultanias.

Smyrna.—There is confirmation that we may expect a crop in the neighbourhood of 55,000 tons; at the same time we must not overlook the fact that the critical period of harvesting is still in front of us. Latest c.i.f. quotations for G.A.Q., September shipment, fail to attract buyers.

Figs.

Very little interest is displayed in new crop Genuines, and the few sales passing are without importance.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 31:—

Egyptian Futures.

Sakel Contract.—We have experienced a quiet week in this market and on balance very little alteration in the price level has taken place. The immediate effect of the breakdown in the negotiations between the operatives and masters and the resultant stoppage of the mills on Monday was to cause prices to fall back to the lowest of the week, liquidation by nervous holders and a limited amount of short selling depressing Novembers to 16.10d. At this point, end of the month trade calling began to come in and a better undertone developed; more recently further support from the above source, helped by the advancing tendency in the American markets, has caused a recovery to last week's closing rates. At the time of writing, the trade outlook remains uncertain; no official negotiations are in progress, but a feeling prevails that the stoppage will not be of long duration; in the meantime, business in actual cotton continues practically at a standstill, although there are signs that a sharp revival in the demand, perhaps only of a temporary character, will be experienced as soon as prospects of a settlement materialise. Alexandria has contributed few features of interest during the week, and price movements at the other side have approximated fairly closely to the movements in the local markets. Latterly, there has been slight evidence of our contract regaining some of the discount at which we have been running below the overseas market; the recent strength shown by the current position and the closing in of early new crop months are encouraging features to those holding the straddle, but further favourable developments appear contingent on a quick resumption of normal trade conditions. For the immediate future prices will probably remain around the ruling level, with any decided movement dependent on the course of the American markets.

Upper Contract.—Trading in this market has been on very narrow lines throughout the past week, and day to day movements have been mainly in sympathy with the fluctuations in the American departments. Competitive varieties continue to sell at a cheap basis, and, with crop reports from Egypt continuing as satisfactory as heretofore, sentiment is becoming increasingly "bearish." Last season the marketing of the crop was helped by the very large straddle operations then in progress against sales of American; this year, unless present conditions undergo a rapid change, early hedging operations are going to weigh heavily and may readily result in values narrowing-in further with shorter stapled cottons. Spot business throughout the week has been very restricted, and the contract has received little support from trade sources.

Egyptian Spot.

As the majority of the mills are now definitely closed, it is hardly surprising that business in this department has fallen away again. Nevertheless, the outlook is not altogether as black as it might be. A few mills are still running, and buying has by no means entirely ceased. It is generally felt that although negotiations so far have resulted in a deadlock, further pourparlers will soon take place and that the stoppage will be of short duration. Certain spinners are already looking ahead, and, although purchases so far have been limited for the most part to small lots, we look for a sharp improvement on the first sign of any easing of the present unfortunate crisis. There have been no signs of panic selling and the basis for desirable lots remains as firm as ever. Spot quotations are slightly advanced on the week.

Sakels.—At from 50 to 150 on contracts the market is a narrow one and staple lots are hard to find. Very little actual business has been reported. A limited inquiry for Good and above has been in evidence, but most of it has resulted in "averaging." The lower qualities have met with very little interest this week.

Uppers.—A moderate inquiry has been in evidence within a range of pass to 20 on, and, to a less degree, up to 50 on, but on the whole business in this growth has shown a very marked decrease.

Pilion.—Beyond a persistent inquiry at from 11d. to 12d., very little interest has been shown.

Nahda, Maarad, and White.—No business reported.

Sudan and Tokar.—Slightly more interest has been shown in lower grades of Tokar, and a very moderate amount of business has been done in Sudans. We look for a good trade in these cottons when the troubles up country have been settled. Very little business has taken place on c.i.f. terms. Forwarding to spinners last week were returned as 7,316 bales Egyptians and 699 bales Sudans. Estimated spot sales, 1,300 bales Egyptians and 180 bales Sudans. Quotations of Sakel show a rise of 10 points, Uppers 3 points, and Pilion 5 points on the week. F.G.F. Sakel to-day, 17.00d. F.G.F. Upper to-day, 11.60d. F.G.F. Pilion to-day, 12.70d.

M. Madgearu, Roumanian Minister of Commerce, last week tabled a Bill in the Chamber authorising the construction of a navigable canal to connect Bucharest with the Danube and the electrification of the railway between Bucharest and Brashov.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended July 25, state:—

Since our last report the futures market has maintained its activity but fluctuations have not been as irregular as during the previous week, and the tone, generally speaking, has been slightly weaker. The week's summary of price movements is as follows:—Sakellaris: November, 33.31 dollars, 0.05 dollars down; January, 33.65 dollars, 0.17 dollars down; March, 34.02 dollars, 0.15 dollars down. Ashmouni: August, 20.91 dollars, 0.20 dollars down; October, 21.37 dollars, 0.08 dollars down; December, 21.81 dollars, 0.06 dollars down; February, 22.25 dollars, 0.09 dollars down; April, 22.65 dollars, 0.09 dollars down; June, 23.05 dollars, 0.09 dollars down.

Sakel.—The week opened with excited sessions as a result of some short covering and heavy speculative buying falling on a rather narrow market. With the added supporting factor of the strength of American, November was forced up to a height of 34.25 dollars. The high levels induced some liquidation of purchases for profit taking, and when the American market showed signs of a reaction the tone of the market weakened, November falling away to approximately 33 dollars. At the close to-day a slight improvement in prices has been registered, but the tendency was undecided. During the whole of the past week trade interest in the market has been negligible; it is reported that straddle operators in Liverpool have sold November here against purchases of the corresponding month in Liverpool. Spinners remain completely without interest in new crop shipments. News from the interior regarding the progress of the crop offers little of interest. Apart from the slight delay which still exists, the state of the crop is about normal. We maintain our opinion that the future course of prices will be governed principally by the fluctuations of New York; we also look for a narrowing of the present difference between Sakel and Ashmouni.

At the Government sale by auction on Wednesday last, 1,210 bales Sakel were offered for sale, of which 481 bales found buyers.

The Sakel/Uppers straddle (November/October) this week stands at 1,194 points, against 1,191 points last week and 1,310 points at this time last year.

Against the third July tender, dockets for 6,750 kantars were issued, bringing the total since the beginning of the month up to 27,500 kantars.

Uppers.—This market has shown slightly more activity than usual, due to the fact that professional traders have been much more active. The demand from abroad has not been striking, and the small orders passed were for prompt shipment. Prospects regarding

THE LIVERPOOL COTTON EXCHANGE.

Liverpool Cotton Association

LIVERPOOL

The Greatest Spot Cotton Market in the World

MEMBERS OF THIS ASSOCIATION
OFFER FACILITIES FOR THE SALE,
PURCHASE AND FINANCE OF
EVERY GROWTH OF COTTON.

The World follows Liverpool Cotton Quotations daily.

GROWERS AND SHIPPERS SHOULD
SEND THEIR COTTON TO LIVERPOOL.

All information may be obtained from the Secretary

prices remain unchanged; fluctuations will probably be governed by those of the New York market.

At the Government sale by auction on Friday last, 1,204 bales Ashmouni were offered for sale, of which 928 bales found buyers.

The Ashmouni/American straddle (October/October) this week stands at 265 points, against 250 points last week and 588 points at this time last year.

The week's receipts amount to 3 kantars, against exports 92,143 kantars; the stock in Alexandria stands at 1,677,202 kantars.

Spot.—The Minet el Bassal market has been very uninteresting during the past week, and very little buying interest was shown. Our estimate of business done is Sakellaridis 1,200 bales, Ashmouni and Zagora 2,250 bales, Pilion 250 bales, White and other varieties 120 bales, making a total of about 3,820 bales.

Sakellaridis.—Business has been confined chiefly to the grades Strict Fully Good Fair and Fully Good Fair/Good, without any appreciable change in premiums from last week.

Pilion.—Continues in moderate demand and any decent staple cotton round about Fully Good Fair/Good finds a ready market. Premiums are unchanged.

Other Varieties.—The bulk of the little business which has been done has been in White, grading Fully Good Fair and Fully Good Fair/Good.

Crop, 1929.—During the past week we have had some rather cool nights. The slight delay mentioned in our report last week still exists. In certain districts of Lower Egypt, bolls have been attacked by the pink boll worm, Zagora and Nahda plantations particularly, but the proportion of the bolls attacked does not, on the average, exceed 5 per cent. Reports from Upper Egypt are, in general, satisfactory. The supply of water continues to be abundant.

BULGARIAN PRE-WAR LOANS.

The announcement is forthcoming that in accordance with the Law June 12, 1929, published in the Bulgarian *Official Journal* of June 26, 1929, all discrimination between holders of bonds of any of the following Bulgarian Government loans will cease in respect of all payments becoming due thereon after June 26, 1929:—Six per Cent. External Loan of 1892, Five per Cent. External Loans of 1896, 1902, and 1904, and Four-and-a-Half per Cent. External Loans of 1907 and 1909. Holders of any bonds of these loans drawn for repayment or coupons due after June 26, 1929, will accordingly be treated as though their bonds fall within the scope of the agreement of December 11, 1926, concluded between the Bulgarian Government and representatives of the British, French, and Dutch bondholders, and their bonds and coupons will be payable at the percentages stipulated by that agreement, irrespective of whether the coupons attached to the bonds are "barred" or not. It is not the intention of the Bulgarian Government at present to replace coupon sheets of "barred" coupons. Drawn bonds and coupons due prior to June 26, 1929, will continue to be paid as heretofore. Any holder of a bond already furnished with a barred coupon sheet, or in respect of which a barred coupon sheet for arrears would be furnished if the talon were presented for the purpose, who is desirous of appealing to the Bulgarian Government with a view to receiving payment of arrears due to him (whether in respect of interest or of drawn bonds) in some currency more appreciated than is provided for by existing arrangements, must lodge such appeal so as to reach the Direction de la Dette Publique, Sofia, on or before September 25, 1929. Appeals must be accompanied by documents proving the nationality of the holder and that he has held the bonds since before July 8, 1922.

Notes of the Week.

The Jewish Agency Extended.

The Zionists in Congress at Zürich last week took the fateful step of enlarging the Jewish Agency, upon which in future non-Zionists will be on an equality with Zionists. This momentous decision, however, was a foregone conclusion, and provision had been made before the Congress for the first gathering of the Enlarged Agency immediately after it. For almost all Zionists, with the exception of the Revisionists, who stoutly maintained their opposition to co-operation with non-Zionists in the political, as distinct from the economic, sphere, had convinced themselves that the establishment of a Jewish National Home in Palestine was simply impracticable without the financial assistance of non-Zionist Jewry. That is the real explanation of this step. It is said that the Zionists needed the moral support of their Jewish brethren who had not yet seen that Palestine should be the focal point of Jewish endeavour, that the "National Home" was no longer merely a Zionist affair, but a Jewish affair; and so on. But the real factor was the financial one. Existing funds for the colonisation of Palestine were short; nor was there any prospect of their being adequately increased without going outside the bounds of the Zionists. As Dr. Weizmann said in his opening address before the Sixteenth Congress: "In the struggle for the idea we (Zionists) could stand alone, whatever our numbers were; but in the struggle for the realisation, which is subject to definite human laws and needs specific technical facilities, we require as allies the whole of Jewry." This Congress was, indeed, a vindication of the conduct and of the plans of the leader of the Zionist Organisation and of his immediate colleagues. Dr. Weizmann spoke wisely, with moderation, and with convincing sincerity. Especially was his ability noticeable in dealing with those critics who fain would have accused the Zionist Organisation of pusillanimity towards the Mandatory Government for Palestine. Whether his judgment upon the probable future will be as justified as has been his conduct in the past it is difficult indeed to

estimate. The leader of the Zionist Organisation firmly believes that by means of the Enlarged Jewish Agency there will be seen a great number of Jewish converts to Zionism. He was, perhaps, bound to say some such thing, as moral justification of the pact with Mr. Louis Marshall; and it may be that on closer examination of what has actually been accomplished in Palestine some of those Jews who have always, and especially since the Balfour Declaration, shunned the Jewish Nationalist ideal, will go over to the Zionist camp. It seems to us, however, scarcely probable that the Zionist ideal will gain very considerable numerical support, even though the attempt to realise the Zionist idea in Palestine is to be fortified. It cannot be said that the world of Jewry is enamoured of the Jewish Nationalist concept. But since this problem is one that would lead us far away from the sphere of Palestine, we cannot deal with it here: there are human and super-national elements in it which far transcend the limits of these Notes.

The Wailing Wall.

It was inevitable that the matter of the *Kotel Maaravi* (Wailing Wall) should have been raised at this Zionist Congress, and, fortunately, the real attitude of Zionists was clearly discernible through the storm of indignation to which deputies gave vent. In the opinion of the Zionist Executive, said Mr. Harry Sacher, who, however bitterly he may be assailed by certain sections of Jews, was at least speaking the mind of Zionists on this point, the problem is governed by the Mandate for Palestine. He added that the doctrine of the *status quo* hitherto adopted by the Government as a basis of its policy was not warranted by the Mandate, and that Jewish rights under the Mandate were more complete and extensive than those embraced within the principles of the *status quo*. Here, then, we have a definite claim—and it is gratifying to have on record so precise an expression of the Jewish point of view—to what unfortunately are rather indefinite rights. The Mandate, with its implication of the establishment of a "National Home" for the Jews, transcends, they say, the policy of the *status quo*. The argument

sounds feasible, and undoubtedly is sincerely held by many Jews. But how they get over the words contained in the first few lines of the text of the Palestine Mandate—"it being clearly understood that nothing should be done which might prejudice the civil and religious rights of existing non-Jewish communities in Palestine"—it would be interesting to discover. In so far as the phrase quoted can be held to imply a precise policy, that policy must, it seems to us, be one of preserving the *status quo*. Depart from that, and where is one? In an atmosphere of religious privilege, wholly alien to British administration. The Palestine Government having decided that the conduct of Jews on the last Day of Atonement infringed the *status quo*, that is, in this instance, the rights of non-Jewish communities, how can the Mandate be quoted against it for acting as it did? It may sometimes be wondered, indeed, whether the propaganda department of the Zionist Organisation is not a little sorry that so much was made of this historic incident, for it can scarcely be doubted that the steps taken later by Muslims, to which the Jews have strenuously objected, would not have been indulged in had there not been made this comprehensive claim to what in effect would be preferential treatment disturbing the *status quo*. In any case, the end of this most unfortunate and deplorable affair is not yet in sight.

Plots in Turkey.

One of the most notable of the less desirable features of the Turkish Revolution has been the tendency to discover plots in every quarter. Presumably it is founded in official fear; certainly it is reflected in the faithful Press of the country. The too common course of this process appears to be: a plot is reported—is it a plot?—it is a plot!—the accused are innocent! So nonsensical a sequence can surely not endure much longer. But these plot-mongers will certainly not be dissuaded from indulging their fancies by the speech which Mustapha Kemal Pasha made on August 7 at Eshi-shekir, the town in which the Court of Appeal sits. Whether there have recently been too many acquittals, or whether there is a nice little crop of trials pending, we do not know, but the President of the Republic minced no words. The Turkish nation, he said, would not tolerate acts tending to undermine the social order, and those who attempted to turn it aside from the straight course would be destroyed, by the peasants, workers, and "heroic army," working in unison. This, presumably, was the note which keeps up the people's spirits. But less obvious and less rhetorical remarks were to follow. For, turning to the members of the Court of Appeal, the Ghazi said: "To you the country

has entrusted the execution of its laws. On the laws depend the people's rights and interests. Take note of my words and keep them well in mind." These words, uttered by the apostle of Europeanisation in Turkey, may will become historic. Did they refer to past or to future events, to counter-revolutionary or to Communistic rebels? Either the Courts have mishandled some cases recently, or they have, very plainly, to enact severe punishment in the future. However interpreted, it was an ominous remark. For from the outsider's point of view, few things have been so surprising, so gratifying, as the apparent independence of the Courts, which have often acquitted persons whom Angora and the Turkish Press painted in the blackest colours. The Ghazi doubtless knows better than anyone the difficulties in Turkey, but in most countries in Europe such counsel as he offered to the Court of Appeal would be counted but interference. It will be highly illuminating to observe the effect produced on the Turkish Judicature by this dark *caveat*.

Egypt's Problem.

The unexpected success of Mahmoud Pasha in returning to Egypt with proposals for an Anglo-Egyptian agreement that go much farther in the direction of meeting Egyptian aspirations than any responsible person in the country could have anticipated has placed the Wafd in a quandary. To reject a treaty on the lines suggested would mean political suicide for the Wafd; yet to acknowledge it as a triumph for Egypt entails endorsement of Mahmoud Pasha's régime. Apparently, therefore, the attempt is to be made to discredit the present Prime Minister, in the hope that the Wafd may ride into power again on the wave of enthusiasm that will accompany the ratification of the Treaty. Whether Egypt will lend itself to these unworthy political tactics remains to be seen. The matter is entirely her own concern, and not one in which Great Britain can intervene. There should, however, be no doubt in any Egyptian mind that the mere suggestion of the elimination of the present Government in favour of a return to a Wafdist régime will be liable to compromise Egypt seriously in the opinion of those countries which have to agree to the abrogation of the Capitulations. Constitutionalism may be a fetish with some people, but its value is seriously diminished, if it has to go hand in hand with the political *gaucherie* that has hitherto been associated with the Wafd. Foreign Powers, with the experience of the last year in Egypt before them, will, it is hoped, allow themselves to be persuaded to accept the abolition of the Capitulations in the belief that Egypt has learnt the value of honest and efficient government. If the country is to revert at once to a parliamentary régime based on universal suffrage, the danger is that there will be an immediate end to effective administration and the rulers of Egypt will be once more the students and mobs that shout back the Wafd's *mots d'ordre*. It cannot, therefore, be too strongly impressed upon Egyptians that those, of whatever country, who consider that the British Government has gone too far in meeting Egyptian aspirations will desire nothing better than to see the Wafd in power once more in time to serve as a warning to the foreign Governments who will be asked to agree to the abolition of the Capitulations.

Serbo-Bulgarian Tension.

Those observers of the Balkan problem who believe that the first step in the establishment of a Balkan Federation is a *rapprochement* between Yugoslavia and Bulgaria are having at the present time to possess their souls in indefinite patience. For the truth is that no sign is discernible that the responsible authorities either in Belgrade or Sofia are disposed to yield or even to attempt to compromise. Yugoslavia in effect harps upon the inviolability of the Peace Treaties, Bulgaria upon the injustice done to Macedonia (which problem, however, should not be confused with the most recent fuss caused over the binational pro-

THE EGYPTIAN "PROPOSALS."

In approaching the subject of the proposals for an Anglo-Egyptian settlement and of the Notes that have been exchanged between the British Secretary of State for Foreign Affairs and the Egyptian Prime Minister, it is essential to bear in mind that for ten years the position as between Egypt and Great Britain has been unsatisfactory, when it has not been actually dangerous, and at all times anomalous. Neither party regarded the present state of Anglo-Egyptian relations as permanent, and various attempts have been made to improve upon it. The Declaration of 1922 was issued in a hurry by the British Government of the day; its intentions were good, but its tactics lamentable, for Great Britain said in effect to Egypt: "We give you what you are asking for, but we count upon your meeting our wishes in certain matters on which we set great store." The Egyptian reply was to take what was offered on the ground that it was Egypt's by right, and to refuse to make any *quid pro quo* to Great Britain. The solution of Egypt's problem, however, proved not to be as simple as the Nationalists imagined. Circumstances beyond their control, with which they had not reckoned, lent both force and justice to the contention that Great Britain's position had also to be taken into consideration; but the Wafd refused to be convinced and continued to kick against the pricks. Two years ago the more reasonable element in Egypt, in the person of Sarwat Pasha, hoping that the Wafd at last appreciated the intolerable nature of the deadlock that it had produced, explored the ground for an understanding with Great Britain which would round off the Declaration of 1922. The resultant draft treaty negotiated with Sir Austen Chamberlain was rejected by the Wafd, also in a hurry; but Egypt soon discovered, mainly owing to Lord Lloyd's insistence upon the facts of the case, that the complacent assumption that it could make full use of the independence offered conditionally in 1922 without accepting the conditions would not hold water. In due time the reasonable element in Egypt considered itself strong enough to challenge the authority of the Wafd, and the Government of Mahmoud Pasha was the result. Believing that, after a year of office, it had done something to remove from Egypt the reproach of being an irresponsible, mob-governed country, devoid of all political ability, this Government turned to Great Britain to see whether the time was ripe for a cautious and piecemeal settlement of the Anglo-Egyptian question. It found a Government in Great Britain anxious to meet it more than half-way, and the tentative overtures for a gradual adjustment of Anglo-Egyptian relations became negotiations for a Treaty of alliance and a full settlement of all outstanding questions.

However much opinions regarding the details of such a settlement may vary, there can be no doubt that the generous meeting of Egyptian aspirations by Great Britain is wholly in keeping with British traditions and with the liberal spirit that in recent generations has characterised British dealings with other peoples. Egypt has never been part of the British Empire; it has occupied an important, albeit anomalous, position in the

British Imperial scheme; but both from the nature of the original act of occupation and from the whole character of that occupation, apart from repeated promises (that its purpose was to enable Egypt one day to be governed by Egyptians, it is a just and normal development that every effort should be made to place the relations between the two countries on a footing that meets Egyptian claims without weakening the security of the British Empire. The tension that has existed in the past has been creditable neither to Great Britain nor to Egypt; for mistakes have been made on both sides. It is, therefore, from the point of view that strained relations between the two countries should be removed as soon as possible in the interests of both that the new proposals have to be examined. Whatever justification, on the strength of past services or on other grounds, can be urged on behalf of Great Britain's position in Egypt, the fact remains that, if that position is not voluntarily accepted by the Egyptians, it must rely ultimately on force—a factor that has lost much of the moral weight that it formerly carried. If, therefore, a modification of that position sacrificing no vital British interest can be devised, which has the whole-hearted approval of Egyptians, Great Britain will have established a further claim to the moral leadership of the world.

For most of the opposition that has been raised in Great Britain and elsewhere against the new proposals for an Anglo-Egyptian settlement Egypt herself—or, more strictly speaking, the Wafd—is responsible. The record of that disastrous organisation, when in power, has left in the minds of most foreign nations the impression of a people wholly irresponsible, unprogressive, lacking in political instinct and relying only on assassination to gain its ends. Little wonder, from this point of view, that any relaxation of the special privileges enjoyed in the country by foreign interests should be regarded with violent misgiving. The future, however, must be allowed to show whether the Wafd, as it has shown itself in the past, is Egypt, and Egypt still the Wafd. If the present leaders could still have their own way, they would, no doubt, summarily reject the new proposals for an Anglo-Egyptian settlement. It is difficult, however, to believe that the Egyptians, having been freed for a whole year from the political terrorism of the Wafd, will fail to appreciate the advantages that the proposals, shortly to be submitted to their judgment, hold out for Egypt. There remains the question whether the proposed settlement can count upon the support of the British Parliament and of foreign Governments, who are expected to follow Great Britain's lead in transferring the jurisdiction of their Consular Courts to the Mixed Tribunals. That the surrender of valuable privileges enjoyed hitherto by foreigners in Egypt, including a wide freedom from taxation, will not be popular goes without saying; but it is not on this aspect of the question that the settlement can be challenged. In so far as fears for the security of Britain's Imperial communications and for the safety of foreigners in Egypt are concerned, it may be pointed out that no other people will have been required to give so many hostages for their good behaviour as the Egyptians. There seems to be no valid reason why the Suez Canal should be less safe with British troops stationed on it than when they were in barracks in Cairo. Again the Egyptians will realise that, in the event of a fresh outbreak of political murder or of any gross violation of the spirit of the agreement, their newly won independence would be in grave danger of being forfeited—and then for all time. Unless, therefore, Egypt shows unmistakably that she wishes still to be identified with the political mentality of the Wafd, there should be no grounds for supposing that the new confidence inspired in the country by the Government of Mahmoud Pasha, which has rendered the "Proposals" possible as a normal and legitimate development of the efforts to place Anglo-Egyptian relations on a permanently satisfactory footing, will not be found to be fully justified by the event.

*The Near and Middle East

From Our Own Correspondents.

Alexandria, August 2.

Forecasts of the Treaty.

At the beginning of this week the local Press published several different versions of a Draft Treaty between England and Egypt. As the basis of each version was materially the same, it would appear that something has leaked out in London.

Some of the London papers have recently discussed Anglo-Egyptian matters in a manner which testifies to their complete ignorance of the facts. For a responsible newspaper seriously to discuss the possibility of Great Britain's abandoning her Capitulatory rights without waiting for other European Powers to agree to follow suit is ridiculous. Nothing that has been published in any of the versions of the Draft Treaty has even hinted that Britain is contemplating such a step, and it can be stated definitely that no British Government would ever do anything of the kind. The published versions of the Treaty, on the surface, make the position of Britons in Egypt difficult enough, but such a step would imply the end of all British interests in Egypt, and would leave the door open for other European Powers who might be very quick to seize the opportunity.

Egypt's Representatives.

The Wafd are still making desperate efforts to convince both Egypt and Great Britain that Mohamed Mahmoud Pasha is a dictator of the most ruthless kind, and that he does not in any way represent the Egyptian public. These two points may be partly true, but for the Wafd to suggest that they represent Egypt is also untrue. Of the two parties the Mahmoud group has the best interests of the country at heart and has an extremely good record of public services accomplished, while the Wafd are seemingly out for their own ends, and the less said about their record the better. A fact which British politicians would do well to remember when discussing the Egyptian question is, that in the last census taken in Egypt, in 1927, the proportion of literates in Cairo, the capital of Egypt and the seat of the Government Departments, was three per cent. The proportion over the whole country is probably even smaller. The greater majority of Egyptians, therefore, are entirely at the mercy of an unscrupulous persons, who, by merely giving them a false impression of current events, can lead them into any mischief. Students, and especially young men from Al Azhar, gather small crowds about them and read

extracts from the papers, and entirely on what type of newspaper is used depend the feelings of the country in general. Thus it is permissible to state that a very large proportion of the uneducated Egyptians believe, through *Al Balagh*, the Wafdist organ, that William Makram Obeid dismissed Lord Lloyd! The Wafd has an immense hold over a large part of the country, for the lower classes are very slow to change their views, and the Wafd propaganda has recently been more intensive than ever. The upper classes, to a certain extent, support the present Government, but there is not the slightest doubt that at a General Election, the Wafd would be returned to power with a large majority. The good impression created by Mahmoud Pasha in London, and his excellent work for Egypt, are being nullified here by clever distortions and mis-statements of fact by the Wafdist. Were even half the politicians in Egypt of the sincerity and disinterestedness of their Prime Minister, the time for such a Treaty as is being discussed would be ripe, but generally such ideals as public or national service merely for the good of the country are totally non-existent.

International Quarantine Board.

A very interesting film was shown this morning to a private audience, depicting the work carried out by the International Quarantine Board at their station at El Tor. Every year thousands of pilgrims from Egypt go to the Hijaz, where they mingle with other pilgrims from the Far East in which cholera is endemic. Were it not for a very thorough quarantine service it would be almost impossible to prevent infection from being brought into Egypt. As it is, however, every pilgrim returning from the Hijaz must disembark at Tor, where he is put through a very thorough disinfection, both himself and his belongings, followed by a short period in quarantine. The most modern methods are used, and the pilgrims are treated with great kindness, so that their period of quarantine is almost pleasant.

The business of transporting Egyptian pilgrims to and from the Hijaz has up till the present been carried out by private enterprise, but a decision was recently taken by the Council of Ministers, investing the Banque Misr Navigation Company with the sole rights of this business. It is understood that the Banque Misr are in negotiation with an English firm which will supply the ships and the

GREECE.

Athens, July 25.

The Growth of Athens.

Great interest is being aroused at the moment in the forthcoming municipal elections. The outstanding candidates for the office of Mayor of Athens are MM. Patses and Christomanos. The former has held the office, on and off, since 1919, and has a fine record of substantial work to his credit. When the enormous increase in the size and population of Athens and the political vicissitudes during that period are taken into account, the amount of work accomplished in the face of exceptional difficulties is striking. Among the improvements may be mentioned the increase of the water supply (apart from the Ulen scheme), construction of drains to conduct the sewage water (formerly used to water the market gardens), into the sea, covering of numerous open water channels, which had long been a menace to the health of the population, increase of asphalted streets from 150,000

to 700,000 square metres in extent, provision of sanitary slaughter houses, beautifying of the neglected squares, and introduction of systematic irrigation of the streets. It is gratifying to know that the hitherto haphazard growth of the city is being controlled, and that the importance of regulating its expansion in conformity with a town-planning scheme is realised.

Visitors and Archæology.

Official statistics show that during 1928 45,000 foreigners visited Greece; this figure includes 15,000 members of "cruises," who are brought by large steamers and stay at most two days. The total number is an increase of about 10,000 on the average totals for 1925-1927, and the amount of money brought into the country is estimated at £350,000, as compared with an average of £250,000 for those years. A large proportion of these visitors are, naturally, American, whose numbers are likely to be increased now that it is known that the Agora excavations will begin in December. The Director of the excavations is Dr. Shear, already well known for his work at Corinth. In connexion with archæology, a Greek archæologist, M. Kyparisses, has discovered a series of Mycenæan tholos-tombs at a place called Pikermi, twenty-one kilometres from Athens on the Marathon road.

Leprosy.

The disease of leprosy has long been known in Greece, and institutions for the isolation of lepers, notably Spinalonga, in Crete, exist. Almost a scare, however, has recently been created by the revelation, based on systematic search, that there are no less than 3,000 lepers at large in various parts of the country, mostly in the islands. One of the reasons given why afflicted persons do not present themselves for treatment at the Pasteur Institute is fear of being sent to Spinalonga, which has an evil reputation. In connexion with combating disease, instruction by means of the film on the subject of malaria and its prevention is now being given in many places, and has met with success. All this goes to show that a serious effort is being made to cope with this scourge, and it had been hoped that M. Christomanos would remain in his post in the Ministry of Health, for which he is so eminently qualified. As these lines were being written, however, the announcement has appeared that he has submitted his resignation.

General Pangalos.

General Pangalos has at last been released from the preventive imprisonment, in which he has been, on and off, for three years, eight months of which in solitary confinement—a worse punishment, as he himself said, than execution. This is intelligible, since for a Greek, conversation is his principal, and often his only, recreation. Nor was this the worst part of his imprisonment. Presumably, in order to reduce his spirit still further, he was constantly being transferred from the Cretan prison to Athens and back again in the roughest weather in the most uncomfortable craft—a destroyer. The Cretan sea is notoriously choppy and the ex-dictator is a notoriously bad sailor, unlike M. Venizelos, who enjoys rough seas. Returning from Crete a few days ago he travelled on the destroyer Panther. The sea was running mountains, and the captain wished to take shelter at Melos. The Prime Minister, however, preferred to go on, and while his colleagues lay prostrate around him, sat quietly in the cabin reading a French novel and eating water-melon.

General News.

The interminable period during which arrested persons are kept in prison pending their trial is, in fact, a real evil in this country, and the hunger-strikers of Missolonghi will not have starved themselves in vain, if their action serves to draw attention to it. About two months ago, as a result of Communist rioting among the tobacco workers of Agrinion, fifteen of the ring-leaders were arrested, and, later, were transferred to the prison at

Missolonghi. After fifty days' imprisonment they were still untried. They threatened a hunger-strike if they were not released by a certain day. The day arrived, and the strike began. After eleven days' fasting they have been released.

The death at Skyros a few days ago of M. Cheimonas has removed one of the best-known Greek landscape painters. Though not possessed of striking originality, M. Cheimonas interpreted Greek scenery with skill and fidelity. He had recently held a successful exhibition in London.

CYPRUS.

Nicosia, July 31.

Sir Ronald Storrs.

The Governor arrived on July 18, and proceeded to Mt. Troodos. He was received with the usual honours. He appeared to be in good health. It is expected that Lady Storrs will return to Cyprus shortly.

The Deputation to London.

Greek members of the Legislative Council met at Larnaca on July 20 and signed the memorial which is to be presented to the Secretary of State for the Colonies. On July 23 they met again at the village of Pedoula, near Mt. Troodos, where it was decided that the document should not be submitted through the local Government, but the two Greek members, the Bishop of Kition and M. Stavrinaki. It was also decided that the members should pay their own travelling and personal expenses. As regards other costs which it is calculated should amount to about £600, it was agreed that an appeal should be made by letter to H.E. the Greek Archbishop, to convene the Holy Synod with a view to arranging that this sum should be contributed, by apportionment, by the different ecclesiastical bodies of the Church in the island. Mr. Zeno Rossides, an advocate of Limassol, will act as Secretary, having offered his services on the same terms as the two members.

The Trade Commissioner.

Major Flinn, Trade Commissioner in London, who has been for some time unwell, and has been granted sick leave from May 1, is still unable to resume his duties. Mr. W. Bevan, his predecessor (formerly Director of Agriculture in Cyprus) has been appointed to take his place temporarily from July 15. The Greek continues to regard the office as quite superfluous and considers that Cyprus derives no benefit from its existence.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 25.

Hysteria.

Two men, Bhagat Singh and Dutt their names, for throwing two bombs in the Assembly Chamber, and firing pistols, though the actual damage, apart from putting an end to the Assembly's business for that day, was happily not attended with serious consequences, were sentenced to transportation for life. In a year, or two or three, their names will be quite forgotten. Immediately the hysteria of India has fastened upon their names. One may open one's newspaper, and read such as this: "Lahore, July 21. Bhagat Singh-Dutt Day, which was celebrated here this evening, did not pass off peacefully as anticipated." It was expected that it would pass off peacefully? Why that? Because it was known that nothing but hysteria could have any use for a Bhagat Singh-Dutt Day. The huge majority of the people of India is totally uninterested. The Day did not pass off peacefully, or at least its celebration. The reason is that there proved to be more hysterical fools in Lahore than were known. This is the sample of Lahore's hysteria. A public meeting was held, attended by nearly 10,000 persons, including numerous women. The women would be the most hysterical.

Hysteria in Paradise.

Resolutions were passed congratulating Bhagat Singh and Dutt and condemning the Government attitude towards their demands. The President introduced to the audience the father of Bhagat Singh and a brother of Dutt. They were greeted with shouts of "Long live Bhagat Singh," "Long live Dutt." My newspaper adds "respectively," for the Indian reporter thought we might not be sure which of the two had been greeted with the shout of "Long live Bhagat Singh," or he wanted there to be no doubt how much English he knows. But to get on with the sample of hysteria in paradise. Dr. Parashutam, the report says, said that Bhagat Singh and Dutt could be compared to the *rishis* of ancient India. That is the stock praise. It is egregiously silly; for the *rishis* in their minds and souls were the farthest removed of all the people that ever have been on earth from thinking like Bhagat Singh and Dutt. Suppose that I, having turned red-hot Communist, exploded a bomb in the House of Commons, and that a Trafalgar Square speaker said that for that act I might be compared with St. Peter and St. Paul. You would stare with amazement at so outrageously silly a comparison. The comparison of Bhagat Singh and Dutt to the ancient *rishis* is no whit less outrageously silly.

Hysteria Screwed Up.

When ten thousand hysterical fools have been packed in a room for an hour, you will expect hysteria to have screwed itself up a peg or two. A later speaker, Dr. Mohammad Alam, is reported to have said that he "thought the day would come when statues of Bhagat Singh and Dutt (the names will be completely forgotten in a year or two) would be erected in all cities in India (it is safe to say that not a single statue will be erected—they cost money—in a single city) and the story of their sacrifice be written in letters of gold." That reminds me of an old story. When the partition of Bengal was effected in Curzon's day, the hysteria of Bengal rose to fever point. Men marched in slow procession, as mourning, beating hand against hand, saying "Bande mātaram" solemnly. They somehow looked supremely foolish, and one laughed, if a procession passed near one's windows. Once the processions all converged on an unbuilt-on site. There they laid the foundation stone of a Federation Hall. In it sundered Bengal was to meet once a year for ever, and cement its true, though divided, love. The next day

the owner of the site said: "That's my land—take that infernal stone away." "But you will give the site," they said to him, "to the Motherland." "I'll do no such thing," he replied; "I'm going to build a house on it to live in myself." All this was in the newspapers. None of the leaders thought they had made fools of themselves: they thought they were showing their fitness to organise government. That is the point.

Hysteria in its Dotage.

Still later in such a meeting hysteria will fall dotty. Mr. Swaroop, it is reported, moved a resolution characterising the cries "Long live Revolution" and "Down with Imperialism" as innocent (the reporter knew this time not to add "respectively"). They were, he said, prevalent all over the world. Maulana Abdul Qadir said there was nothing objectionable in these cries. Why then bother to talk about them? The resolution was carried. The ten thousand fools then felt as pleased as if they had forged a thunderbolt to hurl at the Government, and saw it before them, red-hot on the anvil. When they woke the next morning, and read the report of their inane proceedings in their newspapers, they felt the cockles of their hearts all warm. They had no more a suspicion that they had behaved like silly geese than the Bengal politicians of 1905 saw that they had done that over the stone and the man's land. Political India has very little sense and no humour, and less irony.

The Moral.

The moral is that, as many Englishmen live and work in India—I do, for one—and as we do not want our throats cut, or bread poisoned, it is legitimate of us to tell the Fenner Brockways and the other hot-hearts that, much as we may sympathise with the desire of such as Lord Sinha that the few really capable Indians should be given more responsible work and hold more honoured positions in their own country, we cannot have a large measure of political power conferred on the mass of Indians. They must not proceed, in their thinking about India, from "the faith that is in us," as Montagu and Chelmsford did. Why should we proceed from the faith that is *not* in us, when we *know*? What we know is that the mass of the Indians is ignorant in politics and totally uninterested (crowds of them are schoolboys and undergraduates). We refuse to have ourselves placed in their power.

Platitudes.

One could write on Indian politics platitudinously. I try not to. The speaking or writing of platitudes changes nothing. The platitudes of Dr. Johnson's "Rambles" cannot have changed anything. The salt of Dean Swift's "Tale of a Tub" and "Gulliver" may have changed nothing either; but if something were to change things, it would not be Johnson's platitudes but Swift's salt. The new Under-Secretary of State for India has been talking platitudes. They will not help us. He says that the concentration of some of the best brains in India on purely political issues has resulted in a great deal of necessary and urgent work of a social and economic kind being left undone. Take the social work first. Work, such as Dr. Shiels was thinking of, can do nothing. Many social workers are at work. They effect so little that it cannot be counted. Take the hospitals for instance; take rather all the medical work being done throughout India. The volume of it is so small, that compared with the lives lost this year, in one province alone, the United Provinces, from smallpox, cholera, malaria, the number of lives saved by the doctors throughout India is not worth counting. Here in Bengal we have tuberculosis too. Unless something is changed radically, the whole of Bengal, a more and more ill-nourished people, will soon be tuberculous. The change must come from what has soul-making power. Only one thing has—literature. India must wait for a great, new, living literature.

Economic Work.

Things are more hopeful in the economic sphere, because things that it pays to do, do pay. If the Indians themselves will celebrate Bhagat Singh-Dutt Days instead of gathering the riches of their little "tilled" country, let Dr. Shiels send out Englishmen. They would cost India more in that the said Englishmen would send and take Indian wealth out of the country; but that wealth—what they sent and took out of the country on retiring—and more wealth—what they and others consumed in India—they would have themselves created. Politicians may cry, "Bengal for the Bengalis." Politicians do so cry. Nature cares not a straw what those call themselves who "till" Bengal. She will yield her wealth to any.

BURMA AS A MISSION FIELD.

The World Dominion Survey Series is a series of books the object of which is to present a brief and clear description of the situation in various countries as viewed from the Christian standpoint. The most recently published volume of the series is styled "Christian Progress in Burma," and the author, Mr. Alexander McLeish, gives a detailed and interesting account of the present position of Christianity in that pictureque province of British India. Burma is much the largest of the Indian provinces. It is not densely populated, but it is a land of many races—Burmese, Karens, Shans, Indians, Chinese, Europeans and others. The total population, according to the 1921 census, is rather less than 13½ millions. Of this total the Burmese constitute the largest group, numbering as they do upwards of 9 millions. The Karens form the next largest single group of about 1½ millions. Then come the Shans, Chins, Kachins and others. The Indians are mostly immigrants, and they come chiefly from Madras. They number nearly a million. There are about 150,000 Chinese and between eight and nine thousand Europeans, with about twice that number of Anglo-Indians. There are various religions in Burma, but Buddhism is overwhelmingly predominant. Close upon 85 per cent. of the total population are Buddhists, while no other faith can boast of even 5 per cent. A missionary census was completed as recently as 1926, when it was ascertained that the indigenous Christians in the province numbered 274,105. Of these 192,027 were Protestants and 82,078 Roman Catholics. It follows that the proportion of Christians in the population is roughly one to 49, or say, about 2 per cent.

These results do not suggest that Christianity is making great headway in Burma. But on close examination they are not so discouraging as they may at first sight be thought to be. It must be remembered also that the number of workers is very small while the field of work is of great extent. The total Protestant missionary force is only about 3,889, of whom 351 are Europeans or Americans, the others being native workers. The area of Burma is, it may be noted, 233,707 square miles. The author of "Christian Progress in Burma" is surely justified in claiming that such a force is hopelessly and ridiculously inadequate for a population of more than 13 millions spread over so extensive an area. And the inadequacy becomes the more apparent when the peculiar difficulties of the task are considered. Christianity has been eagerly accepted by one of the races of Burma, namely, the Karens. But "there is," we are told, "practically a deadlock with regard to the Burmans except on the educational side." Among the 1½ million Karens there are to-day 142,000 Protestant Christians as against 9,000 Christians among the 9 millions of Burmese and Talaiings. This remarkable difference has really tended to increase the difficulties. For, as Mr. McLeish points out, "missionary advance follows the line of greatest response on the part of the people." The Karens are a collection of Indo-Chinese tribes who are believed to

have entered Burma from the direction of South-West China in pre-historic times. They are found down the whole of the eastern border of Lower Burma from Toun-goo to Mergui in the delta of the Irrawaddy and in the Pegu Yoma. They are an important section of the community all over the Lower Province except in the Arabian Division, in Rangoon, and in the districts of Prome and Thayetmyo. Their original religion was spirit worship, and many of them still hold to this faith while some have embraced Buddhism. They readily accept Christianity, and the Missions have responded to their needs. The result is that about 150 of the total missionary staff, and about 2,000 of the indigenous workers are engaged among the Karens.

There are about two millions of Shans, Chins, Kachins and other minor races. As regards these people missionary work is still in the initial stage. Nevertheless there are already as many as 12,500 Christians among them, and the outlook is encouraging. It is the Buddhist Burmese, the most numerous of the people of Burma, who constitute the greatest of the problems confronting missionary effort in that land. There is no attempt in "Christian Progress in Burma" to minimise the difficulties. The workers are far too few, but even given an adequate force the task would still be heavy. "Buddhists are strongly fortified with their literature, their established customs and strong prejudices in addition to the material enrichment their religion has had for many centuries. Buddhists have also always had their monastic schools for boys. They have taught the lads their religious liturgy and have trained them into grooves of living laid down by Gautama Buddha which have emphasised great self-denial though no real self-sacrifice. It would be strange indeed if a religion such as this could be thrown off easily. Its enormous body of Scriptures, its regular instructions, its extensive reverence for its well-versed monks are all calculated to make a permanent intellectual impression upon the people."

THE INDIAN CENTRAL COMMITTEE.

The Joint Free Conference, comprising the Statutory Commission sitting with the members of the Indian Central Committee which is co-operating in the inquiry, has now completed the work of examining witnesses in London. Short accounts of the proceedings have appeared from time to time in *THE NEAR EAST AND INDIA*, and a list of the principal witnesses examined was given in a recent issue.

At the final sittings the Conference, with Sir John Simon in the Chair, heard Sir Amhurst Selby-Bigge, a member of the Auxiliary Committee on the growth of education in India whose findings were reviewed recently in these columns. Further oral evidence was also taken from Sir Reginald Craddock and Mr. A. L. Saunders, on behalf of the Indian Civil Service (Retired) Association. A summary of the Association's written memorandum prepared for the Statutory Commission appeared in our issue of December 13 last.

The way is now clear for the Indian Central Committee to consider the preparation of its report, and it is understood that the members of the Committee are meeting at its offices in Clement's Inn every day for that purpose. The Statutory Commission, whose report is not likely to be available until towards the end of the year, has meanwhile dispersed for the holidays. Provisional arrangements, we learn, have been made for the members to reassemble on September 24.

In this connexion it is interesting to learn from the mail edition of the *Pioneer* that reports have received wide circulation in India to the effect, *inter alia*, that "Mr. MacDonald has been guilty of a grave lack of appreciation of the endeavours and work of the Indian Central Committee." Readers of *THE NEAR EAST AND INDIA* who read the Prime Minister's speech in the debate on the

Address will not require to be told that any such suggestion is demonstrably false.

At the moment the Indian Central Committee is examining the reports of the Provincial Committees which co-operated with the Joint Free Conference in their respective provinces, all of which have now reached this country and, with one or two exceptions, have already been published in substance in the Indian Press.

It is hoped that by means of formulating a series of resolutions covering the main aspects of the inquiry the way will be cleared for the preparation of a draft report. The latter will then be considered in detail and members asked to indicate how far they are prepared to endorse its findings and, if not, to what extent they are likely to submit individual notes of dissent.

Although it appears unlikely that the Committee will be able to present an unanimous report, the rumours which have been given publicity by the *Pioneer*—as our contemporary candidly admits “with a certain amount of malicious humour”—concerning the relations between the Committee and the Chairman and members of the Statutory Commission are so manifestly a case of “the wish being father to the thought” that no comment is necessary.

On completion of two months as the special guests of his Majesty's Government the members of the Indian Central Committee have left the Savoy Hotel. Sir San-karan Nair, the Chairman, is at 125, Victoria Street; Nawab Sir Zulfiqar Ali Khan, Sir Hari Singh Gour, Dr. Suhrawardy, and Mr. M. C. Rajah are at Artillery Mansions, Victoria Street; Mr. Kikabhai Premchand is at 58, Queen's Gate, South Kensington; Rajah Nawab Ali Khan is at Westbourne Terrace, Paddington; and Sirdar S. S. Uberoi is staying with friends at Putney.

INDIAN NOTES.

Bombay's Troubles.

The Government of Bombay is certainly under no apprehension of the risk which is said to attend him of whom all men speak well. It is too early to speak of the results of the Strike Inquiry: but the explanation by the Home Member of the apparent inadequacy of the arrangements for the maintenance and restoration of law and order has been severely criticised by the local Press. Meanwhile the unrest in the Bombay mills continues, though it is probable that the end of the agricultural season and the depletion of union funds will bring the strikers back to their work. The passing of the Bill making intimidation during times of strike or emergency a cognizable offence will, it may be hoped, assist in the process, although, as the Home Member has pointed out, the legislation, which is long overdue, is directed not so much against the present disturbances as the growing spirit of lawlessness which is pervading all industrial areas. In the matter of Land Revenue, on the other hand, the Government has met with rebuff in the Legislative Council. It was not sufficient that, in consequence of the Bardoli *débâcle*, the Government promised to suspend the introduction of revisions of assessment already approved, and to set up a system for future revisions, so elaborate and so full of safeguards as to make any appreciable increase in the receipts of Land Revenue extremely problematical. The Legislative Council, in spite of these concessions, insisted on the extension of the suspension and re-examination of approved revisions to four further talukas, which do not differ in character from any others into which revised settlements have been introduced within recent years. It is, in short, clear that the Government will find it increasingly difficult to obtain for the public purse a fair share of the increased price of agricultural produce. This is especially serious when it is remembered that the financial

success of the Sukkur Barrage scheme is dependent on adequate rates being obtained from the cultivator in return for the assured water supply provided. The material portion of the barrage works is being brought to a successful conclusion; but the cost incurred has already reached a total of nine crores of rupees, and the work will be an intolerable burden on the Bombay taxpayer unless it fully pays its way. The outlook for that taxpayer is in any case not bright. As the Governor recently pointed out to the Legislative Council, unless additional resources are found, even essential services must be curtailed, and expansion must be deferred.

Marriages in India.

The restrictions on marriage imposed by Hindu law and custom have an interest beyond the purely technical aspect of the question. The author of the latest contribution to the study of a very interesting problem (Hindu Exogamy, S. V. Karandikar (D. B. Taraporevala, Rs.6) seeks to prove that the rules now prevailing, whereby an orthodox Hindu must marry within a particular caste, or section of a caste, but outside a particular sub-caste, and also outside a long series of relationships on the paternal and maternal sides of his family, have no authority from the earliest days, so far as they can be traced, of the Indo-Aryans. On the contrary, it is probable that these followed the custom of their near relations, the Indo Iranians, who, we know, commonly practised family inbreeding to an extent which would probably now be regarded as hardly eugenic. The various restrictions upon marriage were probably borrowed, like so many other features of Indian civilisation, from the existing Dravidian or Kolarian systems of family life, which the Aryan invaders found established in the regions into which they penetrated. Manu, the first law giver of the Indo-Aryans, enunciated the rule of exogamy in its simplest form, prohibiting marriage in the gotra or family. For this prohibition, there may well have been sound eugenic or social ground. The restriction thus imposed, however, has, doubtless assisted by the totemistic rules of the non-Aryan tribes, been extended until the marriage system is not merely complicated, but narrowed to an extent which, in the author's opinion, seriously affects the outlook of the Hindus. Apart from the legal and technical side of the question, which is adequately treated by the author, he deals with considerations of more general interest. The difficulty for the Brahmin community, and for the other superior castes, has been increased by their sub-division into endless sub-castes. Apart from this, however, all the Hindu castes, high and low, are being Brahmanized with greater or less rapidity. The easiest evidence of the rise of the caste in the social scale is the adoption of Brahmanical dogmas: and among these the most obvious for adoption are the restrictions on marriage. The author ascribes the superior vigour of the Muhammadan and Christian communities to their greater freedom of choice, and particularly in their practice of marriage between cousins. On this it must be observed that the freedom of choice in these communities is in theory absolute, and that cousin-marriage is rare, at least so far as Christians are concerned; while many persons consider that the highest ability is likely to come from the union of entirely diverse stocks. The author, while deprecating the numberless petty restrictions on marriage within a caste, does not appear to go so far as to urge Hindus to marry entirely outside their caste or their religion. The argument set out in his well written book is, however, of much interest as indicating the trend of Hindu minds to free themselves from the trammels of law and custom imposed for various reasons within periods that can be historically examined.

The King has been pleased to approve the appointment of Mr. John Percy Eddy as Puisne Judge of the High Court of Judicature at Madras in the vacancy created by the appointment of Mr. Justice Beasley to be Chief Justice.

GREAT BRITAIN AND EGYPT.

The Foreign Office issued last week a White Paper (Cmd. 3376. Price 3d.) containing the texts of Notes exchanged between Mohamed Pasha Mahmoud, Prime Minister of Egypt, and Mr. Arthur Henderson, Secretary of State for Foreign Affairs, concerning proposals for an Anglo-Egyptian settlement, together with the text of such proposals. The Paper is published herewith *in extenso*.

No. 1.

*Mr. A. Henderson to Mohammed Mahmoud Pasha.**Foreign Office, August 3, 1929.*

Your Excellency.—The accompanying proposals, together with the explanatory notes to be exchanged on matters of detail, which your Excellency is about to submit to the Egyptian Parliament, represent the extreme limit to which I could recommend His Majesty's Government in the United Kingdom of Great Britain and Northern Ireland to go in their desire to achieve a lasting and honourable settlement of outstanding questions between Great Britain and Egypt.

It is the earnest hope of His Majesty's Government that patriotic Egyptians without distinction of party will examine these proposals in the same friendly and conciliatory spirit which has characterised our recent conversations, and will find in them a satisfactory basis for the future relations between our respective countries. If this should be the verdict of the newly-elected Egyptian Parliament, His Majesty's Government for their part will immediately submit the proposals to Parliament with a view to the conclusion and ratification of a treaty carrying them into effect.

I have, etc.,

ARTHUR HENDERSON.

Enclosure in No. 1.

Proposals for an Anglo-Egyptian Settlement.

1. The military occupation of Egypt by the forces of His Britannic Majesty is terminated.

2. An alliance is established between the High Contracting Parties in consecration of their friendship, their cordial understanding and their good relations.

3. Egypt, being anxious to become a member of the League of Nations, will present in the conditions prescribed by article 1 of the Covenant a request for admission to the League, which His Britannic Majesty undertakes to support.

4. Should any dispute with a third State produce a situation which involves a risk of rupture with that State, the High Contracting Parties will concert together with a view to the settlement of the said dispute by peaceful means in accordance with the provision of the Covenant of the League of Nations and of any other international obligations which may be applicable to the case.

5. Each of the High Contracting Parties undertakes not to adopt in foreign countries an attitude which is inconsistent with the alliance or will create difficulties for the other Party thereto. In pursuance of this undertaking they will not oppose each other's policy in foreign countries, nor conclude with a third Power any agreement of a political character which might be prejudicial to the interests of the other Party.

6. His Britannic Majesty recognises that the responsibility for the lives and property of foreigners in Egypt devolves henceforth upon the Egyptian Government. His Majesty the King of Egypt will ensure the fulfilment of his obligations in this respect.

7. Should, notwithstanding the provisions of paragraph 4 above, either of the High Contracting Parties become engaged in war, the other High Contracting Party will, subject always to the provisions of paragraph 14 below, immediately come to his aid in the capacity of an ally. In particular, His Majesty the King of Egypt will, in the event of war or menace of war, furnish to His Britannic Majesty in Egyptian territory all the facilities and assistance in his power, including the use of his ports, aerodromes and means of communication.

8. In view of the desirability of identity in training and methods between the Egyptian and British armies, His Majesty the King of Egypt undertakes that, should he deem it necessary to have recourse to foreign military instructors, these shall be chosen from amongst British subjects.

9. In order to facilitate and secure to His Britannic Majesty the protection of the Suez Canal as an essential means of communication between the different parts of the British Empire, His Majesty the King of Egypt authorises His Britannic Majesty to maintain upon Egyptian territory in localities to be agreed upon, to the east of longitude 32 deg. E., such forces as His Britannic Majesty considers necessary for this purpose. The presence of these forces shall not constitute in any manner an occupation and will in no way prejudice the sovereign rights of Egypt.

10. In view of the friendship between the two countries and the alliance contemplated in the present proposals, the Egyptian Government when engaging the services of foreign officials will as a rule engage British subjects.

11. His Britannic Majesty recognises that the capitulatory régime now existing in Egypt is no longer in accordance with the spirit of the times and with the present state of Egypt.

His Britannic Majesty accordingly undertakes to use all his influence with the Powers possessing capitulatory rights in Egypt to obtain, in conditions which will safeguard the legitimate interests of foreigners, the transfer to the Mixed Tribunals of the jurisdiction of the existing Consular Courts, and the application of Egyptian legislation to foreigners.

12. In view of the friendship between the High Contracting Parties and of the alliance contemplated in the present proposals, His Britannic Majesty will be represented at the Court of His Majesty the King of Egypt by an Ambassador, duly accredited, and His Majesty the King of Egypt will reserve the highest diplomatic rank at his Court to the representative of His Britannic Majesty.

His Majesty the King of Egypt will be represented at the Court of St. James's by an Ambassador.

13. While reserving liberty to conclude new conventions in future modifying the conventions of 1899, the High Contracting Parties agree that the status of the Sudan shall be that resulting from the said conventions. Accordingly, the Governor-General shall continue to exercise on the joint behalf of the High Contracting Parties the powers conferred upon him by the said conventions.

14. Nothing in the present proposals is intended to or shall in any way prejudice the rights and obligations which devolve, or may devolve, upon either of the High Contracting Parties under the Covenant of the League of Nations or the Treaty for the Renunciation of War signed at Paris on the 27th August, 1928.

15. The High Contracting Parties agree that any difference on the subject of the application or the interpretation of the provisions of the present proposals which they are unable to settle by direct negotiation shall be dealt with in accordance with the provisions of the Covenant of the League of Nations.

16. At any time after the expiration of a period of twenty-five years from the coming into force of a treaty based on the above proposals such modification of its terms as may be deemed appropriate in the circumstances as they then exist may be made by agreement between the High Contracting Parties.

ARMY.

BRITISH NOTE.

Your Excellency.—In the course of our recent discussions, certain military questions arose and were most carefully considered. These questions fall naturally into two categories: first, those concerning the Egyptian forces which might, in the unhappy event of the circumstances arising contemplated in the first sentence of paragraph 7 of the proposals, be called upon to co-operate actively with allied British forces; and, secondly, questions touching the British forces which, under paragraph 9, will be stationed in the neighbourhood of the Suez Canal for the purpose of ensuring the defence of that vital artery of British imperial communications.

As to the first category, your Excellency and I agreed as follows:—

- (1.) Existing arrangements, under which the Inspector-General and his staff exercise certain functions, shall terminate. British personnel shall be withdrawn from the Egyptian forces.
- (2.) The Egyptian Government, however, desire in accordance with paragraph 8 of the proposals to avail themselves of the advice of a British military mission. His Britannic Majesty's Government in the United Kingdom and Northern Ireland undertake to furnish such a mission. The Egyptian Government will send the personnel of the Egyptian forces to be trained abroad in Great Britain only. His Majesty's Government, for their part, undertake to receive any personnel which the Egyptian Government may send to Great Britain for this purpose.
- (3.) In the interests of the close co-operation referred to above, the armament and equipment of the Egyptian forces shall not differ in type from those of the British forces. His Majesty's Government undertake to use their good offices to facilitate the supply of such armament and equipment from Great Britain whenever the Egyptian Government so desire.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to **THE SECRETARY.**

With regard to the British forces referred to in paragraph 9 of the proposals:—

- (i.) The Egyptian Government will provide, free of cost to His Majesty's Government, lands, barracks, etc., in localities to be agreed upon, equivalent to those now occupied by the British forces in Egypt. Upon the completion of this new accommodation, those forces shall be transferred thereto, handing over the lands, barracks, etc., thus vacated to the Egyptian Government. In view of the technical objections to effecting this transfer piecemeal it shall await the completion of the new accommodation to be provided. Having regard to the character of the region lying to the east of longitude 32 deg. E. steps will be taken to furnish reasonable amenities by planting trees, gardens, etc., for the troops, who will also be provided with an adequate emergency fresh water supply.
- (ii.) Subject to any modifications which may in the future be made by agreement between the two Governments, the privileges and immunities in jurisdictional and fiscal matters at present enjoyed by the British forces in Egypt will continue.
- (iii.) Unless the two Governments agree to the contrary, the Egyptian Government will prohibit the passage of aircraft over the territories situated on either side of the Suez Canal and within 20 kilom. of it. This prohibition will not, however, apply to the forces of the two Governments or to services maintained by genuinely British or Egyptian organisations operating under the authority of the Egyptian Government.

We also agreed that the Egyptian Government will give all necessary facilities to British military aircraft, personnel and stores on passage to or from the aerodromes placed at the disposal of the British forces in accordance with paragraph 9 of the proposals. His Majesty's Government will give appropriate facilities to Egyptian military aircraft, personnel and stores in territory under their control.

EGYPTIAN NOTE.

Sir,—I have the honour to acknowledge the receipt of your note of to-day's date dealing with certain military questions, and to confirm that it accurately represents the agreement at which we have arrived.

ADVISERS.

EGYPTIAN NOTE.

Sir,—As you are aware, the Egyptian Government have taken in hand an extensive programme of internal reform, and I realise that this task will become even more far-reaching and difficult in view of the important modifications in the capitulatory system contemplated by the proposals. I appreciate that, in order to secure the satisfactory completion of this programme of reform the best advice procurable will be required, and I take this opportunity of informing you that it is the intention of the Egyptian Government to maintain during the period necessary for the completion of the reforms in question, the employment of British subjects in the posts of Financial Adviser to the Egyptian Government and Judicial Adviser to the Ministry of Justice. Future occupants of these posts will be selected by the Egyptian Government in agreement with His Britannic Majesty's Government in the United Kingdom, and will receive their appointments as Egyptian officials from the Egyptian Government.

BRITISH NOTE.

Your Excellency,—I have the honour to acknowledge the receipt of your note of to-day's date regarding the posts of the Financial Adviser to the Egyptian Government and the Judicial Adviser to the Ministry of Justice, and note with satisfaction your Excellency's statement of the intentions of the Egyptian Government.

POLICE.

EGYPTIAN NOTE.

Sir,—I take this opportunity of informing you that the Egyptian Government intend to abolish the European Bureau of the Public Security Department, but, in pursuance of the undertaking contained in paragraph 6 of the proposals, the Egyptian Government will retain, for at least five years from the coming into force of a treaty based on the proposals, a certain European element in their city police, which will remain for the same period under the command of British officers.

If at some future date the Egyptian Government should desire to reorganise their police force, I shall be glad to know whether they can rely upon the assistance of His Britannic Majesty's Government in this task.

BRITISH NOTE.

Your Excellency,—His Britannic Majesty's Government in the United Kingdom note with satisfaction that in pursuance of the undertaking contained in paragraph 6 of the proposals the Egyptian Government, after the disappearance of the European Bureau of the Public Security Department, will retain for at least five years from the coming into force of a treaty based on the proposals, a certain European element in their city police, which will remain for the same period under the command of British officers.

If at some future date the Egyptian Government should desire to reorganise their police force, His Britannic Majesty's Government will be happy to lend them the services of individual experts or of a police mission as they have done in the case of other countries similarly desirous of reorganising their police.

CAPITULATIONS.

BRITISH NOTE.

Your Excellency,—Paragraph 11 of the proposals provides as follows:—

"His Britannic Majesty recognises that the capitulatory régime now existing in Egypt is no longer in accordance with the spirit of the times and with the present state of Egypt.

"His Britannic Majesty accordingly undertakes to use all his influence with the Powers possessing capitulatory rights in Egypt to obtain, in conditions which will safeguard the legitimate interests of foreigners, the transfer to the Mixed Tribunals of the jurisdiction of the existing Consular Courts, and the application of Egyptian legislation to foreigners."

It will be useful if I explain to your Excellency the lines on which I think this reform of the capitulatory régime might well proceed, as I shall be prepared to support the efforts of the Egyptian Government to conclude arrangements with the Powers on these lines when a treaty based on the proposals comes into force.

It was hoped in 1920, when negotiations were in progress between the British and Egyptian Governments, that arrangements might be made for the closing by foreign Powers of their Consular Courts in Egypt. Draft laws were accordingly prepared in that year extending the existing jurisdiction of the Mixed Tribunals, and enabling them to exercise all the jurisdiction now exercised by the Consular Courts.

I shall be prepared to agree to the utilisation of those draft laws as the basis of the reform of the capitulatory régime if foreign Powers are willing to transfer to the Mixed Tribunals the jurisdiction of their consular courts.

On points of detail many changes will no doubt be required. These must be discussed by experts. There are, however, certain modifications which will, I think, be necessary in any event, and which I desire to take this opportunity of pointing out to your Excellency.

It may be difficult for some Powers to agree to the transfer to the Mixed Tribunals of all suits relating to the "statut personnel" of their nationals. Transfer in the case of these questions should be facultative. Jurisdiction in such matters should remain with the consular authorities unless an agreement is made between the Egyptian Government and the foreign Government concerned for its transfer to the Mixed Tribunals. I anticipate agreement that the Mixed Tribunals should exercise jurisdiction in these matters in cases where British subjects are concerned.

In the case of pardons or remissions of sentences imposed on foreigners, and also in connexion with the execution of capital sentences imposed on foreigners, the Minister of Justice will consult the Judicial Adviser, so long as that official is retained, before tendering his advice to the King.

I recognise that the conditions in which the capitulations are at present applied as regards the power of the Egyptian Government to legislate for or to impose taxation on foreigners are no longer consistent with modern conditions. I should be prepared to agree that in future any assent which is necessary before Egyptian legislation, including fiscal legislation, is applied to foreigners shall be given by the General Assembly of the Mixed Tribunals, except in the case of legislation relating to the constitution or jurisdiction of the Mixed Tribunals themselves, which should not come into force until it has been approved by the Powers. It should be the duty of the General Assembly of the Mixed Tribunals to satisfy itself that the legislation in question is not inconsistent with the principles generally adopted in modern legislation which is applicable to foreigners, and, with particular relation to legislation of a fiscal character, that it does not inequitably discriminate against foreigners, including foreign companies.

An extension of the criminal jurisdiction of the Mixed Tribunals will necessitate the preparation and promulgation of a new Code of Criminal Procedure. The draft laws prepared in 1920 contain certain provisions of importance on this subject of criminal procedure (articles 10-27 of Law II, draft of the 18th April, 1920), and your Excellency will no doubt agree that the new Criminal Code should not diverge from the principles laid down in these articles.

There are certain matters as to which it will be necessary for agreement to be reached between the Egyptian Government and His Britannic Majesty's Government in the United Kingdom, but I do not think it necessary to do more at the moment than mention these subjects.

The first is the definition of the word "foreigner" for the purposes of the proposed extension of the jurisdiction of the Mixed Tribunals. I understand from your Excellency that the codes now enforced by the Native Courts in Egypt subject to the Native Courts all persons in Egypt other than those who by law, usage or treaty are withdrawn from their jurisdiction. I am content to accept this

principle provided that it is understood that all foreigners who have enjoyed the benefit of the capitulatory régime in the past will fall under the jurisdiction of the Mixed Tribunals irrespective of changes of sovereignty effected after the War of 1914-18.

The second is the increase in the personnel of the Mixed Tribunals which will be necessitated by the proposed extension of their jurisdiction, and, as part of this question, the new functions of the Procureur Général of the Mixed Tribunals and the staff which will be necessary to enable him to discharge those functions satisfactorily. The Judicial Adviser will, so long as that official is retained, be consulted with regard to the appointment of foreign judges in the Mixed Tribunals and of foreign members of the parquet, if any.

EGYPTIAN NOTE.

Sir,—I have the honour to acknowledge the receipt of your note of to-day's date, in which you informed me of the lines upon which His Majesty's Government in the United Kingdom consider that the reform of the capitulatory régime might well proceed, and drew my attention to certain particular considerations to which you attach importance.

I am happy to state that the particular proposals to which you referred are in accordance with the intentions of the Egyptian Government, who are also in general agreement with His Britannic Majesty's Government as to the lines on which the reform of the capitulatory system should proceed.

As regards the definition of the word "foreigner," I would observe that, while the Egyptian Government would have no objection to the civil and criminal jurisdiction of the Mixed Tribunals including foreigners who possessed capitulatory privileges before the War of 1914-18, those foreigners who do not possess and never have possessed those privileges must evidently be subject to the jurisdiction of the Native Courts.

FOREIGN OFFICIALS.

EGYPTIAN NOTE.

Sir,—In the course of our conversations in regard to paragraph 10 of the proposals, it was understood that His Britannic Majesty's Government in the United Kingdom and Northern Ireland will not press for an unreasonably narrow interpretation of this paragraph, and that nothing therein contained shall prejudice the freedom of the Egyptian Government to engage non-British foreign officials for posts for which suitable British subjects are not available.

BRITISH NOTE.

Your Excellency,—I have the honour to acknowledge the receipt of your note of to-day's date regarding the engagement of foreign officials and to confirm the statement therein recorded of the understanding which we have reached.

MINORITIES.

BRITISH NOTE.

Your Excellency,—I wish to place it on record that it was not thought necessary to mention, in the proposals, the question of the protection of minorities, which figured in the declaration of the 28th February, 1922, but that it is recognised that this question will in future be the exclusive concern of the Egyptian Government.

EGYPTIAN NOTE.

Sir,—I have the honour to take note of your communication of to-day's date respecting minorities in Egypt.

SUDAN.

BRITISH NOTE.

Your Excellency,—When discussing paragraph 13 of the proposals, we agreed that the question of the indebtedness of the Sudan to Egypt should now be examined with a view to a settlement on fair and equitable lines.

We further agreed that a representative of the British Treasury should discuss the question with a representative of the Egyptian Ministry of Finance as soon as a treaty based on the proposals comes into force.

EGYPTIAN NOTE.

Sir,—In reply to your note of to-day's date I have the honour to confirm our agreement that the question of the indebtedness of the Sudan to Egypt should be examined by representatives of the British Treasury and of the Egyptian Ministry of Finance with a view to its settlement on fair and equitable lines.

BRITISH NOTE.

Your Excellency,—It will be convenient to place on record the agreement which we have reached as regards the method by which international conventions are to be made applicable to the Sudan. The conventions which it will be desired to apply to the Sudan will naturally be conventions of a technical or humanitarian character.

In cases where such a convention is signed on behalf of both Egypt and Great Britain, and it is desired that the convention should be applied to the Sudan, the British and Egyptian delegates will, at a convenient moment, make a joint declaration, to be duly placed on record, to the effect that their signatures on behalf of Egypt and the United Kingdom respectively are intended, taken together, to cover the Sudan, and (in cases where the convention requires ratification) that, when the ratifications of both the King of Egypt and His Britannic Majesty have been deposited, the convention will become applicable to the Sudan in accordance with its terms. If no such declaration is made the convention will not become applicable to the Sudan, unless by the method of accession, to which reference is made later.

In cases where such a declaration has been made, no special mention would be made of the Sudan in the instruments of ratification.

In some cases, where the convention provides for subsequent accession, and it may be convenient that the convention should be applied to the Sudan by this method, accession would be effected by a joint instrument, signed on behalf of Egypt and Great Britain respectively by two persons duly appointed for the purpose. The method of depositing the instrument of accession would be the subject of agreement in each case between the two Governments. In such cases no question of ratification arises.

At international conferences where such conventions are negotiated the Egyptian and British delegates would naturally keep in touch with a view to any action which they may agree to be desirable in the interests of the Sudan.

EGYPTIAN NOTE.

Sir,—I have the honour to acknowledge the receipt of your note of to-day's date regarding the method of application to the Sudan of international conventions which it may be desired should apply to that country. I beg to confirm the statement therein recorded of the understanding which we have reached.

BRITISH NOTE.

Your Excellency,—During our recent discussions your Excellency expressed the hope that, on the coming into force of a treaty, Egyptian troops would be readmitted to the Sudan.

If, as His Majesty's Government in Great Britain and Northern Ireland earnestly trust, the treaty is worked in the same friendly spirit in which the proposals were negotiated, they will be prepared to examine sympathetically a proposal for the return to the Sudan of an Egyptian battalion simultaneously with the withdrawal of the British forces from Cairo.

EGYPTIAN NOTE.

Sir,—I have the honour to acknowledge the receipt of your note of to-day's date, relative to the return of an Egyptian battalion to the Sudan, and to take note of the attitude of His Britannic Majesty's Government in the matter.

No. 2.

Mohammed Mahmoud Pasha to Mr. A. Henderson.
Egyptian Legation, London,
August 3, 1929.

Sir,—I have the honour to acknowledge receipt of the letter which you handed to me to-day, covering the proposals, together with explanatory notes to be exchanged on matters of detail, which have been under discussion between us with a view to the achievement of a lasting and honourable settlement of outstanding questions between Egypt and Great Britain.

I realise that these proposals represent the extreme limit to which you could recommend His Britannic Majesty's Government to go, and for my part I am prepared to submit them to the Egyptian people and Parliament in the sincere belief that their acceptance would be in the best interests of my country.

I share the earnest hope of His Britannic Majesty's Government that these proposals will be examined by all patriotic Egyptians without distinction of party in the same friendly and conciliatory spirit in which they have been conceived and discussed by us, and that they will be found to embody a satisfactory basis for the future relations between our respective countries.

It is in this spirit and with this hope that I take back these proposals to the Egyptian people.

M. MAHMOUD.

The Pope on August 6 formally invested Mgr. Tappuni with the Sacred Pallium as Syrian Patriarch of Antioch.

Forty bandits, thirteen of whom are said to have been at large since 1925, have been captured in the Bukovina.

General Gouraud has left Paris for Italy, where he will be the guest of the Italian Government at the Army manoeuvres.

The Hungarian Government, according to a Bucharest report, has requested the Roumanian Government to make new proposals for a direct settlement of the Optants question.

The Governor of Stamboul has been asked by the "Union of Turkish Women" to form a corps of policewomen similar to that existing in London and other European cities.

The funeral of the victims of the explosion in H.M.S. Devonshire, which took place recently at Volo, Greece, was attended by Admiral Sir Frederick Field, Commander-in-Chief, Mediterranean.

The British Mediterranean Fleet is expected at Ragusa, for a stay of ten days, at the beginning of September. A gunboat is already anchored at Ragusa, and is arranging for the feeding of 20,000 ratings.

The death is reported from Belgrade of Dr. Archibault Reiss, formerly Professor of Criminology at the University of Lausanne. Professor Reiss, who was 54 years of age, went to Serbia in 1914 to inquire into the alleged atrocities committed by the Austrian Army. He subsequently went through the campaign in Albania with the Serbian Army.

NOTES OF THE WEEK.

(Continued from page 170)

perties in the regions of Bossilegrad and Tsaribrod). Neither side has really endeavoured to understand the position of the other, with the consequence that those who may roughly be called the militarists of Belgrade and the Macedonians of Sofia are at the moment implacably opposed to one another. The matter is not one of details, for in some particular case Yugoslavia may be right, and in another, Bulgaria. It is the fundamentals upon which the two Slav countries are disagreed, and neither the passage of time since the abortive Pirot Conference nor the friendly counsel of Great Britain and France has served to lessen the bitterness. Are the Peace Treaties to be given effect, or are they to be undermined? For, quite patently, if Yugoslavia were to observe in those territories which she gained as a result of the Great War the rights of minorities as conceived in the minds of Western statesmen, Bulgaria could have no valid grounds for so steadfastly refusing to recognise the sanctity of the Treaty of Neuilly. As matters now are being allowed to proceed between Belgrade and Sofia, Yugoslavia and Bulgaria alike run the risk of losing European sympathy.

End of the Persian Revolt.

It is a matter for congratulation that the revolt of the Bakhtiari against the Teheran Government has come to an end. The Kashgais, as it now appears, had a few weeks ago made terms with the central authority, and now, happily, the Bakhtiari have followed suit. In place of General Jaffar Quli Khan, the Sardar Assad, the Amir Mufakham has been appointed Ilkhani, and Murteza Quli Khan, son of the Samsam es Saltaneh, has been appointed Ilbegi—both with the definite orders to come to an under-

standing with this ancient and honourable tribe. With the appeasement of the Kashgais and of the Bakhtiari, the rebellion as a serious event may be regarded as finished—for it is scarcely to be supposed that the Khamseh confederation of tribes, in eastern Fars, will cause very considerable trouble by themselves. Naturally we look forward to learning the details of the terms of settlement, but in the meantime we may be allowed to express gratification that civil war has been avoided. It is to be hoped that the Teheran Government has done the job of settlement thoroughly, justly, and without involving humiliation.

THE SYRIAN PRESS.

Syria at the League.

[M. Robert de Caix' report to the Permanent Mandates Commission of the League of Nations has, as might have been anticipated, been subjected to a hot fire of criticism from the Damascus Nationalist Press. The following is a translation of the leading article published in the issue of *Al-Qabas* dated July 18. *Al-Qabas* is the present name of the ex-*Muqtabas*, the oldest Damascus paper, founded some fifteen or twenty years ago by Muhammad Kurd Ali, the well-known *littérateur*, now Minister of Education in Syria. The *Qabas* is edited by his brother, Adil Kurd Ali.—Ed.]

M. Robert de Caix, the French delegate to the Mandates' Commission who, in despite of Syria and the Syrians, spoke in the name of Syria, took advantage of the occasion to make the audacious claim, a claim that is in conflict both with the truth and with actual facts (if in conflict with his conscience I do not know) that the "political situation has improved." A Paris telegram informs us that the delegate, in his double capacity of Frenchman and Syrian combined, expounded the reasons that had led the High Commissioner to prorogue indefinitely the session of the Constituent Assembly, and, after referring particularly in his report to the improved political situation, he observed that the countries included in the French Mandate could not keep their engagements as long as their representatives accept the Mandate only in a strictly limited sense.

I do not know how these gentlemen, who speak for a country that reads their words and understands their declarations, have the courage to contradict themselves and flout the truth before God and the Mandates Commission by announcing boldly that the political situation in Syria has improved, and then go on to say that the Constituent Assembly has been indefinitely prorogued, because its representatives accept the Mandate only in a limited sense. How does M. de Caix reconcile the improvement in the political situation with the fact that the Constituent Assembly is prorogued? The statements are obviously conflicting; the claim is in direct variance with the truth and with the facts. Nevertheless, there are people to be found in Europe and on the Mandates Commission who listen to such language and believe it.

M. de Caix, harping on the old string, repeats that the people of the country either shut their eyes to the existence of the Mandate or refuse to swallow it whole, accepting it only in a limited sense. Who told M. de Caix that the country ever asked for a Mandate? How is it true that they shut their eyes to its existence or demand that it should be restricted? Did the country budge an inch from its negative position of non-co-operation, until the High Commissioners, in the name of France, proposed that the Mandate should be exchanged for a Treaty, showering down in their speeches and *communiqués* a rain of words such as "independence, national sovereignty, and the bonds of treaties"? While the flames of the Syrian rebellion spread from the Jabal Druze to the sea, M. de Jouvenel addressed, in May, 1926, to the Damad, Ahmad Namy Bey, his famous statement in which he said: "I agree that for the Mandate should be substituted a thirty years' Treaty between France and Syria, provided that it is sanctioned by the Syrian and French Parliaments." Three Nationalists ventured to accept the experiment. It failed, and one of the results was that the Ministers were removed from office and sent into exile. Then M. Ponsot came to Damascus in February, 1928, and published his statement, in which the people were invited to proceed to the election of deputies. He, too, said: "As to the relations between Syria and France, they will be determined in a Treaty to be drawn up by the two Governments and sanctioned by the two Parliaments." We then, for our part, did not venture to accept the elections until France had acknowledged in the person of the two official representatives her readiness to abolish the Mandate and exchange it for a Treaty. And when the Constituent Assembly was elected, and when the people's lawfully chosen deputies and the representatives of France stood face to face in due form, France "withdrew" the High Commissioner's declarations, and cancelled by a single word what she had undertaken to do four months before in the person of M. Ponsot, and two years before in the person of M. de Jouvenel. M. de Caix' attempt to justify the prorogation of the Constituent Assembly on the plea that its representatives declined anything but a restricted mandate is, therefore, a piece of sophistry contradicting the declarations of the High Commissioners. After all this, and after the country's return to the negative position taken up on the day France entered Syria, we do

not know how the statement can be true that the political situation in Syria has improved. No! It has not improved at all. There has been no change. We regret to say even that the position goes from bad to worse and the country is administered as a Colonial possession. Treaties are made in her name. She is neither consulted nor informed. Her frontiers are delimited, not as she wishes but as others wish. She is governed by a number of officials under a French Administration. Her customs revenues are in the hands of the Haut Commissariat. The instalments of the public debt are fixed and paid out of these revenues, not as she wishes but as others wish.

When M. de Caix had finished his inquiries into the political situation, after satisfying, of course, the members of the Commission with its improvement and the country's enjoyment of freedom, sovereignty, and every sort of political comfort, he turned like a flash of lightning to the economic situation, and declared that "under the Mandate property enjoys a tranquillity unknown before, progress advances with rapid steps, and all the signs of prosperity begin to dawn in Syria." Where and how? Where and how indeed? Where is this economic prosperity? Where are this wealth and ease? Can M. le Comte de Caix, has he the courage to, produce statistics? The Customs Administration is French. It has the figures. Let the statistics, packed up in his saddle-bags, speak a little for themselves before the Commission and declare this prosperity in which we are wading up to our necks and chins.

Twenty-five million pounds [Syrian], M. de Comte, is the adverse balance between our exports and our imports, the difference spent, in the course of five years only, in the purchase of foreign goods, asphalt, benzine, motor-cars, crêpe de georgette, crêpe de chine, even of wheat and flour. Yet in the face of this they declare that the country is prosperous, abundantly blessed. During the last nine years has this hungry land been able to export anything more than *qamar-el-din* (apricot paste) and wooden clogs? And as to the wretched amount of native textiles exported to Iraq and elsewhere, let not M. de Caix forget that all the raw materials and appliances are brought from Europe.

The French, it seems, are fond of learning Arabic proverbs when the occasion offers. M. de Jouvenel was pleased to repeat: "A friends must cleave, he need not believe," after dinning into our ears, to be sure, from morning to night, his favourite maxim: "Peace for the peaceful, war for the men of war." And now M. de Caix, in virtue of an Arabic proverb, wants to make us rich in spite of ourselves and to register before the Mandates-Commission our comfort and prosperity, instead of our hunger and ruin—and that by doing honour to the Syrian proverb which says "Call your Lazarus a Dives."

PERSONAL AND GENERAL

TO-DAY

August 15, 1929 (New Style).

August 2, 1929 (Old Style).

Rabia I, 9, 1348 A.H., of the Muslim Calendar.

Ab 9, 5689, of the Jewish Calendar.

The Maharaj-Kumar of Kutch is staying at the Grand Hotel, Jersey.

Sir John Aird is due to return to London on August 23 from a trip to the Dalmatian coast.

The Earl of Rosse is leaving shortly for India on a visit to the Maharaja of Cooh Behar.

Mirza Sayid Morteza Khan Sharifi has been transferred from the Ministry of Foreign Affairs in Teheran to the Persian Consulate-General at Beyrout, where he will act as First Secretary.

To celebrate the anniversary of the accession of King Faisal I of Iraq, on August 23, the Iraq Minister in London and Madame el Askeri are holding a reception at the Hyde Park Hotel, from 4 to 6.30 p.m.

Mahmoud Pasha, Egyptian Prime Minister, was due to leave Paris on August 13 for Italy. He will meet Signor Mussolini and discuss with him certain clauses in the proposed Anglo-Egyptian Treaty; and will sail from Naples for Egypt on August 16.

Shaikh Hafidh Wahba, representative in London of King Ibn Saoud of the Hijaz and Najd, recently underwent a serious operation. He has been in a nursing home for the past few weeks, but is progressing satisfactorily. It is hoped that he will shortly be completely restored to health.

Sir Esmond Ovey, K.C.M.G., M.V.O., His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Mexico City, who has been appointed His Majesty's Ambassador Extraordinary and Plenipotentiary at Rio de Janeiro, has served, among other places, in Tangier, Sofia, Constantinople and Teheran.

It is stated in the Teheran Press that Dr. Schniewind, who arrived in Persia from Germany early this year, to be adviser to the Ministry of Finance, has been appointed to be Director-General of this Ministry. Whether Dr. Schniewind will be given powers similar to those enjoyed by Dr. Millsbaugh is at present undecided. M. Farzine, formerly Minister of Foreign Affairs, was recently made Finance Minister.

It was officially announced last week that Sir Percy Lyham Loraine, Bt., K.C.M.G., H.M. Minister in Athens, had been appointed to be H.M. High Commissioner for Egypt and the Sudan. Sir Percy's first diplomatic appointment was to Constantinople in 1904, since which date he served, among other places, in Teheran, Rome, and Paris. From 1921 to 1926 he was British Minister in Persia, and three years ago he was transferred to Greece.

The Sultan of Zanzibar arrived at Zanzibar on August 6 on the return from his visit to England.

Ratifications of the Treaty of Friendship and Conciliation between Italy and Abyssinia have been exchanged at Addis Ababa.

It is announced from Belgrade that M. Svetozar Pribitchevitch, one of the leaders of Croat-Peasant Democratic coalitions against the Centralists of Belgrade, is seriously ill.

A Treaty of Friendship was signed in Mecca on August 3 between Turkey and the Dual Kingdom of the Hijaz and Najd. The independence of King Ibn Saoud's State is recognised, and most-favoured-nation-treatment is accorded to subjects of each of the contracting parties.

A meeting was held at the Haifa Technical Institute on August 3 in commemoration of the hundredth anniversary of the birth of Lawrence Oliphant, who interested himself philanthropically in Palestine during the 'eighties.

A public meeting at Haifa on July 28, said to have been attended by 5,000 persons, adopted a strong resolution of protest against the recent buildings by Muslims at the Wailing Wall.

A public notice, signed by Major C. E. Howard, commanding the Trans-Jordan Frontier Force, has been issued to all ex-members of the Palestine Gendarmerie, permanently resident in Palestine or Trans-Jordan and not over 34 years of age, to enrol themselves in the Frontier Force Reserve.

Tuesday Morning.

The Roumanian Market.

Further extracts from the report of Mr. Humphreys on Roumania, dealing with the import trade, will be found elsewhere in this issue. The details given indicate plainly the extent to which the market as regards some of the most important commodities is largely in the hands of our rivals. Thus in regard to motor cars, the United States, Italy, and France head the list of countries from which Roumania draws her supplies. For machinery Germany, Czechoslovakia, and Austria are the chief suppliers, while Germany is again first with regard to electrical machinery. In a few lines British goods are to the fore, notably in the supply of oil motors and motor cycles, and the success of British manufacturers in regard to these commodities is an indication of what could be done in other directions if only our traders would exercise the necessary enterprise and take the requisite steps to bring the quality of British goods to the attention of Roumanian buyers. The success of British motor cycles in Roumania is due very largely to the prominent part our machines have taken in the various trials held in the Near East. Manufacturers of other commodities have the opportunity of showing their products at the numerous fairs and exhibitions held during the year. As I pointed out last week, the Roumanian market is one of great potentialities; it is also one where foreign competition is on the increase, and if our traders are to develop their relations with that outlet it is essential that no time should be wasted.

Cement for Egypt.

Attention is drawn in the current issue of the Monthly Journal of the British Chamber of Commerce of Egypt to the marked improvement in the exports of cement from the United Kingdom to Egypt in 1928. Egypt's imports of cement have steadily been going up as the result of the works of development that are in progress. Thus while the value of the imports for 1926 was £E371,881, the total for 1927 was £E472,174, while for 1928 the figures were £E511,805. It is only in the last year that the expansion of the United Kingdom's trade is really noticeable, for while the British exports for 1927 at £E52,497 were roughly double the total for 1926, they only represented about 9 per cent. of the total trade, but for 1928 the figures were £E101,934, which represents about 20 per cent. of the total imports. This expansion is due to some extent to the construction of the Nag Hamadi Dam, but our contemporary points out that there has also been a large increase in the use of British cement in the country generally. The chief place in Egypt's imports of cement is taken by Yugoslavia with £E168,431 in 1928, as against £E157,606 in 1927 and £E155,578 in 1926, Belgium being second with £E146,367 in 1928, as against £E158,182 for 1927. In view of the great improvement in the British figures it is quite possible that in the near future we shall improve on our present position of third in the list. The most important producer of cement among Egypt's neighbours is, of course, Palestine, and it is obvious that she too should find a good outlet for this commodity in the Egyptian market.

Tomato Production in Cyprus.

On many occasions recently I have had occasion to refer to the efforts made by the authorities in Cyprus to develop the resources of the Island to the fullest extent. Orange cultivation, flax production, and cotton growing are some of the promising agricultural industries which have been receiving attention. As showing the desire of the authorities to explore every possible opening for trade, it is interesting to note that the possibilities of developing an export trade in tomato products are now receiving attention. The question of tomato production in the Island is discussed in a recent Agricultural Supplement to the *Cyprus Gazette*. It is pointed out that the tomato plant grows so well in Cyprus and the production of fruit is so prolific that it is worth considering whether it may not be possible to utilise the surplus fruit for the preparation of tomato extract or purée for export. The development of an export trade would require the cultivation of the tomato plant on a large scale. Inquiries received recently by the Department of Agriculture for tomato purée suggest that there would be little difficulty in finding the necessary markets, and it is possible that in the cultivation of the tomato Cypriot agriculturists may find a profitable addition to their present products.

India's Tea Production.

In view of the recent floods in some of the Indian tea districts there was every reason to expect a decrease in the latest estimate of the tea production for the current season. This has not proved to be the case, and while the estimate at the end of June showed a crop of 5,943,000 lb. more than the estimate at the corresponding date last year, the figures for the end of July at 144,216,533 lb. represent an increase of 12,343,000 lb. As stocks are standing at a high level the increase in the crop estimate is bound to have some effect on prices. The predominant factor with regard to this commodity, of course, is that the Russian market has not regained its pre-War position, and the development of tea-drinking in other countries such as Egypt has not so far compensated for the lack of this outlet. If and when Russia again takes her normal supplies of tea the balance between production and consumption is likely to be upset.

CORRESPONDENCE

REPARATIONS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The letter by "Briton" which appeared in your issue of the 1st inst., and which arrived in Constantinople to-day, deals with a subject which has occupied the attention during the last week of several Britons whose losses during the War still remain unsettled.

The Paris Commission for the assessment of losses suffered by French, Italian and British nationals, after a delay of six years, now announce a final dividend of 12½ per cent., making a total of 52½ per cent. From these dividends the sums paid by "Lord Sumners' Commission" are being repaid to the British Treasury. So that except to those who received more than 52½ per cent. of their assessed claims from Lord Sumners' Commission the British tax-payer has paid nothing. The amount so paid cannot be more than a few thousand pounds on account of claims arising from losses in Turkey.

The question that has been occupying the attention of several claimants and the Council of the British Chamber of Commerce of Turkey is how far the surplus millions arising out of the liquidation of German property in Great Britain can be called upon under the Treaty of Versailles to satisfy unsettled claims of British nationals resident in Turkey.

Those who have studied the Treaty of Versailles allege that they have an unanswerable case, and refer questioners to Articles 231, 232, Annex I (g) Articles 233, 252, 297 (E), Annex 4 of the Treaty. The Articles in particular say :—

Article 231 of the Treaty lays down that Germany accepts responsibility for causing all the loss and damage to which the Allied Governments and their nationals have been subjected as a consequence of the war imposed on them by the aggression of Germany and her Allies.

Article 232 states that although Germany's resources may not be adequate to make complete reparation, the Allied Government however require, and Germany undertakes that she will make, compensation for all damage done to the civilian population of the Allied Powers and to their property during the War and in general all damage as defined in Annex I hereto.

Annex I (g) states that compensation is to be made by Germany for damage in respect of all property, wherever situated, belonging to any of the Allied States or their nationals, which has been carried off, seized, injured or destroyed by the acts of Germany or her Allies on land, seas, or from the air, or damage directly in consequence of hostilities or any operations of war.

Article 233 states that the damage referred to in Article 232 and Annex I (g) shall be determined by an Inter-Allied Commission to be called the Reparations Commission with powers as laid down in Annexes II to VII. The

Commission shall consider the claims and give to the German Government an opportunity to be heard. They shall also (Annexes 2-10 and 11) afford a similar opportunity to the Allies of Germany when it shall consider that their interests are in question. But neither Germany nor her Allies will possess the right to take any part whatsoever in the decisions of the Commission. The latter will not be bound by any rules of law but shall be guided by equity, justice and good faith.

Article 252 of Treaty reads: The right of each of the Allied Powers to dispose of the enemy assets and property within its jurisdiction at the date of the coming into force of the present Treaty is not affected by the foregoing provisions (laying down the sequence of distribution of the reparation funds).

Article 297 (E) states that the: Nationals of Allied Powers shall be entitled to compensation in respect of damage or injury inflicted upon their property, rights of interests, including any Company or Association in which they are interested in German territory . . . The claims made in this respect shall be investigated and the total of compensation determined by the Mixed Arbitral Tribunal provided for . . . this compensation may be charged upon property of German nationals within the territory or under the control of the claimant State. This property may be constituted as a pledge for enemy liabilities under the conditions fixed by paragraph 4 hereto.

Annex 4 referred to reads: All property rights and interests of German nationals within the territory of any Allied Power and the net proceeds of their sale, liquidation or other dealing therewith may be charged by the Allied or Associated Power in the first place with amounts due in respect of claims by the nationals of the Allied Powers with regard to their property rights and interests, including Companies and Associations in which they are interested in German territory or debts owing to them by German nationals . . . they may be charged in the second place with payments of the amounts due in respect of claims by the nationals of such Allied Powers with regard to their property rights and interests in the territory of other enemy Powers, in so far as those claims are otherwise unsatisfied.

After reading these paragraphs it certainly would seem that the case of the claimants is strong and that the proper authority will, before returning to Germany the surplus funds available, referred to by "Briton," pay British nationals who sustained damage in Turkey the difference between their assessed claims and the division they have received plus interest at 5 per cent. per annum.

It must not be overlooked that His Majesty's Government has solemnly signed two Treaties, those of Versailles and Lausanne—wherein they adhere to the provision that they will be guided not by law but "by equity, justice and good faith."—I am, etc.,

CYPRUS TRADE IMPROVEMENT.

The report on the trade of Cyprus for June, states that there was an increase in both imports and exports during the month. Imports at £162,744 were £17,889 above June, 1928, and £43,660 over the quinquennial average. Exports at £150,917 were £40,274 above June last year and £50,808 above the quinquennial average. For the six months January-June the following are the values of imports and exports as compared with the same period last year:—

	Imports.		Exports.
	£		£
1929 ...	956,362	1929 ...	851,749
1928 ...	841,266	1928 ...	698,707
Increase	115,096	Increase	153,042

The principal items of import showing increase over June, 1928, were: cotton goods £888; flour £4,205; leather and leather goods £3,747; motor cars £5,325; petrol £1,687.

Exports were good, the following articles being those which accounted principally for the large increase over June, 1928: carobs £4,583; hides and skins £1,961; mules £1,997; oxen £756; potatoes £8,963; pyrites £11,888; raisins £8,042; wine £1,381. There were decreases in exports of asbestos £2,012 and cotton £5,231.

Twenty steamers called at Larnaca, 32 at Limassol and 18 at Famagusta, as against an average of 27, 28 and 21 respectively.

Flight-Lieutenant Bentley, flying a De Havilland Moth, landed at Heliopolis on August 5 with an American passenger, who chartered the machine for a flight from Johannesburg via Egypt, Syria, and Turkey to Berlin.

The production of crude oil in Roumania in June amounted to 383,341 tons, as compared with 387,143 tons in May and 336,521 tons in June, 1928. The production of the principal districts in June was as follows (in tons):—Prahova, 283,290; Dambovitza, 86,324; Buzau, 7,200; Bacau, 6,527.

The directors of the Dacia Romano Petroleum Syndicate announce that the capital reorganisation scheme has been sanctioned by the Court. The nominal capital of the company is therefore now £350,000, divided into 1,750,000 shares of 4s. each. In the circumstances it is necessary for shareholders to send in the old certificates so that these may be exchanged for certificates for an equivalent number of shares of 4s. each. It is intended if practicable to re-arrange the distinctive numbers of the shares, with a view to providing for the distinctive numbers of the shares held by each shareholder being consecutive instead of as at present in many groups of numbers, which have resulted from numerous transfers. As it is desired to issue all the new certificates on September 2, it is essential that shareholders should forward their old certificates to the company's office so that same are received not later than August 31.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Paper and Printing and Binding Materials.—The Egyptian Ministry of Finance invites tenders for the supply and delivery of the following printing and binding materials required for the Government Press:—Smooth-surfaced writing ink paper; bristol board (manilla); paper for drawing books; brown paper for drawing books; smooth-surfaced writing paper, cream-laid; marbled paper; strawboard No. 30; tissue paper; cloth embossed for binding; tarlatan for binding; wire, tinned, for stitching machine; ink, typo; ink, ruling, powder; glue. September 14. (D.O.T.)

Pipes and Motor Cars.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of pipes required for the year 1929-1930, September 21; and motor cars required for the year 1929-1930. November 2.

Paper and Gum.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper and gum required by the Government Press for manufacture of envelopes. October 14.

Electric Lamp Standards.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of 240 electric lamp standards with armature and globes. October 1.

Articles for Cotton Spinning Factory, Etc.—The Director-General of Prisons, No. 43, Sharia El Bustan, Cairo, invites tenders for the supply of articles for the cotton spinning factory and humidifying and ventilating plant for the said factory at Delta Barrage, August 27; and for machines, engines (Diesel and semi-Diesel), boilers and electric batteries, etc. September 28.

Towels, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of towels, tassels for tarbushes, collars and caps, to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. September 2.

TURKEY.

Copper Bars.—The Administration Générale des Chemins de fer et des Ports d'Etat invites tenders for the supply of 11,850 kilogrammes of copper bars, in sizes ranging from 25 to 35 m.m. diameter. August 27. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, August 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maimyo for Calcutta (Birkenhead, August 26); s.s. Makalla for Calcutta (Birkenhead, September 5).

Bibby Line.—S.s. Leicestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, August 21).

British India Line.—S.s. Morvada for Colombo, Madras, and Calcutta (London, August 24); s.s. Hatimura for Bombay (London, August 31).

Cunard Line.—S.s. Bactria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, Fiume; also at Palermo, Messina, Catania, Corfu and Gruz if sufficient inducement (Liverpool August 31, Swansea September 3); s.s. Bantia for Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza; also at Volo if sufficient inducement offers (Liverpool, Glasgow, and Swansea, August 31).

Johnston Line.—S.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 7).

P. and O. Line.—S.s. Novara for Calcutta (London, August 30); s.s. Viceroy of India for Bombay (London, August 30).

Prince Line.—S.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 17); s.s. Lancasterian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus (London, August 21); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout and Cyprus (Manchester, August 31).

Ellerman and Papayanni Lines.—S.s. Manchurian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool August 17, Swansea August 22); s.s. Flaminian for Malta, Alexandria, Jaffa, and Haifa (Liverpool, August 22); s.s. Lesbian for Gibraltar*, Algiers*, Malta, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 24, Swansea* August 24); s.s. City of Lancaster for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow August 26, Swansea August 28, Liverpool August 29). *Subject to sufficient inducement. THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 13.

As was only to be expected the volume of business on the Stock Exchange during the past short week has been on a much restricted scale, but thanks to the slight improvement in the immediate monetary outlook the tone was better. Gilt-edged stocks reflected the change in the monetary position, but the rise in the New York Federal Reserve Bank's rediscount rate at the end of the week came as a sudden surprise, and prices all round were marked down heavily. Whether this change will be followed by a similar move on the part of the Bank of England depends upon the extent to which speculative activity and the price of call money in Wall Street react to the Reserve Bank's change in their rate. In the miscellaneous markets activity in the recently popular counters has continued, and the two favourite margarine issues have been particularly buoyant.

For Safety.

As most investors are aware—some to their cost—there has been during the last few months a slump in the value of stocks and shares. Recently there have been signs of a better tone, but the many overclouding factors on the horizon suggest caution in choosing investments. The cotton dispute, although it has not so far seriously affected textile securities, and other wages controversies which are pending, and, above all, the unsettled condition of the Money Market with the recurring fear of the announcement of an increased Bank Rate as every Thursday noon comes round, are all factors making the Stock Exchange outlook uncertain. In these circumstances the ordinary investor may wisely avoid the temptation of low priced speculative industrial shares and confine attention to "safety first" stock. Some examples may, therefore, be helpful. The Gas Light and Coke 5 per cent. debentures redeemable 1952-7 have the merit of being stock of the largest and one of the best managed English gas companies. Last year the company made a profit of £1,421,645, covering the interest on the debentures nearly eight times. The debentures, issued to the nominal value of £3,600,000, yield £5 2s. per cent. The City of

Sidney has an issue of £2 million 5½ per cent. debentures redeemable at par in 1954, which now yield £5 9s. per cent. Bank shares, in view of the ample reserves, conservative but well informed management, and the regularity of dividends, which has become a byword, can be classed as almost "gilt-edged" investments. Westminster ordinary yield £5 5s. per cent. and Lloyds £5 4s. per cent.

Hotel Securities.

While the holiday season accounts for quietness in many branches of activity at the present time, it is also responsible for extreme activity in other directions, one of which is the hotel industry. The attention we give to hotels is usually connected with their attractions as temporary residences, but shares and debentures of some of the larger hotel companies are quoted on the Stock Exchange, and merit consideration from the investment standpoint. Conditions in the industry have been improving for some time past, but in its nature it is one in which profits are likely to fluctuate considerably and the ordinary shares of these concerns are therefore somewhat speculative. In several cases, however, the financial position is sufficiently strong for the prior charge securities to rank as well secured industrial investments. The interest on the Savoy Hotel 4 per cent. perpetual debentures, for example, has been covered some ten times by earnings in recent years, and a substantial reserve fund has been built up. On these debentures a return of £5 11s. per cent is obtained. Carlton Hotel 4 per cent. debentures, redeemable 1949, yield £6 2s. per cent., and in this case interest is covered over nine times by the last year's earnings. The market in this stock is narrower, however. The ordinary shares of the Carlton Hotel Co. return £6 4s. per cent., and those of the Savoy Hotel £6 5s. per cent.

The A.B.C. Affairs.

The report of Sir Harry Peat, the eminent accountant, on the financial position of the well-known caterers, the Aerated Bread Company which was made public a day or two ago contains some strong criticisms. In his opinion the commitments of the A.B.C. in the Abford Estates property owning company are unsatisfactory, as is also the financial relations of the parent company with its subsidiaries, whose profits have been declining. Some subsidiaries should be disposed of and others more closely assimilated by the A.B.C. proper. The board of directors, Sir Harry thinks, needs to be considerably strengthened and the secretarial and accountancy systems need remodelling and bringing up to date in order to keep the management in closer and quicker contact with the business. Modernisation of some of the depots is also considered necessary. Sir Harry Peat thinks the company capable of earning considerably more than it actually has been doing for some years. The capital is intact and well covered by profit earning assets. Sir Hamar Greenwood, the Chairman of the company has stated that some of the matters referred to in the report are already being dealt with and the other suggestions will be acted upon with Sir Harry Peat's co-operation. Investors should note that in the first place the reorganisation will need money which Sir Harry Peat suggests need not come from additional capital but by borrowing or out of revenue. Last year the ordinary dividend fell from 10 per cent. to 3½ per cent. and on this basis the present yield is £2 14s. per cent.

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms.
The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfers on all its Branches, at the exchange of the day.
The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.
Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.
The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.
The Bank transacts every description of banking operations.

Motors and Motoring.

(By Our Motoring Correspondent)

Motor Lorries and Agriculture.

Having spent the last fortnight in a purely agricultural district, I have been able to realise the great boon the motor truck is to farmers and market gardeners. Not only does it bring them into intimate touch with the various markets in their vicinity—they can travel as far in an hour as previously they could in a day with horsed equipment—but it enables them to sell the greatest possible quantity of goods at much lower prices than they could previously. If they care to handle produce in a wholesale manner, they can travel the district buying from other producers and selling in bulk. With a truck that will carry up to, say, two tons of roots or other commodities, they are practically independent of the railway, and, so quickly have the advantages of motor transport become known, that there is hardly a farmer in the district to which I refer who has not one or more 30 cwt. trucks, as well as a small runabout car. The truck invariably has a low-loading, general purpose farmer's body, with cattle-loading ramp and detachable slat sides above the side boards. Such a van answers practically every purpose, and, with good tyres to start with, costs very little for maintenance in a district where even the smaller secondary roads are well surfaced. With the general purposes body, root crops of every kind, from sugar beet to potatoes, can be carried, feeding stuffs can be hauled, and a couple of cows or a score of sheep can be carried if and when necessary. A point in connexion with this that may be mentioned is that with a motor truck of the kind described, the farmer is not bound to sell his livestock in the nearest market, but can carry them to any district where there may be a demand. Further, drovers' charges are avoided, as any livestock purchased can be taken away in the truck instead of it being necessary, as formerly, to pay men to drive them home.

The most widely used types of vehicle are the light one-ton van, the 30 cwt. lorry, and, for big work, the 2½ ton wagon. Most of the farmers in the Midlands prefer the 30 cwt. vehicles, as they are light and speedy and yet have ample capacity. Solid tyred vehicles are not in great favour here, as one of the essentials of the farm vehicle is that it should be able to travel on rough or soft ground, as ordinary farm roads, and by reason of their comparative narrowness solid tyres are not generally suitable for that work. Speed is another quality which the farmer seeks in his motor van, and the light, speedy vehicle is far preferable to the bigger and slower type.

A point that has to be remembered is that farm lorries often have to start up on soft ground and perhaps travel some distance along a dirt track before they reach a hard road. When root crops, in particular, are being dealt with, the ability to start up on and travel along soft ground is apparent, as it would never pay a farmer to have to employ horsed vehicles to go into the fields collecting the roots as they were pulled up and have to unload these vehicles into motor lorries at the farm. Generally speaking, unless the ground is of a peculiarly soft or boggy character, an ordinary 30 cwt. lorry with good pneumatic tyres will be able to follow the root pickers along the field and then move off at once on to the road to carry the produce to market or to the dump.

In the great market gardening districts the position is practically the same. At one time it was believed that big delivering services could be organised which would collect produce at the various gardens and carry it to market at a low cost, but the farmer has now seen the advantage of owning his own vehicle, a course which is economically sound so long as he has a constant round of tasks for it to perform. As a writer put it recently, in market gardening work it is essential to have transport available almost on the instant it is required. Prompt and efficient means of transport is the backbone of this particular industry. Practically every market gardener is the owner of at least one light lorry, and those who have not yet decided as to the vehicle they will buy are collecting information and prices with a view to purchase in the near future.

Motor Show Prospects.

There is already some speculation as to what the coming Motor Show will bring forth in the way of new developments, particularly as to prices and innovations in designs. From certain indications it would seem that we cannot expect much in the direction of price reduction; indeed, there are those who feel that we have already reached bed-rock as far as selling prices are concerned. That view is based on the fact that there have been no recent falls in the prices of raw materials, and labour costs, for certain reasons, are not likely to be lower as time goes on. In fact, many in the trade hold the view that prices will probably advance and that 1929 marked low water in that respect. However, we have the fact that works' production and works' resources have improved, and so we may expect, with some confidence, rather better value in the details of car equipment.

So far as engines are concerned, the straight eight-cylinder design is coming into favour and we shall certainly see more of these used in the new season's models. Two or three of the British-made luxury cars will be fitted with that type, and a leading Continental production will also change on to that design. So far, there is a great advance in the straight eight engine, but carburation is still rather a problem. Following to some extent on the same lines, we shall find some of the smaller cars which have hitherto had four-cylinder engines changing over to the six-cylinder type, whilst one at least of these hitherto boasting a twin cylinder engine only will fit a four-cylindered power unit. A good deal of experimental work has been going on in the various works' laboratories, and as a result higher engine speeds will be the order of the day. Gear boxes will also be improved and simpler methods of changing will be fitted on the smaller cars, but the "free-wheel" idea, about which so much was heard a few months ago, does not seem to have commended itself to manufacturers and we shall probably hear and see very little of it at Olympia this year.

In view of increasing unemployment in the country the Roumanian Government has decided to compile lists of all foreigners working in Roumania, with a view to prohibiting from further residence in Roumania all those engaged on tasks which could be equally well done by unemployed Roumanians.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 7:—

Egyptian Futures.

Sakel Contract.—When we wrote these notes last week a feeling of optimism with regard to the probable duration of the strike was prevalent. Speculative buying of the November position on the following day resulted in that option being forced up in the region of 16.70d. This advance was short-lived, however, and the next day saw the same month down to 16.23d. on some American selling, and general pre-holiday liquidation. Since then the tone has been steadier as a result of some trade "calling" and some mild support from Alexandria. Values on balance are only a few points lower than those ruling a week ago. November and January have tended to narrow slightly as fears of Sudan tenders diminish. Our "parity" of approximately 30 points under Alexandria shows little change, although the tendency appears to be towards a narrowing, if anything. Briefly, a complete lack of new business has paralysed all initiative, and, were it not for the steadiness displayed by American contracts, a severe drop would probably have been witnessed. Sentiment with regard to the strike has changed round and hopes of a speedy settlement are dwindling rapidly. Nevertheless, the situation is such a serious one for Lancashire that it is unthinkable that the present state of affairs will continue without both sides straining every nerve to reopen negotiations.

Upper Contract.—This contract has ruled very quiet and the tone has been rather on the heavy side, although only a small net decline has been registered on the board. Local liquidation has been in evidence, and, with the very poor offtake available, values might well have broken badly had it not been for the sentimental support derived from the steadiness of American contracts. Differences with the latter market have narrowed slightly, particularly in the later deliveries.

Egyptian Spot.

Apart from the strike up-country we have had the August holiday week-end intervening, and with more mills ceasing to run, and no move towards a settlement, the outlook has been anything but cheerful. Business in actual has shrunk to minute proportions and prices have scarcely been tested. On the whole, values have remained very steady, although, on balance, small declines have been registered. The underlying strength of American contracts, pending the report due the 8th inst., has been the chief support.

Sakels have witnessed a very small inquiry within a range of 50 to 200 on November contracts, and the low grades at about 11d. to 12d. have also produced an odd inquiry here and there. The top qualities have been neglected.

Uppers.—A moderate business has been done in cotton at from 10 to 25 on, and an abortive inquiry has been met with for the very best quality. The lower grades, for which there is usually a very brisk demand at this time of the year, have been entirely neglected.

Pilion.—A few inquiries for cotton at from 11½d. to 12d. have cropped up, but we have not heard of any actual business being put through. Better qualities have not been asked for.

Nahda, Maarad, and White.—No business reported.

Sudan and Tokar.—Business on a very moderate scale has continued in the former, chiefly in the lower qualities. Tokar has suffered from neglect. C.i.f. business has become dead and forwardings to the trade last week shrank to 2,060 bales Egyptians and 439 Sudans. Estimated spot sales for the week (four days), 500 bales Egyptians and 200 bales Sudans. Quotations of Sakel show a net decline of 5 points; Uppers and Pilion are 10 points lower. F.G.F. Sakel to-day, 17.05d. F.G.F. Upper to-day, 11.50d. F.G.F. Pilion to-day, 12.60d.

February, 22.50 dollars, 0.25 dollars up; April, 22.92 dollars, 0.27 dollars up; June, 23.32 dollars, 0.27 dollars up.

Sakel.—The news of the lock-out in Lancashire naturally had an unfavourable effect on the market here, but the decline caused thereby was regained on the unexpected firmness displayed by both the New York and Liverpool markets. Trade interest in the market is still lacking and the daily sales at Minet el Bassal have fallen to a very low figure. It is interesting to note that out of the 1,230 bales Sakel offered by the Government for sale on Wednesday last, July 31, only 305 bales found buyers, i.e., only 25 per cent. of the quantity offered was sold, the lowest percentage since the opening of the Government auctions. Fresh business with spinners for new crop shipment has been of negligible quantity, if not actually nil. Reports from the Delta on the progress of the crop again offer no outstanding feature. Export houses have made practically no sales to spinners of new crop cotton, and do not show any hurry to commence purchases in the interior. Hedging operations in the futures market against new crop cotton have up to now been very small. We maintain our opinion that our market will, for some time yet, continue to be governed principally by the movements of New York.

The Sakel/Uppers straddle (November/October) this week stands at 1,218 points, against 1,194 points last week and 1,244 points at this time last year.

Uppers.—This market has been much quieter than the Sakel market, but here too the tendency has been rather firm. Trade interest has been more active than in Sakel, but has, nevertheless, not been sufficiently large to cause a decisive advance in prices. Moreover, the strength of the present statistical position begins to dwindle in importance, as within three or four weeks the first receipts of new crop cotton will commence to appear on the market. It would seem that the present premium of Uppers over New York is likely to be maintained for the time being. The Ashmouni/American straddle (October/October) this week stands at 243 points, against 265 points last week and 525 points at this time last year.

The week's receipts amount to 498 kantars, against exports 62,373 kantars; the stock in Alexandria stands at 1,615,327 kantars.

Spot.—There is nothing new to report this week, business continuing on rather quiet lines. Of a total turnover for the week of about 3,390 bales, we estimate Sakellaridis 800 bales, Ashmouni and Zagora 2,280 bales, Pilion 170 bales, and other varieties 50 bales.

Sakellaridis.—What little business has been transacted has been confined to better grades, with a very small inquiry for low cottons. Premiums are unchanged.

Ashmouni and Zagora.—The greater part of the past week's business has been done in these growths for cotton grading Fully Good Fair/Good and Good. The low grades have been entirely neglected. Premiums are unchanged.

Pilion.—There has been a small turnover at last week's premiums. The grades in demand were Fully Good Fair and Fully Good Fair/Good.

Other Varieties.—Have been very neglected and premiums are as last week.

Crop, 1929.—In Lower Egypt the crop is making normal progress. The high temperature of the last few days has been particularly favourable to the growth of the plants. On the other hand, there have been some fairly damp nights and morning fogs which, if repeated, might cause an expansion of the pink boll worm and Nadua Assalia attacks. The damage resulting from these attacks up to the present is of no importance. In Upper Egypt, the condition of the crop is satisfactory. Opening of the bolls is proceeding normally, and it is expected that picking will commence about the 10th instant in the early fields of the extreme southern districts. The new Nile flood has reached the Delta.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended August 1, state:—

Since our last report the futures market has been very irregular, but it may be said that, on the whole, the tone has remained fairly firm. The week's summary of price movements is as follows:—Sakellaridis: November, 33.75 dollars, 0.44 dollars up; January, 34.09 dollars, 0.44 dollars up; March, 34.49 dollars, 0.47 dollars up. Ashmouni: August, 21.07 dollars, 0.16 dollars up; October, 21.57 dollars, 0.20 dollars up; December, 22.08 dollars, 0.27 dollars up;

British Consular Reports

III.—ROUMANIA.

(Continued from page 166.)

The Import Trade.

Motor cars and motor cycles and lorries and pedal cycles are all imported from abroad in considerable numbers. The import list of motor cars is headed by the United States makes, then follow Italy and France. There are only two British makes on the market. British motor cycle makers began last year to expand their business in this country with great hopes of further improvement. Belgian, French, German and Italian motor cycles are also seen on the roads. The import of lorries has not appreciably increased owing to the condition of the roads. The demand for pedal cycles is constantly growing and British manufacturers have begun to take some interest in this market, which up to the present has been held by French, German and Belgian cycles. Of these, large stocks are held for which long credits are granted. Important business is done in tyres and all the world renowned makes are to be found here. One British make is well introduced but there is room for others.

Oil motors are now imported principally from the United Kingdom. The improvement in British sales is due, apart from the question of quality, to the credit facilities which British firms now accord to Roumania, whose market offers a large field, in view of the numbers of engines required for the peasants' mills, for industry, agriculture and other purposes.

With regard to leather goods His Majesty's Consul at Cluj reports that efforts have been made by local dealers (in Transylvania) to import black and coloured chevreaux from the United Kingdom. These, however, were quickly ousted by goods of American origin, the dealers stating that British manufacturers either take little interest in this market or impose too onerous terms of payment. Patent leather is imported from the United States, and a little from Germany, this latter country also exporting a little box-calf leather to Transylvania. As regards footwear, although a great many hand-made shoes of local manufacture are worn, a certain quantity of factory-made shoes of Czechoslovakian, Swiss and Austrian origin are imported, while goloshes are imported from Austria and Sweden. Foreign made leather belting is being gradually driven from the market by the domestically manufactured article, which, however, is not of the best quality. Small quantities of leather for book-binding purposes and sports goods were imported into Transylvania during the past year.

His Majesty's Consul at Timisoara states that the sale

of shoes has suffered from the reduced purchasing power of the population. There are, however, important imports of shoes, in spite of the high duty, chiefly from Czechoslovakia. Coated canvas for linen shoes, different cottons for lining and artificial satin are brought from Great Britain, though Italy and Czechoslovakia are competitors. Flax yarn and linen threads also come from the United Kingdom; in these articles Germany and France are the competitors. Great Britain sends also rubber-crêpe and shaped rubber soles; the United States is her rival in the latter.

Most of the imported machinery comes from Germany, then, in order of importance from Czechoslovakia and Austria and smaller quantities from the United Kingdom. These competitors grant credit facilities and very often send their goods on consignment. Last year textile machinery mostly came from Czechoslovakia, Germany, and a small share from the United Kingdom. Machine tools are supplied as a rule by Germany and smaller quantities by other countries.

Electrical machinery also comes from Germany, who heads the list of imports, and such firms as the A.E.G. and Siemens Schuckert have their own selling branches in Roumania, which hold stocks on the spot and secure most of the Government and municipal orders for town lighting, motors and other machinery and materials. Other countries practically do not count in this branch.

Notwithstanding the exceedingly high import duties, some foreign coal of better quality, which is not produced in this country) was imported for domestic and industrial purposes. Generally such foreign coal is brought from Poland and in smaller quantities from the United Kingdom. Coke for industrial purposes is imported in large quantities and competent judges are of opinion that Great Britain could secure a larger share of this trade if greater credit facilities could be given. Most of the sugar factories and metallurgical works use imported coke.

Sulphate of copper is manufactured in this country but in insufficient quantities to meet the home needs, and in inferior quality. Farmers prefer British brands which are imported in large quantities. German firms have endeavoured to extend their sales of sulphate of copper, but they have not been very successful.

Dyes, up to last year, came almost exclusively from Germany, and in very small quantities from Switzerland and Italy. In the beginning of 1929, however, British dyes were successfully introduced on this market. Other British chemical products find a good market in Roumania, e.g., glycerine, cocaine, morphia, menthol, insulin, mercury, carbolic acid, camphor, etc.

Agriculture.

The actual area sown in cereals and other crops has increased each year since the war, until it exceeds the

normal pre-War figure, but the same cannot be said of production. No increase has been attained in the yield of the leading cereals and the effects on agriculture of the unfavourable weather of the years 1927 and 1928 have diminished the purchasing power of the farmer. Improvement seems contingent upon the inculcation of more up-to-date methods both as regards ploughing and fertilising of the soil and the use of selected seed. The competent authorities have expressed their intention of abolishing export taxes on cereals in the near future.

The following provisional returns issued by the Ministry of Agriculture show the areas sown in the autumn of 1928 for harvesting in 1929 (the 1927 figures are given for comparison):—

	1928.	Hectares.	1927.
Wheat	2,902,936	...	2,946,600
Rye	292,602	...	275,802
Barley	130,182	...	107,439
Rapeseed	18,189	...	63,207

The wheat area is 43,664 hectares less than in 1927, while those of barley and rye have increased by 22,743 and 16,800 hectares respectively. The rapeseed sowings,

however, amount to little more than a quarter of those of 1927.

The Roumanian Ministry of Agriculture has issued the following figures intended to give an approximate idea of the number of fruit trees in Roumania in 1927. No scientific census has been made as it is intended to take a general agricultural census in 1930: plum trees, 48,361,996; walnut trees, 3,625,287; apple trees, 7,813,914; pear trees, 3,411,239; cherry trees, 7,976,396; apricot trees, 994,078; peach trees, 915,584; quince trees, 1,069,238.

(To be continued.)

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for July was 75,920 tons.

The London Office of the Banque Franco-Serbe is now at 26, Throgmorton Street, E.C.2.

Notes of the Week.

Persia and Foreign Powers.

The success with which Persia is regularising her position with foreign Powers is very striking. With her immediate neighbours, Russia and the British Empire, she has in the last year or two reached working agreements. With Iraq she recently made a notable gesture of reconciliation, and the reception accorded in Baghdad to the new Persian representative, Inayatullah Khan Samiyi, was a symbol of the intense relief that an extremely unsatisfactory state of affairs was at an end. The friction, which at one time threatened to be serious, between Turkey and Persia, is at this very moment being resolved by a Frontier Commission based on Maku. And the latest success of Persia is to be noted in her dealings with the King of the Hijaz and Najd. In some ways, this last, though not vitally important like her relations with nearer States, represents Persia's most picturesque success. For a Wahhabi State to have attained good relations with a quintessentially Shiah State—and the traditional attitude of Wahhabis towards Shiahs needs no explanation—is something on which Persia no less than King Ibn Saoud may justly be congratulated. It is a most gratifying manifestation of good will in quarters which might not have been looked upon as likely to generate good will, and it is yet another indication that both Riza Shah Pahlavi and King Ibn Saoud know well how to overcome local prejudices. On the whole, Persia's foreign policy as conducted in recent years must afford very considerable satisfaction to her gifted people. It is an appropriate, if fortuitous recognition of the prestige which Persia has gained that the next meeting of the Council of the League of Nations should be presided over by the Persian delegate.

Russia and the Yaman.

The slight hysteria that was displayed in a few circles when it became known that Soviet Russia had accomplished what Great Britain even yet has not been able to accomplish, namely, a Treaty with the Imam Yahya of the Yaman, turns out to have been as unjustified as calm observers of the situation thought it at the time to be. For *Al-Yaman*, the only journal, we think, that is pub-

lished in the Yaman, last month printed the text of the Russo-Yaman Treaty. This friendly and commercial agreement, which is designed for a period of ten years, really provides for little else than the recognition by Russia of "the complete independence of the whole Yaman" and free commercial intercourse between subjects of the Imam and Russian subjects. Why it should have been supposed that such provisions were, in effect, a further lever to dark Bolshevik designs in India and the whole Middle East is not very clear. What the Imam Yahya, as an independent ruler, is able to do with Powers outside his State, whether they be Italy, Russia, or some other Power which has not yet recognised him, he can certainly do with no lack of British good will. British interests repose in the main in the integrity of the Aden Protectorate, by guaranteeing which the Imam could have a Treaty to-morrow with the British Empire. Actually it is little that either Italy or Russia can achieve in the Yaman, and those observers were possibly wisest who asserted, in face of the Italo-Yamani Treaty and of this later Sanaa Treaty, that what the Imam would still most fondly cherish would be a Treaty with Great Britain. Certainly there is nothing in the published clauses of the Sanaa Treaty which can raise great enthusiasm in this independent Arab State. One cannot help feeling that this continual talk of Soviet activities in Arabia, in the sense of the Arabs' being converted to Bolshevik doctrines, is singularly unintelligent. Possibly you may work on the so-called feelings of devout Muslims for the purpose of some particular incident, but you surely cannot, unless you directly govern them, pervert their mental and religious attitude. The atheism of Moscow has very little chance of spreading in the sublime atmosphere of Sanaa; one can imagine the fearless Zaidis, in their garden of the Yaman—"Arabia Felix"—saying to Bolshevik teachers what T. E. Brown said of his garden—"No God? Nay, I have a sign!"

The Macedonians and Sofia.

Nothing could more plainly indicate the difficulties under which the Bulgarian Government works in connexion with the frontier with Yugoslavia than the

manifestation of open Macedonian hostility to it. Macedonian influence upon the Sofia Administration is, of course, unceasing, but for the most part it is kept in the background. Enough of it is known, however, to give a handle to the Yugoslav accusation that the Sofia Government is under the thumb of the Macedonians, and it is true that great reluctance is often shown in the Bulgarian capital in dealing with this menace. M. Liapcheff himself is peculiarly reluctant to take such severe measures as in other circumstances would seem to be indicated. But from time to time the Bulgarian Government resolves to show that, after all, it itself is master of the country, and that these illegal steps of the Macedonian Brotherhood must be checked. Last week, for instance, a conflict arose between the Macedonian Revolutionaries and Government troops in the neighbourhood of Petritch. The Revolutionaries had rebelled against the authorities' examining consignments to them, and the Government asserted its right to such an examination in convincing fashion. Again, on August 13, a band of Revolutionaries attempted to cross the Yugoslav frontier in the neighbourhood of Trn, and the Bulgarian frontier guards had to fight them before they would yield up their arms. Such firm conduct as this is bound to create the greatest resentment among the recalcitrants of the I.M.R.O., and it may be that serious conflicts will occur before it is fully realised that the Sofia Government is what every right-minded observer of the Balkan situation must hope it to be—in earnest. For no real peace in the Balkans is possible until the Bulgarian Government has mastered its Macedonians. Whatever Yugoslavia may do in her newer territory, she will, it is to be expected, have abundant defenders so long as the I.M.R.O. is in existence.

The Wailing Wall Once More.

It has been obvious, during the past few weeks, that some untoward incident was possible in Palestine as a result of the whipping up of Jewish indignation over the question of the Wailing Wall. So passionate, indeed, had been the expression of Jewish sentiments that the Ninth of Ab (August 15) was looked upon with some anxiety, lest hot-headed partisans should disregard the advice of the local Jewish leaders in this matter. The Palestine Zionist Executive, the Chief Rabbinate and the National Council had expressly demanded "that all action in the matter should be taken only with their consent." On the whole their advice appears to have been accepted. But, according to an official announcement issued by the

Palestine Government on August 18, some hundreds of young Jews attempted to make political use of the Ninth of Ab at the Wailing Wall. The result of such unwise action could have been foreseen: Muslims assembled in strength to deny the use by Jews of the Wailing Wall for purposes other than their usual practice of prayer. Immediately telegrams were despatched to the papers, depicting the disorders in the most lurid colours. It is, however, a tribute to the efficiency of the local authorities responsible for law and order that the situation at the Wall on the following day was perfectly normal. No doubt more will be heard of this affair. But in consideration of the highly emotional circumstances it is probably gratifying that the actual disorder appears to have been comparatively slight.

INDIAN NOTES.

The Floods in Sind.

The announcement of the distinction of K.C.S.I. recently bestowed upon Sir Louis Rieu, has been followed by the news of his retirement: and his many friends will be grieved to hear that its cause is ill-health. His successor is Mr. W. F. Hudson, also a former Commissioner in Sind, who will bring to the Government a quality of briskness and dispatch in which it has been regarded as lacking of recent years. Although not too robust in health, Mr. Hudson is still an excellent tennis player, almost as skilful as he was when he played for Oxford. Meanwhile the mention of the Sukkur Barrage in last week's issue brings to mind another of the troubles of the Bombay Government. Following the earlier and far from reassuring reports of the floods in Sind comes the news that the embankment of the Abul Cahal, which irrigates Khairpur State, has been broken near Gambat. The town is apparently safe, but the country for twenty miles round has been submerged and unless the flood waters from the burst Shyok ice dam dissipate themselves in the upper reaches of the Indus the inundation is likely to be extensive. In former days such floods were a commonplace: and, though they did much immediate damage, they enabled large areas to be cultivated, while the temporary nature of the villages destroyed allowed them to be easily refounded. The increasing embankments and canalisation of the Indus, however, have caused such floods to be a rarer phenomenon in recent years, while villages, roads, and the system of cultivation generally have become more permanent in their nature. The damage caused by an unusual inundation is, therefore, far more serious than used formerly to be the case, while the adventitious compensatory advantages are smaller.

Bengal and Primary Education.

The Bengal Primary Education Bill, which we have mentioned more than once lately, has been shelved by the newly elected Legislative Council. Following the example of its predecessor the new Council has referred the Bill to a large Select Committee, which procedure means, of course, that there will be no progress. The Select Committee which was appointed by the old Council was the largest on record, and it made an exhaustive study of the Bill. Now there will be a further prolonged scrutiny, and another voluminous report. The real reason doubtless is that there is no party in the Council who will venture to face unpopularity by imposing the taxation which is contemplated by the Bill. Taxation is nowhere more unpopular than in Bengal; and measures which necessitate new taxes have a very slender chance of getting through the legislature. For years past there has been an insistent demand, on the part of the educated classes, for the establishment in the province of a system of primary instruction. But now that the question of meeting the cost has to be considered enthusiasm seems to have vanished. This is greatly to be regretted, for the need is really urgent. Bengal is a backward province in regard to primary education.

THURSDAY, AUGUST 22, 1929.

THE JEWISH AGENCY AND PALESTINE.

The Jewish Agency, a composite institution of Zionist and non-Zionist, long talked of, hoped for, and, in some quarters, feared, is now an accomplished fact. In scenes of tremendous enthusiasm, its inaugural meeting took place in Zurich last week. The main feature of the early speeches was, as might have been expected, an emphasis on the fact that Palestine was now to become what is called by successful commercial men—and prominent among the advocates of this "mixed" institution for the colonisation of the Holy Land by Jews are not a few such men—a "business proposition." There is something, we think, although this is not the place to dilate upon it, in the complaint made by certain Zionists, that this new Jewish Agency implies a toning-down of the Zionist ideal. For the non-Zionists, from whom it is hoped to draw considerable sums of money for Palestine, that is, for the Jews in Palestine, will contribute rather from a sense of duty than towards the accomplishment of an ideal. It is not, of course, for non-Jewish observers to express any opinion on whether they are right or wrong in so doing, but the point should be recognised. Less and less, presumably, we shall hear mention of Jewish Nationalism in Palestine, more and more of business methods and reasonable returns among the Palestinian Jews. The Holy Land is, in short, to be "Americanised." The keynote of the Jewish Agency is sound, practical methods: as Mr. Louis Marshall put it—"as a practical people they were going to help to up-build Palestine in a practical manner." He spoke, naturally, only on behalf of non-Zionist American Jewry; but it needs little foresight to understand that it is their note, their method, which has roused the enthusiasm of successful Jews, Zionist and non-Zionist, in Europe, and which will in all probability dominate the counsels of the Enlarged Jewish Agency. For it had for some time been felt, even among the Zionists themselves, that the mode of colonisation in Palestine was not sound; it was obvious, indeed, that at the quick end of certain enterprises was inevitable shipwreck. That was one of the reasons which prompted the formation of the Joint Palestine Survey Commission—a body which examined Jewish colonisation in the Holy Land from the severely practical aspect. After its report had been published it was patent that the establishment of the Enlarged Jewish Agency was merely a matter of time, or alternatively, that for the Zionist ideal in Palestine, hitherto perhaps unsoundly pursued at times (as all ideals are, whether inevitably or not, pursued) would be substituted a mere idea—the "upbuilding" of Jewish colonies in Palestine. Whether this substitution will remain a permanent factor in the situation, or whether, later on, there will be a reversion to the possibly finer, wilder ideals of the first years of the Jewish Agency, must

be left for Time, the Arabs, and the British Mandatory Power to decide.

What is likely to be the material effect on Palestine of this new Jewish Agency? A Budget of £750,000 a year is provided for, and a million pounds annually is foreshadowed. Manifestly there must, with all this wealth, be a considerable difference in the circumstances of the Jewish colonists. Mr. Louis Marshall warned the Council of the Jewish Agency, indeed, against expecting any great results at once; but Dr. Weizmann said that he looked forward to an immigration programme of 100,000 Jews into Palestine in the next five years. Which of these two more or less contradictory statements is likely to be correct, we have no means of judging, but certainly, if Dr. Weizmann's forecast is sound, the position in Palestine may call for new plans on the part of the Arabs. It has been the habit of the native inhabitants of Palestine during the last few years to regard the menace of being numerically overwhelmed by the Jews as increasingly slight, but the most recent solidifying of extra-Palestinian Jewish forces has caused them considerable anxiety. Hence, in part, their resolve to demand representative institutions, and no longer to indulge their non-co-operation policy. If there is to be—what it is difficult, indeed, to believe—an annual Jewish immigration into Palestine for the next few years of 20,000—the much-talked-of Arab-Jewish collaboration will surely become not less, but more difficult. For it is a delusion, widely entertained in these latter days, that all problems can be solved through the emollient of economics, that political, national, or racial ideals and ambitions invariably lose their edge on contact with prosperity. It is sometimes, but not always so. Because the Jewish settler brings money into the pockets of the Palestinian Arab it does not follow that the Arabs will increasingly welcome him. For the despised Arab, though quick enough to appreciate financial advantage, is by no mean unaware of the motive of the donor. The problem does not solve itself in that way. Not the financial, but the psychological key it is which will unlock the Arab's heart.

The matter is, admittedly, extremely difficult. The Jewish Nationalist ideal—that ideal of making "Palestine as Jewish as England is English"—has without doubt been modified, if not entirely banished. The Arab of Palestine no longer fears Jewish political domination. But this new accession of wealth to the Jewish colonists will present fresh problems, for though it may, and certainly will, spill over into Arab pools, its main content, naturally, will be preserved in constantly expanding Jewish reservoirs. Now will these pools and reservoirs ultimately coalesce, or will those who control the reservoirs insist on their not being contaminated by the too long stagnant pools? If Mr. Felix Warburg, who is one of the most influential persons connected with the new Jewish Agency, is a true prophet, the Muslims and Christians will continue to look enviously at their well-equipped neighbours, the Jews. Mr. Warburg said, at a meeting of the Jewish Agency Council last week, that it was the duty of the Government in Palestine to supply an equal proportional contribution for education and health to Jewish, Arab and Christian institutions alike. He added that "they, the Jewish Agency, would provide the additional sums necessary to make their institutions the best." A perfectly natural, inoffensive remark; but how great a problem in co-operation it implies! With the impulse in Jewry to make of Palestine a cultural centre there can be few to quarrel—few, indeed, will not admire it profoundly. The appearance in the Holy Land of a pure Jewish type is something to move the imagination. But it should not be supposed that with the passing of the Jewish movement into apparently smoother waters and into a more moderate atmosphere, the problems of Palestine are at an end. In a sense they are only beginning, for not until now has a comparatively united Jewry started to storm the ramparts of Zion.

From Our Own Correspondents.

The Proposals.

Alexandria, August 9.

The documents relative to the proposed agreement between England and Egypt have now been published. They have been received by the Egyptian Press on the whole in a most sensible, calm manner, strikingly at variance with the frenzied outbursts in the English newspapers. The general opinion in Egypt, except, perhaps, among the Wafd, is that these proposals are of such vital importance to Egypt that any premature decision regarding them is impossible, and only after the nation has had time fully to digest each item, will it be possible for an opinion to be given. That the new proposals mark a great step forward in the relationship between the two countries is everywhere commented upon, and, if it is possible to judge from the reserved comments already made in Egypt, public opinion is very favourable towards the new Treaty.

It seems quite clear that the reason which led the British Government to expedite the negotiations leading to the drawing up of these terms, was the extraordinarily good impression made in London by Mohamed Mahmoud Pasha, and, perhaps to a much larger degree, the record of his Government in maintaining peace and order throughout the country for more than a year. It must also follow that the British Government was entirely unmoved by the frenzied efforts of the Wafd, under the leadership in London of William Makram Obeid, to persuade them not to give a hearing to Mahmoud Pasha. The charges brought by Professor Obeid were wild and entirely unsubstantiated, and obviously calculated to give an entirely wrong impression of internal Egyptian affairs. They give an adequate impression of the mentality of the Wafdist party, and show, also, that that party has only one object: to get back into power by any means whatsoever. It is, therefore, incredible that the British Government should insist that elections should take place at once in Egypt, and on the lines of universal suffrage. Such a step would put the Wafd back into power and thus undo all the good work done by the Mahmoud Cabinet during the last year. The Wafd has immense influence on the ignorant masses of Egypt, which are totally incapable of discriminating between the high-sounding phrases used by the Wafd while out of power and their corruption and wilful neglect of the nation's interest when in power, and the sound, solid work and reforms actually carried out by the Mahmoud Party.

Until the advent of the present Government, nothing had ever been done in Egypt to ameliorate the extremely hard lot of the ordinary Egyptian working classes, yet in twelve months Mahmoud Pasha initiated innumerable reforms, which are designed entirely to alter the status of the Egyptian lower classes. What is even more important from a European point of view, is the fact that measures for the maintenance of public security have improved so considerably under his régime, and when the reforms in the Police force and the Ghaffar forces, which he initiated, are completed, Egypt will be as safe to live in as many European countries.

The opinion is held in certain influential quarters that the action of the Labour Government in rushing through these new proposals is against Egypt's interests. The proposals are certainly the inevitable outcome of the 1922 policy, which declared Egypt an independent, sovereign State, but it would—it is alleged—have been much wiser to have waited a year or two until Egypt was more fitted to assume absolute control of its own destinies, before such a step was taken.

The Wafdist Press is still continuing its intensive anti-Mahmoud campaign, but while this may still impress the ignorant classes, Mahmoud Pasha is daily gaining the support of a rapidly increasing body of the more intelligent of his compatriots.

An American's Views on Africa.

A well-known American business man, Mr. Ernest Filsinger, Vice-President of the Royal Baking Powder Company, arrived in Egypt this week by air from Johannesburg. Mr. Filsinger was in Johannesburg on business when he received a request from his firm in America to proceed to Berlin, and as he was anxious to make business arrangements in other African towns, he chartered Captain R. R. Bentley, the famous South African airman who had piloted Lady Bailey and Lady Heath on their recent African flights, to take him over Africa and then on to Europe. Captain Bailey said that thanks to the excellence of the Shell Company's organisation throughout Africa, it was possible to arrange the flight at 48 hours' notice. After calling at a large number of towns they arrived in Cairo last Monday, having made the trip, including stops at various towns of periods ranging from one day to one week, in three weeks, whereas had they been obliged to travel by road, rail and steamer, they would have taken at least four months.

Mr. Filsinger was greatly impressed by the British administration in Africa. He says the officials display such practical idealism, breadth of view, imagination and intelligence as to arouse his profound admiration. He was immediately struck by the recent commercial development of the country, and in his opinion Africa will before long play an exceedingly important part in world commerce. Another thing which called forth his praise was the excellence of the roads, especially in Uganda, which he considers are as well kept as many in England. This is mainly due to the fact that the Government made gifts of good quality motor cars to the native chiefs, who, having cars, wanted good roads to drive them on, with the result that a net-work of excellent roads soon appeared. He also considers that really intelligent methods are being used to educate the native tribes on practical lines, which enable them to help themselves.

Captain Bentley and Mr. Filsinger arrived in Alexandria on Thursday and will leave for Constantinople to-morrow. They expect to arrive at Berlin about August 20, whence they will proceed to England.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

Communications in Egypt.

Steps are already being made to improve the means of communication in Egypt, and to that end the Government intends to purchase six steamers for the transport of passengers, 18 boats for the transport of goods, and pontoons and other accessories, for the inauguration of a river service on the Nile. Whether this scheme will prove workable or not remains to be seen, as the upper reaches of the Nile are navigable for boats only of extremely shallow draught, except during certain periods of the year, and river transport is of necessity much slower than rail or road.

Constantinople, August 6.

The Ghazi in Constantinople.

Notwithstanding repeated assertions in the local Press that it was the Ghazi's intention to spend the summer months on his model farm near Tchan Kaya, the President of the Republic arrived in Constantinople yesterday morning at very short notice.

Instead of detraining at Ismidt and completing the journey to Stamboul by sea—the usual routine hitherto followed on these occasions—Kemal Pasha remained in his "coupé" until the Presidential train reached Pendik, where he motored to the Villa of Ismet Pasha, the Premier, who is spending the summer vacation on the

shores of the Gulf of Ismidt. After spending about an hour with the Premier, the Ghazi took the train to Haidar Pasha. There he embarked in the *Seuyudlu*, the smaller of the two ex-Imperial yachts, which conveyed him to the steps of Dolma-Baghtche Palace, to the booming of cannon, the hooting of ships' syrens, and the waving of many flags. The reception at Haidar Pasha was of the simplest nature, the travelling escort across the Bosphorus consisting of a solitary police barge, in place of the usual array of cruisers, destroyers and torpedo boats.

Death of Savfety Zia Bey.

Deep regret has been felt in official and diplomatic circles at the sudden death of Savfety Zia Bey. The "Chef du Protocole," a relatively young man, collapsed and expired within a few minutes at an informal dance which was being held at the Prinkipo Yacht Club, a favourite resort of Ministers and Deputies on leave in Constantinople during the summer months. He was recognised generally as an official who discharged the multifarious and exacting duties of his difficult office with great tact and *savoir faire*. Perhaps his greatest encomium is the fact that he died without leaving a single enemy among his colleagues—an epitaph that any man could wish for in these times of sycophants, tuft-hunters and time-servers.

The obsequies of Zia Bey were carried out on strictly European lines, and—for the first time on record in Turkish annals—his sorrowing womenfolk have published in the local Press an expression of their gratitude for the sympathy shown to them by all classes on the occasion of their bereavement.

Statistical Data.

The foreign expert who two years ago carried out the statistical survey of the density of population in various parts of Turkey, has found time, after achieving his main object, to regale the reading public every now and then with statistical data which, although bearing only indirectly on the main issue, nevertheless provide interest-

ing material for the student of social questions in this part of the world.

It is thus possible to learn that in Constantinople the Benedicts are in the minority, the bachelors outnumbering them by nearly 65,000. One is now no longer at a loss to explain the strenuous opposition which was raised in celibate circles some few months ago when the imposition of a relatively heavy tax on unmarried men was mooted in official quarters.

Divorced persons of both sexes do not exceed 9021 in number—a remarkable fact in a city where polygamy and facile divorce were not so long ago the rule rather than the exception.

Illiterate persons in Stamboul, notwithstanding the rapid increase in the number of primary and secondary schools, still number 481,244, thereby exceeding the number of those who can write and read by nearly 170,000. It is only fair to remember in this connexion, however, that these figures refer to 1927, at which time the new alphabet had not yet been introduced and popular night schools had not yet been founded. It will be interesting to see what progress the 1930 statistical survey will record in this matter.

In regard to occupations, the Vilayet of Stamboul possesses 89,517 farmers or agricultural labourers, 52,856 industrial workers, 70,100 merchants, 13,392 members of the liberal professions (excluding doctors), 13,409 Government officials, 18,917 troops of all ranks, 35,767 clerks in business establishments, 4,226 postal and telegraph clerks, and 3,396 medical practitioners.

Included in the statistical returns, unfortunately, are 2,164 deaf and dumb, 374 cripples, 1,307 armless persons, 352 hump-backs and 5,477 persons classified under "miscellaneous physical disabilities"—including, probably, blind persons who are not otherwise specifically indicated.

CYPRUS.

Nicosia, August 7.

The Asbestos Mines.

A strike of some 200 workmen at the Amiandos Asbestos Mines at Troodos, who demanded shorter hours and higher wages, led to some rioting, which was promptly dealt with. About fifty ringleaders and other have been charged before a District Court, many being sentenced to various terms of imprisonment up to one year. Order was soon restored at the mines.

Fresh Archæological Discoveries.

Excavations by the Swedish Mission at and near Trikomo, in the Famagusta district, have yielded a number of interesting finds of Babylonian, Phœnician, Egyptian, Greek, and Cypriot workmanship, dating from the 16th to the 12th centuries B.C., from a grove of the Mycenaean epoch, and from various tombs. The objects include bracelets, rings, ear-rings, vases of pottery, axes, knives, and many other things, besides about 100 skulls and other human remains of the epochs mentioned.

The Greek Deputation for London.

The Bishop of Kition, who with M. Stavrinaki, was chosen by the Greek members of the Legislative Council to proceed to England, has declined to act, and it has been decided that once more a larger and more representative meeting should be called—to consist of the Holy Synod, Greek members of the Council, and other leading Greeks from all parts of the island, with a view to arriving at further decisions. It is regrettable that more time and money should again be wasted over what can but be, if carried out, a futile mission.

More Visitors to Cyprus.

The Italian steamer President Wilson brought about 300 travellers, chiefly German, to Limassol. The majority visited Kolossi, a village about eight miles distant, to inspect a mediaeval tower built by the Hospitallers in the 14th century. Their name is preserved in a village, towards the north, called Spitali. It was at Limassol itself, which also contains an interesting mediaeval tower, that King Richard Cœur de Lion was married to Princess Berengaria.

Water Supply of the Capital.

As in so many past years, anxiety is once more felt at Nicosia, not only on account of a possible insufficiency of water, but owing to alleged inadequate supervision of channels against contamination. Whatever may be the responsibility of the Water Board, which is an active body, it would seem that it would be well if the whole question of the water supply could be taken up by the Government, and an increased supply provided for.

Canon Newham.

Canon Newham, Director of Education, who has been seriously ill in hospital at Nicosia, is better, and much gratification is expressed by all classes.

Calcutta, Delhi, Simla, Lahore, Rawal
Pindi and Murree

The Ven. Archimandrite Gennadios Themalis, of The Greek Church Vicarage, Greek Church Street, Cardiff, who died on December 12, aged 78, left estate in England of the gross value of £4,086, with net personality £4,020. He left—£1,500 upon trust to use the income for the benefit of "some young man of my country who should so desire to study theology (he is to be most moral and intelligent), or if not used for this purpose it shall be used for teaching religious lessons in the schools of my country"; £400 for the church he established in Antwerp, the income to be paid to the priest for teaching religious lessons to the children of the community; £250 to the Clerical Association of the Clergy and its organ of publicity, *Clerical Association*; £250 to the Young Men's and Young Women's Christian Associations, Athens, and to their organ and newspaper, *New Creation*; £200 to the ethical and religious periodical, *Regeneration*; £300 to "my pupil and young chorister, Antony Arapis, who has repeated perseveringly since he was a child that he intends to become a priest," so that he may study theology, but if when he becomes of age he shall change his mind the said legacy shall lapse; £70 "with my blessing" to Helen Karavokyran, "because I used to live in her parents' house and taught her on my knees her religious duties when she was small"; £70 "with my blessing" to Virginia Rose Feorenzi, "because I lived and took my meals in her parents' house as a brother and she taught me music"; £300 for setting in order and publishing his MS. speeches or sermons, religious and moral discourses, Sunday lessons, various poems, etc., and the MS. treatise on the teaching of Greek music and for the publication of the picture of his representation in colours of the system of the five ancient Greek philosophers, some in pictures and some in his university note-books on psychology; £300 to the Church of St. Nicholas, Cardiff; £150 for the continuation of his work of sacred pictures; and £150 "to serve as first fruits of gifts" for the purchase of a plot of land for the burial of Orthodox Greeks; and £100 for the expenses of his funeral and £50 for distribution "to the poorest of the poor" after his funeral.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 1.

The Boycott of the Legislatures.

The Allahabad meeting of the All-India Congress Committee ended as was foreseen. The opposition throughout the country to any immediate resignation of Assembly and Council Congress members was too strong, and the Working Committee had to recommend to the larger Committee that the decision be postponed until the Congress meets at the end of the year in Lahore. The resolution passed is long, but it is too important not to give nearly in full. The text is:—

"In view of the general situation in the country, this meeting . . . is of opinion that the time has come when all national effort should be concentrated on the preparation of the country for a campaign of non-violent non-co-operation after December 31, 1929, and agrees . . . that all Congress members . . . should resign their seats to give effect to this campaign; but having regard to the views expressed by a considerable body of members . . . this Committee resolves that the question of withdrawal from the Legislatures do stand over till the forthcoming Congress at Lahore. This Committee further desires the public in general, and the members of the Legislatures in particular, to prepare for withdrawal . . . should such a course be necessary, on and from January 1 next. . . ."

Compromise.

More important than the decision was a note struck in the speech of Mr. Gandhi recommending that the resolution be passed. He said, as reported in the *Pioneer*: "In conclusion he asked those who listened to him not to forget that preparation and organisation alone sometimes frightened the enemy and avoided battle. From this point of view, therefore, they must not slacken their efforts at organisation. He therefore appealed especially to those legislators who wished to remain in the Councils during the next few months to realise the responsibility that lay on them." The speech was in Hindi. Mr. Gandhi was not satisfied with the summary in English that was published, and caused it to be published the next day that what he stressed was that preparation and organisation were means for avoiding battle, and that there was no suggestion of frightening the enemy. No indication could well be plainer than that, that Mr. Gandhi and Pandit Motilal Nehru do not want things to come to non-violent non-co-operation, civil disobedience, and non-payment of taxes (what a mouthful) after January 1; no "hint" to the Government of India and the British Legislature not to force them to resort to that could be broader.

The Way Out.

In the minds of these leaders, who now obviously do not want things to come to a crisis at the beginning of next year, the way out is a Round Table Conference between themselves and the British Cabinet, or a committee of it. That is why Mr. Gandhi made such a point of declaring himself a man for compromises. "But he for one," the report read, "was a man for compromises. He had made a compromise with Mr. C. R. Das and Pandit Motilal Nehru after his return from jail. Now it was not a question of compromise between him and Pandit Motilal Nehru, but between them both on one side and some of the Swarajists on the other." So he said, but the more important compromise in his mind (students of the subject in England must think of Mr. Gandhi as a subtle-minded man, one of somewhat the same kind as Disraeli) was one between the National Congress and Great Britain. An indication that this is so lies in the fact that the *Pioneer*, which has shown strong sympathy with the Congress, or the Nationalists generally, now writes in a modified and more conciliatory tone. It has changed as much as Gandhi has changed since last December in Calcutta, and in the same direction. On the

same day on which Mr. Gandhi's correction was published the *Pioneer* had a leading article in which such things as this occurred: "'Preparation and organisation,' says Mr. Gandhi, 'have sometimes frightened the enemy and avoided battle.' If we read his mind aright, and if we are doing him and his colleague in compromise, Pandit Motilal Nehru, no injustice, we believe that they sincerely wish to avoid this battle, and would most heartily and honestly welcome a peaceful solution."

The Congress Difficulties.

The Congress leaders may well desire a compromise. First, part of their following, the more active part too, is hot headed enough to think that the political severance of India and England is practical politics. That is rubbish, and the leaders know it. All moderate opinion in India desires a British army to keep out invaders. Secondly, to talk of non-violent non-co-operation, civil disobedience, and non-payment of taxes is easier than to rouse the whole country actively to carry out that policy. Would it even paralyse the Government of India, if carried out? Not every one by any means would refuse to pay taxes. I, for one, would pay my income tax; others would pay theirs. I, for one, would still want taxed tobacco to smoke, and some one would be found ready to import it, and pay the custom duty. Others would want their tobacco. So, while a great deal of the ordinary revenue would not be raised, a great deal of revenue would be. Then suppose the Government held up a few large cities to ransom, levied contributions on them, what answer would the Congress find to that? Or suppose there was a forced loan. Or suppose the British Government was found ready to finance the Government of India during the crisis. The Congress weapon might prove far too blunt. It would. The part that has already been tried, the boycott of foreign cloth, has proved too blunt a weapon. It fails; the traders' protest against it will militate against what partial success it has had. So the Congress leaders want to get out of the hole in which they have landed themselves.

New Muslim Parties.

Another indication that there are forces compelling the Congress leaders to seek to compromise their differences with the Government of India is that the need has been found to organise Muslim Parties in support of the Congress policy. The implication is that the bulk of the Muslims are indifferent or hostile. One of the new bodies bears as its name the Congress Muslim Party of Bombay. The other is an All-India Party, and is called the Nationalist Muslim Party. The Muhammadans of India are so divided, that they do not trouble whether you spell the word "Moslem," or "Muslim." That, however, is a very small matter. Pandit Motilal Nehru addressed a letter of congratulation to Mr. Brelvi on the formation of the Congress Muslim Party of Bombay. "I heartily welcome the formation of the Congress Muslim Party," he wrote, "and wish it every success. Nothing can be more disastrous to our political emancipation than the hostile attitude adopted by some Muslim reactionaries towards the Indian National Congress. They are trying to revive the early days of the Congress, when Mussalmans kept aloof from the great national institution on unwarranted suspicions similar to those they are now instilling in the minds of their co-religionists."

The "Reactionaries."

It is not by any means only a matter of "some reactionaries." Mr. Mahomed Ali, in answer to a question put to him as a witness before the Riots Inquiry Committee in Bombay, said: "I am still a Congressman, will go to the Congress and argue with Congressmen, but unfortunately it has become a Hindu communal organisation. Pandit Motilal has not the courage to stand against Dr. Moonje, with the result that the Hindu Mahasabha is all-powerful in the Congress to-day. Hindu leaders, except on one occasion, have failed to condemn Hindu aggression. The Hindu political leaders pretend to be

nationalists, but are really communalists." That answer was given several days after the publication of the Pandit's letter to Mr. Brelvi. In that letter he argued that there were no real grounds for Muslim suspicion of the Congress. His arguments have clearly made no impression on Mr. Mahomed Ali. I may add that he is the Mahomed Ali, not another man of the same name.

Land Revenue Matters.

Of Bardoli and land revenue matters generally I have written more than once. I have not yet succeeded in meeting any one sufficiently well informed in that obscure subject to explain clearly to me how in a sphere of administration that we were all led by Curzon to think was the last sphere in which Government would be found to be at fault—how in that sphere, ever since 1922, or some such date, Government would have appeared to have acted on wrong principles. It is very strange. The Government Settlement officers are understood to be highly expert men. Yet they may err so gravely, apparently, that a body of mere peasant cultivators know they have no case that will bear looking into. This appears so. Perhaps it is a legacy from the Great War. There is a promise of legislation in the Bombay Presidency, and, I believe elsewhere.

ANGLO-INDIANS AND THE STATUTORY COMMISSION.

(From a Correspondent.)

Colonel Gidney, the leader of the Anglo-Indian community, has submitted, to the Statutory Commission and to the Viceroy, a supplementary note on the question of unemployment among Anglo-Indians. He discusses in detail the various aspects of this difficult problem; and, if his facts and figures are to be depended upon, it would certainly seem that the prospects of the community are gloomy. Most of the avenues of employment which have been hitherto open to them are, Colonel Gidney says, being closed. It is true that the number employed on the Indian railways has increased with the expansion of the railway system; but other communities show a very much larger proportionate increase. And in all other State services, whether central or provincial, and in commerce, in industry, and elsewhere, the Anglo-Indians are suffering from a steady decrease of employment. As a general rule the Indian is willing to accept a lower scale of pay; and this willingness is helping him as regards commercial and industrial avocations. And so far as regards Government service Indianisation is now the accepted policy.

According to the Note it is this policy which is the chief cause of the trouble; for the community has always depended primarily on the State and the Railways for employment. Colonel Gidney estimates that at the present time the number of employed Anglo-Indian men throughout the country is about 22,400. Of these the great majority work on the railways—which are now chiefly State lines—or in the various Government services and departments such as, for example, the Posts and Telegraphs, Customs, Excise, Police and so forth. Of the minority some are teachers and some follow the learned professions, while others are in business, and others work on the land. It is admitted in the Note that until the introduction of the Reforms the community—depending on the Government—lived "in the pseudo-security of a measure of preferential treatment." The Reforms scheme with its policy of Indianisation came as a rude awakening.

The community was then and still is, Colonel Gidney says, in a state of educational unpreparedness. Its members are not educationally equipped for the open competition in which they are required to face; and it follows that for the time being "Indianisation can only mean anti-Anglo-Indianisation." Colonel Gidney further complains that cases are "on record where Anglo-Indians

have been discharged to be replaced by Indians pursuant to this policy of Indianisation." But the community, by approaching the Secretary of State, has arrested this deprivation to some extent. It claimed protection under an Act of Parliament which enacts that Anglo-Indians are natives of India for economic purposes. And the Government has since declared that, being statutory natives of India, Anglo-Indians must be included in all schemes of Indianisation, and must eventually run a level race with the Indians. In other words, they are natives of India; and this status, Colonel Gidney says, the community has definitely decided to accept.

Regarding themselves as natives of India the Anglo-Indians are not opposed to the realisation of self-Government. But, like all the Minority communities, they are apprehensive of the future. They fear that a further devolution of power from the Europeans to the Indians will prejudicially affect their interests, and will handicap them to an even greater extent than they are now handicapped in the competition for a livelihood. They want some form of safeguard against this eventuality. They ask that they may "not be crushed under the wheels of any speedy chariot of political experiment or advancement, and that the right to live consistent with their European standard, culture, and Christian religion may not be denied them." Their fears in this connexion are not groundless, as there is a decided tendency on the part of the Indians to regard them as aliens, and to refuse to accept them as natives of India for employment purposes.

It is quite possible therefore that the Anglo-Indians may not get fair play even though they accept the status of Natives of India. And they are therefore entitled to ask for that consideration which every minority community in India has a right to expect from the British Parliament. They are also justified in calling attention, as is done in the Note, to the anomaly of the existing system of European education in India. The Indians are educated on one system; the Anglo-Indians on another. The Indian looks to the Indian universities for higher education. The Anglo-Indian takes the Cambridge Local Examinations. This difference has tended, Col. Gidney thinks, to separate the Indians from the Anglo-Indians. It has brought about a cleavage; and it has induced "an educational superiority complex" on the part of the Anglo-Indians. And what is more it tends to alienate the sympathy of the Indians at a time when the future of the community must depend on the existence of good relations with them. There is force in the contention that the question should be considered, for if the Anglo-Indians are henceforth to have the status of natives of India there should be a uniform system of education for all Indians alike.

INDIA AND THE LEAGUE OF NATIONS.

Sir Mohamed Habibulla, who is leading the Indian Delegation to the League of Nations, the personnel of which was announced in THE NEAR EAST AND INDIA of June 26, has arrived in London, accompanied by his son and his secretary, Mr. G. S. Bajpai, I.C.S.

The party were received by a large number of Indians, among whom were the Maharaja of Burdwan, Sir Umar Hayat Khan, Dr. Paranjpye (representing the India Office), Mr. S. E. Gupta (representing the High Commissioner for India), Mr. and Mrs. Nehru (representing the India Social Club), and Mr. M. C. Raja (of the Indian Central Committee).

Sir Mohamed will remain in London until the end of the month conferring with his colleagues and the India Office.

The King has been pleased to approve the appointment of Mr. Dwarka Nath Mitter as Puisne Judge of the High Court of Calcutta, in the vacancy which will be created by the retirement of Mr. Justice Bepin Behari Ghosh on September 3 next.

PERSONAL AND GENERAL

TO-DAY

August 22, 1929 (New Style).

August 9, 1929 (Old Style).

Rabia I, 16, 1348 A.H., of the Muslim Calendar.

Ab 16, 5689, of the Jewish Calendar.

Sir Hesketh Bell left London last week for Yugoslavia.

Lady Edward Spencer Churchill will leave England for Belgrade on August 29.

Major Sir Archibald and Lady Boyd-Carpenter left England for a cruise in the Orsova on August 17.

Sir John Chancellor, High Commissioner for Palestine, is returning to-day (Thursday) to Jerusalem.

Sir Thomas and Lady Pile are leaving at the end of this month for a cruise to Spain and Greece.

The Maharaja of Rajpipla left London on August 15 for Paris.

Sir Abe Bailey gave a dinner party at 38, Bryanston Square on August 21, to meet Sir John Chancellor, High Commissioner for Palestine.

Baron de Robeck and Sir D'Arcy Lindsay were among the passengers who left last week in the Mantua for Bombay.

Sir Percy Loraine was received in audience by the King on August 15, and kissed hands upon his appointment as High Commissioner for Egypt and the Sudan.

M. Georges Cattau, Secretary to the Royal Egyptian Legation, left London on August 15 for St. Moritz on leave, and will be away for about two months.

Mrs. Cressy-Marcks has arrived in Europe from Bombay in the Maloja. She returned to her Buxton house on August 17.

King Fuad of Egypt left Paris on August 17 for Naples, where he will embark for Alexandria. He was accompanied by the Egyptian Prime Minister and the Minister for Foreign Affairs.

Sesostri Sidarouss Bey, Egyptian Envoy Extraordinary and Minister Plenipotentiary to Athens and Belgrade, left London on August 15 for Paris, where he met King Fuad.

Mr. Akio Kasama, Japanese delegate to the International Labour Office, has been appointed Minister in Teheran. The Japanese Legation in Teheran was established on August 8.

The Turkish Ambassador left London last week for Angora on leave, and will return in October. Mme. Ferid Bey has left for Switzerland. During the absence of the Ambassador, Sevkhi Pasha, Counsellor, will act as Chargé d'Affaires.

The Foreign Office announces that the King has been pleased to approve the appointment of Mr. Sydney Philip Perigal Waterlow, C.B.E., formerly his Majesty's Minister in Bangkok, who was appointed his Majesty's Minister in Addis Ababa in November last, and succeeded in that office by Sir Sidney Barton, K.B.E., in March, to be his Majesty's Minister in Sofia in succession to Mr. R. A. C. Sperling, C.M.G. Mr. Waterlow entered the Diplomatic Service in 1900.

It was announced from Khartoum last week that sentence of death on one of the native murderers of Capt. V. H. Ferguson, who was killed on December 12, 1927, has been confirmed by the Acting Governor-General of the Sudan.

NEWS IN BRIEF.

Remains of Serbian soldiers who died fighting on the French front have been brought to Split by the cruiser Dalmatia.

The Soviet Government of Russia is reported to have issued a decree prohibiting the use of Arabic characters for printing.

The diplomatic mission from the Wahhabi King, Ibn Saud, was received by the Shah of Persia on August 12 in Teheran.

It is reported that over 1,000 houses have been destroyed and many persons drowned by the floods in Tabriz.

Two more generals have been appointed Grand Zupans of the Kossovo province of Yugoslavia, and another general to be Grand Zupan in the Srem.

It is announced in the *London Gazette* that Field-Marshal Lord Allenby, Colonel of the Life Guards and the 16th/5th Lancers, has been appointed Honorary Colonel of the 5th Battalion, the Welch Regiment, Territorial Army.

The first meeting of the Council of the Jewish Agency for Palestine, as reorganised in virtue of the recent decision of the Zionist Congress, opened on August 11 in Zurich in the presence of about 2,000 visitors, including representatives of the Swiss Government and the Secretary-General of the League of Nations.

THE PERSO-IRAQI FRONTIER ON THE SHATT AL ARAB.

(From a Correspondent.)

Lands intersected by a narrow forth
Abhor each other. Mountains interposed
Make enemies of nations who had else
Like kindred drops been mingled into one.
Cowper—"The Task" (Bk. II.).

Of no frontier are Cowper's lines truer than of the section of the Perso-Iraqi frontier with which this essay deals, although in this case, as in many others, geographical considerations are secondary to those of language and environment.

Basrah was conquered by the Turks in 1688, and was held by them till they were ejected by the Indian Expeditionary Force in 1914, though it was held, for a year by the Persians under Sadiq Khan, brother of Karim Khan Zand, in 1777, and for a shorter period by the Muntafiq Arabs in 1787.

The authority both of Persia and of Turkey over the lands which they respectively claimed at the head of the Persian Gulf was insecure during the whole of the eighteenth century, nor were geographical conditions stable. The Karun, which till 1766 had no natural connexion with the Shatt al Arab or Bahmishir channels, and entered the Persian Gulf *via* Qubban and the Khor Musa, changed its bed in that year, and carved out a new channel for itself along an artificial canal which had been dug as a boat channel from Marid to Khumbek on the Bahmishir, which thus became the main stream of the Karun.*

As a consequence of this geographical change, the village of Muhammarah began to assume commercial importance, and, indeed, to rival Basrah as an emporium of trade: it was held by the K'ab Arabs, who, though originally emigrants from Turkish territory, had since 1765 (when they defeated the Turks in a naval engagement) ceased to be Turkish subjects, and in due course became, *vi et armis*, subject to Persia. In 1837 the Turks seized Muhammarah, plundered and destroyed it. Haji Jabir, who was at the time deputy of the Kab Shaikhs, whose headquarters were at Fallahiyah, on the Jarrahi, appealed, not in vain, to the Persian Government, and from this date the active intervention of the latter in the affairs of Muhammarah began. The Bahmishir was, however, still mainly used by boats bound for Muhammarah. At this period the position was fairly clear: the territorial rights belonged *de jure* to Turkey—*de facto* to Persia, and a diplomatic tug-of-war was in the circumstances inevitable. Persia claimed an indemnity of one million pounds sterling, Turkey claimed Muhammarah, the island of Abadan and the surrounding territory. A rupture appeared imminent, and Great Britain and Russia offered mediation. This was reluctantly accepted, and resulted in the Treaty of Erzeroum, signed in 1847 and ratified at Constantinople in 1848. This Treaty included the following stipulation:—

Art. 2 (Extract).

The State of Turkey also firmly undertakes that the town and seaport of Muhammarah, and the Island Al Khizr, and the anchorage place, and also the lands of the eastern bank, i.e., of the left side of the Shatt-al-Arab, which are in the possession of tribes acknowledgedly attached to Persia, shall be in possession of the State of Persia, in full sovereignty. And besides this, Persian ships shall

* Kinneir, "Geographical Memoir of the Persian Empire, 1813."

have the right to navigate the said river in full liberty, from the place where it flows into the sea, as far as the point of junction of the frontiers of the two parties.

Before the Turkish Government consented to ratify this Treaty it secured from Great Britain and Russia certain "explanations" of the Treaty: with these explanations we need not here concern ourselves, as they do not directly affect the present question.

The Treaty, however, laid down no definite boundary, and in 1850 the limitrophe Powers (Persia and Turkey) and the Mediating Powers (Russia and Great Britain) appointed representatives to fix a line. The Commissioners of the Mediating Powers made recommendations in 1850, which were not accepted, and it was not till 1869 that their conclusions were presented, in the unsatisfactory form of a map of the frontier on which two lines were marked, within which in their opinion the frontier lay.

Meanwhile, on the Shatt al Arab, a *modus vivendi* had been reached on both the territorial question and the line along the river: the latter had been tacitly agreed to be the *medium filum aquæ*, islands on the West and East of which belonged to Turkey and Persia respectively as riparian owners. On the water itself both parties exercised rights of police and Customs supervision, not without occasional bickerings, but with a fair measure of agreement.

When, however, in 1910 the question of the frontier was raised afresh, it was inevitable that the diplomatic basis should be the Treaty of 1848, and it was in accordance with its provisions that a line was agreed on by the Persian and Turkish plenipotentiaries at Constantinople in November, 1913.

But in the Shatt al Arab important concessions were made to the geographical and commercial changes that had taken place since 1848. The Treaty of Erzeroum allotted to Persia the port and anchorage in the Karun opposite the old town of Muhammarah and lying between that town on the one bank and the island of Abadan on the other. The agreed boundary awarded to Persia as the anchorage of the town of Muhammarah one-half of the Shatt al Arab for about one mile below to a point some four miles above the mouth of the Karun, a substantial modification the expediency of which was dictated by the fact that modern steamers could in no case anchor opposite the old town of Muhammarah as in former days. In other respects the boundary line in the region of the Shatt al Arab complied with the clear meaning of the Erzeroum Treaty by following low-water mark of the Abadan shore and the islands adjacent thereto, thus creating, as may well be imagined, an anomalous situation at the modern port of Abadan. This boundary line was in due course demarcated on the ground in 1914 by Perso-Turkish Frontier Commissioners, assisted by British and Russian Commissioners with powers of arbitration.

Had it been suggested to the Turkish Government in the course of negotiations at Constantinople in 1911-1913 that Persia should be given an anchorage in the Shatt al Arab, in the same way and of the same size as that conceded above and below the mouth of the Karun, it is highly probable that it would have been conceded. As far as is known, no such suggestion was ever made by the Governments principally interested, *viz.*, the Persian and the British Governments—a regrettable omission, for oil shipments were already being made though only to the amount of 40,000 tons in 1912 (seven months) and 80,000 tons in 1913.

The British Government were at this juncture doubtless influenced by the fact that the Turkish Government had, in the course of the comprehensive Anglo-Turkish negotiations then current in connexion with the Baghdad Railway and other matters, agreed in principle to establish under their own control a Conservancy Commission for the lighting, buoying, and, if need be, dredging of the Shatt al Arab, the first Director or which was to be a distinguished British engineer. With this prospect in view they no doubt thought that any anomalies that might arise from the inconvenient frontier prescribed by the

For particulars apply to THE SECRETARY.

Treaty of Erzeroum would be amicably adjusted on the spot.

A few days after the last boundary pillar of the Turco-Persian frontier had been erected and the final protocol signed, Turkey declared war on Russia, and threw in its lot with the Central Powers. A month later a British Expeditionary Force entered Basrah, and the control of the Shatt al Arab was temporarily vested under military and international law in the hands of the British Commander-in-Chief on the spot, who, five years later, in 1919, delegated his powers by proclamation to the Director of the Port of Basrah, subject to the administrative control of the Civil Administration of Mesopotamia. The regulations drawn up for the guidance of the Port Director were in conformity with the Treaty of Erzeroum, and gave administrative effect, for the first time, to the decisions of the Constantinople protocols of 1912 relative to the Turco-Persian frontier and to the frontier demarcated on the ground by the Frontier Commission in 1914. A pilotage service was organised, lights and buoys and steering marks were erected, with admirable efficiency, and with a minimum of friction with the Persian Government's representatives: harbour masters were provided at Magil to berth ships, and were likewise allotted for the same purpose to Abadan.

When a National Government came into being in Iraq, the ultimate control of the Port Directorate passed as a matter of course to the Iraq Government, subject at first, however, to a greater degree of supervision on the part of the High Commissioner than in the case of other Departments, as the port wharves, and other assets, were the property of the British Government. The intention was, and apparently still is, to create a Port Authority on the lines of the Port Trusts that exist in most of the great ports of the world; but the technical difficulties involved have hitherto proved insurmountable, and the Director continues to work as an official of the Iraq Government, under the control of the Finance Department. Under his auspices, the Port has been managed with notable efficiency and economy, and the bar of the Shatt al Arab has been dredged to a depth of 28 feet, the necessary funds being placed at the disposal of the Iraq Government by the Anglo-Persian Oil Company, Ltd., whose tankers constitute the greater part of the total traffic on the Shatt al Arab as far as Abadan.

Yet the situation remains anomalous, for whilst the control of the river is vested wholly in one of the limitrophe States, namely, Iraq, the bulk of the shipping is bound for Persian ports—Abadan and Muhammarah—and the Persian authorities are unable to place police and Customs patrols on the river, as of old. Hence, no doubt, a good deal of local friction, and the decision of the Shah to press forward schemes for a deep water port in Persian waters at Khor Musa, connected by rail with the interior. The success of this project, however, will not make it any less necessary to reach a reasonable readjustment of the frontier régime on the Shatt al Arab. It is emphatically not a case for arbitration, for the only point that could be submitted to the decision of an arbitral tribunal would be, in present circumstances, the interpretation to be placed on the relevant clauses of the Treaty of Erzeroum, and the verdict is scarcely in doubt. On the other hand, it must be borne in mind that though by common law, failing specific provision to the contrary, as in the unique case of the Shatt al Arab, the riparian States own the bed of the stream to the *medium filum aquæ*, it has been repeatedly held that the land only is thus owned, not the water in the stream, which is not deemed capable of private ownership. The right to use the water, whether for irrigation, power, or navigational purposes, is, however, subject to the obligation not to inflict substantial damage to other riparian owners, up or down stream.

It is clear, therefore, that there is every ground and much need for a diplomatic settlement, which will take into account the change that has taken place in conditions since the frontier was settled in 1912. It is time to abandon the attempt to administer the Shatt al Arab in

1929 on the lines laid down in 1847. Change is a function of growth, and if Treaties are to be respected, means must in the long run be found to modify them to meet changing conditions, such as those which have followed as a consequence of the Treaty of Lausanne. The Shatt al Arab is the only international river of the Old World which is subject to unilateral control. So long as control on these lines is maintained, it will continue to separate, rather than to unite, and to be a source of friction, rather than an aid to communication.

It should not be beyond the scope of practical diplomacy for Great Britain, as the Power principally concerned, to bring together the riparian owners, Iraq and Persia, with a view to the conclusion of a tri-partite agreement which would form the basis for a permanent settlement of the many local issues involved.

THE SYRIAN PRESS.

Muslim Waqfs in Syria.

[The Muslim *waqfs* (pious foundations) of Syria were administered during the Turkish régime by the Government. They had been administered hitherto under the French Mandate by a board of supervision and control presided over by a Frenchman. This arrangement has called forth loud and frequent protests. It is now reported that the *Haut Commissariat* has opened an inquiry into the matter. The board of control's proposal appears to be that the *waqfs* should be administered in future by the local authorities, and this proposal is resisted by the Muslim Nationalists on the ground that the local authorities are not free agents. We reproduce the leading article on this subject that was published in the issue of *al-Shaab* dated August 2.—ED.]

We have referred on various occasions to the question of the Muslim *waqfs*. This administration and its board of control, which employs officials appointed by the French authorities and not responsible to the Muslims, is under the thumb of the *Haut Commissariat*. Whenever the opportunity occurred, we have demanded that this supervision should cease as soon as the Syrian Constitution was promulgated, and that the *waqfs*, as the Islamic Council of Beyrouth has requested, should be handed over to the Muslims to whom they belong, in order that they may be administered by national councils elected for the purpose. In connexion with the board of control's present proposal that these *waqfs* should be handed over to the local authorities, we mentioned some time ago the counter-proposal made by the Islamic Council of Beyrouth, that religious councils should be elected *ad hoc* to take over the administration of the *waqfs*, religious (shariah) law cases, schools, orphanages, hospitals, and, generally, all similar Muslim institutions, on the ground that this is what Muslim opinion demands and approves. We called upon the *Haut Commissariat* to comply with the wishes of the Muslims and to accede to their joint demands by handing over to them the *waqf* administration and by rejecting the board of control's proposal, as being inspired by interests that debar the Muslims from the enjoyment of their property and its superintendence through their own representative courts. We fear, however, that the *Haut Commissariat* may have decided to adopt the proposal put forward by the board of control, whether by confirming it or modifying it, and to carry it through in the teeth of Muslim opposition in Syria, in spite of the fact that the board's proposals are contrary to Muslim interests, this, too, at a moment when all the Muslims, both of the coast and the interior, are agreed in demanding that their *waqfs* should be restored to them and taken out of the hands of the little ring that has fastened upon them and mismanaged them.

In our opinion the text of the Constitution and the vote of the Beyrouth Islamic Council should be enough to induce the *Haut Commissariat* to make over to the Muslims what is nothing more than their due, to renounce the exploitation of the *waqfs*, and to take them out of the hands of the present board. Further, if these reasons are not enough to assure to the Muslims their rights, we do not know how this exploitation and control of the Muslim *waqfs* can be justified, when the *waqfs* of all the other communities have been handed over to them years ago. The Muslims alone are distinguished by this mark of disfavour and deprived of their rights, while their *waqfs* are seized by a set of profiteers who have laid their hands on them and take what they please.

We desire to state that the whole responsibility for the continuance of the present state of affairs and the results that are likely to arise from it rests with the *Haut Commissariat*, and if this fact should lead the *Haut Commissariat* to hand over the *waqfs* to the local authorities (as the board of control, inspired, of course, from above, has proposed) and the courts erected by them, the responsibility for doing so still lies with the *Haut Commissariat*, for everyone knows that though local authorities are triumphant our courts are mere ciphers behind which stands the Mandatory Power and whose course every French official can direct as he likes.

Accordingly, if the *Haut Commissariat* wishes to be relieved from the responsibility of allowing the Muslim *waqfs* to fall into decay and ruin, it must hand them over to the Muslims, their rightful owners, and to no one else. Let the Muslims have the responsibility of their administration and reform, let them deal with them as they

see best, but to impose their administration on the Muslims through the agency of phantom courts, acting in pursuance of the *Haut Commissariat's* wishes and inspired by its behests, will not in the least relieve it from the responsibility of ruining the *waqfs*.

Lastly, if the Mandatory Power is persuaded that the Muslims of the coast and the interior are incapable of administering their *waqfs*, that they need the guidance of leading-strings, and that the other communities deserve more than they to be given independence and the management of their *waqfs* and other religious matters, she is making a grave mistake. The Muslims of Syria are quite capable of managing their own vital concerns, they do not at all need the guidance of leading-strings. In the sphere of politics and social life they have given proof of a high enough degree of culture to fit them for the loftiest stages of liberty and independence. The policy of their adversaries is dictated simply by self-interest and greed.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

RECENT EVENTS IN NAJD.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The inaccuracies which occasionally appear in the letters of your Jidda Correspondent have recently aroused comment, among some at least of your readers who are acquainted with the facts of recent events in Najd. Your number of June 6 provides a notable example of the curious errors of your Jidda Correspondent, who takes on himself the duty of relating the course of events on the Persian Gulf coast from a distance of several hundred miles away in the Hijaz.

Among numerous inaccuracies in the letter to which I refer, the most remarkable is that contained in the paragraph which begins: "Of greater relative importance, however, are the operations undertaken by Abdulla ibn Jiluwi against the Ajman sections which have recently been prominent in Kuwait territory; they appear to have been heavily dealt with and their leader, Dhaidan ibn Hithlain, is reported officially to have been killed. These operations should secure a long period of peace . . ."

The true facts of this regrettable incident are as follows. A part of the Ajman tribe, under their Shaikh Dhaidan ibn Hithlain, had openly declared against King Ibn Saoud, and allied themselves with the rebel *Ikhwan*. A large force, consisting partly of townsmen of the Hasa and partly of contingents from the Bani Khalid, Al Murra, Bani Hajir and loyal Ajman, were dispatched against them, under the command of Fahad ibn Jiluwi, the son of Abdulla ibn Jiluwi ibn Saoud, Governor of the Hasa. The rival armies faced one another near Sarrar, the home of Dhaidan ibn Hithlain. An exchange of letters ensued, the exact contents of which are not known. As a result, however, Dhaidan, with a few horsemen, visited Fahad, and dismounted at his tent.

It is difficult to say whether Fahad in reality contemplated treachery or not, but a report was carried back to Dhaidan's followers that their chief had been treacherously kidnapped. The Ajman, greatly excited, advanced to avenge their leader, and delivered a night attack on ibn Jiluwi's army. Dhaidan ibn Hithlain was apparently killed by the orders of Fahad ibn Jiluwi, who was himself killed shortly afterwards by a man of the Ajman. The "loyal" Ajman joined their rebel cousins, while the remaining badawin contingent fled without firing a shot. Fighting continued between the rebels and the Hasa townsmen until dawn, when the remnants of the latter made good their escape. The action was a complete and unexpected victory for the rebel Ajman, who are still in arms against King Ibn Saoud.

In view of the wide circulation and educative value of your paper, I have ventured to trespass on your space to correct these inaccuracies. Deeply as all those who desire peace and good order in Arabia may sympathise with King Ibn Saoud in his present difficulties, the dissemination of

faulty information on the subject can, in the long run, do nothing but harm.—I am, etc.,
July 20. "VERITY."

NON-ARAB TRIBES IN SOUTH ARABIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I am writing with reference to the recent correspondence on the subject of Non-Arab Tribes in South Arabia.

I have in my possession a very old book, "The Koran, Translated into English," etc., etc., to which is prefixed "A Preliminary Discourse, By George Sale, Gent." "Printed in 1734"; and in relation to the various points raised by your correspondents a few extracts from this book may prove of interest.

I will give the extracts under their sub-titles as they appear in the book, word for word.

"THE PROVINCE OF YAMAN." The province of YAMAN so called from its "situation to the RIGHT HAND, or fourth of the temple of MECCA," or else from the HAPPINESS AND VERDURE of its soil, extends along the INDIAN ocean from ADEN to cape RASALGAT, part of the RED sea bounds it on the west and south sides, and the province of HEJAZ on the north. It is subdivided into several provinces, as HADRAMUT, SHIHR, OMAN, NAJRAN, etc., of which SHIHR alone produces the FRANK-INCENSE. The metropolis of YAMAN is SANAA, a very ancient city, in former times called OZAL, and much celebrated for its delightful situation, but the prince at present resides about five leagues northward from thence, at a place no less pleasant, called HISHN ALMAWAHEB, or the CASTLE OF DELIGHT.

This country has been famous from all antiquity for the happiness of its climate, its fertility and riches, which induced ALEXANDER THE GREAT, after his return from his INDIAN expedition, to form a design for conquering it, and fixing there his royal seat; but his death, which happened soon after, prevented the execution of this project, etc., etc., etc.

"THE TRIBE OF AD." The tribe of Ad were descended from AD, son of AWS, (or Uz, Gen. x. 22.23.) the son of ARAM, the son of SEM, the son of Noah, who after the confusion of tongues settled in AL AHKAF, or the WINDING SANDS in the province of HADRAMAUT, where his prosperity greatly multiplied. Their first king was SHERAD, the son of AD, of whom the eastern writers deliver many fabulous things, particularly that he finished the magnificent city his father had begun, wherein he built a fine palace adorned with delicious gardens, to embellish which he spared neither cost nor labour, proposing thereby to create in his subjects a superstitious veneration of himself as a God. This garden or paradise was called the garden of IREM, and is mentioned in the KORAN, and often alluded to by oriental writers. The city they tell us is still standing in the deserts of ADEN, being preserved by providence as a monument of divine justice, tho' it be invisible, unless very rarely, when God permits it to be seen, a favour one COLABAB pretended to have received in the reign of KHALIF MOAWIYAB, who sending for him to know the truth of the matter COLABAB related his whole adventure; that he was seeking a camel which he had lost, he found himself on a sudden at the gates of this city, and entering it saw not one inhabitant at which being terrified, he stayed no longer than to take with him some fine stones which he shewed the KHALIF.

The descendants of AD in process of time falling from the worship of the true God into idolatry, God sent the prophet HUD (who is generally agreed to be HEBER) to preach to and reclaim them. But they refusing to acknowledge his mission or obey him, God sent a hot and suffocating wind, which blew seven nights and eight days altogether, and entering at their nostrils past thro' their bodies, and destroyed them all, a very few only excepted, who had believed in HUD, and retired with him to another place. That prophet afterwards returned into HADRAMAUT, and was buried near HASEC, where there is a small town now standing called KABR HUD, or the SEPULCHRE OF HUD, etc., etc., etc.

"THE INUNDATION OF ARAM." The first great calamity that befell the tribes settled in YAMAN was the inundation of ARAM, which happened soon after the time of ALEXANDER THE GREAT, and is famous in ARABIAN history. No less than eight tribes were forced to abandon their dwellings upon this occasion, some of which gave rife to the two kingdoms of GHASSAN and HIRA, etc., etc., etc.

The tribes which remained in YAMAN after this terrible devastation, still continued under the obedience of the former princes, till about 70 years before MOHAMMED, when the king of ETHIOPIA sent over forces to assist the CHRISTIANS of YAMAN against the cruel persecution of their king DHU NOWAS, a bigotted JEW, whom they drove to that extremity, that he forced his horse into the sea, and so lost his life and crown; after which the country was governed by four ETHIOPIAN princes successively; till SEIF the son of DHU YAZAN of the tribe of HAMYAR obtaining succours from KHOSRU ANUSHIRWAN, king of PERSIA, which had been denied by the emperor HERACLIUS, recovered the throne and drove out the ETHIOPIANS, but was himself slain by some of them who were left behind. The PERSIANS appointed the suc-

ceeding princes till YAMAN fell into the hand of MOHAMMED, to whom BAZAN, or rather BADHAN, the last of them, submitted, and embraced his new religion.

This kingdom of the HAMYARITIES is said to have lasted 2020 years, or as other say above 3000, the length of the reign of each prince being very uncertain.

"THEIR LANGUAGE, LEARNING, ACCOMPLISHMENTS, ETC., BEFORE MOHAMMED." The ARABIC language is undoubtedly one of the most ancient in the world, and arose soon after, if not at, the confusion of BABEL. There were several dialects of it, very different from each other; the most remarkable were that spoken by the tribe of HAMYAR and the other genuine ARABS and that of the Koreish. The HAMYARITIC seems to have approached nearer to the purity of the SYRIAC, than the dialect of any other tribe; for the ARABS acknowledge their father YARAB to have been the first whole tongue deviated from the SYRIAC (which was his mother tongue, and is almost generally acknowledged by the ASIATICS to be the most ancient) to the Arabic.

The map in Sale's book shows the coast line of the province of Hadramaut as reaching from Lasaa, a few miles east of Aden to within a few miles of Dhafar. Dhafar is shown as in the province of Shiha.

Is it possible that the Non-Arab tribes to which Mr. Thomas refers are descendants of the Ethiopian forces?

—I am, etc.,

"INTERESTED."

July 30.

ALBANIA AND GREAT BRITAIN.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your issue of June 27, I read with great interest the comments you made on Albania, on Mgr. Fan Noli, and on the present King of the Albanians, Zogu I.

I must admit that your statements were absolutely correct. There is no comparison between the King of Albania and Fan Noli as far as popularity, influence, and power in Albania are concerned. Fan Noli is a patriot, but though well known among the Albanians in the United States of America, he is very little known in Albania. Ahmed Zogu has been a leader since he was sixteen years old.

Such being the case, I consider your remarks very logical. Nevertheless, every Albanian is duty-bound to make known the sufferings of the Albanian people, who are in need of protection. The fate of the Albanians was decided in London, and Sir Edward Grey was the man to mark the boundary line of Albania. The Albanians to-day consider England as the creator of free and independent Albania. The Albanians are familiar with the fact that Great Britain has done a great deal for Albania. They appreciate what Gladstone, Lord Bryon, E. M. Durham, Peacock and others have done for the Albanian cause.

The Governments of the great nations must keep an eye on the affairs of the small nations and on those who are under the yoke of some other Government, which must be bound to international and humanitarian laws. Some nations in the Balkans, however, do not respect such laws, and commit terrible things on those who desire to upkeep their customs, their language and the ordinary rights of human beings.

THE NEAR EAST AND INDIA has, in my opinion, the distinction of being impartial, and I hope it will do justice by protecting the rights of Albania; and by doing this will assist the unfortunate and suffering Albanians. The Albanians have the right to depend on the protection of Great Britain for two reasons: (1) England is an impartial nation in the Balkans, and her advice will be listened to by the Balkan nations; and (2) Great Britain knows well how to help nations from her own experience—for all nations under the English Government are living happy and content. Such being the case, I hereby ask you to take the place of the good Samaritan and help the Albanian cause.—I am, etc.,

ATHANAS THIEMEL BODI.

The raising of the Persian Consulate-General at Baghdad to the status of a Legation is officially announced in Teheran.

The choice of the name of Andrew for Yugoslavia's youngest prince, who was christened at Bled on August 14, has aroused great enthusiasm in Slovenia, where the name is common.

The British and United States Ambassadors in Turkey went last week on a ten days' voyage round the Turkish ports on the Black Sea.

The Court of Appeal at Eskishehr has confirmed the sentences recently passed at Smyrna on 24 Communists who were convicted of spreading subversive propaganda. It is stated that they will be imprisoned at Sivarek.

The King has approved the General Service Medal with Clasp "Southern Desert, Iraq" being granted to personnel of the Royal Air Force who took part in the operations against the Akhwan in the Southern Desert, Iraq, between January 8 and June 3, 1928.

Book Review

SCHWEICH LECTURES, 1926.

"PALESTINE IN GENERAL HISTORY." By Theodore H. Robinson, J. W. Hunkin and F. C. Burkitt. *The Schweich Lectures of the British Academy, 1926* (Published for the British Academy by Humphrey Millard, Oxford University Press. 6s.)

Professor Robinson describes Palestine's foreign relations from the earliest times to 612 B.C., and Mr. Hunkin carries on the story to the destruction of the Jewish State by Titus in 70 A.D. Each discusses his allotted period briefly and lightly within the limits of a single lecture, and the result is a handy and by no means unreadable summary of the heavy mass of research and intelligent guesswork that has during the last half century accumulated around the subject of Western Asia from Hittite to Roman times. Seen within this perspective Palestine appears merely as a tiny buffer state:—

Palestine was from the earliest times a bridge between the great civilisations of the ancient world; and how the land became a desirable, indeed a necessary possession, is seen as soon as one or the other began to aim at universal empire. She was thus dominated in turn by the Egyptians, by the Hittites, and by the Assyrians, and might have become the seat of a Philistine Empire but for the rise of Israel. Yet even that people failed to secure independence except for short intervals during which both the great powers were distracted by internal troubles.

Mr. Hunkin's lecture on Palestine's links with its greater neighbours, from the time of the neo-Babylonian Empire, through the Persian and Hellenistic ages, up to the Roman conquest, is an able boiling-down of much learning, and has the advantage of being abundantly illustrated by photographs of contemporary material—material familiar enough, but usefully collected here.

Professor Burkitt, in the third lecture, maintains his reputation for fresh ideas and a readableness often on the level of good journalism. His contribution is a short article in which he endeavours to make sense out of the sudden rise, the moderate flash of prosperity, and then the sudden collapse of the two desert kingdoms of Palmyra and Petra. He offers as the key to the problem the verse from the "Song of Deborah," "In the days of Shamgar the highways were unoccupied and the travellers walked through byways." And so, in the days of Ptolemaic and Seleucid rivalries the highway, the great road from Egypt through Gaza, by the sea plain and across to Damascus, and so to Homs, Hamath and Aleppo to Babylon—the route of Abraham and the Baghdad railway—was no road for peaceful merchants: they were compelled to go "through byways," in this case the route south of the Dead Sea, by Edom and Petra; hence the Nabataeans, the lords of Petra which dominated this route, for a time grew prosperous. But with the *pax Romana* the old route was opened up again, and Petra gradually disappeared from history. Thus it is that we hear nothing of Petra before 311 B.C., and after 107 A.D. it became a backwater of civilisation before long to disappear from the map and to be discovered as a curiosity in the 19th century.

Palmyra is first heard of in 42 B.C. It lies astride an inferior caravan route (one of the present motor routes) some hundred and more miles south of that easier, better watered road of Abraham and the Baghdad railway. The rise of the Parthians whom the Romans could never dislodge, blocked the northern road, whereupon the citizens of Palmyra, outside the territories both of Rome and Parthia, acquired wealth as organisers of the southern caravan route, until the political ambition of the royal house of Zenobia provoked Rome into making an end of this upstart state; and then it, too, with the *pax Islamica* lapsed into its present condition of an interesting ruin.

The volume falls below other "Schweich Lectures" in importance; but even so it might have been usefully dignified with an index. And is the disuse of final *sigma* in certain Greek transliterations a grotesque misprint or a recently scholarly convention?

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Persian Gulf.

Elsewhere in this issue will be found extracts from a very interesting report on the Persian Gulf by Lieut.-Commander Forester, Acting British Vice-Consul at Bushire. The regions covered by the report are Bushire, Bandar Abbas, Muscat, the Bahrein Islands and Kuwait, the trade of which in the aggregate is of considerable importance. Thus the value of the imports through Bushire for 1927-28 was £2,056,275, that of the exports being £1,395,242, while for Bandar Abbas the figures for the same period were £934,999 for imports and £350,452 for exports. The total trade of Muscat for 1927-28 was £518,944, that of the Bahrein Islands was £3,043,222, while that of Kuwait was £629,447. British trade is to the fore in the markets fringing the Persian Gulf generally, but there is no doubt that more may be accomplished in the future given the requisite enterprise on the part of our traders. Attention may be drawn in this connexion to the reference in the report to openings for British trade. The writer points out that in favourable circumstances Persia should provide a progressive market for a very large range of commodities. It is, however, a poor market, and it is essential that it should be catered for with that point always in view. In other words, it is not the slightest good to expect to find a large market there for expensive products, and the reason why our trade rivals have been so successful in this outlet is that their goods have been offered at prices well below ours.

Suez Canal Traffic.

The figures of the Suez Canal traffic are an important index of the extent to which world trade is reviving, and it is satisfactory therefore to be able to record the fact that the record figures of the first half year of 1928 have been easily surpassed by the tonnage using the Canal in the first six months of this year. The figures were 16,854,000 tons, which represents an advance of 862,000 tons on the 1928 total. It is significant that the greater part of this increase was in the outward movement of merchandise, which, of course, is largely composed of manufactured articles. Actually the outward movement totalled 7,979,000 tons, an increase of 495,000 tons, while the figures for the homeward movement were 8,875,000 tons, an increase of 367,000 tons. The order of the leading countries using the Canal was unchanged during the period. The British figures were 9,642,000 tons, an increase of 598,000 tons, representing 57.2 per cent. of the traffic as compared with 56.6 per cent. for the corresponding period of 1928. Holland was again second with 1,757,000 tons, an increase of 71,000 tons, but has now only a very slight lead over Germany, whose total is 1,732,000 tons, an increase of 150,000 tons. France occupied the fourth place with 1,042,000 tons, an increase of 105,000 tons.

Cyprus Asbestos Company.

At the recent general meeting of the Cyprus Asbestos Company, a report of which will be found elsewhere in these columns, interesting details were given of the progress during the past year. The production of asbestos was 16,287 tons, so that there has been a further increase of 5,000 tons in output. The tonnage milled was 433,271 tons, and it is anticipated that 475,000 tons will be milled this year, giving a production of about 18,000 tons. The construction of further mills has been proceeded with, and the company's total ore milling capacity for a full season is now about 550,000 tons, which will permit of a further increase in production next year without the construction of more mills.

Re-organisation in Roumania.

An interesting review of the economic and financial situation in Roumania since the monetary stabilisation has recently been issued by the Minister of Finance. As he justly points out, successive Governments since the War have largely confined their efforts to develop the production of the country to legislative action. This has failed, of course, to stimulate the country's consumptive capacity, while the exports have fallen rapidly owing mainly to a series of bad harvests. For the period from 1919 to 1928 there was a favourable trade balance for five years and an adverse balance for five years, the commercial balance for the whole period being adverse to the extent of 1,141 millions of gold lei. The Finance Minister is optimistic as to the outlook, pointing out that in regard to agriculture on which the country's prosperity depends considerable progress has been made in recent years. Monetary stabilisation, he points out, has given security and a relative fixity of values to agriculturists. He admits however, that the new taxation is onerous, and unfortunately there is no prospect at present of the Government being able to effect a substantial reduction. Its incidence is felt throughout every branch of the nation's activity, and while many other countries are now suffering from the same thing to a greater or lesser degree its effect on Roumania's life is undoubtedly particularly pronounced.

COMMENTATOR.

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms.
The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfer on all the Branches, at the exchange of the day.
The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.
Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.
The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.
The Bank transacts every description of banking operations.

TURKISH BUSINESS PROFITS IN 1928.

(From Our Own Correspondent.)

Constantinople, August 6.

At a time when the sustained depreciation of the Turkish lira, the imminent application of the new Customs Tariff, and cognate financial matters form the subject of almost daily speculation and criticism in the Turkish Press, it is instructive to study some other statistical data just published by the Ministry of Economy. From these tabulated statements one learns that 23 companies operating in Turkey last year with a working capital of £T4,563,000 were enabled to declare dividends totalling £T562,304, or roughly 12 per cent. Seventeen companies with a total capital of just over four millions balanced their books with a trading loss. Eleven companies of a total capital of £T1,953,000 entered into voluntary liquidation, their place being taken by four newly-founded establishments with a total capital of £T1,200,000.

As regards the mercantile marine, eight companies with a total capital of £T3,346,000 earned £T512,080, whereas four companies of a gross capital of £T235,000 suspended their operations and withdrew from the market. Coming to banking establishments, it is instructive to gather that 30 banks with a gross working capital of £T34,547,000 announced profits of £T2,704,363 bearing in mind that one Turkish financial establishment alone accounts for half of the latter, i.e., £T1,362,461.

ECONOMIC CONDITIONS IN BULGARIA.

[The following notes are taken from the bulletin of the British Bulgarian Chamber of Commerce of Sofia, dated July 31.]

General Situation.

In consequence of the congested condition of the market for goods of foreign origin (especially textiles, machinery, motors, gramophones, and leather) combined with the disquieting increase in the adverse foreign trade balance, almost all private banks, at the suggestion of the National Bank, undertook a more or less drastic curtailment of credits to importers. The increasing tension of the monetary situation is intensifying the effects of this policy. There is much probability that importers and wholesale dealers in imported goods will have to overcome serious difficulties for some time to come.

This situation may undergo a substantial change for the better if the final crop results prove generally better than last year's. In any case, the practical effects thereof are not expected to come into play before the end of October, and, as far as tobacco is concerned, the early spring of 1930.

The purchase of rolling stock and road material for the railways is continuing, although on a somewhat smaller scale. According to official information, three railway engines for the State Collieries at Pernik are to be purchased by direct negotiation and without adjudication. Three more engines are to be ordered in the same way for the Administration of Railways, and tenders will be invited for another ten engines. These purchases appear to be followed with keen interest by French, German, Italian, and Czechoslovak manufacturers.

A French concern has been awarded a large contract for the delivery of a complete electric power generating plant at Vutcha (Southern Bulgaria). The competition has been very keen. As far as information is available, no British tender has been submitted.

Miscellaneous.

The Ministry of Agriculture has circulated an order to all officials inviting them to advise the population to economise in the use of fodder on account of the prospective shortage of this year's crop which is by one third smaller than that of the previous year.

According to official data furnished by the Labour Section of the Ministry of Commerce, Industry, and Labour, the number of employees in industrial undertakings during June was 70,831, against 82,169 in May, and 71,383 in June, 1928.

The wholesale commodity index number (on the basis of 1914 equals 100) for June was 3,245, as compared with 3,338 for May and 3,318 for April, and 3,078 for June, 1928. The general level of wholesale prices, therefore, has decreased by 2.9 per cent. as against May and by 5.4 per cent. as compared with June 1928. This slight decrease in the cost of living is due to reduced prices in the following groups: "Foodstuffs of vegetable origin" (6.6 per cent.), "Animal foodstuffs" (0.2 per cent.), "Fuel" (4.1 per cent.) and "Various" (0.2 per cent.).

Tenders will be invited shortly by the State Railway Administration for the supply of locomotive tyres, locomotive leading wheel tyres and 15-ton wagon wheel tyres, for an amount of 3,000,000 leva.

The large edible oil industrial undertakings in 1927, in which year the last census was taken, numbered 15. The capital invested in these undertakings as at December 31, 1927, aggregated 2,972,894 gold leva.

The deposits with the Postal Savings Office during the first six months of 1929 aggregated 216.6 millions of leva against withdrawals of 204.7 millions of leva. Therefore during the first six months of the year the deposits exceeded the withdrawals by about 11.8 millions of leva. During the same period of 1928 the deposits amounted to 214.2 millions of leva against withdrawals of 155.1 millions of leva, leaving a surplus of 59.5 millions of leva over withdrawals.

The Suez Canal Company announce that on and after January 1 next the maximum authorised draught of water for vessels using the canal, which is now 32 ft. (9m. 75) will be increased by one foot, thus making it 33 ft. (10m. 06).

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

WESTMINSTER BANK

LIMITED

HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

Company Meeting.

CYPRUS ASBESTOS COMPANY.

Large Increase in Output.

The ordinary general meeting of the Cyprus Asbestos Company, Ltd., was held at Amiandos on July 31.

Mr. H. L. Jones, who presided, read the Managing Director's speech, as follows:—

Gentlemen,—As you will have seen from the Director's report and accounts, production for 1928 amounted to 16,287 tons, so that for the second year in succession we have obtained an increase in output of just over 5,000 tons. The tonnage milled in 1928 was 433,271 tons, as against 301,839 tons in 1927. Recovery yield at 3.76 per cent. compares with 3.71 per cent. in 1927.

Results to date indicate a further slight improvement in the recovery yield to about 3.8 per cent., and, as we expect to mill this year 475,000 tons, production should be about 18,000 tons.

Steady Improvement Anticipated.

In this connexion it will interest you to know that since the mines were originally opened in 1906, something like ten million tons of rock have been quarried. Of this total almost one half has been quarried during the last two years, and the signs of improvement in the recovery field, which supports geological indications, lead one to conclude that the low yield of 3.71 per cent. in 1927 is unlikely to be repeated and that we may now look forward to a slight but steady improvement.

More Mills Completed.

Primary Mill No. 7 has been completed and is running satisfactorily. Primary Mill No. 8 will be running in a few days. These mills will raise the total ore milling capacity for a full season to about 550,000 tons, so that an increase in production can be obtained next year without the addition of further mills.

The Central Power Station Building Extension has been completed and a fifth 330 k.w. set installed. The sixth set, which completes the power programme for the time being, will be erected shortly.

Expenditure on capital account in connexion with development of the quarries, which figures in the accounts under the heading of "Development Account," is now coming to an end, and should cease after the end of the current year.

Working Costs.

The lowering of working costs becomes an easier problem with each increase in the annual production, and this no longer presents any technical difficulties. What in future we produce in any one year must be governed by what we can dispose of at remunerative prices. The market generally appears to be expanding, and, provided we are not in too much of a hurry to press on towards the figure which I hope we shall one day reach, namely 40,000 tons, there seems little fear that stocks will rise to an inconvenient level.

Subject to prices remaining fairly stable, I look forward to an increasing margin of profit which should result in very satisfactory figures.

The total crude oil production of the Roumanian oilfields during June was about 400,000 tons, as against 375,000 tons for the preceding month, and 340,000 tons for June, 1928. The production of the principal operating companies during the month was as under (in tons):—Steaua Romana, 67,930; Astra Romana, 63,006; Rom.-Americana, 41,599; Creditul Minier, 38,072; Phoenix Oil, 38,178; Sirius, 33,729; Concordia, 19,022; Colombia, 14,914; and I.R.D.P., 13,149.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Scientific Instruments, Etc.—The Director-General, Physical Department, Sharia El Insha, No. 1, Cairo, invites tenders for the supply of scientific instruments and clocks. September 30.

Faroukia Canal Masonry Works.—The Director of Projects and Resident Engineer, Naga Hamadi Barrage, Naga Hamadi, invites tenders for the construction of Faroukia canal masonry works. September 15.

Construction of Lahaiwa Tunnel.—Tenders are invited by the Ministry of Public Works of the Egyptian Government for the construction of the Lahaiwa Tunnel on the east side of the River Nile and at about 500 kilometres south of Cairo. November 16.

Electric Motors, Etc.—The Egyptian Ministry of the Interior invites tenders for the supply and installation of electric motors, pumps, mechanical filters, and the sinking of an artesian well of 80 metres depth. October 16. (D.O.T.)

Paper and Gum.—The Egyptian Ministry of Commerce invites tenders for the supply of paper and gum for the manufacture of envelopes. October 14. (D.O.T.)

Steel Water Tanks, Etc.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of two steel water tanks on steel framework tower, complete with necessary piping and fittings, as well as an electric water level indicator. October 5. (D.O.T.)

Wooden Platform Weighing Machines.—The Ministry of Public Works invites tenders for the supply of 113 wooden platform weighing machines as follows:—15 of 1,000 kgs. capacity, 16 of 500 kgs., 21 of 300 kgs., 38 of 250 kgs., 21 of 125 kgs.; also 2 of 500 kgs. capacity, zinc covered. August 31. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, August 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maimyo for Calcutta (Birkenhead, August 27); s.s. Makalla for Calcutta (Birkenhead, September 5).

Bibby Line.—S.s. Shropshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, September 4).

British India Line.—S.s. Morvada for Colombo, Madras, and Calcutta (London, August 24); s.s. Hatimura for Bombay (London, August 31).

Cunard Line.—S.s. Bactria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Corfu, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, and Gruz if sufficient inducement (Liverpool August 31, Swansea September 3); s.s. Bantia for Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza; also at Volo if sufficient inducement offers (Liverpool, Glasgow, and Swansea, August 31).

Johnston Line.—S.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 7).

P. and O. Line.—S.s. Novara for Calcutta (London, August 30); s.s. Viceroy of India for Bombay (London, August 30).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 31).

Ellerman and Papayanni Lines.—S.s. Lesbian for Gibraltar*, Algiers*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 24, Swansea* August 24); s.s. City of Lancaster for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow August 26, Liverpool, August 26); s.s. Roumelian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool September 14, Swansea* September 14); s.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool September 14, Swansea September 19). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

It is announced that in September there will be a passenger service by the Simphon Express from London to Baghdad. Trains from London will transfer their passengers for Baghdad at Haidar-Pacha. The second stage will be as far as Nissibin, whence transport will be provided by motor bus to Mosul. From Mosul to Baghdad the train will be without sleeping cars owing to the narrow line.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 20.

Several factors conspired to restore confidence in the Stock Markets during the past week, notably the publication of improved overseas trade figures for July, the favourable turn taken by the cotton trade dispute, the satisfactory technical position revealed at the Stock Exchange settlement and developments at The Hague Conference. In consequence, the ground lost at the end of the previous week as a result of the sudden rise in the New York Federal Reserve rediscount rate has been recovered. International stocks were again active under the lead of Wall Street, and industrials generally were firmer, though there was little expansion in the volume of business. Gilt-edged stocks were steadier in the absence of any immediate monetary disturbance, and were assisted by the report that the Bank of England had arranged a £50 millions credit in New York, a rumour which was later authoritatively denied. The Rhodesian section was the centre of some excitement on the receipt of favourable development cables.

International Nickel.

The International Nickel Company of Canada has this week published its first financial report covering the six months from January 1, when the company was formed to merge International Nickel Company of New Jersey and Mond Nickel. Earnings for the six months under review amounted to 14,683,522 Canadian dollars (£2,936,700) and other income brought the total to 15,688,777 dollars. After allowing for taxes, depreciation, interest, etc., the profit was 11,238,176 dollars (£2,247,635), equivalent to 74 cents per share on the common stock after deduction of the preferred dividend. The profit of the old Canadian company for the same period and prior to its merger with Mond Nickel was £1,017,300, about half the present figure. Dividends for the first two quarters of the year were at the rate of 20 cents, but for the third quarter they have been declared at 25 cents. The control of this company is in the hands of American interests, the majority of the directors being directors of the original Canadian company. The trading results now published show that the fusion was well justified, and no doubt the full benefits

of the unified control have still to be fully felt. The rationalising economies and the fact that the company now controls 80 per cent. of the world's nickel output, suggest that full benefit should be derived from the potentialities of its properties and the shares have considerable attraction as a speculative lock-up.

Textiles Recovery.

The settlement of the cotton dispute naturally induced a better tone in the market in textile shares. Nevertheless, it is generally realised that the part whatever wage reduction is agreed upon can play in putting the cotton textile industry on its feet again is limited. Trade has been very poor this year, even the Egyptian section, which has in previous years been fairly active, having to introduce short-time working. The industry's difficulties, especially in the coarser lines, lie largely in the growth of foreign competition, but it is generally considered that further progress towards consolidation into large scale units, and greater initiative in marketing are eminently desirable. It is significant that the companies working on a relatively large scale have had the best records in the past difficult years.

Coats' ordinary shares yield £5 19s. per cent., and those of English Sewing Cotton £6 6s. per cent., while a return of £6 8s. per cent. is obtained on Fine Cotton Spinners' ordinary. The first-named company's 6 per cent. cumulative "B" preference shares return £5 8s. per cent., while English Sewing Cotton 5 per cent. cumulative preference yield £5 14s. per cent. The same return is obtained on the similar shares of Fine Cotton Spinners.

Drapery Trust Accounts.

The Drapery Trust, Ltd., which was established at the end of 1925, published this week its third annual report. The revenue of the Trust from dividends and interest for the financial year ended May 31 amounted to £401,705, and although this is a decrease of £16,016 compared with last year, the total gross income is £535,125, or £39,414 more than for the previous twelve months. The investments of the company are shown at £4,743,231, against £4,341,631 last year, but cash appears very low at £1,474 compared with £188,575 in the previous balance-sheet. Preference dividends absorb £192,000 and were paid at the rate of 7 per cent. plus 1 per cent. participating dividend, the same as before, and the ordinary dividend, which has been raised from 8 per cent. to 10 per cent., absorbs £150,000. The trust is part of the Debenhams group, which controls a large number of London and provincial stores, including Debenhams and Freebody, Marshal and Snelgrove, Stagg and Russell, Swan and Edgar, Bobby and Co., and Plummer Roddis. While numerous improvements have been effected in the business acquired by the groups, these businesses are left free to develop under their own managements. Considerable sums have been spent on renovating and enlarging premises, but this work is now practically completed, and the results of the amalgamations should have an increasing influence on the accounts. Drapery Trust 7 per cent. cumulative participating preference yield £7 2s. per cent. and Debenhams preferred ordinary give the same return.

It is reported from Constantinople that vessels arriving in Turkey from Tunis will be required to undergo examination, a case of plague having been reported in that city.

The Department of Overseas Trade announces that the space applied for in the London section of the British Industries Fair, which is to be held at the new Olympia next year, from February 17 to 28, exceeds 145,000 square feet. The total area available for the Fair is 200,000 square feet. A limited amount of space is therefore available in a few sections.

The directors of the Commercial Bank of the Near East have declared an interim dividend at the rate of 6 per cent. per annum, less income tax, in respect of the half-year ended June 30 last. The transfer books of the company will be closed from August 22 to September 2 inclusive, and dividend warrants will be posted on September 2 to shareholders on the register.

British Consular Reports

III.—ROUMANIA.

(Continued from page 192.)

The fruit harvest of 1928 was mediocre both as regards quantity and quality. In some districts where frosts occurred in the early spring the harvest was poor. The following are the approximate estimates of the 1928 harvest of various tree fruits:—

Metric Tons.			
Cherries	... 113,750	Walnuts	... 82,210
Apricots	... 14,690	Plums	... 812,600
Peaches	... 4,840	Apples	... 265,660
Quinces	... 18,180	Pears	... 87,490

In 1928 an area of 239,825 hectares was covered with vines, and, according to the preliminary estimates, an average yield of 26.3 hectolitres of wine per hectare was obtained, the total production amounting approximately to 6,315,400 hectolitres, as against 7,100,632 hectolitres in 1927.

Bessarabia has attempted to seek compensation for her poor cereal harvest by exporting fruit. Her apple crop was good and about 1,000 waggons of apples were exported to Germany on November 1 at 12,000 lei per 1,000 kgr. ex orchard, while 530 wagons of walnuts were exported to Germany and Denmark at 1,700 dollars per wagon (of 10 metric tons). There were 250 wagons of prunes available but the price could not compete with that of Serbian fruit. As regards grapes, although the harvest was comparatively poor, 50 wagons were exported to Germany and 50 to Poland at prices ranging from 10 to 20 lei per kilogramme according to quality. The prices for wine are still low and transactions rare, viz., 110 lei per "vedro" instead of 160 lei as it was last year.

Livestock.

Conditions of life for cattle in Roumania, both natural and artificial, are utterly different from those prevailing in Great Britain. It is stated that the Shorthorns received from Great Britain as a gift in 1912, have undergone gradual modifications in build and development, owing to the climate, even in cases where they are well fed and cared for. Crosses between the Shorthorn and the Roumanian native breeds have been found to be inferior to the pure local stock, both as regards the yield of milk and butcher meat. On the other hand all the pigs imported at that time have thriven well and do not suffer from the climatic conditions of Roumania. Consequently both the State farms and the larger land owners are becoming increasingly interested in breeding English pigs.

The present Government is very anxious to give every possible encouragement to the breeding of livestock and to increase exports and they therefore intend to cancel the export duties still in force and to reduce the railway charges and give any other possible facilities to breeders with a view to improving the unsatisfactory conditions now prevailing. The following table showing the number

of livestock of various kinds in 1928 as compared with 1927 has been issued by the Ministry of Agriculture:—

	1928.	1927.
Horses	... 1,944,700	... 1,939,438
Oxen	... 4,435,697	... 4,552,166
Buffalo	... 189,641	... 192,268
Sheep	... 12,800,576	... 12,941,051
Goats	... 386,045	... 418,616
Pigs	... 2,831,524	... 3,075,782

Industry.

According to the records published by the Institute of Statistics there were in existence at the end of 1927 in all Roumania, 1,168 industrial limited companies with aggregate capital of 27,892 million lei as compared with 1,171 companies with capital of 24,818 million lei in the preceding year.

The Roumanian petroleum industry has continued to progress both as regards production and capital investment, most of the new capital coming from abroad. Many of the Roumanian companies have sought foreign support. Now that the new Mining Law has done away with most of the restrictions which formerly handicapped the co-operation of foreign capital in the mining industry, considerable expansion and development in the Roumanian oil industry are expected in the near future with the assistance of foreign capital. The hope is also expressed locally that the present Government will construct new roads in the oil areas and repair those already in existence, that all export duties on petroleum products will be abolished and the communal taxation diminished and that steps will be taken to abolish many of the formalities at present required, and finally that new pipelines will be laid from the refineries to the ports of Constantza, Giurgiu and Braila.

The low world prices for petroleum products and American and Russian competition have to some extent affected the profits of the Roumanian oil companies, but the latter have devoted a good deal of attention to the re-organisation of their sales abroad. With a view to reducing the cost of production, many of the oil companies have concentrated on introducing improvements in their drilling and refining systems and administration. While some have purchased the improved machinery and plant, others have sent competent members of their staff abroad to study the methods and administration of foreign oil enterprises. In some of the older oilfields new oil strata have been reached by deeper drilling and improved methods.

The timber industry had a better year than in 1927. Timber in general, and building material in particular, were in good demand, partly owing to a brisk trade with Bulgaria in this commodity. The output of sawn and bent beech wood has constantly increased, fostered by demands from abroad. Oak parquet flooring was also in good demand especially in Bucharest, where a larger number of houses was erected in 1928 than in any year since the War. Firewood proved unprofitable until January, 1929, when the demand increased owing to the exceptionally cold winter, and large quantities were exported to Hungary. The prices then rose considerably, but went down again about the middle of March.

Before the War Roumania was not counted among the countries producing iron and steel, and the only iron works that existed were mechanical workshops for repairs. With the Transylvanian and Banat provinces she has acquired rich mineral deposits, including iron ores and important metallurgical works, whose activities have been greatly encouraged by protective tariffs. Her present capacity of production of iron and steel and the

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

actual production in 1926 and 1927 are given as follows in the "Analele Economice si Statistice":—

	Annual Capacity.	Production.	
		1926.	1927.
		Metric Tons.	
Cast iron	260,000	62,976	63,203
Rough iron and steel ...	160,000	111,566	130,066
Rolled & semi-manu- factured products ...	300,000	140,306	173,089

In the list of the principal rolled iron products are included bars, angles, channels, rails, tyres, sheets, tool steel, etc. In 1926 the total home consumption of iron and steel, including machinery, amounted to 534,309 metric tons (no more recent figures are available), and of semi-manufactured products 385,996 metric tons, of which 145,690 tons were imported. In the same year the total imports of iron and steel products, weighing 371,156 metric tons, amounted in value to £12½ million. During the period under review the metallurgical industry suffered partly from depression in the oil industry and partly from lack of orders from the State owing to shortage of funds. The railways also confined their repairing work to their own workshops and gave very few private orders.

The Railways.

The State Railways closed their annual balance-sheet on December 31, 1928, with a deficit of 1,326 million lei (provisional figures) receipts having amounted to 11,066 million lei and expenditure to 12,492 million lei, while the estimated revenues were 13,600 million lei. It is officially stated that the deficit was mainly due to the great diminution of cereal transports.

A sum of about £15,000,000 has been allotted from the recent loan and other sources for carrying out the following programme of work on the railways: (1) Renewal of 1,400 km. of rails with new ones and of about 300 km. with used rails. (2) Doubling of lines over 344 kilometres. (3) Installation of signalling and safety apparatus. (4) Extension of stations, new shunting stations, etc. (5) Extension of telegraph and telephone systems. (6) Reconstruction and strengthening of bridges. (7) Water softening plant, etc. (8) Extension of workshops. (9) Repairs to rolling stock. (10) Increase of rolling stock.

For the construction of new railway lines a fresh loan will be required (according to the report drawn up by the Technical Committee of the Ministry of Communications) for a sum of 42,000 million lei to be used over 4 or 5 years. Over 10,000 million lei will be required to finish the 5 new lines already begun some years ago. A sum of 9 million dollars from the recent loan will be used to form a working fund for the Railway Administration after all outstanding accounts have been paid.

IV.—THE PERSIAN GULF.

A report on economic conditions in the Persian Gulf for the two years ended March 20 last by Lieut.-Commander Forester, Acting British Vice-Consul at Bushire, has just been issued. The report, which does not include the ports of Basrah and Mohammerah, contains the following:—

The total trade of the area under consideration actually showed a decrease in value in 1927-28, as compared with 1926-27, of £1,059,876, the total trade of the Persian side showing a decrease of £1,325,756, while the trade of the Arab side showed an increase of £264,889. Of the decrease on the Persian side the sum of £1,072,154 is due to a decrease in opium exports. This decrease appears to be in the nature of a shrinkage back to more normal proportions after a boom year in 1926-27. Apparently after the Opium Convention of 1925 all the countries in the Far East which legitimately import opium under licence proceeded to lay in big stocks, while the export of unlicensed opium from Persia for smuggling into the Far East also increased largely. In the opinion of the writer the above-mentioned figure of £1,072,154 decrease in opium exports

can reasonably be discounted as due to abnormal circumstances. If this figure is ignored the decrease in the value of the total trade on the Persian side will be reduced to £252,611, and the decrease in the total trade of the whole area will be turned into an increase of £12,278.

Sugar, tea, and piece-goods, the staple imports of the Persian ports, all showed a decline in value in 1927-28 over imports for 1926-27. The value of sugar imported decreased by approximately £95,000, but as the c.i.f. value decreased during the same period by as much as 25 per cent., due to a fall in world prices, the actual quantity legitimately imported was but little less than in the previous year. As more Russian sugar now finds its way down from the north of Ispahan and Shiraz, and as the quantity of smuggled sugar on the market undoubtedly increased during 1927-28, it may be considered that, despite the fall in the value of sugar imports, Persia is now absorbing more sugar than at any time in the last few years. Nevertheless, the consumption of sugar throughout the country is still only 54 per cent. of the consumption in 1913-14. Tea imports decreased by approximately £57,000 during the same period, and piece-goods by £68,000.

The general fall in the value of Persian imports may be attributed to the decreased purchasing power of the people and the tightness of money brought about by the Persian policy of high tariffs and high monopoly and road taxes levied on imports. The monies so collected were all accumulated in 1927-28 in the capital. They are now gradually being returned to circulation as the construction of the north to south railway progresses, and this fact should have a beneficial effect in the future on Persian trade as a whole.

Openings for British Trade.

Persia should, in the next few years, provided the country continues to enjoy the present degree of internal security and peace, provide a progressive market for woollens, knitted goods, artificial silks, haberdashery, ready-made clothing, boots and shoes, preserved food-stuffs, whisky and other alcoholic drinks, lemonade powders and essences and similar "soft" drinks, gramophones, rubber articles including tyres, motor cars, particularly commercial vehicles, motor cycles, pedal cycles, motor accessories, lubricating oils, machinery (including agricultural and irrigation machinery), electric plant and accessories, wireless sets, small tools, galvanised iron and tin plates, copper and nickel in bars or sheets, tin, aluminium and enamelled ware, crockery and glass, lamps, paper and stationery, soap, dyes for the carpet industry, particularly synthetic indigo, sporting guns and ammunition.

It must be borne in mind, however, that the Persian market is essentially a poor one and on the whole unresponsive to high quality and high-priced British goods. The heavy taxes imposed on practically all imports, and the immobilisation during the last few years of a large capital sum in the Treasury for railway construction, have considerably reduced the purchasing power of the inhabitants. A start has now been made on the construction of the railway, but the larger proportion of the money collected for this purpose will be required for payments outside Persia, while the small amount returned to circulation in payment of Persian labour will only find its way, at first, into those districts where railway construction is actually in progress.

(To be continued.)

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended July 10 amounted to £E7,980, making the total from April 1 £E79,304.

ATTWATER & SONS, PRESTON, England

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 14:—

Egyptian Futures.

Sakel Contract.—The week has been chiefly remarkable for the effect produced by the U.S. Bureau report. Traders generally had been prepared, by a series of private estimates, for figures of a slightly "bullish" character, rather than the reverse, and a fair amount of short covering had taken place in anticipation. The quotation for November just prior to the report was 16.41d., but after the figures were known selling pressure was renewed, not only that day, but during several succeeding sessions, and as a result the same month was forced, at one time, as low as 15.60d. During the last day or two, however, a recovery has been made partly on the harder tone apparent in American contracts and partly owing to the better strike news, and we close to-night with the same month 15.80d.

Trading throughout the week has really been of a most restricted character, and the lack of fresh business coming in from outside sources has been a general complaint round the market. The truth of the matter is, of course, that the possibilities of cotton do not at present offer sufficient inducement to the outside speculator, who finds the stock or wheat markets more attractive under existing conditions. Minor features have been few. There has been some buying of November and selling of January at around 17 points difference, and it is considered probable that, should normal conditions at the mills be resumed at an early date, the difference between the two months will narrow still further. Opinion with regard to the possibility of tenders on November are divided. November Liverpool and November Alexandria have closed in slightly during the week.

Upper Contract.—This has been the more active market, but the tone has remained heavy. There appears to be a general impression that a large crop is now assured, and merchants who have been unable to dispose of their stocks, owing to the stoppage at the mills, are faced with the unwelcome prospect of carrying over a large proportion of their holdings into the next crop. There is nothing in the situation calculated to foster "bullish" enthusiasm, and it is little wonder that some rather aggressive selling of the November position has lately been in evidence. We have again closed in with American contracts. Our premium over Alexandria has also narrowed considerably, and at one time this week stood at only 60 points.

Egyptian Spot.

An improved business has taken place this week, but the effect of last Thursday's American Bureau report was seen in a smart drop in values, which took place immediately following its publication. Although the wages deadlock has been improved by the masters agreeing yesterday to the principle of arbitration, it is yet too early to assume that an immediate return to normality is assured; and buyers are, as yet, in no hurry to commit themselves. Nevertheless, the general inquiry has shown some slight improvement, and in some quarters hopes are entertained that a number of mills will resume working during the coming week-end.

Sakel.—The small inquiry which has been met with has been almost identical with what we reported last week. That is to say, a very moderate business has taken place at from pass to 150 November contracts, and an even more moderate demand for low cotton at from 10d. to 12d. has been easily satisfied.

Uppers.—This cotton has furnished the bulk of the inquiry during the week and on one day a "line" of some 500 bales changed hands. The most popular range has been from "pass to 20 on" November contracts, and there would appear to be a plentiful supply of this cotton available on the spot here at the moment. The better, and the lower qualities, have again been neglected.

Pilion has been in moderate request up to 200 on. Actual results, however, have been almost negligible.

Nahda, Maarad, and White.—No business reported, but an odd inquiry for White cotton at round about pass price November Sakel appeared on one occasion.

Sudan Sakel.—The usual steady business has taken place, but quantities sold have not been of any great weight. The Continent has shown increasing interest, and altogether the demand for this cotton has been rather more lively.

Tokar Sakel.—Entirely neglected. C.i.f. business has shown no improvement. Forwarding to the trade last week amounted to 3,041 bales Egyptian and 308 bales Sudan. Estimated spot sales for the week, 1,200 bales Egyptian and 550 bales Sudan Sakel. Quotations of Sakel show a decline of 55 points, and those of Upper and Pilion 40 points on the week. F.G.F. Sakel to-day, 16.50d. F. G. F. Upper to-day, 11.10d. F.G.F. Pilion to-day, 12.20d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended August 8, state:—

Since our last report the futures market has been quieter, but the tone has nevertheless remained firm. The week's summary of price movements is as follows:—Sakellaridis: November, 33.49 dollars, 0.26 dollars down; January, 33.83 dollars, 0.26 dollars down; March, 34.26 dollars, 0.23 dollars down. Ashmouni: August, 21.15 dollars, 0.08 dollars up; October, 21.49 dollars, 0.08 dollars down; December, 21.09 dollars, 0.09 dollars down; February, 22.43 dollars, 0.07 dollars down; April, 22.83 dollars, 0.09 dollars down; June, 23.15 dollars, 0.17 dollars down.

Sakel.—The week opened with a tendency for higher prices, but the publication on the 5th inst. of the Egyptian Government's estimate of the acreage planted in cotton this year changed the atmosphere, the figure given for Sakel being certainly larger than the market expected. There was in consequence some liquidation, and prices lost a fair amount of ground; the tone of the market, however, afterwards stiffened again on reports of floods in the Sudan, together with forecasts that the figures of the American Bureau Report, to be published this afternoon, would be of a nature to cause a further rise in New York. The reports of floods in the Sudan had no serious foundation. The sowing of the new crop in the Gezira is already well advanced and will, as usual, be completed during the present month.

There is nothing special to report on the demand from the trade, which continues to be on a very poor scale. There is as yet no sign of an early settlement of the lock-out in Manchester. As stated above, our market is expecting a somewhat bullish American Bureau Report, and if the figures to be published this evening are bearish, a serious decline in prices can be expected, as the principal cause of the strength of our market during the last few weeks has lain in its confidence in a gradual rise in New York.

We give below the statistical position of Sakel in Egypt as at the end of July:—Stock, Alexandria, 728,000 kantars, including the Government cotton. At the same date last year the stock of Sakel in Egypt was 745,000 kantars. We would add, for purposes of comparison, that exports of Sakel for the month of August last year amounted to about 176,000 kantars.

The Sakel Upper straddle (November/October) this week stands at 1,200 points, against 1,218 points last week, and 1,233 points at this time last year.

Uppers.—This market has followed very closely the fluctuations of Sakel. The Government estimate of the acreage planted in Ashmouni and Zagora was about as expected. The trade demand has been rather limited. No interest whatever has been shown by spinners in cotton for new crop shipment. We give below the statistical position of Ashmouni and Zagora in Egypt as at the end of July:—Stock, Alexandria, 479,000 kantars. At the same date last year the stock of Ashmouni and Zagora in Egypt was 473,000 kantars. We would add, for purposes of comparison, that exports of Ashmouni and Zagora for the month of August last year amounted to about 219,000 kantars.

The Ashmouni/American straddle (October/October) this week stands at 258 points, against 243 points last week and 433 points at this time last year.

The week's receipts amount to 638 kantars, against exports 76,401 kantars; the stock in Alexandria stands at 1,539,564 kantars.

Spot.—Again we have had a very quiet week, the total sales only amounting to 3,600 bales, of which we estimate 940 bales Sakellaridis, 2,400 bales Ashmouni and Zagora, 240 bales Pilion and 20 bales other varieties.

Sakellaridis.—During the past week the only demand in Sakel was for cotton grading Gully Good Fair and Fully Good Fair/Good. The better qualities were entirely neglected and premiums are as last week.

Ashmouni and Zagora.—There has been a fairly strong demand for cotton between Fully Good Fair and Good, and buyers have been taking up any offerings without regard to staple. There has been a small inquiry for Good Fair Uppers. Premiums are unchanged.

Pilion.—Here the demand remains the same, and for cotton other than Fully Good Fully Strict and Full Good Fair/Good there is no market. Premiums remain as last week.

Other Varieties.—Have been entirely neglected.

Crop, 1929.—The progress of the crop in the Delta is satisfactory. There has certainly been some damage as a result of pink boll worm attack and boll shedding due to humidity, but the damage, though increased compared to last week, is not, at least for the time being, causing any anxiety. The news from Upper Egypt continues to be, on the whole, favourable; in the advanced fields the opening of the bolls is going on normally and it is expected that the first picking will commence about the 15th inst. and become general towards the 25th.

British Roadstone.

It is rather curious to find that apparently there is some profit in shipping broken stone into this country, although one would think, especially after a tour in the Midlands and the West Country, that we had plenty of stone of our own. Naturally, and properly, an outcry is being raised about this by those interested in selling British stone, and I understand that as a result things are getting rather better in the roadstone trade. The production during last year of 13,262,000 tons of natural roadstone from British quarries, is gratifying, especially so as it shows a large increase over the total for the preceding year. The actual figures for the past three years are: 1926, 12,257,000 tons; 1927, 13,040,000 tons and 1928, 13,262,000 tons. Discussing the report of the Secretary for Mines, in which the figures are given, Mr. H. J. Grace, President of the National Federation of Granite and Roadstone Quarry Owners, said that the steady increase in the use of British roadstone might be attributed to the fact that more and more local highway authorities were adopting the Ministry of Transport's recommendation that all roads, no matter of what surfaces, should be treated with a liquid dressing in which should be incorporated the largest possible amount of hardstone chippings. In view of the large roadmaking schemes announced by the Government a further big increase in the use of British roadstone may be expected, especially as the Minister of Transport recently stated that it was the policy of his department to use roadmaking materials of British origin wherever and whenever possible.

It may not be known, generally, what the nature of the organisation is which was set up under the Ministry of Transport, and which practically exists to-day. Sir Henry Maybury is my authority for saying that the country is divided into seven divisions, the headquarters of each division being as nearly as possible in the centre, where a divisional engineer with a technical and administrative staff is installed, and to whom all road matters in the district are referred. Plans, specifications, estimates and full particulars are submitted to the divisional engineer by the highways authorities in the area covered, and when schemes have been approved, grants from the Road Fund monies are indicated to the local authorities, payment being made to these bodies as the work proceeds. Final payments are made to them upon the certificate of the divisional engineer that the work has been carried out in a proper manner. Ordinary routine matters are settled in the divisions, but exceptional schemes are dealt with at headquarters and no expenditure of any kind may be made out of the Road Fund without Treasury sanction. So far as road classification is concerned, it may be taken that all the main and "dis-turnpiked" roads for which the county Councils were previously responsible, have, in fact, been classified under the Ministry of Transport classification scheme, as first- or second-class roads; and in addition there are roads still maintained by the urban

and rural district councils which are not main roads, but which, nevertheless, are classified under the classification scheme.

Cheap Road Construction.

A cheap form of road construction has been suggested by Mr. Harold Bradley, who says that the greatest mileage of our roads, carrying fast and heavy traffic, have a good surface merely because of the quality of the surfacing, and that a good, travelling surface, by which expression, he means a surface that it is good to travel upon, too often disguises the real facts. Beneath the smooth, tarred surface destructive agencies are at work, in the form of internal attrition, which will eventually, and, probably suddenly, when assisted by other forces, such as frost or the passage of extra-heavy vehicles, cause the crust of broken metal to disintegrate and become incapable of carrying even the normal traffic imposed upon it.

He deals, rather severely, with some of the present methods of road construction, and says a form of construction which may be termed the intermediate type between waterbound and tar-macadam is that known as the semi-grout process. This method is comparatively inexpensive, and costs very little more than a mud or waterbound road, though its advantages are considerable. To begin with, it is a scientific method of road construction and although the initial cost of making the road is slightly greater than that of making a water-bound macadam road, ultimately it is more economical, and it is, of course, ultimate economy that counts.

A semi-grouted road requires careful grading of the aggregate, useful proportions being 60 per cent. of 2 in., 30 per cent. of 1½ in. and 10 per cent. of ¾ in. stone. The grading of the stone will, however, depend upon its hardness; a soft material will crush under the roller and so upset the balance. In any event it is economy to purchase a hardwearing stone at the outset, for it should not be forgotten that provided the construction method is good, the cost of maintenance depends largely on the quality of the stone used. A soft or brittle material is always liable, after the road is open, to fracture into smaller units which become flicked out of the bed by traffic, leaving an incipient pothole behind.

Cement-bound roads, either made by the slurry method or the sandwich system are quite as simple to construct as the method just described, and such types of construction are bound to become more popular as their advantages become better known. Cement-bound roads are particularly adapted to steep gradients subject to what is technically termed "scour." The aggregate stands up boldly as the road wears, and affords an excellent footing for all horsed traffic and is skid proof no matter what type of rubber tyres are used.

With cement roads a hard wearing stone repays any extra expenditure as, owing to the low rate of attrition, little wear takes place. It is quite unnecessary to seal the

LIVERPOOL

MANCHESTER

GLASGOW

The number of vessels passing through the Suez Canal in July was 486, the receipts being 88,110,000 francs. The corresponding figures for July, 1928, were 511 vessels and 88,450,000 francs.

NEWS FROM ALL SOURCES.

It is reported that a temporary Treaty for the establishment of commerce and customs facilities has been signed at Baghdad between Russia and Iraq.

The party of English bakers which had been visiting Greece left for London on August 18. The Greek Government has decided to appoint an Englishman to give lessons in baking currant bread.

Messrs. Watson and Youell, Galatz, report that the quay dues charged at Danube ports have been doubled, and are now 2 lei per ton on bulk cargoes reckoned on thirds of the steamer's deadweight capacity, and 4 lei per ton in the case of loading and discharging general cargo and packages, charged on the actual weight.

It is reported that the plum crop in Yugoslavia is developing under good conditions, but the yield promises to be only light. At present it is estimated that the total crop will not exceed 1,700 tons. Crops of peaches, apricots, apples and pears are all light and will only be sufficient for home consumption.

Barclays Bank (Dominion, Colonial and Overseas) announce that they have received the following cable from their Cairo office:—
 “The Statistical Department of the Ministry of Finance announces that the total imports for Egypt for the month ending July 31 amount to £E4,285,444, against £E3,620,669 for the corresponding month last year, and exports £E3,225,159, against £E3,960,165 for July, 1928. Cotton exports were £E2,475,424, against £E3,373,794.

Notes of the Week.

The Calamity in Palestine.

The calamity that in the last few days has befallen Palestine is peculiarly tragic. For the land that has suffered almost every ill, from earthquake to the strife of contending armies, is now in the throes of something little less than civil war. This violent clash between Arab and Jew cannot, however, be called either sudden or totally unexpected. As is pointed out elsewhere in this issue, ever since the Muslims began again last month to build at the southern end of the Wailing Wall, the Jewish community in Palestine has, so to speak, been lashing itself into fury. An outburst of temper, and the certain counter outbursts on the part of the Arabs, became increasingly possible, though it was still hoped, before the night of *Tisha be-Av* (date of the destruction of the Temple) that discreet counsels would prevail. But, as all the world now knows, the more violently-minded on either side gained the upper hand. Rioting began in the Holy City, spread to the suburbs, and blazed even to the remoter parts of Palestine. As is inevitable in such circumstances, innocent lives were lost, and priceless properties sacrificed. At the moment of going to Press it is impossible to estimate the number of killed and the damage done, but it is profoundly to be hoped that by the time of this issue the prompt measures taken to restore order will have resulted in a general halt to further outrage. A particularly sorry coincidence of this affray has been the absence on leave of so many of the senior officials of the Palestine Government; nor can one but lament the scant sources of reliable information upon the situation in Palestine. It is, indeed, an ironical fact that both highly placed officials and responsible journalists should be away from the Holy Land at this critical time. The High Commissioner, however, is due back in Jerusalem about the date of this issue, and since it is known that one of his first intentions on his return was to attempt to settle the whole problem of the Wailing Wall, it is comforting to presume that, as soon as order is re-established, a concentrated effort will be made to remove this now notorious obstacle between Arab and Jew.

The Right and Wrongs of It.

On examining this tragedy, one cannot avoid the question: Was it inevitable? Were the Jews wholly right, and the Arabs wholly wrong? Or *vice versa*? It is, perhaps, premature to endeavour to answer these questions, before peace, that has been the happy and deserved boast of the Mandatory Power during the last few years, reign again in the Holy Land. But a few general impressions may be indulged in. Unquestionably, in our view, it was the Jewish acts on the last Day of Atonement which set the Muslims a-thinking how best they could circumvent this new and preposterous claim of the Jews to the ownership of the Wailing Wall. As is well known, their main *riposte* consisted of building operations at the southern end of the Wall. Now the highest legal advice—advice which comprehended the whole position of Great Britain as Mandatory Power in Palestine—had been given upon what was and what was not legally permissible for the Muslims to build. At first sight, their particular buildings would seem to imply an infringement of the *status quo*. But evidently the Palestine Administration interpreted the general instructions of the legal advisers to the Crown as giving permission for this particular series of building operations at the southern end of the Wall. Whether it was correct in so doing, it is as yet impossible to say. Therein, however, lies the crux of the matter. If the Jerusalem Government was sound in its particular application of the general ruling, it is obvious that a settlement may have, willy-nilly, to be imposed upon the Jewish community; if such a series of acts as those in which the naturally indignant Muslims have indulged was not contemplated under the general ruling, obviously the way may soon be free to a possibly amicable settlement. That, however, is a detail, though a tremendously important detail. What is so distressing is to see the readiness with which Arab and Jew have flown at each other's throats. It is but a melancholy justification that one has in recalling the warning that the much talked-of co-operation between Arab and Jew was largely mythical, and that all was not so *couleur*

de rose as those who study only the reports of the Permanent Mandates Commission might be led to suppose.

Egypt and Great Britain.

Those who appreciate the difficulties of Mahmoud Pasha's position in Egypt will not have looked for any eulogies of Great Britain in the speech, delivered at Alexandria on Saturday, in which he commended to his fellow-countrymen the proposals for an Anglo-Egyptian Treaty that he had brought back with him from London. The project was described as "a glorious consummation of many years of struggling," and this it is from the Egyptian point of view. The keynote of Mahmoud Pasha's presentation of the subject was his appeal to every Egyptian to lay aside party views and to consider the project from an entirely unbiased point of view. For this reason his speech avoided criticism of his political opponents, and he was careful to take no personal credit for the recent negotiations in London, but to represent them as a normal, if unexpected, development of the policy pursued by Egypt during the last decade. But for this consideration for the Wafd the Egyptian Prime Minister must have contrasted the psychological effect of his own tenure of office with the misgivings that were evoked in Great Britain by the Wafd's policy. If the independence of Egypt proclaimed in 1922 appeared to Egyptians as "a mere mockery," it was because the Declaration was not intended to have its full effect until a treaty with Great Britain had been signed. The failure of the Wafd's leaders to grasp this aspect of the situation, which prompted the negotiations carried out in turn by Sarwat Pasha and Mahmoud Pasha, was largely responsible for Egypt's intervening troubles. This chapter, however, has been closed by the patriotic efforts of the present Egyptian Government, and it is for the Egyptian people to make sure, by means of the whole-hearted support now given to Mahmoud Pasha and his colleagues, that it will not be re-opened.

Egypt's Electoral Law.

No sentence in Mahmoud Pasha's speech is likely to give rise to more comment in Egypt than his statement that he had not yet had time to define the method by which the nation's opinion (of the proposed treaty) will be made known. Under the Constitution of 1923 Egypt inaugurated parliamentary government with male adult suffrage. It was a bold experiment in a country with one of the highest percentages of illiterates. Where the mass of the population is unable to read it has little opportunity to form its own judgment on public affairs, and can only accept the views of its informants. To this circumstance, in combination with a certain element in the Egyptian character, may be attributed the complete surrender of the electorate to the Wafd, who from the outset entered the political field with an organisation with which no other party showed any inclination to compete. In no country in which the adult population had a mind of its own or was capable of holding views of its own would the student class have been allowed to assert itself and exercise political domination as was the case in Egypt during the years of the Wafd régime. It needed, however, only the appearance of another power in the land to challenge the authority of the Wafd for the hold of the latter over the fellaheen to be at once relaxed. Yet it is unlikely that the old instinct of obedience and submission to terrorism has been wholly eradicated within a year, and the Wafd is probably still sufficiently well organised to be able to pick up the threads of its former domination as soon as the freedom of an electoral campaign is accorded to it. Under such conditions the proposed treaty

between Egypt and Great Britain would have little chance of being considered by the Egyptian electorate "from an entirely unbiased point of view." Mahmoud Pasha knows, however, that Egypt has an opportunity to-day of obtaining advantages that will not easily come her way again, if she rejects what is now offered her, and he has to decide whether he will run the risk of allowing the nation to spite itself at the bidding of the Wafd, for purely party ends, or whether he will modify the electoral law to bring it more into conformity with the intellectual development of the great bulk of the Egyptian people. If the Wafd's patriotism were entirely disinterested, there could be no doubt that it would be anxious to offer the Prime Minister its whole-hearted support of the proposed treaty, however much prestige he might stand to gain from the Anglo-Egyptian settlement, and so obviate the necessity of modifying the electoral law.

Russia and the Revolt in Persia.

It is a curious coincidence that just as the Persian Legation in London announces the definite ending of the revolt in Southern Persia, the *Pravda* should not only be praising the work of the "rebels," but also state that the movement among the Kashgais and Bakhtiariis is getting stronger. The attitude of this Moscow journal is highly instructive. At the beginning of the trouble in Southern Persia, it will be remembered, the rumour was spread that the British were behind the "rebels," and fierce denunciations of Great Britain were indulged. Now, however, it appears that it is the rebels who all the time were opposed by the British! Listen to the *Pravda*: "The peasants, workers, and shepherds of Persia have no faith in the existing Persian Government, which is a mere puppet in British hands. They have put up a strong fight against both the aggression of the Persian Government and the oppression of the British." Whether there has been any foreign complicity in this revolt, now happily ended, in Southern Persia, remains to be proved: certainly there has been no British complicity—a fact of which Teheran itself must by this time be fully aware. It has been the habit of the Russians, however, in many parts of the world, to accuse the British of stirring up disorders for which they themselves were primarily responsible. We do not suggest, indeed, that this last revolt in Fars needs any outside explanation. As far as the somewhat unreliable reports that have reached this country allow one to judge, the issues between the tribes and the Teheran Government were purely domestic. But the comment of this Russian newspaper is undeniably interesting. In the Shah, it would appear, the Russians think they have no friend, for the *Pravda* states that "the accession of Riza Khan has not in the least improved the conditions of the toiling class of Persia. The latter is beginning to express its dissatisfaction in the form of an open struggle." When the Bolsheviks talk like this, one is moved to wonder how it is that they have attained even the limited success of which they can boast. The Shah "a mere puppet in British hands!" It would be interesting to discover one Persian or one Englishman of this opinion. So rare a specimen would, we imagine, at once be enshrined in a home for mentally defective observers.

The Good Name of Persia.

The communication from the Persian Legation in London to which we have referred takes incidental care to point out that the accounts of the disturbances have been at times exaggerated. And it would seem, indeed, that the scope of this revolt was at first thought to be larger than it has since proved to be. As a matter of fact, Persian publicists have been severely put out by the descriptions of the revolt sent out by foreign newspaper correspondents. It is the serious aim of Persia at this moment to attract foreign capital for the development of her resources, and Persians rightly feel that if such reports of disorders in their country are spread in Europe and America, particularly if such a story as that which

The Index to Volume XXXV (January 3 - June 27, 1929) of "THE NEAR EAST AND INDIA." is now ready, and copies will be forwarded to subscribers gratis on application to the Manager, The Near East and India, 170 Strand, London, W.C.2.

made out that a mere section of an Arab tribe in the south could hold at bay fully equipped regular troops gained currency, foreign financiers would feel diffident about investing their capital. Certain Teheran journals have expressed considerable indignation and anxiety over this affair. They have ridiculed the idea that the revolt was a serious one, and refer jocularly to the fact that an explanation was recently given in the House of Commons upon the attitude of Great Britain towards the so-called "movement in the South." Persia is certainly to be sympathised with in this matter of faulty information, but her publicists are in error in supposing it to be due to perfidious propaganda or malice. The intelligence services of the entire Middle East are notoriously ill-organised, and Persia is by no means the only country to suffer in this way. She herself, possibly, could do something to counteract false impressions: there was considerable substance in the demand recently made by Teheran journals for fuller official information upon the progress of events in the revolting South. No one, and least of all foreign newspaper correspondents, wishes to blacken the name of Persia, a land in which rumour is always abundant and reliable information hard to come by. One method which immediately suggests itself is for the Persian Government to keep its Legations abroad fully supplied with details. In view of the urgent desire of that Government that foreign capital should be attracted to Persia, such a proceeding as we have suggested would appear to be imperative. In any case, this revolt in the South is now over, and it is to be hoped that the Teheran Government will have derived from it most useful lessons in regard both to policy and publicity.

The Situation in Syria.

Nothing is more notable in the Syrian situation than the disparity of evidence upon the country's economic position. The French delegate to the League of Nations declares that it has recently undergone a considerable improvement, but many Syrian publicists stoutly deny this. It is, in fact, largely because of what they consider to be the thoroughly unsatisfactory nature of Syria's economic situation, that the Syrians still protest against the Mandatory Power. On August 11, for instance, the date of the suspension of the Constituent Assembly last year, the inhabitants of Damascus declared a general protest, and the Nationalist Party published a manifesto in which much was made of the commercial and financial plight of Syria, and other commentators have suggested that things are so bad that, unless something is soon done to alleviate matters, there is danger of further disorders. The truth is difficult to discover, but it is to be doubted whether affairs are so bad economically in Syria for there to be a real danger of another rising. The French High Commissioner must know perfectly well the risks incurred in keeping the political problem unsolved, and it is incredible that the French are not straining every nerve to counterbalance things by promoting the material welfare of the country. Whether such measures will have any radical effect on the political situation and on Nationalist ambitions in general is, however, another matter.

Turkey's Self-Confidence.

While admitting that Europe contains more than one country whose belief in its future is sometimes expressed in rhetorical and extravagant language, one may doubt whether any of the other countries in this Continent has ever surpassed in flamboyant expression the would-be latest addition to the European comity, namely Turkey. The self-confidence of the new Turks under Mustapha Kemal Pasha is amazing: it is surpassed only by the deference paid to the Ghazi himself. In many Turkish minds, indeed—one speaks, of course, mainly of the larger towns, not of the villages and their peasants—the Ghazi would appear to have taken the place of the Prophet. There is a discernible tendency to suggest that everything that is reactionary is represented by the Prophet Muhammad, and everything that is progressive is represented by Musta-

pha Kemal Pasha. About such a remarkable personality as the Ghazi rumours almost inevitably grow, as they grow round all prominent leaders of men. For some time past reports have been current concerning the Ghazi's ill-health. Wise men paid little attention to them, however. Yet they had, apparently, attained to such a vogue that the Ghazi himself saw fit to deny them. In an after-dinner speech recently at Buyukdere, which reads like an impromptu effort, Mustapha Kemal Pasha said: "The man who has concentrated his whole life to furthering your interests is in perfect health." And he went on to deliver a notable prophecy, which those Turks who hail him as a substitute for the Prophet will doubtless cherish: "Under the new régime this nation, this country, will be the most esteemed and highly honoured in the world. I shall not die before I have seen my words come true." To the outside world there is no little pathos attaching to the manner in which the whole Turkish nation hangs on the lips of its great President, for it is no longer a question merely of the love for and homage paid to a national hero, but apparently a general realisation that apart from Mustapha Kemal Pasha Turkey has no one to whom she can turn for guidance. For a one-man country the President's prophecy is a bold one, and he will have to devote special attention to Turkey's financial and economic policy if the prophecy is to be fulfilled in the lifetime of the present generation in the West.

INDIAN NOTES.

The Princes and the Nehru Report.

At the All-Parties Convention, which was held at Calcutta last Christmas, it was resolved to invite the Chancellor of the Chamber of Princes to appoint representatives to confer with a Committee of the Convention, at a round table conference, on the constitutional position and status of the Indian States in a future commonwealth of India. It is now reported from Allahabad that this invitation has just been issued by Pandit Motilal Nehru, who has also sent a similar invitation to the Nizam of Hyderabad, the Maharaja of Mysore, and the Maharani Regent of Travancore. If the Princes accept the invitation—and on this point we have no information—it may be presumed that the subject for discussion will be the draft constitution which is outlined in the Nehru report. This report was framed by a Committee of the All-Parties Convention, and it outlines a constitution based on Dominion status. Paragraph 86 of the document says: "The Commonwealth shall exercise the

THE YUGOSLAV-BULGARIAN FRONTIER.

The recrudescence of trouble on the frontier between Serbia and Bulgaria, after hopes of a satisfactory settlement of the main points at issue between the two countries had been raised by the agreement reached at Pirot last February, suggests that a more radical solution of the Yugoslav-Bulgarian problem is required than the mere waiting for good will on both sides. There is a tendency abroad to imagine that the Macedonian question is at the back of all trouble in the Balkans, and that, as this problem cannot be solved without raising others of wider significance, even if less intense, it must be left to time and chance to find the best way out of the difficulty. The more recent incidents that have troubled the relations between Serbs and Bulgarians, however, have had nothing to do with the Macedonian question, but they concern directly the demarcation of the frontier between the two countries as fixed by the Treaty of Neuilly. On general principles there is much to be said against the revision of the Peace Treaties; most certainly, there can be no general scrapping of treaties in the belief that an agreed settlement on all points would now be easily reached in an atmosphere of peace and friendliness in contradistinction to the "seething cauldron of human passions" that Versailles represented ten or eleven years ago. On the other hand there can be no valid reason why any one Peace Treaty should be regarded as so sacrosanct that it cannot be amended in detail where the necessity for so doing is proved and the alteration can be carried through to the advantage of all the parties concerned. A case in point would seem to be made out in connexion with the Yugoslav-Bulgarian frontier in the light of a remarkable document that has recently been published. As is known, the Treaty of Neuilly made certain rectifications of that frontier in favour of Yugoslavia on strategic grounds. The plea for the modifications was reasonable and legitimate; Bulgaria had been the aggressor in the Great War, and, if Yugoslavia could show that in similar circumstances a different frontier would offer her greater protection, the Allied Powers may well have been without any definite evidence on which to raise objection. The object in view was the maintenance of peace. In 1919-20 that object appeared to be best served by the rectification of the frontier. To-day, however, there is a strong reason for supposing that the rectification as carried out, instead of making for peace, is proving a potent factor for unrest, outrages and strained relations between the two countries. Common sense, therefore, prompts an examination of the matter in the light of the experience of the last ten years.

A report has recently been published by the Bulgarian Social-Democratic Party on the results of an investigation carried out by certain of its members into the state of affairs on the Yugoslav-Bulgarian frontier. This document is sufficiently striking to merit attention. It may quite well be open to the charge of partiality on the ground that its authors are Bulgarians first and Social-Democrats afterwards; but it describes a state of affairs along the

frontier which can easily be disproved, if it is inaccurate; but if the description is correct, the present condition of things can never have been intended by the framers of the Treaty of Neuilly, and it is clearly somebody's duty to bring it to an end with the least possible delay. The following are some of the statements made in the report on the strength, it is declared, of a personal investigation; they concern mainly the northern section of the frontier, which lies outside what may be called the Macedonian zone. In the district of Trn, "the line of demarcation passes through numerous villages, such as Bankia, Vrabcha, Strezimirovitz, etc., leaving one part of the villages in Yugoslav territory and the other in Bulgarian territory. The same applies to the district of Bossilegrad, in the county of Kustendil. There exist even cases where the line of demarcation separates the property from the land farmed and the house from its garden. Elsewhere, the village school remains in Bulgaria, while the church has passed to Yugoslavia; or again, the only fountain in the village, serving the whole population, has been allotted to Serbia in such a way that the population of the part of the village located in Bulgaria has been deprived of the possibility of drawing water at the fountain which it has used from time immemorial. . . . The number of Bulgarian families inhabiting the frontier zone in the district of Trn and possessing property in Serbian territory is about 900, representing a population of 6,500 people. According to the official registers of property, these families possess 875 acres of meadowland, 1,745 acres of fields and 2,500 acres of prairie land in Serbian territory. A population similarly situated exists, moreover, in the frontier zone in the districts of Koula, Tsaribrod, Bossilegrad, and throughout the length of the old Serbo-Bulgarian frontier, as well as at Petritch. . . . In all, this question concerns a population of 30,000 souls possessing in round figures 25,000 acres of land, the greater part of which belongs to Bulgarian subjects, but is situated in Yugoslav territory."

If the conditions are as described, it is not a matter for surprise that there has been "trouble" on the frontier. What is to be wondered at is that it should have been regarded as in the interest of either country to perpetuate this state of affairs and the consequent friction for ten years. To the onlooker it would appear as if the Government of General Zivkovitch, under the prompting of King Alexander, had been the first Government in Belgrade to decide that the state of affairs was intolerable. It invited the Bulgarian Government to a joint conference, and the Pirot agreement resulted. Then, it must be supposed, other influences were brought to bear in Belgrade, and the arrangement reached at Pirot, which promised to ameliorate the situation along the frontier, if it did not remove all causes of trouble, was shelved by Yugoslavia for three months and ultimately denounced. Further incidents have taken place on the frontier, and the position remains where it was, save for increased irritation on both sides. If the facts are as reported by the commission of investigation appointed by the Bulgarian Social-Democrats, it is evident that there is little hope that the two countries of themselves will be able to solve a problem which arises out of a radically unsatisfactory demarcation of the frontier line. Those responsible for the Treaty of Neuilly can never have intended to fix a frontier of the character of the one that now divides Yugoslavia and Bulgaria. It is not a question of favouring one country at the expense of the other. Twenty-five thousand acres mean little to a country, but they are everything to the few thousand people who possess them and who depend on them for a livelihood. The object to be aimed at is to do justice to a certain number of individuals who have been wronged under a treaty, contrary to the intention of the authors. Yugoslavia has suggested expropriation with compensation. If it could be accepted willingly, it would offer a solution; but no one with knowledge of the Balkans would expect the suggestion to be accepted. The alternative is a revision of the frontier line so that it can be redrawn in less crude fashion than at present; and the task should be carried out under the auspices of the League of Nations.

Alexandria, August 16.

The Political Situation.

The political situation here has developed in a rather extraordinary manner, for no party will commit itself in any way. There is a general feeling of expectancy, and everybody is waiting for someone else to make the first move. The terms of the Treaty are undoubtedly receiving a great deal of private discussion, but the results of such discussions are not made public. The only matter which is receiving any publicity is the electoral question. So many contradictory statements have been issued, both in Egypt and in England, with so much show of authority, that no one knows whether or not the electoral law will be modified. Mahmoud Pasha is due back next Friday, August 23, and is expected to make a statement on August 25. The general consensus of opinion at present is that he will declare that the modified draft of the electoral law will be put through, but there is a quiet confidence in high Wafdist circles that this will not be so. That idea is somewhat borne out by the speech made recently by Dr. Dalton.

Although the opinion of the British and European communities is on the whole against the proposals, by far the greater part of the influential members of such communities are away on leave, and nothing, therefore, has been done. Had some of the great financial magnates, people with really large interests at stake, been in Egypt, it is almost certain that the proposals would have been received by a storm of protest. As it is, those commercial people who are still here, are arranging a meeting to discuss the question, and a statement of some kind will shortly be made. Certain legal and commercial circles here are definitely of the opinion that the Treaty will not pass the Egyptian Parliament, and odds of fifty to three against were offered yesterday.

Egypt and Syria.

The fears expressed in some of the English newspapers that the Treaty will have a marked repercussion in India, greatly to Great Britain's detriment, may be far-fetched, but local repercussions have already been noticed which, local circles allege, show that the news has created a great stir in Syria. August 11 has been set aside by the Syrian Nationalists as a "Day of Protest" against the action of the French Authorities in disbanding the Syrian Parliament, and this year the day was accompanied by a very large demonstration, in the course of which repeated reference was made to the Anglo-Egyptian question, and a parallel was drawn.

Party Excitement.

For the last week things have been very quiet indeed, and life has resumed the usual summer stagnation. This state of affairs will undoubtedly continue until the end of next week, when King Fuad, Mahmoud Pasha, Dr.

Hafez Afifi, and many other Egyptian politicians are due to return. Exciting events are then expected, and once Mahmoud Pasha has declared his intentions, the whole political section of the country will very quickly be worked up to a fever of excitement. There are undoubtedly great preparations being made at the present moment for a desperate political fight between the Wafd and the Liberal Constitutionalists, and there is a grave danger that the interests of Egypt will be entirely lost sight of in the throes of party rivalry.

Attacks on the Treaty.

The attacks which are being made on the Treaty in certain sections of the British Press are having the effect of awakening in the Egyptian mind thoughts that the Treaty must really be worth having, for the surest way to make an Egyptian believe in the desirability of anything is to show reluctance to give it. Only the mildest disorders have been seen; the only one to reach the Press was a demonstration at Damanhour, always a bad town, which became slightly out of hand, and which resulted in five arrests. The prisoners were released on bail, and it is stated that Nahas Pasha will personally undertake their defence when the case is tried.

Drug Smuggling.

The Coastguard Administration has been handling the drug smuggling question in an extremely admirable manner, and it is becoming increasingly difficult for the traffickers to land their noxious cargoes. Most of the well-known local narcotic, hashish, comes from Syria, and is usually shipped to Egypt, and then either landed disguised as some other less harmful commodity, or else thrown overboard near the coast in the hopes that the tide will carry it ashore, where other members of the band will collect it. As often as not these consignments fall into the hands of the very vigilant coastguards, and so fresh methods have to be adopted. The latest, and one would imagine, least profitable, method was discovered by the harbour police last week. A small object was seen to have been thrown overboard from a large ship which had just arrived from Syria. The police went in search of this object, which turned out to be a large and fat goose. So large and fat was the goose, however, that the police were suspicious of it and subjected it to a careful scrutiny, when it was found that the bird had been cut open and then sewn up. It was reopened and found to be full of hashish. The stomach and other internal organs had been removed, and their place filled with about three kilos. of hashish. This method is both cumbersome and obvious. It would require a large flock of geese to contain sufficient drugs to be worth smuggling, and even the most unintelligent policeman would surely become suspicious were he to observe a whole flock of fat, dead geese floating shorewards, and even were his suspicions not aroused it is not probable that such a gift from the sea would be ignored, and the policeman's family would very soon dine off "goose à la hashish."

The British Consulate in Alexandria.

The British Consulate-General in Alexandria has for long been housed in a totally inadequate building in the centre of the town. To-day spacious new premises were opened in a splendid position on the sea front, where an imposing white stone building, with a red roof and attractive green shuttered windows, has been built. The new Consulate is much larger than the old one, and as up-to-date as the other was antiquated. Its position is such that it stands out amongst the other fine buildings on Alexandria's new corniche road, and the Union Jack which flies above it can be seen from a great distance. An impressive little ceremony marked the formal opening, and a guard of honour from the Durham Light Infantry saluted the unfurling of the flag, which was hoisted by the Consular cavass, who has many years' honourable service, in the presence of Mr. Heathcote-Smith, British Consul-General, Mr. A. S. Calvert, Vice-Consul, Col. Matthews, commanding the Durham Light Infantry, and a small crowd of members of the British community.

GREECE.

The Liberals' Strength.

Athens, August 12.

It is scarcely to be wondered at that the extreme Loyalists persist in regarding the return of M. Merkouris as Mayor of Athens as an indication that popular sentiment is veering in their direction. Actually it is nothing of the kind. The Liberals would have had a majority of some 6,000 votes but for the unfortunate decision of M. Christomanos to leave the Ministry of Health—unfortunate because he was specially qualified for the post and had already begun to do useful work there—and offer himself as a candidate for the Mayoralty. At Salonika a split in the Liberal vote caused the Jewish candidate, M. Manos, to be elected, but, since he did not secure the necessary quota of votes, the elections will have to be held again. Owing to the solidarity of the Jewish vote more than half the Corporation will be Jewish. Similarly at Xanthe, Turks, it is reported, have secured all the seats of the City Council. This has caused much pain and surprise, but, as M. Michalokopoulos pointed out (in answer to a protest from the local deputy), the Greek electors have only themselves to blame.

In the provinces, the Municipal Elections have in many places been accompanied by rioting, and more than the usual number of episodes have occurred—which perhaps goes to show a revival of political feeling, but may only be the expression of personal and local animosities. Taken

all in all, the results indicate satisfaction with the present régime, or, at any rate, reluctance to exchange it for any other.

The Needs of Athens

As far as Athens is concerned, the crying needs are completion of the drainage scheme, regulation of the city's growth in accordance with a definite plan, and the enforcement of preventive measures against malaria, and other diseases. The new Mayor has stated that he intends to devote himself to the welfare of the inhabitants, irrespective of politics, and has sent a telegram to M. Venizelos (inviting the support of the Government), who has suitably replied. All this is as it should be, and Athenians will look forward to a period of office marked by no less accomplishment than that of his predecessor.

The Eastern Telegraph Company.

The negotiations between the Government and the Eastern Telegraph Company have been temporarily broken off. It may be remembered that the original concession came to an end in 1916, when it was renewed to the end of the War, and again for a further six months. It finally expired in 1923, and negotiations were begun for its renewal. The proposals of the company formulated early in 1925 included, among others (1) Renewal of the concession for another thirty years, the Company undertaking to add a wireless system; (2) the Company to hand over the cables to the State, which, however, would pay a fixed yearly sum for their upkeep. (3) The State to receive one-fifth of the profits from the cables and 50 per cent. from the wireless. (4) Both the State and the Company to have the right to claim a revision of the contract after the first ten years, and after every subsequent five years. (5) The State to have the right to buy the wireless station at a valuation; and (6) On the expiration of the contract the wireless station to become the property of the State without payment.

The negotiations on the basis of these proposals were still in progress when the dictatorship of General Pangalos intervened; during which the Company succeeded in obtaining the concession under still more favourable terms than those which had been proposed in 1925. By the terms of the new contract, the concession was to be renewed for fifty instead of thirty years, while the State surrendered its rights to a share of the profits, its right to buy out the wireless station, its right to the possession of the station on the expiration of the contract, and finally its right to claim a revision of the contract at the stated intervals.

After the fall of the Dictator, the contract was repudiated by the succeeding governments, on the grounds that it had not been ratified by Parliament. The negotiations were, therefore, re-opened, and recently a special representative of the Company has been sent from London. It seems that the Company is now prepared to admit the claim to a revision of the contract by the State after ten years, and also the claim to the possession of the wireless station after the expiration of the contract. The receipts from transit charges for through telegrams, granted by the Pangalist contract to the Company, are now under discussion, and it is at this point that the negotiations have been broken off.

Archæological Exports Forbidden.

A recent circular of the Ministry of Education defines the archæological objects which come within the meaning of the Act that forbids their export. As quoted by a leading newspaper, the circular defines as archæological objects, statues, reliefs, statuettes, inscriptions, stones from ancient buildings, ikons, vases, weapons and ornaments, more than 100 years old. As no specific mention is made of coins, it would be interesting to know whether these are included, since they are the principal objects which find their way out of the country, to the loss of Greek museums. Another class of objects which are frequently exported are engraved gems and rings, but

these presumably come under the heading of ornaments. In any case, dealers are in future obliged to have a sale-permit for any of the above-mentioned objects, and to exhibit a notice in their shops to say that buyers must demand to see the permit for the particular object they wish to buy. For infringement of the Act, penalties up to two years' imprisonment may be imposed.

Sofia, August 13.

Bulgaria and Yugoslavia.

Bulgaria and Yugoslavia have just exchanged two Notes which indicate better than anything else the profound mistrust of one towards the other.

Relations between the two States have been strained for some months past, as a result of a series of incidents, and above all of the energetic attitude of the Liapcheff Cabinet over the question of minorities. The Bulgarian Government means resolutely to defend the cause of Bulgarians in soil annexed to Yugoslavia. Recently an intolerable situation has arisen on the Serbo-Bulgarian frontier, where the Yugoslavs are firing upon Bulgarians on any kind of pretext.

The political amnesty which was voted a short time ago by the Sobranje has furnished the Yugoslav Government with an occasion for showing its ill will towards Bulgaria. It addressed to the Sofia Government, on July 24, an inopportune Note which caused general surprise and indignation against Yugoslavia. For public opinion here does not interpret Articles 118, 119, and 120 of the Treaty of Neuilly in the way in which Belgrade seeks to interpret them.

The Yugoslav Note rested entirely on a forced and arbitrary interpretation of the Bulgarian amnesty as a rehabilitation of the policy which led in 1915 to the intervention of Bulgaria against the Allies and particularly against Serbia, and consequently as a symptom of the preparation of new Serbo-Bulgarian hostilities. This Note was regarded by Bulgarians as a malicious attack by Yugoslavia.

On August 2 the Bulgarian reply was sent. It begins by first of all establishing that none of the crimes provided for in Articles 118, 119, and 120 of the Treaty of Neuilly is connected with the recent amnesty, that these crimes were wiped out by the Government in 1919 and 1920, and that consequently the amnesty in no way constitutes an infringement of the respective clauses of the Peace Treaty. It proceeds to explain that the sole aim of the amnesty is to ensure the final pacification of the country. Referring particularly to the accusation against General Jekoff, ex-Generalissimo, and the massacres perpetrated in Serbia during the War, the Note asserts that the order imputed to the Generalissimo was never officially given and that those responsible for the murders have long since received the punishment which they deserved. The conclusion is that the Yugoslav Note is objectless, because it relates to things quite foreign to the amnesty against which it wishes to protest. Passing from defence to attack, the Bulgarian reply expresses the bitterness caused among Bulgarians by the Yugoslav Note by this raking up of the unhappy past. In conclusion, the Bulgarian Government declares that the Note from Belgrade is not of such a nature as to contribute to the establishment of mutual confidence and tranquillity between the two neighbouring peoples.

The Second Note.

On July 29 came a second Note from Yugoslavia, to which the Bulgarian Government replied on August 9. It referred to Yugoslav-Bulgarian differences over the Pirot Conference. It was a strangely ill-written Note, full of striking contradictions. The Belgrade Government declared that it could not accept the putting into effect of the Pirot Agreement until the two subsidiary demands had been met, and in consequence it asked for the nomination of a Mixed Commission to liquidate the binational properties and to establish a "dead" zone. This amounted to a denunciation of the Pirot Agreement.

In reply, the Bulgarian Government explains its point of view that the Pirot Agreement should be applied before any new negotiations are set on foot. It added, however, that it did not refuse to open *pourparlers* on the two Yugoslav demands.

Discussions will be resumed in September, when the Ministers of Foreign Affairs of either country will meet at Geneva and will be able by direct explanation to prepare the way for fresh negotiations.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 8.

Phrases and Truth.

If one heard the headmaster of an English school saying to the sixth form: "My hope rests entirely on your strict sense of discipline," one would know that he believed that the boys had a sense of discipline. It might not be as strict a sense as the headmaster would like it to be, and the hope he would have in speaking would be that his words would make it stricter. A sense of discipline would be there. In India, where English words are used divorced from their meanings, and for a value they have for Oriental ears as mere phrases, a man may be heard speaking of a sense of discipline in people, when he knows that they have none. That must be terribly confusing to all those listeners outside India who have not learnt the queer fact. It is not the kind of fact that one could guess. One must learn it by observation, or be taught it. What has made me return to this subject is a letter from Pandit Motilal Nehru in this morning's newspaper. It is a letter of reproof to certain of the followers of the Congress in the Punjab; a letter of reproof about a matter not in itself interesting. Or not very interesting. The letter ends with these words: "We are living in critical times, and the youth of the country are our only hope, but that hope rests entirely on their strict sense of discipline." The Pandit knows much better than I do that in the youth that he had in his mind there does not exist any sense of discipline. It is not now a case of its not being strict enough for a given purpose: a sense of discipline in these young Indians is non-existent.

Discipline.

I remember that years ago I was walking up and down in the Eden Gardens, while the band played. The lawn was crowded with people. They were most of them Europeans, all walking up and down. As they all knew to "keep to the left," the files did not get mixed. I had

Old-Established Company in India, having Direct Connection in London, is prepared to act as Makers' Representative in Tendering against Government Requirements, when Revised System of Purchasing becomes operative.—Particulars from Box 777, The Near East Ltd., 170, Strand, W.C.2.

a companion, a Muhammadan, a merchant from Bombay. Presently he remarked to me that the orderliness of the crowd was an amazement to him. "We Indians," he went on, "because there is no sense of discipline in us, could not do a thing like this. If we were all Indians here, we'd have to stand still to listen to the music." I was once invited to attend the annual meeting of a literary and social society in the north of Calcutta. There was to be acting afterwards; the galleries were crowded with women and children; the body of the hall was packed with young men. I was on the platform. A report was read; speeches were made—to the people a few yards off. As the rest of the young men and all the women and children were all talking about their private affairs, no report could be read to them. The pandemonium was not a bit disconcerting to any one on the platform but myself, the solitary non-Indian present. I once was invited to lecture to a Calcutta audience. Before I began I made a point of asking those who were likely to want to go out in the course of the lecture to go out before it began. Some few rose and went out. I began to lecture. One here would get up and go out; then one there. So I stopped and asked that those who were likely to want to leave within the next twenty minutes, should leave before I resumed the lecture. I said I did not care how small my audience was; but I refused to speak to a perpetually moving body. That is the only way to deal with such people.

Municipal Government.

Earlier in the week than the day of the Pandit's letter there had been thrown up, for those watching, another good example of this amazing divorce of words and their meaning. The Report of the Madras Provincial Committee had this: "Moreover the progress made in the last ten years under Indian direction in education, local self-government, and in general enterprise amply justifies further political advance." I think myself, and have admitted, that a further advance is justified, but it cannot be said to be justified by any progress made during the last ten years in education, self-government, or any enterprise under Indian direction, because there has been none throughout the greater part of India, if there has been any anywhere. When I read the quoted words, I nearly fell down; for only a day or two before I had met a high official of the Finance Department of the Government of India, deputed to inquire into municipal finance and other finance in one of the large provinces. He remarked presently: "If the muddle they have made of municipal finance throughout India had been plainly told to the Statutory Commission, instead of being slurred over, the Commission would have had to report that there was no case whatever for a political advance that could be based on the work done in the past." So I already knew, of course. One is perpetually opening one's newspaper, to read that a Municipality or a Local Board has had to be suspended for mismanagement or a worse thing. One day it is Gaya, the next it is Mandalay. That official I met a day or two before reading the quoted words. I met another a day or two after. What, I asked him, did he think of those words on the Madras Committee's Report about advances in local 'self-government and education? "There have been none whatever," he replied, "under Indians. The Government has done something, but they have done nothing."

"Indian National Demand."

My heading is the title of a pamphlet that was distributed, when the All-India Congress Committee met at Allahabad on July 26. I have been keeping what I had to say for the fitter moment. After a passage in which the emphasis is laid on the fact that all parties in India are united in demanding the same constitutional status for India as is enjoyed by the Dominion of Canada, the Commonwealth of Australia, etc. (that is a little doubtful, perhaps) the document goes on with this outrageous travesty of fact: "Between themselves, the Representa-

tives of all Parties have broken the back of the communal problem by important and far-reaching agreements on fundamental rights of citizenship, universal adult suffrage and abolition of communal electorates. The matters that still remain unadjusted are more or less matters of detail and will adjust themselves in no time once the Government accepts unequivocally the right of India to the immediate establishment of the Dominion form of government."

The Analysis.

Take that bit by bit. Suppose you were to say to some Frenchman or German; one who had not been following the course of affairs in India: "We have broken the back of the communal problem by introducing universal adult suffrage and by the abolition of communal electorates." Then the following might be heard: "How is universal adult suffrage found to work in India?" "It has not yet been introduced." "Oh—has any harm followed the abolition of the communal electorates?" "They have not yet been abolished." "But, but—how exactly have you broken the back of the communal problem, if it isn't by the two things by which you said you had broken it?" "It isn't broken yet; we hope—that is, some of us do—that it would be by the establishment of universal adult suffrage and the abolition of communal electorates. Universal adult suffrage may not be established in India in the life-time of any of us, or indeed before the earth dies as the moon died. As for the communal electorates, those of us who never wanted them are all in favour of abolishing them, but those, or most of those, who originally demanded them still demand them. If people simply will not all agree to the same thing, what can the writer of a pamphlet do but say more emphatically that they have all agreed to it?" I meant to carry the analysis a little farther, but that is perhaps enough.

The Comedy.

The truth is that the minds of men in India, a very few excepted, are as the minds of little children, and the whole thing turns into comedy the moment you look straight at it. Let me go back to that lecture. A man called on me, saying that he was the secretary of the Calcutta Meccano Society, and the members of the society wanted me to come and lecture to them on any literary topic. I remarked that the connexion between meccano and literature was slight. Could he tell me what kind of an audience I should find. "I might prepare something," I explained, "and it all be above the heads of the audience." He considered that with knitted forehead. I sat looking at him. Then I remembered that I had an unpublished essay in a drawer. I got it out, and asked him to read a little of it, and tell me if it was the kind of thing they wanted. He read a few pages, and said it would do beautifully. When I got to the room in College Square, and saw the audience (youths, most of them), I saw that what I had prepared was just grotesquely unsuitable; that they would none of them have understood a word of it. But (do listen to this; even this is true) it is doubtful whether it mattered to them whether they understood a word or not a word. What they wanted was to watch my face, while I spoke, to hear the chairman return thanks to the lecturer, to pass a vote of thanks to the Chair, to have spent an hour in a room, and to publish in the newspapers that the Meccano Society of Calcutta had been lectured to by Mr. — on —.

The meeting of the executive committee of the Universal Religious Peace Conference, which was charged with the preparation of the proposed world congress, closed in Frankfurt on August 22. The congress will be held in Calcutta or Jerusalem, probably in 1932.

The death has occurred of Brigadier-General F. M. Edwards, who joined the Indian Staff Corps in 1863. He was in the fighting on the Indian Frontier in 1867-8, and played a distinguished part in Eastern theatres in subsequent years. In the Great War he commanded a brigade at Salonika, and in the B.E.F. He was present at the capture of Jerusalem, and in 1917 was appointed A.D.C. to the King.

PERSONAL AND GENERAL

TO-DAY

August 29, 1929 (New Style).

August 16, 1929 (Old Style).

Rabia 1, 23, 1348 A.H. of the Muslim Calendar.

Ab 23, 5689, of the Jewish Calendar.

Sir Dhunjibhoy and Lady Bomanji are among the recent arrivals at Harrogate.

Mrs. Alec-Tweedie is motoring in Czechoslovakia and will not return to Devonshire House till October.

Sir Muhammad Habibullah arrived last week in London, and is staying at the Berkeley Hotel.

The Anglican Bishop in Jerusalem, Dr. Rennie MacInnes, is shortly arriving in England for a holiday.

King Fuad of Egypt, accompanied by Mohamed Mahmoud Pasha, arrived at Alexandria on August 23.

Sir Grimwood and Lady Mears arrived at the Hotel Belgravia, Grosvenor Gardens, S.W.1. last week from India.

Field-Marshal Viscount Allenby and Viscountess Allenby arrived last week at Stanley, Pearthshire, for a stay of several weeks.

Sir Herbert and Lady Samuel arrived in Prague at the end of last week, after a visit to President Masaryk at Topolcaný in Slovakia.

Sir Norman Bolton and Sir Henry Moncrieff-Smith left London on August 22 for Marseilles, embarking on the Rajputana for Bombay.

Lord Lloyd was received in audience of the King at Buckingham Palace on August 22, upon relinquishing his appointment as His Majesty's High Commissioner for Egypt and the Sudan.

The Prince of Wales received Sir Percy Loraine, Bt., His Majesty's High Commissioner for Egypt and the Sudan, at St. James's Palace on August 23. Sir Percy left London on August 27 for Cairo.

The Amir Talal, son of the Amir Abdullah of Trans-Jordan, together with Hassan Pasha Khalid, his father's Prime Minister, arrived at Marseilles on August 24 in the Macedonia, on his way to England.

Lieutenant-Colonel the Rt. Hon. G. F. Stanley, the new Governor of Madras, was knighted by the King at Buckingham Palace on August 23 after he had kissed hands on his appointment. The King invested him with the insignia of a Knight Grand Commander of the Order of the Indian Empire.

Rear-Admiral M. E. Dunbar-Nasmith, V.C., C.B., who is to succeed Rear-Admiral H. E. Grace on September 2 as Rear-Admiral Commanding submarines, Portsmouth, was awarded the V.C. for entering the Sea of Marmora with submarine E 11 and sinking eleven Turkish ships during the War.

At the dinner given by Sir Abe Bailey at 38, Bryanston Square on August 21, to meet Sir John Chancellor, the guests included Sir Francis Newton, Sir Howard D'Egville, the Hon. Denys Finch-Hatton, Commodore Ponsonby, Mr. E. L. Homan, the Marquis of Reading, Lord Passfield, Mr. Rudyard Kipling, Lord Rossmore, the Hon. Hugh Wyndham, Sir Clement Kinloch-Cooke, Sir Clive Wigram, the Hon. Oliver Stanley, Colonel Grogan, Colonel Fenwick, Lord Moynihan, Mr. Christopher Chancellor, Colonel Whitburn, Major Christie, and Lord Bethell.

We understand that Major Hubert Young, Secretary at Gibraltar, has been appointed Counsellor to the High Commissioner at Baghdad *vice* Mr. B. H. Bourdillon.

Shaikh Dujaily, who has been lecturing for the last five years in Arabic at the School of Oriental Studies, is returning this week to Baghdad.

Sir Maneckji Dadabhoy left London on August 22 for India, and will be at the opening of the Simla session of the Council of State. Lady Dadabhoy and other members of the family will leave Kingsnympton Hall, Kingston Hill, for India in October.

Air Chief-Marshal Sir John M. Salmond has been appointed to succeed Marshal of the Royal Air Force Sir Hugh Trenchard as Chief of the Air Staff, with effect from January 1, 1930. Sir John has commanded in many theatres, very notably in Iraq.

Dr. Percy Dearmer is giving a course of nine public lectures illustrated by lantern slides on Byzantine and Byzantinesque Art in the Great Hall, King's College, Strand, on Tuesdays, beginning on October 8, at 5.30. The lectures cover in painting the little known period which begins with the mosaics of the fifth century and continues till Eastern influence was merged into the beginning of the Renaissance in the time of Cimabue.

A luncheon was given on August 26, at Claridge's by Sesostri Sidarouss Bey, Egyptian Minister Plenipotentiary to Athens and Belgrade, to Sir Percy Loraine, High Commissioner for Egypt and the Sudan, and Lady Loraine. The guests were: The Rt. Hon. Sir Ronald Lindsay, Major-General Sir John Hanbury-Williams, Mr. F. P. Watson, Financial Adviser to the Egyptian Government, Mr. John Murray, Mr. F. E. F. Adam, Miss Adam, Abdel Malek Hamza Bey, Egyptian Chargé d'Affaires, Mr. and Mrs. R. A. Radi, and the Egyptian Consul and Madame Assal Bey.

KING FAISAL THE FIRST.

On the occasion of the anniversary of the accession of the King of Iraq, General Jaafar Pasha al Askari, Iraq Minister in London, held a reception on August 23, at the Hyde Park Hotel, at which some 200 persons were present, including members of the Diplomatic Corps and many officials and others connected with the Middle East. Prominent among the distinguished assembly were several young Iraqi officers, now studying in England the various branches of the art of warfare. A telegram of congratulation was dispatched to the King of Iraq in Baghdad.

INDIAN NOTES.

(Continued from page 219)

same rights in relation to, and discharge the same obligations towards, the Indian States arising out of treaties or otherwise as the Government of India has hitherto exercised and discharged." It can hardly be expected that this will commend itself to the Princes, seeing that they have just published an expression of their gratification at the opinion recorded by the Butler Committee on the point. The States asked, it will be remembered, that without their own agreement the rights and obligations of the Paramount Power should not be assigned to persons who are not under its control, for instance an Indian Government in British India responsible to an Indian legislature. And the Butler Committee recorded their "strong opinion that, in view of the historical nature of the relationship between the Paramount Power and the Princes, the latter should not be transferred without their own agreement to a relationship with a new government in British India responsible to an Indian legislature." As the Princes pointed out in one of the resolutions which they submitted to the Viceroy at the end of June, this recommendation leaves the door open for negotiations between the States and British India with a view to an equitable and satisfactory arrangement on fair and honourable terms. In the same resolution the Princes said that they would welcome the admission of British India to its due place among the British Dominions. But they certainly did not express their willingness to accept the Dominion Government as the Paramount Power. On the contrary they hold strongly to the view, which has been endorsed by the Butler Committee, that their treaties and engagements are with the British Crown acting through an agency responsible to the British Parliament. They cannot be expected, therefore, to agree to paragraph 85 of the Nehru Report; and if that clause is to be the basis of the proposed negotiations it would seem to be unlikely that these will serve any useful purpose.

The Troubles of Sind.

The Province of Sind is having its full share of the vagaries of nature in the present year. Drought in the neighbouring districts of Mekran brought in many migrants, and may have been the chief cause of the high mortality that prevailed in Lower Sind. Then the river Indus came down in unusual flood, accompanied by heavy local rainfall. This had its usual effect of bringing down many of the mud houses of which the towns and villages in Sind are still mainly composed. A certain number of lives are always lost in such cases; but there was the compensating advantage of the high lying cultivation getting a full supply of water, and the Government of Bombay was able to assure the Legislative Council that the damage was greatly exaggerated. At the end of July, however, there was further excessive rain. Many places in Sind, including Karachi, received in one night a quantity exceeding the average rainfall of the year. Cables have announced the fall of yet further rain, while the bursting of the Shyok dam in Kashmir must lead to renewed greater floods in the river. Fortunately the previous floods had subsided before the further accession of water, and no great damage need be feared if the breaches in the great Begari Bund do not prove to be serious. As

usual the cables paint an unnecessarily lurid picture. Such floods, though they inevitably entail the loss of a number of cattle, do not lead to any considerable loss of human life. Nor is there any reason to fear the cholera epidemic which is announced to be likely. What is more likely is an increase of malaria as the floods subside. The most interesting point perhaps is the continuing importance of the floods on the river, which is at once the life-giver and the destroyer of Sind cultivation. The existence of the Sukkur Barrage will make little difference in years like the present of unusually large water supply. Its usefulness will come in the moderate or deficient years. Fortunately there is no report of any damage to the Barrage works, now well on their way towards completion.

NEWS IN BRIEF.

The Iraq Cabinet resigned on August 25.

The new Turkish penal code, which is modelled on the German code, came into force on August 20.

M. Herriot, the French ex-Premier, who has been on a visit to Salonika, left at the end of last week for Delos.

The Persian Minister in Rome has been authorised to conclude permanent treaties with Hungary and Austria.

The Salonika police prohibited a meeting of Communists which was to have taken place on August 25. Two Communists were arrested for distributing leaflets of a subversive character.

The Treaty of Friendship between Persia and the Hijaz was signed at Teheran on August 24. The Hijaz Mission was afterwards received in audience by the Shah, who bestowed gifts upon each of the members.

The Persian Legation announces that it has been officially informed that order and tranquillity have now been restored in Southern Persia, the accounts of the disorder in which were at the time much exaggerated.

M. Madgearu, the Roumanian Acting Minister of Finance, has issued instructions that every effort should be made to collect taxes and fines due to the State, in view of the Budget deficit.

An agreement is reported to have been reached between the Persian and Iraq postal administrations and the Junkers firm, whereby the latter will transport the mail from Iraq to Persia, as well as that from Europe delivered at Baghdad by Imperial Airways, Ltd.

Negotiations are proceeding between the Persian Government and the Junkers Company for the purchase of some aeroplanes, costing 15,000 tomans each, for the purpose of fighting locusts by means of poisonous spray.

At the coming meeting of the Assembly of the League of Nations the Albanian Government will be represented by M. Raouf Fitso, Minister for Foreign Affairs, M. Mehdi Frasherri, Prime Minister, and M. Demetri Poppa, Secretary-General of the Ministry of Foreign Affairs. M. Fitso arrived in Rome on August 23.

Great flood damage was last week reported from Tabriz. The losses list comprises some 100 persons killed, 5,000 houses destroyed, 3,200 bales of merchandise and the Customs House damaged. Many streets and roads were washed away in places to a depth of three yards. The Government has authorised an expenditure of £8,000 for building dams.

The death is announced of General Liman von Sanders, at the age of 74. General von Sanders was appointed head of the German Military Mission to Turkey in 1913. On Turkey's entry into the Great War, he was given command in the Caucasus, but in 1915 he took up the defence of the Dardanelles. In March, 1918, he was appointed to command the Turkish forces in Palestine, but, though he fought gallantly, could not stem the tide of the British advance. After the War he wrote a notable book entitled "Five Years in Turkey."

A Vickers Victoria troop-carrying aeroplane crashed at Heliopolis aerodrome, Cairo, on August 24, three members of the crew being killed and three injured. The Air Ministry states that the three men killed were:—Sergeant John Melville, No. 86011 (first pilot); Pilot Officer John Wilson (second pilot); Leading Aircraftman Charles Ernest Langan, No. 335056 (a member of the crew). The names of the other three members of the crew, who were injured, are:—Leading Aircraftman Mervyn Henry Creed, No. 354179, dangerously injured, fractured base of skull and occiput; First-class Aircraftman Frank Wilfred Mabbett, No. 363187, dangerously injured, fractured femur, multiple head injuries; and Sergeant Sydney Deacon, No. 335284, slightly injured, concussion, shock, abrasion to lower limbs. The injured men were admitted to the bomber station sick quarters at Heliopolis.

THE SIXTEENTH ZIONIST CONGRESS.

Extending the Jewish Agency.

BY ASHER LEVITSKY.

It has been rightly said that a moment becomes historic only through the retrospective estimation of a later age. Yet all those who ventured a prognostication of such future estimation were unanimous in acclaiming the Sixteenth Zionist Congress, which opened in Zurich on July 28, as an occasion of undoubted historical significance. This Congress had gained this early distinction for the boldness of spirit and courage of mind with which it accomplished the task of setting up a more powerful and far-reaching institutional machinery for tackling on behalf of the Jewish people the task of rebuilding Palestine as a Jewish National Home. In a spirit of great generosity, exceeded only by its political sagacity, it superimposed on itself a body more authoritative in fields of activity where hitherto it had itself exercised an unchallenged prerogative.

The general character of the interest evoked by this Congress should not surprise anybody. The Zionist Congress has lately attained the ideal which Herzl, its founder and the father of Zionism, had for many years tried to embody in it. It has become the nearest approach to a Parliament of the Jewish nation, since its decisions began profoundly to affect the status and well-being of a nation, estimated to number some sixteen million souls, and gradually to link up its fate once more with its historic homeland. The ubiquity of the Jewish nation removes all territorial limitations from the exercise of "sovereign" authority by this Parliament in all Zionist matters. These Zionist matters go far beyond Palestinian affairs. Zionism, although primarily Palestinocentric, takes also cognizance of many problems, mainly cultural in their character, appertaining to the Diaspora Jew.

The Zionist Congress meets in the ordinary course of events once in two years and lasts for about ten days. During this short period it reviews the work of the Zionist Council and Executive for the past two years by means of a searching process known as the "General Debate." After this there follow sessions of constructive work, consisting of sifting out and adopting sets of resolutions prepared by various commissions of the Congress. These commissions are constituted by the representatives of the various parties and entrusted with the task of investigating and reporting on some specific branches of Zionist activity, political, economic, financial, colonisatory, organisational and cultural. The Congress then reaches its culmination with the election of the Leader and an Executive entrusted with the conduct of affairs for the ensuing biennial period. The discussions on the various resolutions tend sometimes to become most animated, since they represent the inter-play of distinct political parties with profound ideological differences, whose visions of a future Palestine vary from a theocratic State to a socialistic Utopia.

All these questions, of course, came under review at this Sixteenth Congress as in previous Congresses. Important schemes of industrial and commercial development were suggested. A number of interesting financial proposals was made, including the question of a public loan for the development of Palestine. Provisions for urban and rural colonisation were made with a view to the expected increase in Jewish immigration. The questions of Hebrew education and health were keenly debated, that of education revolving mainly on the problem of the ideal involved in the system gradually developing in Palestine. The various items of the budget were carefully scrutinised from the point of view of both ways and means and appropriation. The sum of £750,000 was decided upon to be raised through the *Keren Hayesod*—the Palestine Foundation Fund of the Zionist Organisation—to meet the minimum estimates of the various Zionist services

raised for the purchase of land in Palestine as the inalienable property of the Jewish people through the medium of the *Keren Kayemeth*. The Jewish National Fund—which is the Zionist institution for national land acquisition in Palestine, while a rider has been added, in the form of a reasoned statement, calling upon the Government of Palestine to fulfil its elementary duty in making larger grants to Jewish medical and educational services, thus relieving Zionist funds for a more intensive concentration upon colonisation activity. A series of political resolutions was passed, dealing with certain unsatisfactory aspects of the political situation in Palestine, with special reference to the serious state of affairs in connexion with the Wailing Wall, and the problem of the State Lands; these resolutions embodied also a strong protest against the relentless persecution of Zionism in Soviet Russia.

But the question of questions, was of course, the Jewish Agency. All eyes were focussed upon it, for herein lay the great innovation concealing in itself the promise of a great hope. It fell to this Congress to bring to a conclusion this important issue, introduced six years ago by the President and leader of the Zionist movement since the Great War—Dr. Chaim Weizmann. During six long and difficult years the Zionist leader has been conducting negotiations in the United States and in every important country of Europe with a view to extend the movement of active interest in the upbuilding of Palestine as a Jewish National Home, thereby increasing the financial resources essential for such an undertaking as well as creating a body which could represent the entire Jewish people united for this purpose. In this way he has gained an enhanced political prestige and influence. Such an Agency was in fact foreshadowed by Article 4 of the Palestine Mandate, which says:—

An appropriate Jewish Agency shall be recognised as a public body for the purpose of advising and co-operating with the Administration of Palestine in such economic, social and other matters as may affect the establishment of the Jewish National Home and the interests of the Jewish people in Palestine, and subject always to the control of the Administration to assist and take part in the development of the country. The Zionist Organisation so long as its organisation and institutions are in the opinion of the Mandatory appropriate, shall be recognised as such Agency. It shall take steps in consultation with His Britannic Majesty's Government to secure the co-operation of all Jews who are willing to assist in the establishment of the Jewish National Home.

Had the Jewish people as a whole rallied to the ranks of the Zionist Organisation immediately after the occurrence of such great events as the promulgation of the Balfour Declaration, the recognition by the greatest Powers of the world of the historic rights of the Jewish people in Palestine, and the entrusting by the League of Nations of the Palestine Mandate to the British Government with the idea that the Mandatory Power should be responsible for the carrying out of the Balfour Declaration—the great campaign for the creation of the Jewish Agency in its present form would have been unnecessary. But this, unfortunately, did not happen, and the immense burden and responsibility connected with the upbuilding of Palestine remained the sole concern of the Zionist Organisation. The latter has, indeed, proceeded with a great measure of success to carry out its huge task, continuing the pioneering work begun about 50 years ago by a group of enthusiasts known as *Chovevei Zion* ("Lovers of Zion") and Baron Edmund de Rothschild

of Paris. The Zionist movement had, especially since the War, achieved many a thing which in the time of Herzl could be regarded only as a dream, or at best an ideal achievable only in a future generation.

Politically, the Great Powers of the world have recognised the Jewish historic claims to Palestine; the Jewish National Home is internationally assured by the Palestine Mandate. Economically, the Jewish population of Palestine has been more than doubled during the last ten years through Jewish immigration into the country which proceeded in spite of economic and administrative difficulties; large tracts of land have been acquired by Jews, either nationally or individually; new Jewish settlements, rural and urban, have sprung up through the determined efforts and sacrifice of Jewish pioneers; large and valuable concessions have been acquired, while the Jewish industrial and commercial undertakings continued promisingly to develop. Culturally, there was established in Palestine a Hebrew school system, beginning with a most up-to-date Kindergarten and culminating with the Hebrew University; the spirit of liberty is duly safeguarded in these schools, thus giving full opportunities of self-expression and development to distinct tendencies in Jewish life and tradition; the whole system is based upon a revived Hebrew language, recognised as one of the three official languages of the country and adapted to meet practical necessities in all the branches of a modern life. These achievements have had a considerable effect upon the well-being of the Arabs, whose standard of living and general development have notably progressed in consequence.

Here at least is a strong foundation of a rising Jewish National Home, painfully laid down by the pioneers who went to Palestine, driven, in the words of Dr. Weizmann, "by age-long hopes and dreams, which through thousands of years have slumbered in the Jewish soul and to which the faithful have adhered with the unshakable belief in the old sacred prophecies." "The ideal of these pioneers," to quote further Dr. Weizmann's speech delivered at the opening of the Jewish Agency on August 11, "was a vision of a new people, freed of the narrowness of the Ghetto and the eternal plea of misunderstanding, living its own life on its own soil. We believe that this was no artificial thought, but the necessary result of the peculiar meeting of the original Jewish world with the European spirit of the past century, an elementary movement of self-affirmation whose most evident symptom was the development of a modern Jewish literature, especially in the Hebrew language." The successes attained by the pioneers have been further inspired by an ideal of creating a Jewish Home which has a spiritual value also to those Jewish people who live in other countries.

Thus stated the task is obviously too immense for the powers and resources of a mere section of the Jewish people, however strong and enthusiastic. But the problem of the Agency was not presented solely as a method whereby to increase the financial resources available for the rebuilding of Palestine, through a big financial corporation, foreshadowed as the Agency's colonising instrument. It was intended as a natural development, uniting the entire Jewish people for the fulfilment of its central task of rebuilding Palestine as a Jewish National Home. The concatenation of circumstances has been such as to suggest this task as a central and primary aim of the creative endeavours and inspiration of all the sections of the Jewish people, whether they accept the entire gospel of Zionism with all its implications or not. This is the real basis underlying the whole scheme for the extended Jewish Agency; the rest is a question of constitutional details. No question has ever been so keenly debated and so thoroughly and exhaustively considered. For six years a vigorous discussion proceeded, and all possible arguments on either side were laboriously marshalled, culminating in this Congress, which cautiously but magnanimously took the historic decision. The small but strong opposition was sincerely and elo-

quently conducted, but the compelling developments and circumstances of Jewish life overruled all the doubts, misgivings and mistrusts of a small section of fanatical puritans. The Jewish Agency has at last been created and immediately convened, not to supersede the Zionist Organisation, but to take over those of its functions as are defined by the Palestine Mandate. The constitution which gives the Zionist Organisation 50 per cent. of the seats in the Council of the Agency, while reserving the other 50 per cent. to the representatives of all the Jewish communities all over the world, coupled with the provision that the President of the Jewish Agency is to be the President of the Zionist Organisation for the time being, is a sufficient guarantee that Zionist ideals will never be compromised. In fact the inauguration of the Jewish Agency immediately after the closing of the Sixteenth Zionist Congress only strengthened the convictions of the protagonists of the Agency. The triumph of Zionism evinced by the acceptance of its central idea of rebuilding Palestine as a Jewish National Home by the entire Jewry of the world, was complete. This Jewry was represented by its greatest leaders, men of international repute. Einstein, Louis Marshall, Felix Warburg, K. L. Frankel, Lord Melchett, Sir Herbert Samuel, Oscar Wasserman, Leon Blum were all there, eloquently proclaiming their faith in the Zionist ideal of a Jewish Palestine in the up-building of which they have come to share. Thus the Rubicon was crossed, symbolising perhaps the greatest crossing in the long history of the Jewish people; for it meant a crossing by a freshly united Jewry, over a gulf of two thousand of years of dispersion, disruption and decadence, back to the land of hope and promise.

THE "WAILING WALL" INCIDENTS.

The tension in Jerusalem between Arabs and Jews which led to the serious riots on August 23, is a direct outcome of last September's episode of the screen at the Wailing Wall on the Day of Atonement. The blame for that is variously attributed; but whether the cause was the Jewish beadle's ill-timed zeal for orthodoxy and decency in keeping the sexes apart, or the callous brutality of a British police inspector in carrying out orders, or the unwary or ill-advised action of the Deputy District Commissioner in giving such orders—whatever the cause, the immediate result was a perfectly justified burst of indignation from the Jewish community. And in this expression of indignation there was nothing to upset Muslim feelings. But, unfortunately for the peace of Jerusalem, that indignation was too assiduously fostered and organised: the hail of protests from every Jewish centre the world over, however spontaneous they may actually have been, ceased in time to be impressive and (in Arab eyes) had the appearance of wire-pulling and manœuvring to force the hands of the Central Government and drive them to an early decision upon Jewish rights at the Wailing Wall.

The local Arab leaders perhaps exaggerated Jewish influence in high places, but rightly or wrongly they felt themselves faced by an act of aggression—a Jewish bid to secure some definite and assured control of the Wall and adjoining property. The responsible local Jewish leaders quickly realised that their protests were being misunderstood or misinterpreted in Muslim quarters, and they issued statements emphasising that Jewish claims went no farther than a plea for undisturbed worship at "the Wailing Wall," such as had been granted to the Jews for centuries past: they put forward no claims to ownership.

But the popular Hebrew Press was less cautious and spoke much of "Our Wall," and that it was quite easy for the Government to apply its "Expropriation Ordinance" and to transfer the property to the Jews (who also regarded the Wall as a sacred site), to remove the Muslims who happened to live near the Wailing Wall, and to compensate them (even at the expense of the Jews) with property elsewhere.

At all events the Muslim Supreme Council, as trustee

for the property (the Abu Madyan Wakf) adjoining the Wailing Wall, considered it its duty to organise counter-measures. These measures were (a) to stir up Muslim religious feelings, and (b) to demonstrate by any means the absolute nature of Muslim proprietorship of the property concerned.

Therefore certain local Muslim leaders gave the Muslim world the impression that the Jews were striving to oust the Muslims from the Sacred Area itself—from the Tomb of the Rock and the Mosque Al-Aksa; and they revived the tradition that it was at this very part of the Wall which the Jews were claiming that the Prophet hitched his miraculous steed, Al-Burak, when he paid his night visit to Al-Aksa: the Wall was, therefore, a holy site for the Muslims, sanctified by the Prophet himself, and to allow it to fall into Jewish hands was sacrilege.

At the same time the Muslim Supreme Council set about a series of repairs and adaptations of the immediately adjoining structures. These acts served to irritate Jewish feelings, to assert absolute Muslim proprietorship, and to challenge futile Jewish protests against alleged Muslim breaches of the *status quo* at the Wailing Wall. Thus the house to the north of the Wailing Wall area was adapted for use as a club or hostelry for indigent Muslims; some upper courses of masonry and a balcony were built above the north end of the Wall; the boundary wall at the north end of the area was pulled down and rebuilt and a privy constructed behind it—all to a loud chorus of Jewish protest and ineffective formal complaints. Worse still, a Muezzin began to take his stand overlooking the area in order to sing out at the set hours the Muslim call to prayer.

Last March work was begun on the southern side—the blank end of the blind alley which constitutes the Wailing Wall area. The rumour promptly spread that the intention was to build a mosque there and to open up this south end so as to turn the Area into a public road leading to the Sacred Area, instead of, as in the past, a cul-de-sac which gave access only to two or three hovels inhabited by Mograbi Arabs. The usual protest followed. The work was stopped, not, however, because it was a breach of the Wailing Wall's *status quo*, but because no permit had been secured for such building.

Nothing more was heard for the next three months. Then, towards the end of July, when most of the responsible Government officials had gone on leave (including the High Commissioner, the Deputy District Commissioner—loosely styled Governor—of Jerusalem, and the Attorney-General), and when virtually every Jewish leader of importance or responsibility had set off for the Zionist Congress at Zurich—then the building was begun afresh and pushed on rapidly.

There was immediately a great outcry among the Jews. This time it took on a quite different tone from previous protests. Several things served to raise the cry to hysterical pitch. There was not a responsible Jewish leader left in the country; inquiry showed that the officials of the Zionist Executive had been formally notified weeks before that such building was to be permitted; it became apparent that the building operations had as their object to repair the southern wall (bordering a road leading to a gate of the Sacred Area), to make a door in this wall and to make steps leading down into an area (immediately south of the actual Wailing Wall area) from which there was immediate access to the Wailing Wall. Thus the Wailing Wall area could be used by anyone passing between the city and the Mosque Al-Aksa. Furthermore the rumours that a "mosque" was to be made of the southern area were confirmed.

The worst was still to come. The Rabbis and the acting Zionist Executive made the usual representations to the acting Chief Secretary and to the acting Deputy District Commissioner. To their horrified surprise they were told that the Muslim Supreme Council was acting with the full knowledge and consent of the Central Government—that the legal advisers to the Crown had duly studied the problems arising out of the *status quo* of the Wailing Wall and that they had come to the conclusion that any sanctity which pertained to the Wailing Wall was confined to that

part only which was frequented by Jewish worshippers—the actual courses of Herodian masonry venerated by the Jews—and that no breach of the *status quo* could be effected by any repairs or alterations which the Muslims chose to carry out in adjoining property belonging to them.

The acting British officials tried to placate the Jews by assuring them that every possible protection would be given to them in their religious practices at the Wall, and that "at the fixed Jewish times of prayer" means would be taken to see that they suffered no interference or distraction from unsympathetic passers-by. This did not in the least appease Jewish fears. "Fixed times of prayer" was something unheard of at the Wailing Wall (but it transpires that this was not really included as part of the new rulings issued from London); also no regard was shown to the Jewish insistence that the change of a *cul-de-sac* into a (possibly) populous thoroughfare was quite the most radical change possible in existing conditions at the Wailing Wall.

Since then the temperature of local Jewish feeling rose rapidly and there were several minor cases of assault at the Wall between Jews and Muslims. The gravest danger point seemed to be the Fast of the Ninth of Ab (Thursday, August 15), when it is the annual custom of the Jews to assemble during the day at the Wall in their thousands. Diligent police precautions were taken, and no "incident" occurred (too much importance ought not to be attached to the point made in the official statement about the "non-religious" demonstration by Jewish youth on that day; for a long time the Wall has provided Jews with an object of pilgrimage from Jewish Nationalist as well Jewish religious motives.).

With the rising tide of Jewish indignation there inevitably grew increased alarm and nervousness on the side of the Muslims, culminating in the outbursts on the two Fridays, August 16 and 23. On every Friday the Sacred Area is thronged by Muslims from outlying villages—and these provide inflammable material liable to ignite on slight provocation in moments of serious tension, and, what is more dangerous still, to spread the fire to districts outside Jerusalem and to isolated Jewish settlements (the riots of 1920 and 1921 gave ample illustration of this).

There would certainly seem to be something wrong in the (alleged) ruling from London that the *status quo* at the Wailing Wall is unaffected by turning the Area into a thoroughfare and by equipping nearby a place for Muslim "religious exercises" side by side with the site that for centuries has been *par excellence* the centre of Jewish religious devotion. Sanctity and religious and national sentiment cannot be packed neatly into limits defined by the letter of legal rights in property.

In conclusion, the following may be quoted (from *Ha-Aretz*, August 6). It is from an alleged interview with Jemal Effendi El-Husseini, formerly Secretary of the Palestine Arab Executive, and now Secretary to the Muslim Supreme Council:

"As for the Muezzin giving out the call to prayer, and the singing and music which have recently begun [by the neighbouring Mograbi Arabs] beside the Wailing Wall"—Mr. Jemal explained that these Mograbis "were accustomed long ago to practise their religious exercises in this Zawiyah [the Area adjoining the Wailing Wall area], but they later took to using the Mosque in the Haram esh-Sherif. But after the Jewish doings at the Wailing Wall [referring to the episode of the Screen on the Day of Atonement] the Mograbis resolved to return to their former place of prayer and to make their prayer and petitions to Allah again in the Zawiyah after their traditional manner, wherein they accompany their prayers with drumming and singing. I reiterate it: the Mograbis have begun again to perform their devotions here as a result of the Jewish infringement of the *status quo*."

Sir Sefton Brancker, Director of Civil Aviation, arrived in Salonika last week to examine the proposed site of the air port for the Indian air service.

Sir Howard Kennard, British Minister to Yugoslavia, returned to Belgrade last week from leave. He is leaving on September 14 to take up his new appointment as British Minister in Stockholm.

A rare example of the work of Al Bakri, the Islamic geographer (early 16th century), which was discovered on a native bookstall at Marrakesh, has been sent to the Sharif Al Kittani Library at Fez.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Turkish Tariff.

Details which are now available with regard to the new Turkish Customs Tariff, which is due to come into operation on October 1, show that the Angora authorities have certainly not erred on the side of moderation in drawing up the new scales of duties. The Tariff in fact represents protection of the most full-blooded description. Broadly speaking, there has been an all-round increase of the duties by 100 per cent., but in the case of the few commodities which Turkey at present produces the duties are framed on a prohibitive scale. If Turkey were in the position of a country such as America with the land literally studded with great industries and with almost limitless natural resources to help forward further expansion the step taken by Angora would be understandable. As it is it appears to be the strangest expression so far of the ideal of Turkey for the Turks. The most obvious consequences of the Tariff will be a marked decrease in imports and a general rise in the cost of living in the country. The commodities produced by Turkey such as clothing are sufficient to meet only a small part of the country's consumption; therefore, despite the prohibitive duties, the Turks will be obliged to buy a certain amount of foreign goods, though it may be taken for granted that their purchases will be restricted to the minimum. So far as they continue to buy foreign goods the new Tariff will operate in effect as a tax on consumption, and when its full effects are appreciated it is not likely to redound to the popularity of the present Administration.

Egyptian Cotton Varieties.

Some interesting changes are to be noted in the areas devoted to the various types of cotton in Egypt this year. For Sakellarides the total was 847,950 feddans as against 799,523 for 1928 and 795,740 for 1927; for Ashmouni and Zagora 804,069 as against 768,411 and 599,149 for the two previous years; for Pilion 87,537 as against 97,218 and 74,451; for Nahda 44,331 as against 25,883 and 4,261, and for Other Varieties 57,591 as against 47,437 and 42,198. The total area under cotton this year was 1,841,478 feddans as against 1,738,472 feddans for 1928 and 1,516,199 feddans for 1927. From the figures I have quoted it will be seen that Sakellarides still maintain its predominance, but Ashmouni and Zagora now closely rival it in importance, the advance in the area under these types being one of the most significant features of recent years. Pilion has not quite held its own, but Nahda continues to advance rapidly, and if its rate of progress is maintained will soon be taking an important place among Egyptian cottons. The search for new cottons is always going on, and before long one or more new types will emerge from the comprehensive title of "Other Varieties," to take a place alone. In the possible staple types of the future one of the most promising seems to be Maarad, which is the subject of a recent article in the "International Cotton Bulletin." A high yield per acre is one of the outstanding qualities of this cotton. Tests made over a period of four years with commercial cotton varieties showed that Maarad was first with a yield of 5.53 kantars per acre, which is, of course, an exceptionally high yield for Egypt. A test last year gave 5 kantars per acre for Maarad as against 4 for Sakellarides. Another advantage of this new type is that it gives a longer lint length than Sakellarides. It

is a curious fact that tests have shown that the superiority of the yield of Maarad over Sakellarides varies from north to south, becoming greater in the south.

Athens Buses and Trams.

The matters in dispute between the Greek subsidiary of the Power and Traction Finance Company and the Greek Government have not yet been all adjusted, though it is satisfactory to know that they have now been reduced to such comparatively trivial things as the size of the seats in tramcars and motor omnibuses and the stopping places of these vehicles. These questions are to be dealt with by two arbitrators, one appointed by the Ministry of Communications and the other by the company, and in the event of disagreement the matter will be referred to a third arbitrator whose decision will be final. It must be admitted that the difference with regard to the seats has its humorous side. It is not clear whether Greeks require more seating accommodation than English people or whether the company has decided that the Greeks ought to require less. As the trams and buses are in operation the settlement of the problem may prove a nice question for the arbitrators.

The Travel Exhibition.

I am informed that already there has been a very good demand for space at the International Travel Exhibition which is to be held at the Royal Agricultural Hall in London next June, under the title "Ideal Holidays." When I first referred to the exhibition I suggested that the Near East and the Mediterranean regions generally were likely to figure prominently, and I understand that Greece and Palestine are among the Near East countries which will be represented. An exhibition of this nature naturally should be of special interest, and it promises to be one of the features of the next London season.

Motorship v Steamship.

The statistics for the transits of the Suez Canal in 1928 throw an illuminating light on the growth of the number of motorships. The transits of motorships in that year was 826, the tonnage being 4,739,000, as against 640 transits and 3,591,000 tons for 1927. Of the total traffic through the Canal in 1928 motorships represented 14.8

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

HEAD OFFICE: ATHENS.

Telegraphic Address: "Bancathen."

Correspondents all over the World.

The BANK OF ATHENS specialises in the development of Trade between GREECE and the UNITED STATES and GREAT BRITAIN, and in General Banking Business.

London Branch:

22, Fenchurch Street, London, E.C.3

Affiliated Institutions in the United States:

NEW YORK: The Bank of Athens Trust Company, 205, West 33rd St.
BOSTON: The Athens Bankers' Corporation, 15 Kneeland St.

per cent. In the transits of motorships Great Britain was easily first with a total of 363 of a tonnage of 2,112,000 as against 270 transits of 1,504,000 tons for 1927. Germany came second with 127 transits of 258,000 tons as against 95 transits of 570,000 tons, while Norway occupied the third place in both years. The transits of 1928 were made by 231 vessels, the number of transits being on the average $3\frac{1}{2}$ for each vessel, which compares with an average of 3 for the previous year. Of the 231 vessels 98 were British, 37 Norwegian, and 29 German, the respective figures for the previous year being 88, 39 and 22. There has been a steady tendency for an increase in the size of motorships using the Canal, and the measurement of the new vessels transiting it in 1928 gave an average of 5,269 tons as against one of 4,884 tons for the previous year.

Sudan Trade Expansion.

The trade of the Sudan continues on the up grade, the figures for the first five months of this year being £E8,238,766, which represents an increase of £E1,676,198 on the total for the corresponding period of 1928. An increase was recorded under every heading, the principal one, of course, being in exports which at £E5,289,246 are up by £E1,409,479. Compared with this improvement, which is mainly due to cotton, the rise in imports which at £E1,866,623 are £E183,818 up is unimpressive, though it is as a matter of fact very important, indicating as it does that economic conditions in the Sudan are now on the up grade. Naturally much depends on the prospects of this year's crop, and if as present indications suggest, the harvest generally is good and the yield of dura is satisfactory the effect on the purchasing power of the country will be appreciable, with the result that a marked impetus will be given to the import trade.

COMMENTATOR.

A USEFUL DIRECTORY.

The problem which is common to all overseas buyers, is that of the best means of getting into touch with British traders. Sell's National Directory, the thirteenth (1929) edition of which has just been issued, aims at meeting this difficulty by showing the leading makers of, and dealers in, every kind of commodity produced in the United Kingdom. The scope of the work can be gathered from the fact that its contents includes a list of 130,000 traders, manufacturers, exporters, etc., classified by trades. The Directory, which is published in eight languages, is issued at 12s. 6d., and is post free to any address in the world.

The National Bank of Egypt announces an interim dividend for year 1929, payable September 2, at 8s. per share.

SUDAN GUM ARABIC MARKET.

Messrs. Boxall and Co., of Khartoum, report as follows for the month ended July 31:—

Arrivals in Kordofan Stations (El Obeid and Nahud, no other stations bringing in gum since some time) amounted during the month of July to 172 tons, about half of which was rain-damaged, as against 495 tons last year—a shortage of 323 tons or 65 per cent. Arrivals during the month have been gradually falling off, and during the last week of July they have amounted to only 17 tons as compared with 54 tons for the first week. The shortage in Kordofan and Tendeili this season to date as against last season totals about 4,900 tons; with the shortage of inferior Hashab estimated at about 2,000 tons the total shortage in Hashab gums as against last season would amount to date to about 6,900 tons.

El Obeid prices for gum free from rain damage have closed at the end of the month at about 10s. per cwt. more than the closing price of June 30. But if one bears in mind that the daily average is no more than $5\frac{1}{2}$ tons for the whole month, and still less for the latter half of the month taken separately, and moreover that only half that quantity is gum free from rain damage, it will be easily realised that even the El Obeid price is very little more than a nominal price nowadays. Notwithstanding the smallness of demand, those local dealers who have any gum in hand (the total of any such gum cannot amount to much) are able to obtain for it much higher prices than those paid at El Obeid for the few kantars still coming in.

Demand has been very small. Talha prices have gone up 1s. per cwt.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.) EGYPT.

Electric Power Station.—The Ministry of the Interior, Municipalities and Commissions Section, invites tenders for the supply and erection of an electrical power station for Dessouk Town. October 2. (D.O.T.)

Electric Power Station.—The Ministry of the Interior, Municipalities and Local Commissions Section, invites tenders for the supply and erection of an electrical power station for the town of Samannoud. September 28. (D.O.T.)

Venturi Meters.—The Public Works Ministry, Tanzim Department, invites tenders for the supply of two Venturi meters to register discharge continually in cubic metres. September 14. (D.O.T.)

INDIA.

Pipes, Etc.—The Indian Stores Department, Simla, invites tenders for the supply of 80,000 ft. of rising main, specials, sluice valves, air valves, etc., for the Jaipur Water Supply Scheme. September 16. (D.O.T.)

ALBANIA.

Quinine.—The Ministry of Finance of the Albanian Government invites tenders for the supply and delivery at Tirana of the following annual requirements of quinine:

Kgs.

1,250 compressed sulphate of quinine.

250 compressed bi-sulphate of quinine.

500 sugar-coated bi-sulphate of quinine.

500 sugar-coated sulphate of quinine.

500 chlorhydrate of quinine, sugar-coated.

500 chocolate with quinine.

300,000 ampules of 1.00 grams, bichlorhydrate of quinine.

300,000 ampules of 1.50 grams, bichlorhydrate of quinine.

150,000 ampules of 0.25 grams, bichlorhydrate of quinine. September 16. (D.O.T.)

Motors and Motoring.

(By Our Motoring Correspondent)

The Engine as Brake.

From an engineering point of view there is no objection whatever to the use of the engine as a brake, although some drivers are averse to the custom. The matter has been raised, so it may as well be discussed, and in the first place it will be generally admitted, I think, that it is sound practice to apply the braking action over all available media so as not to bring too severe a strain on any one of them.

The question has been raised as to whether, when running down hill with the engine acting as a brake, there is any benefit from keeping the switch on, so that the engine is firing. The query may be put, concisely, in this way: With the throttle closed down to a slow running position, is the braking effect of the engine greater with the ignition switch on or off?

In each case gas is taken into the cylinders on the proper stroke and compressed. That compression is one of the chief factors in the braking action. In one case the mixture escapes unfired, and in the other it is ignited. The firing must give an impetus to the pistons, but with spark retarded and throttle almost closed, that impetus is slight. At the same time, exhaust gas has to be cleared out of the cylinders, and is driven out against its own pressure. That causes further braking action, which if the switch is off and the mixture is not fired, is not brought into existence.

The compression braking effect, when the switch is off, may be written as "x." When the switch is on, the same compression braking effect x is obtained, but its amount is reduced by the amount of force brought to bear against it by the engine firing a force which can be written as "y." In the one case then, the braking effect is x and in the other, x-y.

But in the latter case an added braking effect in clearing out the exhaust gases is obtained, which may be called z, so that the compression braking effect is increased by the scavenging effort. With switch off the total braking effect is x, with the switch on, the total braking effect is x plus z-y. Now, with the switch on and the ignition advanced, the value of y is considerable, but x and z are constants. Were it not for y, obviously, x plus z would be greater than x. That is to say that were it not for the driving impulse, the braking effects of compression, plus the scouring out of the exhaust gases under pressure would be greater than those of compression alone. The problem, therefore, is how to reduce the value of y to the lowest possible figure.

It is apparent that the only way this can be done is to retard the ignition as much as possible, to cause late firing of the mixture, so that the exploding and expanding gas follows rather than drives the piston. This late firing adds considerably to the braking effect of the scavenging stroke which follows as the piston, for a part of the stroke, has to be driven up against the expanding gas.

The problem therefore resolves itself to this: Using the engine as a brake with the switch off, utilises compression alone. Using it with the switch on, and the ignition fully retarded, brings a further braking effect into action by checking the expanded gases at the beginning of the scouring stroke, but minimises it by the amount of driving effect given by the explosion. Is the driving effect less than the braking effect created by the scouring of the exhaust gases? If the ignition can be greatly retarded, that probably will be the case. If, on the other hand the timing is so advanced in its normal position that the point of greatest retardation is not such as to cause the exploding gas to push rather than drive the piston, then braking value is lost by having the switch in an "on" position. As it is not possible for the motorist to measure

the value of all these forces without the use of laboratory instruments, his best plan will be to take the car to the top of a hill and time it during descent, once with the engine in gear and the switch off, and again with the switch in the "on" position and the ignition lever fully retarded.

Preventing Accidents.

In regard to the Royal Commission on Transport, it seems evident to the disinterested that the most urgent matters from a public standpoint should take precedence of those which are more particularly of a trade character. There is no branch of the committee's work which can be of greater importance than that relating to the finding of means whereby accidents on the road can be minimised if not altogether avoided. As the *Commercial Motor* says, there are many structural and maintenance problems of almost equal importance and they, we think, must prove the Commissioners' connecting link to the second phase of their conclusions. It may be forecasted that this will be the one treating of licensing reform, of which the essentials will have to be based on some plan of zoning the country, with area commissioners or the like, superior to purely local licensing bodies but responsible to the Ministry of Transport. All this is rendered virtually inevitable, so long as the Commissioners decide to accept the general trend of the evidence which they have taken.

Whilst on the subject, the paper quoted can certainly take to itself considerable credit in connexion with the success which British six-wheeled vehicles have been achieving in various parts of the world. In the face of strong opposition that journal did a great deal to encourage the development and use of the six-wheeler, and the result is that large numbers of six-wheeled commercial vehicles are now in regular use successfully carrying passengers or goods in various parts of the world. British makers have displayed commendable vision in exploring many overseas markets which offer chances for six-wheelers, because whatever its merits for use in countries with highly developed road communication facilities, it is in undeveloped and uncharted areas that this type of vehicle shows up to unusual advantage. In Australia, South Africa, India, New Zealand, Canada and other parts of the Empire, beneficial demonstrations of the capabilities of the six-wheeler have been given, and, in their enthusiasm to penetrate new markets, some British makers are even turning their attention to foreign countries. We can assure them that a market for this type of vehicle certainly exists already in parts of Roumania, Bulgaria and Turkey and the merits of the type only need to be better known for many other prospective users to come forward.

Problem of Second-hand Cars.

An interesting point has just been raised in the columns of the *Light Car*, where someone wanted to know when, exactly, a car becomes second hand. Referring to certain legal aspects of motoring it is pointed out that there seems to be no end to the problems which crop up in connexion with motors and motoring and this is by no

STEAM & HYDRAULIC ENGINE PACKING MANUFACTURERS

FLAX, ASBESTOS AND COTTON,
AND ALL ENGINE ROOM STORES.

ATTWATER & SONS,

Hopwood St. Mills, Preston. Tel. Add.: "Attwater, Preston"

Contractors to British, American, French and Italian Admiralty.

means one of the easiest of solution. The question now is: Can a car be honestly and legally described as being "second hand" when, as a matter of fact, it has had more than one previous owner? Certainly it is inaccurate to say that a car is second hand when it has been through three or four hands. It is actually third hand or fourth hand, as the case may be, and the only point that seems to matter is whether a Court would take that view. It seems to me that by this time the custom of describing any used article, no matter by how many people it may have been used, as second hand has become so established that no Court would regard the description of "second hand" to an article which had previously been in the possession of three or four other people, as "attempting to obtain money by applying a false trade description." After all, the best English dictionary I can obtain, defines second hand thus: Something not new; something taken or bought from another, as a second-hand car; of, pertaining to or dealing with goods which are not new; something that is worn and not new. That seems to me to cover the ground fairly well, especially as the dictionary specifically mentions second-hand cars.

Incidentally, if a car is advertised as second hand, what exactly is meant by the description? Merely that it is not new and in that connexion it is obviously immaterial to the prospective buyer whether it has been driven, say, ten times by one owner or once each by ten owners. The whole point is that the car is not new and that it is not in new condition.

ROUMANIAN SHIPPING AND PORTS IN 1928.

The report of Mr. R. J. E. Humphreys on Roumania for the year ended April last contains a detailed survey of shipping and ports in 1928 from which we take the following:—

Roumania, holding as she does the mouths of the Danube, is an important shipping centre and considerable quantities of goods pass in transit through her ports for Bulgaria, Hungary, the north of Yugoslavia, Czechoslovakia, Austria, and the south-east of Germany. The Roumanian shipping trade has suffered a marked reduction during the last two years owing to the partial failure of the maize harvests and its revival will depend mainly on the results of the harvest of 1929, which will not be known until autumn. Maize exports generally take place in the spring to allow of the grain being thoroughly dried during the winter. The proposal to use the rivers Dambovitz and Arges to form a navigable channel connecting Bucharest directly with the Danube has recently been revived and a scheme placed before the Government for consideration; it is stated that foreign capital will be solicited for this work.

H.M. Consul-General at Galatz reports that the tonnage cleared from the Danube ports through Sulina in 1928, compared with previous years, was as follows:—

Danube register tons.			
(Approximately the same as Suez Canal register.)			
1925	1926	1927	1928
1,493,317	1,662,932	1,491,741	825,524

The figures for 1928 are the lowest since 1919.

H.M. Vice-Consul at Braila states that 33 British ships aggregating 56,064 net tonnage arrived and cleared at the port of Braila during 1928, as against 51 ships aggregating 84,504 in 1927 and 79 ships aggregating 127,576 net tons in 1926. The total quantity of

exports during 1928 being 62 per cent. less than in 1927, the number of steamers calling at Braila was proportionately reduced. Thus only 204 steamers of other flags aggregating 498,974 net tons called during 1928 as compared with 449 steamers aggregating 866,726 net tons in 1927 and 586 aggregating 1,071,201 net tons in 1926.

The following information regarding the shipping and developments at the port of Constantza is reported by H.M. Vice-Consul there:—The tonnage of shipping entered during the year shows an increase on 1927, the respective figures being:—

	Vessels entered.		Net registered tonnage.
1927	...	...	1,149
1928	...	...	1,113
			2,334,233
			2,482,767

By a regulation issued during 1928 all tankers are compelled to discharge fresh water ballast outside the harbour, unless the ballast has been previously examined by a port employee and declared free of oil products. The object of this regulation is to prevent the occurrence of fires in the port through the ignition of floating petrol products, one such fire in September, 1928, having caused damage to a Dutch vessel. In rough weather, however, it is argued that it is dangerous for tankers to face heavy seas with emptied ballast tanks, and almost impossible for them subsequently to negotiate the narrow and difficult entrance to the petrol-basin. Delays and minor accidents not infrequently occur. A project for the taking over by the Port Authority of the handling of all cargo—a service at present performed by shipping agents—is being considered.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, September 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Makalla for Calcutta (Birkenhead, September 5); s.s. Stockwell for Calcutta (Birkenhead, September 12).

Bibby Line.—S.s. Shropshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, September 4).

British India Line.—S.s. Manora for Colombo, Madras, and Calcutta (London, September 7); s.s. Hatimura for Bombay (London, September 7).

Johnston Line.—S.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 7).

P. and O. Line.—S.s. Novara for Calcutta (London, September 13); s.s. Kaisar-i-Hind for Bombay (London, September 13).

Prince Line.—S.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Cyprus (London, September 11).

Cunard Line.—S.s. Bactria for Casablanca, Ceuta, Genoa, Leghorn, Naples, Corfu, Bari, Gruz, Venice, Trieste, Fiume; also at Palermo, Messina and Catania if sufficient inducement (Liverpool, August 31, Swansea, September 3); s.s. Bantia for Gibraltar, Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement offers (Liverpool, August 31); s.s. Bothnia for Gibraltar, Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement offers (Liverpool, Glasgow and Swansea, October 5).

Ellerman and Papayanni Lines.—S.s. Maronian for Malta, Alexandria, Jaffa, and Haifa (Liverpool, September 12); s.s. Roumelian for Gibraltar, Algiers, Oran, Patras, Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 14); s.s. Gerano for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona, Venice, Trieste, Fiume, and Shushak (Liverpool, September 14, Swansea, September 19); s.s. Egyptian for Gibraltar, Algiers, Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 28, Swansea, September 28). Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

The Yugoslav customs tariff is to undergo a general revision.

The Zagreb Autumn Fair will be held from September 7 to 18.

The traffic receipts of the Suez Canal Company from August 10 to 16 amounted to 20,500,000 francs.

The traffic receipts of the South Indian Railway Company for the week ended July 27 amounted to Rs.12,10,984, making the total from April 1 Rs.2,10,93,020.

For the first six months of the current year Roumania had an adverse trade balance of £5,346,250 as against £4,125,000 for the same period last year.

Foreign exhibits at the Samples Fair at Liubliana, which is to be held from August 31 to September 9 inclusive, will include automobiles, machinery and iron and steel products.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 27.

Business on the London Stock Markets this week has again been of the small dimensions associated with holiday times, to which the approach of the fortnightly settlement has contributed. In addition, monetary anxieties and discouraging reports from The Hague are responsible for a less confident tone than a week ago. It is, therefore, to be regarded as satisfactory that the gilt-edged sections show little change on the week, while, with the exception of Southern, Home Rails show a firmer tendency due rather to a realisation of their prospects than to the unsensational traffics. In the quiet industrial markets, international stocks have attracted chief attention, but margarine issues have been prominent on rumours of an agreement with Lever Brothers. Coal, iron and steel shares, whose prospects are discussed below, have also been in request. Rhodesians lapsed into inactivity again, until the end of the week, in the absence of public support.

Foreign Bonds.

For some years now foreign bonds have been much neglected on the Stock Markets, including the so-called "Reconstruction" issues. When the League of Nations directly or indirectly through one or the other of the member nations concerned itself with loans to assist the restoration of several European States, these loans enjoyed a deserved popularity, and at their issue prices they offered generous yields of $7\frac{1}{2}$ to $8\frac{1}{2}$ per cent. The League of Nations undertook to control the expenditure of the proceeds for productive purposes, and the service of the loans is a charge on definite sources of revenue. In the case of these protégé countries of the League, as of many other countries, the financial outlook has much improved, and their respective loans, while still containing an element of speculation inherent in foreign investments, are sounder now than when many of them were issued, and this is true of the several loans issued subsequently which did not have such a good reception. Although this section of the market is neglected nearly all the foreign bonds have kept firm,

despite the general decline in security values, indicating their intrinsic strength. Many of them, however, are at attractive prices, including Belgian 7 per cent. yielding £6 10s. per cent., and German 7 per cent. yielding £6 13s. per cent. The Austrian 6 per cent. is exceptional in being actually guaranteed by various Governments, including Great Britain, France and Italy, and yields £5 15s. per cent.

Coal, Iron and Steel Companies.

It is recognised that the bad state of trade in the basic industries, including the heavy industries, is chiefly responsible for the present industrial depression in England. The recent signs of improvement in the heavy industries are therefore particularly gratifying. The value of exports of coal, iron and steel, and machinery, up to July of this year was higher than for the same period in each of the last two years, as was also the number of motor cars and chassis exported. Iron and steel production for the first seven months of 1929 was greater than for the corresponding period of 1928. In the coal trade, while there has been some summer slackness in home demand, exports have been well maintained. Other favourable signs are the pooling schemes among coal owners tentatively coming into existence, and the progress reported in the negotiations to find a basis of co-ordinating the district marketing schemes. In the iron and steel trades many firms have passed their dividends for several years, but the majority have now turned the corner, and the recent amalgamations into various groups should prove a right step on the road to renewed prosperity, so that the outlook for those who have invested in this industry is now less black. Three firms which have done well, even in bad times, are Guest-Keen and Nettlefold, whose ordinary shares yield £5 8s. per cent., Swan Hunter, with ordinary shares yielding £7 1s. per cent., and the coal merchants, Wm. Cory and Son, whose ordinary shares give a return of £5 13s. per cent.

Singers Satisfy.

The net profits of Singer and Co., the well-known motor manufacturers, for the year to July 31, 1929, show a slight increase over those for the preceding twelve months at £173,922 against £171,223. The dividend and bonus on the ordinary shares is $17\frac{1}{2}$ per cent. against $12\frac{1}{2}$ per cent. last year, but since the nine months' dividend payable on the 7 per cent. cumulative preference shares issued as a bonus last year requires £21,181, this distribution must be regarded as satisfactory. As usual £10,000 is carried to reserve and the carry forward is increased by £19,800. In their report the directors refer to difficulties facing the motor industry, but expressly state that they have not negotiated to combine with other motor car producers in any way. Other remarks suggest that they look instead to an expansion of their own business, though naturally this must depend to some extent on the effects of the repeal of the import duties. The difficulties referred to, however, are mainly due to the intense internal competition in the industry, in which three firms are responsible for 75 per cent. of the total production and 45 share the remaining 25 per cent. For the smaller companies, at any rate, some measure of combination seems essential. Meanwhile those considering investment in motor car companies would be well advised to give most attention to the well-established concerns with a good dividend record. In this connection we may refer to Rolls Royce ordinary yielding £4 6s. per cent. Only the $7\frac{1}{2}$ per cent. cumulative preference shares in Morris Motors are available to the public and these yield £7 10s. per cent., which in view of the security is very satisfactory.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms. The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfers on all its Branches, at the exchange of the day.

The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.

Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.

The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

British Consular Reports

IV.—THE PERSIAN GULF.

(Continued from page 231.)

Credits.

The purchasing power of the great bulk of the population is extremely low and purchases are of a hand-to-mouth character. Consequently price and not quality remains the determining factor, although in some lines the people are just beginning to realise that they are actually too poor to buy the cheap and shoddy. In towns the rapid extension of the instalment system allows for the sale of better quality goods to a certain class of consumer, but this tendency itself is a result of the general financial stringency and the determination of the retailer to turn over his capital at all costs. It follows that the retailer demands longer credit from the middleman, the middleman from the importer, and the importer from the foreign manufacturer who, in the last resort, is asked to finance the market. The British exporter, when he does not insist on an irrevocable credit being opened in London by the Persian buyer against total payment for the goods on shipment, will ask for 20 to 25 per cent. cash with order, balance against documents at the Persian Gulf Port or Baghdad. In exceptional cases he may grant a 91 days' credit which, in summer, allows ample time for a consignment to reach its destination, but not in winter. On the other hand, a German firm will usually take 20 per cent. in advance, 20 per cent. when the goods reach a Persian Gulf port, and the balance on delivery at their destination. Italian manufacturers of woollen goods take 15 per cent. advance, 20 per cent. at the Gulf ports, and the balance when the goods are sold. In artificial silks conditions are stiffer: 25 per cent. advance, 25 per cent. at the Gulf port, and the balance at destination. But in cotton goods the Italian manufacturer, besides granting the same credits as in the case of woollens, will send goods on consignment to his Persian client without draft or bill. The mistake certain Continental firms doing business in Persia have made has been in accepting 5 to 10 per cent. advances from all and sundry. British shippers who took 20 per cent. with the order and 25 per cent. plus costs when the consignment reached Bushire could afford to allow the Persian purchaser time to dispose of the goods.

Developments in 1928-29.

Statistical information for the year 1928-29 is not available at the time of writing, but the following is a summary of events during the above year which have affected or are likely to affect the commercial situation.

In May, 1928, Persia signed treaties with the principal Powers and countries and acquired tariff autonomy. Thereupon a new customs tariff was put into force which raised the import duties on all luxury articles. This has already resulted in some diminution of imports into the country.

On August 1, 1928, temporary regulations for the enforcement of a Government opium monopoly were issued with instructions that the regulations were to be put into force throughout the provinces as soon as received. The Monopoly Service was ordered to report on the results of the law and the experience gained at the end of six months. The present situation is that the Monopoly Service confines its activities, as regards the preparation of the drug, to opium intended for consumption within Persia. It does not export opium, but sells it in the raw state to exporters who prepare the drug under the supervision of the officials of the Monopoly Service. Exporters had to pay during 1927-28 a tax of 200 tomans, nominally £40, per case of approximately 160 pounds weight, which tax superseded all former export duties, etc. The tax was raised on March 21, 1929, to 250 tomans per case, nominally £50.

The Monopoly Service has fixed the price for buying

opium from the cultivators at the average price of the last three years preceding the enforcement of the monopoly laws plus 10 per cent. The Monopoly Service must, by law, pay cash to the sellers of the opium for any amount up to 6½ lb., and the balance must be paid within two months. As, formerly, cultivators could usually obtain credit for their opium crop for about three months before it was gathered, the new regulations will oblige them to wait much longer to benefit from their crops and so will probably lead to a diminution in the amount of opium grown.

The Opium Monopoly hopes to be able to enter direct into the export business, but as the service lacks the necessary experts for preparing opium for export and is consequently unable to guarantee the morphine content, it is unlikely that it will be able to do this for at least a year. Meanwhile it is interesting to note that certain British firms who import piece-goods into Persia, and whose business has been hard hit for the last few years, have commenced to act as exporters of opium for legitimate consumption to British Possessions which formerly obtained all their supplies from India and have in some cases managed to barter Manchester piece-goods against a proportion of the opium purchased by them for export.

At the end of the year plans were being elaborated at Teheran for a Government monopoly on matches and tobacco, and it had been suggested that the duty on imported cigarettes should be raised from 60 per cent. to 140 per cent. *ad valorem*. These two monopolies will undoubtedly affect adversely the import trade of the Persian ports in the south, and will certainly lead to a further increase in smuggling.

Russian Competition.

The threatened Russian economic invasion of the Gulf materialised during 1928 and three Russian ships called at the Persian Gulf ports during 1928, bringing sugar and cotton piece-goods and some sundries. Although the effects on the market were not so serious as was feared at one time, the introduction of Russian goods through the southern ports undoubtedly had an unsettling effect on the market, which was further aggravated by the continued penetration of Russian goods overland from north to south.

Transport.

The Persian railway from Khor Musa (now to be known as Bandar-i-Shahpur) to Teheran via Ahwaz, Dizful, and Hamadan, has been commenced, and it is said that it will be completed as far as Dizful by the spring of 1930. Should this railway prove to be a practical proposition it must seriously damage the position of Bushire as a port of import for Teheran, but should benefit the trade of the Gulf as a whole.

The Persian Government voted money early in 1929 for the construction of a new and easier motor road from Bushire to Shiraz via Firuzabad.

The Pearl Industry in Bahrein.

For centuries the Persian Gulf has been famous for its pearls and at present the centre of the industry and the chief market in the Gulf is at Bahrein, where over 500 diving boats are registered. About 15,000 of the inhabitants of Bahrein gain a living by diving for pearls, and

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz, and Braila.

For Rates of Freight, Insurance and other information apply to:

JOHNSTON LINE, LTD., 6 Billiter Street, London, 26, Cross Street, Manchester, and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

during the season large numbers of divers migrate annually from Persia and the Arab coast. About another 15,000 divers are engaged in the industry off the coasts of Qatar and the Trucial Oman, while Kuwait employs another 5,000 men approximately, but exact figures are difficult to obtain.

The diving season lasts from about the middle of May until the middle of October and is sub-divided into three periods, the first, known as Khanchieyah, lasting about 25 days; the main season, known as Ghaus, lasting about 4 months and 10 days; and the second short season, known as Raddah, lasting about 20 to 25 days. Every year the Shaikh fixes the beginning and end of the Ghaus by a proclamation and orders all divers to report to the captains of their diving boats a week or so beforehand so that the boats may be prepared for sea. The short seasons are not fixed by proclamation and the time of commencement depends on the weather.

When a boat has reached a likely position on the pearl banks, which are free to all comers, it is anchored and the oars are fixed horizontally above the water. Two ropes are made fast to each oar; one of these has a weight attached to it to help the diver to reach the bottom while the other is used to pull him up if he is diving in deep water. The average depth is about 20 feet. Each diver is provided with a clip, like a clothes peg, which he fixes on his nose, and a pair of hard leather finger guards to enable him to dislodge the shells without cutting his hands. Round his neck is slung a string bag in which he puts the shells as he plucks them. On rising to the surface he hands the shells over to the oarsmen who heap them on the deck. The shells are opened every morning before diving begins, and are then thrown back into the sea owing to a superstition that this ensures a good crop the next year. The captain of the boat superintends the opening of the shells, taking any pearls found and locking them up in a sea chest. Diving is, of course, an unhealthy and very arduous profession. Pearling boats are very overcrowded and sometimes remain at sea for two months at a time.

In the majority of cases diving is financed by merchants ashore who make advances to the captains of boats. The latter are expected in turn not only to equip and provision the boats but to make advances to their divers. The rates of interest on all advances made in the pearl diving industry have now been fixed by order of the Shaikh at 20 per cent. for the two short season and 10 per cent. for the Ghaus. The captain of a boat is not bound to sell his pearls to the merchant who finances him unless he makes an agreement to that effect, when no interest is charged, and the merchants buys the pearls at 20 per cent. below the market value. No regular wages are paid to divers but they are entitled to a share of the profits. When a boat's accounts are made up the captain takes one-fifth of the profits after deduction of all expenses and the crew divides the remainder in proportionate shares. The biggest buyers are the Continental pearl merchants, together with one two Indian and Persian merchants. These buyers now come to Bahrein in person instead of dealing through agents as they used to. After the close of the diving season they take the pearls down to Bombay to be graded and polished, and thence to London and Paris to be placed on the world market. Buyers seldom pay cash down, and often payments are not completed till the following season. A number of brokers act as middlemen between the boat captains, the smaller merchants and the Continental buyers.

The increasing number of cultured pearls which have appeared on the world market has adversely affected the pearl trade in general. A cultured pearl, usually worth about one-third the value of a natural pearl, cannot be detected, even by an expert, without an expensive electrical apparatus. Last season, when several pearls bought from Bahrein were found to be cultured pearls, a testing apparatus was used which is considered infallible in the case of bored pearls but in the case of unbored ones there remains a slight margin of doubt. The apparatus consist of a hollow needle containing two minute mirrors. This is introduced into the pearl, the interior of which is then illuminated by means of a powerful ray of electric light, enabling the operator to see whether the heart of the pearl is natural or not.

The Bahrein Government has forbidden the import of artificial and cultured pearls, but the latter cannot be detected by customs officers. It has been suggested that the Government should buy a testing machine and charge a fee for the use of it. As there is no export duty on pearls it is not possible to form any accurate idea of the average value of the pearls exported each year. In 1927 it was estimated that the pearls in Bahrein at the end of the season were worth about £2,000,000; £600,000 worth were taken to London by the biggest buyer in Bahrein in that year.

After Bahrein the next most important market is Dabia, on the Trucial coast of Oman. This port is rapidly rising in importance as a pearl centre, but it will be some years before it seriously menaces Bahrein's predominant position. The famous "rose pink" pearls nearly all come from Dabai. Kuwait is another important pearl centre.

The Greek Government has decided to establish a sugar monopoly.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended July 31 amounted to £E8,783, making the total from April 1 £E96,004.

Egyptian Trading has been registered as a private company, with a nominal capital of £20,000 in £1 shares, to carry on the business of shippers, exporters, importers and merchants of, and brokers, factors and dealers in, cotton, flax, wool, jute, silk or other fibrous substances, etc. The subscribers are: M. Nessim, 14, Rue El Falaki, Alexandria, Egypt, company director; W. A. Rowntree, Westlands, 7, Chorley New-road, Bolton, cotton salesman. H. E. Emini Yehia Pasha, of Alexandria, is to be chairman of the directors.

A telegram from Viceroy, Education, Health and Lands Département, to the Secretary of State for India, dated August 14, states:—Rainfall, week ending August 14. Excess: Chota Nagpur, Bihar and United Provinces (East). Normal: Burma, Assam, Orissa and Malabar. Fair: Bay Islands, Bengal, United Provinces (West), Central Provinces (East), Konkan, Madras (South-East), and Madras Coast (North). Scanty elsewhere. Monsoon strengthening central parts of country.

ATTWATER & SONS, PRESTON, England

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 21 :—

Egyptian Futures.

Sakel Contract.—Interest in this contract has shown few, if any, signs of expansion, and a series of small narrow markets has resulted. This has been somewhat surprising in view of the past history of the Sakel contract with its ultra-sensitiveness to outside features because, during the week, we have witnessed a rather sharp upturn in American values due to adverse crop reports. Formerly, this would have been sufficient to inaugurate at least a temporary "bull" campaign in Alexandria, bringing in its train fluctuations of a more or less alarming character. On this occasion, our American market opened one morning 30 points higher, and the Sakel contract responded with 15 points only. Alexandria has been a particularly heavy market (probably due to the reception of hedge selling), and the difference with Liverpool has again narrowed, November/November now standing at 15 points, as against 23 points a week ago. This narrowing of the two markets has induced profit-taking by straddlers who, earlier in the year, had bought Liverpool and sold Alexandria at around 50 points. A little speculative buying and short covering by local operators supplied the necessary contracts here.

A certain amount of "bidding up" of the November position has been noticeable on several occasions, and this month continues slowly to tighten up with respect to January, the difference between the two months now being 11 points, after being at one time rather less. Since the mills restarted there has been, of course, an improved offtake for actual cotton, and with a comparatively small stock of tenderable Sakel available we may quite likely see a progressive hardening of the near positions before the weight of cotton begins to make itself felt. The crop appears to be progressing in a highly satisfactory manner and the immediate course of values will depend almost entirely on what happens to the American crop during the ensuing very critical weeks. November Sakel and October American (Liverpool) are now 593 points apart, as against 605 points a week ago.

Upper Contract.—There has been little activity shown in this market and the tone has been on the heavy side in spite of the more "bullish" appearance of American cotton and a rather better offtake for our raw material. The crop is expected to be a large one and is progressing favourably, whilst hedge selling, by now, must also be exercising a restraining influence on values. We have again closed in with American contracts. Opinion generally appears to be against this market.

Egyptian Spot.

The past week has witnessed a general resumption of work at the mills, and interest in actual cotton has at last shown signs of revival. There has been no real rush for cotton, as many mills had already bought a little in anticipation (with the exception of a strike clause), and the first move of course was the ordering forward of this cotton rather than the immediate purchase of more. Nevertheless, a steadily improving demand has manifested itself from day to day and this has infused fresh life into a weary market. Nothing spectacular has occurred in the way of price fluctuations, and on balance there are only minor changes to report in spot quotations. The basis for Sakel has shown signs of stiffening, but in the case of Uppers the reverse has been noticeable.

Sakels.—An improved business has taken place, and more cotton has appeared to meet the inquiry than might have been expected. Practically all qualities have been in request from time to time, but what used to be called the "bread-and-butter" cotton of the Egyptian trade, i.e., Good Fair and Fully Good Fair, at from 50 to 200 on, has attracted most attention.

Uppers.—A brisk inquiry has been met with and a good business has resulted in cotton at from 15 to 30 on November contracts. The lower cottons at from 25 off to "pass" have also received more attention, and a few inquiries have been received for the "inferior" cotton at about 10d.; generally speaking, the top qualities have been neglected.

Pilion has been in limited request only, and few sales have been reported.

Nahda and White.—Both these growth have figured occasionally in the demand, but it is only the lower qualities which appear to attract buyers at the moment.

Maarad.—Neglected.

Sudan Sakel.—A fair business has been done at firm rates and the inquiry continues to broaden.

Tokar Sakel.—Neglected.

C.i.f. business has been slow and interest in new crops continues to be absent. Forwardings to the trade last week amounted to 5,110 bales Egyptian and 206 bales Sudan. Estimated spot sales for the week, 2,300 bales Egyptian and 1,050 bales Sudan Sakel. Quotations of Sakel are 15 points down to 10 point higher. Uppers has eased 12 points, and Pilion 15 points on the week. F.G.F. Sakel to-day, 16.60d. F.G.F. Upper to-day, 10.98d. F.G.F. Pilion to-day, 12.05d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended August 15, state :—

Since our last report the futures market has been rather active, but the tone has been weak and closing prices to-day showed heavy declines for all deliveries. The week's summary of price movements is as follows :—Sakellaridis : November, 32.05 dollars, 1.44 dollars down; January, 32.45 dollars, 1.38 dollars down; March, 32.93 dollars, 1.33 dollars down. Ashmouni : October, 20.46 dollars, 1.03 dollars down; December, 20.92 dollars, 1.07 dollars down; February, 21.36 dollars, 1.07 dollars down; April, 21.75 dollars, 1.08 dollars down; June, 22.19 dollars, 0.96 dollars down.

Sakel.—The publication of the American Bureau Report on the 8th inst. estimating the production at 15,543,000 bales caused a heavy drop in New York, which naturally was reflected in our market the following day. In one session November declined about 14 dollars as a result of liquidation of "long" positions and some short speculative sales, the figure given by the Bureau being about 250,000 bales above that anticipated locally. The exceptional activity of the first session of the week was succeeded by a series of rather weak markets, business transacted being for professional account and of moderate volume.

Export houses continue to take but an insignificant interest in the market, which is only natural in view of the continued lack of interest shown by spinners in new crop business. Taken as a whole, the position appears to be weakish, and a further decline in prices may easily occur. The Government offered for sale on Wednesday last, the 14th inst., 1,271 bales Sakel, of which 131 bales found buyers. The Sakel/Uppers straddle (November/October) this week stands at 1,159 points, against 1,200 points last week and 1,238 points at this time last year.

Uppers.—After a very weak opening, the market showed a relatively steadier tone, due to some straddle purchases of October against sales of November. The demand from the trade has been only moderate, in spite of the further shrinkage of the premium of Ashmouni over American. All reports received from Upper Egypt are satisfactory, and the market will shortly have to face the weight of the new crop arrivals; it is to be feared that unless a substantial revival in the demand from spinners occurs, these arrivals will bring Ashmouni prices still nearer to those of American. The Government offered for sale on Friday last 729 bales Ashmouni, of which 503 bales found buyers.

New York : Brentano's, Fifth Avenue and 27th Street.
Boston (Mass) : Smith and McCance, Ashburton Place.

The Ashmouni/American straddle (October/October) this week stands at 233 points, against 258 points last week and 410 points at this time last year.

The week's receipts amount to 60 kantars, against exports 99,805 kantars; the stock in Alexandria stands at 1,439,819 kantars.

Spot.—The past week has been one of the quietest this season. Sales only amount to about 2,920 bales, of which we estimate Sakellaridis 775 bales, Ashmouni and Zagora 1,990 bales, Pilon 140 bales, and other varieties 15 bales.

Sakellaridis.—The demand has been for Fully Good Fair and Fully Good Fair/Good without any appreciable change in premiums. The quality of cotton on offer is very poor indeed. Staple cotton below Fully Good Fair is practically non-existent.

Ashmouni and Zagora.—In spite of the strong demand very little business has been put through owing to the poor quality of cotton on offer. The market has been denuded of all decent staple cotton and there is a very great shortage of medium grade cotton.

Pilon.—The demand has dropped on to slightly lower grades and a small business has been put through at last week's premiums.

Other Varieties.—Have been very neglected.

Crop, 1929.—Lower Egypt.—There is nothing particular to report this week concerning the crop, which is progressing normally; however, a delay of about 10 days still exists. The pink boll worm attack varies according to district, but the proportion of attacked bolls is at present rather small. Picking is expected to commence in the advanced fields between September 5 and 10.

Upper Egypt.—Weather conditions have been good and the success of the crop seems assured. In certain districts of the South, picking has commenced, but this is exceptional. The crop is slightly backward and arrivals of any important volume are not expected at the ginning factories before the end of the present month.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at June 30, 1929, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share capital, (300,000 fully paid shares of £10 each), £E2,925,000; Reserve fund: statutory reserve, £E1,462,500; special reserve, £E1,340,625; current, deposit and other accounts, £E14,096,805; Egyptian Government, £E16,756,099; Sudan Government, £E251,429; mixed tribunals, £E2,111,777; bankers' accounts, £E428,978; cheques and bills payable, £E254,976; sundry other accounts, £E1,817,877—£E41,446,066. Assets: Government securities and securities guaranteed by the Egyptian Government, £E22,981,809; sundry securities, £E916,272; advances on merchandise, £E2,181,159; advances on securities, £E3,993,919; advances otherwise secured, £E1,345,591; sundry other advances, £E1,252,840; bills of exchange, £E3,627,023; local bills discounted, £E680,291; buildings and furniture, £E220,521; money at call and at short notice, £E906,750; bankers' accounts, £E285,343; sundry other accounts, £E1,128,179; cash: notes, £E1,336,302; gold, £E301,342; silver, nickel, etc., £E288,635—£E1,926,279—£E41,446,066. Issue Department.—Notes issued, £E24,600,000—£E24,600,000. Gold, £E3,339,570; British Treasury bills, £E8,960,430—£E12,300,000; securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E1,500,000; British Treasury bills, and British War Loan, £E10,800,000—£E12,300,000—£E24,600,000.

*By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

Notes of the Week.

Egypt and the Proposed Treaty.

The attitude of the Wafd in connexion with the proposals for an Anglo-Egyptian treaty will leave the outside world—or that section which interests itself in Egyptian affairs—either dumbfounded or exultant. Public opinion in regard to Egypt may be divided roughly into two camps; on the one side are those who, having satisfied themselves that the Egyptians will never be capable of governing themselves in conformity with the contemporary standard of good government, are particularly anxious that no risks should be taken by their being given complete independence, and on the other side are those who believe that Egypt has qualified for self-government and that no justification exists for the withholding of it. The misgivings of the former, in regard to their effect on world opinion, have been considerably undermined by the existence in Egypt for over a year of an efficient Government, which has undoubtedly enhanced the prestige of Egypt among the nations. The continual challenging of this Administration by the Wafd was regarded as a more or less natural move in party politics, and was not interpreted as definite evidence on the part of any substantial section of the Egyptian people of inability to appreciate good government. Now comes the proposal for implementing the complete independence of Egypt, and the reply of the Wafd, instead of the subjecting of the terms to intelligent criticism, is to inaugurate disorder in the country. For there can be no other interpretation of the great Wafdist meeting held in Cairo last Saturday. Nahas Pasha, President of the Wafd, refused to discuss the proposed treaty, and apparently confined his remarks to a denunciation of the present Government, with whose achievements his own tenure of office cannot be compared. If the Wafd has ever wished to convince the world of Egypt's ability to govern herself, it had its opportunity last Saturday. Nahas Pasha's quarrel with Mahmoud Pasha is of no interest outside Egypt. What every enlightened observer of Egyptian affairs wanted to learn was whether the great mass of the Egyptian people can prove itself equal to the new responsibilities that it is proposed to confer upon it. The Wafd's answer is an

emphatic negative. It claims to represent nine-tenths of Egypt, and says in effect : "We have no interest in good government or statesmanship; but, if you do not give us what we want, we will riot." If that reply were to stand as the voice of the country, a fatal blow would have been administered to the prestige of Egypt. It is evident, however, that the last word on the subject has not yet been spoken. Even in the Wafd meeting there were many signs of discontent with Nahas Pasha's attitude, and his almost incredible stupidity makes it difficult for all but the most prejudiced to believe that Egypt as a whole will follow his lead.

Perplexity in Palestine.

The time is not yet ripe to examine who was primarily or immediately or ultimately responsible for the disorders in Palestine, but whether the Muslims, the Jews, or the British Government be contained in the answer to that question, there is little doubt that each of them was surprised by the magnitude of the outbreak. Apprehension and warning of impending trouble appear to have existed in abundance, but neither the authorities nor the assailants and the victims could have believed so vast a conflict possible. It is easy, but of little use, to be wise after the event, to say that the police force should never have been reduced as it was reduced during Lord Plumer's régime, or that the Jews should never have been allowed to create even the impression that they were aiming at ownership of the Wailing Wall, or that the campaign of the Grand Mufti against all Jewish claims at the Wall ought to have been checked at the outset. All these things can in a sense be reduced to a common denominator; that the degree to which Arab natives and Jewish immigrants were coming together had been absurdly exaggerated. It is impossible, on any other assumption, to explain at once the extreme methods of the Arabs in this outbreak and the apparent complaisance of the authorities previously to it. From one angle, therefore, it may be said that this disorder has rudely broken down the walls of make-believe, has laid bare once more the fundamentals of the situation in Palestine. We may

remark, incidentally, that the endeavour made in certain circles to explain these disorders by reference to actual events or to external agents is quite superfluous: Palestine, whatever its imports and exports may be, is self-contained in regard to the manufacture of trouble. But though one may understand these things, it is fairly certain that for some time to come most people in Palestine will be in a state of perplexity upon the future. One thing only may be taken for granted: that the Mandatory Power will continue to govern according to the Mandate.

The Balfour Declaration.

There will, quite obviously, be no withdrawal of the Balfour Declaration; it needed no words from Lord Balfour himself for the world to be reassured on that point. The facilities for establishing a "Jewish National Home" in Palestine will exist so long as there are Jews to take advantage of them. Lord Balfour, indeed, in his published letter to Dr. Weizmann, states that his confidence in the "general wisdom" of the policy of attempting to establish a "Jewish National Home" in Palestine remains unshaken, but even without this confidence no wise Briton could think of going back upon his pledged word. That is a fact of which the Arabs of Palestine must soon become, if they are not already, fully aware. At the same time, it would be the height of unwisdom to ignore the significance of these disorders, and that is, that it is only under the tightest and firmest supervision that Arab and Jew can be forced to live peacefully side by side. Such a process does not necessarily imply co-operation between old inhabitant and new settler—a hope that has, presumably, been indefinitely postponed; it does imply compulsory toleration as between Arab and Jew. It probably implies also certain changes of detail in the implementing of the Balfour Declaration, for no fair-minded observer could blame Great Britain if, in face of what is now seen to be the basic fact of the Palestinian situation, namely, mutual distrust between Arab and Jew, she proceeded more cautiously than ever. The punishment of massacres cannot annihilate natural facts. What Great Britain is now engaged on in Palestine is, after all, an experiment, one of the greatest experiments known to history. There is no known precedent for her work there, and if mistakes have been made in the past, it is her duty boldly to confess them and to adopt another line. That such a course will involve the resentment or at least the displeasure of both Arab and Jew is probably to be expected, but unless a country, like an individual, lives up to its best lights, and in accordance with its own ideas of justice, it will surely fail. All such changes of detail, however, must await the definitive re-establishment of law and order in Palestine.

A Commission of Inquiry.

It is generally expected that when the situation in the Holy Land is once more fully under control, a Commission of Inquiry into the disorders will be appointed, and the advice, which we hope was superfluous, that such a Commission should contain no one known to have prejudices in favour either of Muslim or of Jew, has been freely offered. What benefits such a Commission could confer is, perhaps, a debatable matter, for the problem of Palestine, of all problems in the world, is not one that can be investigated within a short time. Such a Commission would probably have small knowledge of the local conditions in Palestine, yet local conditions are in effect the problem of Palestine. Even to a single question like the Wailing Wall there is not, though many English journals have suggested that there must be, a solution which absolutely inhibits the possibility of a further clash between Arab and Jewish claims. You may get clear the outlines of the peculiar problem of the Holy Land, you may discover the fundamentals in the situation, and yet—trip up over one detail, which is almost certain to be a religious or pseudo-religious detail (the difference is much more subtle than it sounds), and the whole fabric of your

solution may be endangered. One of the main difficulties is that the civilised, or rather, urbanised, mind of the West has hitherto shown little disposition to attempt to probe the mind of the Arab. Untutored, primitive, sensual—call that mind what you will; it is, nevertheless, a fact, and, what is more, a permanent and irremovable factor in the Palestinian situation. On the whole, we should like to see this Commission of Inquiry, if it is to be appointed, composed of men to whom a wide acquaintance with Religion, with History, and with the Land is public knowledge. Beside these three fundamentals, skill in political or legal matters would be of little account.

Yugoslavia and Bulgaria.

The belief that in the matter of Yugoslav-Bulgarian relations Belgrade speaks with two voices according as one or other of two opposed schools of policy gains the upper hand, finds confirmation in the conciliatory Note that was dispatched to Sofia, closing the amnesty incident. The Yugoslav Government had found an occasion for protest in the amnesty accorded to Dr. Radoslavoff, the Bulgarian Prime Minister who had been responsible for Bulgaria's entry into the War, and who, since the Armistice, had been in exile in Germany, and had pointed out that the amnesty violated certain provisions of the Treaty of Neuilly. In its reply the Bulgarian Government challenged the Yugoslav interpretation of the Treaty and stated that the amnesty was a domestic affair of Bulgaria. In its new Note the Yugoslav Government accepts the Bulgarian statement, and adds that, if this explanation had been given at the outset, it would have refrained from intervention in the matter. The ground is thus prepared for a meeting between the Foreign Ministers of the two countries in the friendly atmosphere of Geneva, and it is to be hoped that a personal exchange of views will lead to what the dispatch of Notes across a vexed frontier has so signally failed to produce—a satisfactory settlement of a thoroughly bad demarcation of the boundary line between Yugoslavia and Bulgaria.

Political Suspense in Iraq.

The resignation of the Prime Minister of Iraq, Taufiq Beg Suwaidi, carries the story of Iraq's political development little further. For as he succeeded to office because of the prevailing conditions of suspense—Sir Abdul Muhsin having carried on during the latter part of his tenure only because otherwise Iraq would have been without a Cabinet—so his fall involves, or can be seen at the moment to involve, no solution of the dispute between Iraq and Great Britain. Sir Abdul Muhsin is reported, indeed, to have consented to form another Cabinet, but only on condition that the unyielding attitude with which Great Britain confronted him during his last term of office be softened—that is, that a more conciliatory mood be adopted in reference to such matters as Iraq's defence, her railways, and the Port of Basrah. In the unsatisfactory meantime, Taufiq Beg Suwaidi has consented to carry on. It is undeniably unfortunate that this suspense should be allowed to drag on in this indefinite way. Iraq, if she does not go back during such a time, cannot easily go forward. It was no secret that during the earlier negotiations Sir Abdul Muhsin frankly hoped for more moderate terms from the British Government, though rumour had it that domestic reasons were not entirely unconnected with his resignation. Possibly, then, Sir Abdul Muhsin, having made his stand for Iraqi independence, may find, after his holiday in Turkey and Syria, that his tactics may meet with delayed success. The Labour Government is credited with the desire to clear up obscure situations in its commitments abroad, and it is scarcely possible than an intelligent and decently conducted explanation of their wishes by Iraqis will not deeply impress the British Government. The present unsettled and inconclusive nature of Iraq's relations with Great Britain can be satisfactory to neither country.

Education in Persia.

The communication (published elsewhere in this issue) made last week by the Director of Public Education in Persia deserves to be carefully studied and pondered over. For the enthusiasm with which modern Persia is tackling the problem of education is impressive. The statistics which Mirza Issa Khan Sadig adduces, alone prove the keenness of Persia to take to herself that part of Western civilisation which is useful to her. And in this connexion it may be well to emphasise an important fact. Persia, which, as is generally admitted, contains some of the finest intellects and the readiest brains in the world, does not aspire to be completely Westernised: she realises, and is proud of, her past greatness, of the time when she was as an intellectual beacon to the comparatively darkened world around. She presents herein a great contrast with, say, Turkey. But she is resolved so to adapt herself to present-day conditions as in time to be independent of Western advice and help: in other words, having acquired the technique of Western civilisation, she will make her own interpretation of it. Few things can be more useful in this process than the sojourning of her young men in the cultural West, and of cultured Westerners in Persia. On the score of higher education, indeed, Persia may point with pride to her achievements, especially when the limits of time and of money are considered. What impresses foreign observers, however, is the huge gap existing between the cultured upper classes in Persia and the lowly illiterates: there is no middle section of educated, or even of semi-educated, opinion—the leavening that has served many other countries so well at all times. But of this lamentable fact the authorities in Teheran are fully aware, and they have deliberately chosen the method of working from the top downwards. There is no question that they are thoroughly in earnest in this problem of educational reform. And, though fundamental changes come slowly in Persia, there is good reason to hope that, with the accumulation of larger funds for education, there will be witnessed with the passage of years in Persia such a manifestation of her eager intellectual spirit as may astonish the world.

Afghanistan.

News from Afghanistan suffers from the double disability of being generally contradictory and invariably undated. Thus, although a report of celebrations held in Kabul in honour of the Amir Habibullah's successes reaches the outside world a few days after the announcement of the fall of Gardez, it may be assumed that this latter event had neither taken place nor even been anticipated at the time of the premature rejoicings in the capital. In normal circumstances Gardez would constitute a key position, and its capture in the interests of General Nadir Khan would augur ill for the Amir of Kabul. The forces on both sides, however, are so exiguous and Nadir Khan's treasury is so low, that it remains doubtful for the present whether either of the protagonists is in a position to terminate the state of virtual stalemate. It would seem as if there would have to be a more general declaration on the part of the tribes in favour of one or the other before any notable development can be recorded in Afghanistan. In the meantime ex-King Amanullah has had the satisfaction of receiving from his successor on the throne of Kabul a telegram of congratulation on the eleventh anniversary of Afghan independence. The first anniversary of the beginning of the challenge to King Amanullah's reforms falls in November.

INDIAN NOTES.**The Whitley Commission.**

No part of the Viceroy's address at the opening session of the Indian Legislative Assembly in January occasioned more widespread satisfaction than his reference to the impending appointment of a Royal Commission to explore all aspects of the labour problem. The decision was not

entirely unexpected, but the announcement that the Government had been fortunate enough to secure the services of Mr. J. H. Whitley as chairman was a surprise. The composition of the remainder of the Commission and its terms of reference, when they were subsequently announced, also commanded general approval, for it is recognised that as a body the Commission is singularly well equipped for the task in hand. Some idea of the magnitude of that work is afforded by the comprehensive list of subjects which appear likely to engage the Commissioners' attention in the course of their inquiry. In their official *communiqué*, issued for the guidance of witnesses, a summary of which is given on another page, it is, moreover, pointed out that the schedule is not intended to be exhaustive. Although those Indian politicians who are most fervent in their denunciations of the conditions of Indian labour have already indicated their intention of boycotting the inquiry, the Commission is assured of a substantial measure of fruitful co-operation in its responsible task. No doubt, it will co-opt provincial assessors to assist it in the study of local conditions, while expert advisers, we understand, will be appointed in connexion with the examination of particular aspects of the problem, such as the employment of women labour and public health. A comprehensive survey of the whole field of industrial relationship in India—and the personnel of the Commission is an assurance that the ground will be covered thoroughly—must take a considerable time. It is therefore satisfactory to learn that there is no reason to suppose that the Commission will refrain from recommending immediate action if and when the opportunity presents itself. In view of the present situation in Bombay and Calcutta we imagine that any advice so proffered will be eagerly welcomed by the sorely-tried authorities and as readily acted upon.

Burma and Separation from India.

The question of separating Burma from India is not new, but of late the demand for separation has become much more insistent than it was in the past. The Burmese complain that their interests are subordinated to the interests of India. They say that India is hampering the development of the province by taking a larger share of its revenue than is justified by the services which she renders. And they believe that Burma will always be poverty-stricken so long as she is connected with India; and that nothing but separation will enable her to make progress. A few months ago a resolution in favour of separation was adopted by the Burma Legislative Council

BRITAIN'S DUTY IN PALESTINE.

It would be idle to attempt to minimize the significance of the recent unfortunate events in Palestine. The hopes based on the period of quiescence during the High Commissionership of Lord Plumer, that both Jew and Arab had had many of their raw edges rubbed off, have been belied, and the peaceful development of the country has received a rude setback. The task of the Mandatory Power, however, is clear. It is to restore law and order, and to start afresh, in the light of the experience now gained, the work of promoting harmony, and, ultimately, co-operation, between the two discordant elements. The problem is not to prove as easy of accomplishment as had been anticipated, or, at least, hoped. The Muslim section of the Arabs has shown that it has not yet appreciated certain fundamental elements that are essential to membership in a civilised State. However serious differences of opinion, whether religious or political, may be, a settlement must not be sought by recourse to rioting and massacre. Whatever provocation may be alleged, there can be no palliation of the orgies of murder and pillage in which Muslims throughout Palestine have indulged. One or more collisions between fanatical elements of the two parties might have been explained away; but what has happened is a very different affair. The initial clash in Jerusalem has been followed by something in the nature of a rising, as it were in response to a word of command, of a considerable proportion of the Muslim population of the country against the Jews. From Hebron to Haifa Jews have been the victims of unprovoked attacks by Arabs, and, but for the hurried dispatch of British troops and bluejackets to the country, the indiscriminate slaughter of peaceful inhabitants would have been general. Not the least humiliating aspect of the whole episode from the Muslim point of view has been that no one has appeared among the Muslims to stay the slaughter or to denounce the perpetrators.

As the immediate cause of the outbreak is known, it becomes the duty of the Mandatory Power to see to it that the Wailing Wall in future ceases to be a source of friction between Muslim and Jew. Hitherto this bone of contention has been regarded from the point of view of an academic controversy, calling for a nice adjustment of claims, rights and privileges, with all the trappings of legal rulings and appeals to history and tradition. As the Mandatory Power has taken refuge behind the shibboleth of the *status quo*, each party to the dispute has conceived it to be its duty to do all in its power to introduce modifications in that *status quo* for its own advantage. So long as the controversy entailed nothing more serious than moves and counter-moves, accusations and counter-accusations, the Palestine Government could strive with patience and tolerance to keep the balance even, while

calling down a plague on both the contestants. To-day the quarrel has exceeded these bounds. One party to the dispute has shown that it is prepared to find in the Wailing Wall an occasion for the wholesale massacre of the Jews of Palestine. The challenge cannot be ignored by the Mandatory Power. A decision must be reached in the controversy, and it must be enforced in such a way that it will be difficult, if not impossible, in future for the spark to be lighted at the Wall which is to be the signal for a conflagration throughout Palestine. If the overgrowth of pretensions is cleared away, a few facts emerge. The Wailing Wall is a hallowed spot for the Jewish race, and for many centuries the Jews of Palestine have been allowed to use it and the pavement in front of it for devotional purposes. The Wall is part of property which is sacred to the Muslims, and the pavement in front of it, as well as the adjacent walls and buildings, are Wakf property. At this point it becomes essential to differentiate between property that is sacred, and as such is associated with religious exercises, and property that has been assigned from pious or other motives to Wakf trusteeship. The sanctity of the latter is that which attaches to all trusteeships, but often in the case of Wakf property is unconnected with religious exercises. The pavement in front of the Wailing Wall is Wakf property, but so little sanctified is it in the eyes of the Muslims that they will allow their animals to defile it, if by so doing they can cause Jewish worshippers annoyance. The adjacent walls are also Wakf property, but so little of holiness have they in the eyes of those who make use of them that they are put to the meanest uses. Until the recent events in Palestine, there may well have been no occasion for the Government to cut this Gordian knot, but to-day there is the peremptory call for a punishment of Muslim excesses. Even if every man guilty of the murder of one or more Jews could be found, tried and hanged, justice might be satisfied, but the seed of future trouble would remain. It is evident that few, if any, of the culprits will ever be traced, and punishment by the imposition of collective fines would by itself be equally ineffective. The problem is to see to it that the Wailing Wall should not give rise to constant friction between Jew and Muslim, and that the Muslims should be for ever reminded that, although their tradition may be to avenge an insult by murder, this desert practice cannot be indulged any longer in a civilised State.

A decision calculated to put an end to the Wailing Wall controversy would be the following: To confirm the Muslims in their proprietorship of the Wall; to confirm the Jews in their unrestricted right to use the Wall area and the enclosure for devotional purposes, subject to the condition that no structure of any kind is to be affixed to the Wall or to the pavement or to remain there overnight; to make the area a *cul-de-sac* by closing all approaches to it at the south end and along the western side, providing the tenements on the west side with necessary exits and entrances in other directions. Under such a ruling the Jews would have no occasion to attempt to steal a march on the Muslims, in order to modify the *status quo* to their own advantage; and the Muslims, in turn, would not have to be on their guard against such manœuvres or be constrained to act in anticipation of them. The Wall area will cease to be a thoroughfare, and opportunities of Muslim provocation will be eliminated, or, if deliberately sought, can be dealt with by police measures. An outcry for a short period from the Muslim authorities of Palestine may be expected; but it may be doubted whether they will prefer as an alternative penalty to surrender for judgment all those who were guilty of the murders of Jews or who can be held morally responsible for them either by provocative words or through refraining from exercising their authority over less enlightened coreligionists. Only by some drastic measure as that proposed above can the Mandatory Power hope to put an end to the unedifying conflict that has raged round the Wailing Wall and to make good its own omission to provide adequate protection for the population of Palestine.

*The Near and Middle East

From Our Own Correspondents.

Alexandria, August 23.

Alexandria "En Fete."

King Fuad, and Mahmoud Pasha arrived together in Egypt this afternoon, and were received with enormous enthusiasm. The whole of Alexandria is *en fête*, and the town is gay with flags and coloured electric lights. This evening King Fuad will attend a reception, to be given in his honour, in a huge marquee which has been erected on the sea front, and to-morrow Mahmoud Pasha will deliver his long-awaited speech. There are over twelve thousand notables from the provinces in town for the occasion, and the whole country is in a fever of excitement. The Arabic Press, which has been remarkably reticent on the subject of the new proposals, will, no doubt, now be able to give full rein to its impressions.

Prince Omar Toussoun's Views.

The only important pronouncement of the week on the subject was a long interview given to *Al Ahram* by Prince Omar Toussoun. Prince Toussoun really belongs to no party, but his opinions carry a certain amount of weight, and anything he has to say is listened to with respect. He gave very frank views on the Treaty, and according to his ideas, Egypt is not receiving nearly enough, especially in regard to the Sudan. He says that by the present proposals the status of the Sudan will be that resulting from the Convention of 1889, which he considers as null and void, as it is prejudicial to Egypt's legitimate rights there. If England is sincere, he continues, she should return the Sudan to the status held before the Mahdi mutiny, and also give back the territory which was detached from the old territory of the Equator, i.e., the district in which the Albert Nyanza lake dam will be erected. England detached this territory from the Sudan, ceded it to Uganda, and considers it as belonging to the Crown. The second thing England should do for the Sudan is to appoint a Deputy-Governor, who should be an Egyptian, and in future the Governorship and the Deputy-Governorship should be held by an Egyptian and an Englishman, i.e., when the Governor is English the Deputy should be Egyptian and *vice versa*. Government posts in the Sudan should be divided equally between Englishmen and Egyptians, and the British and Egyptian troops in the Sudan should be equal in number. That, he says, is the minimum which Egypt should accept in regard to the Sudan.

Barracks for British Troops.

In an article in *Al Mokattam*, the question of barracks for British troops, which the Egyptian Government is to erect on the banks of the Suez Canal, is discussed. It is estimated that each barracks, to hold 800 men, will cost the Government between £55,000 and £60,000. As the number of British troops to be left in Egypt after the

ratification of the Treaty is stated to be 4,000, five barracks will be needed, at a cost of, say, £300,000. Besides this the Government will have to erect living quarters, construct gardens, roads, and make arrangements for a decent water supply; the cost of these extras is estimated at £2,100,000. Therefore the total cost to the Egyptian Government will be roughly two and a half million pounds. In compensation for this outlay, Egypt will, as far as its chief cities are concerned, be free of British troops, and also she will take over the barracks at present in the hands of the Army of Occupation. These barracks alone, comprising the whole of the citadel, the Kasr-el-Nil Barracks in the centre of Cairo, barracks at Abbassia, Heliopolis and Alexandria, must be worth at least double the cost of the proposed new buildings. One will, therefore, agree with *Al Mokattam*, which considers that the money will be well spent.

Constantinople, August 21.

The Arrival of the "Yellow Bird."

At one o'clock on the afternoon of August 19, there alighted at San Stefano Aerodrome, the French machine "l'Oiseau Jaune" or "Yellow Canary," as the Turkish papers put it—from which there stepped forth Assolant, Lefèvre, Lotti and M. de Saint-Pierre, the representatives of the "Cidna" (Compagnie Internationale de Navigation Aérienne). The visitors were officially welcomed by the Sub-Governor of Stamboul, the head of the Turkish Air Service, the President of the Turkish Air League, the French Military Attaché and representatives of the French colony in Constantinople. Leaving Le Bourguet on July 10 last, the airmen flew to Madrid, Lisbon, Rome, and Athens, already a respectable *randonnée*, before coming to Constantinople to show the *Tricolore*. The route they propose to take on their homeward journey will carry them to Bucharest, Belgrade, Prague, Warsaw, Riga, Berlin, Copenhagen, London and Brussels.

At the conclusion of the official ceremony, the French aviators proceeded in motor cars to Dolma-Baghtche Palace, where they inscribed their names in the Ghazi's visiting book.

New Lamps for Old.

Once again have the judicial authorities of Turkey swapped horses whilst crossing a stream. As from yesterday, the Old Turkish Penal Code, patterned on the Code

Napoléon, has become a thing of the past, its place having been taken by a brand-new Code, modelled on German lines.* The new Ordinance confers on both judicial and police authorities a much broader latitude than they enjoyed in the past, many decisions being now left to the discretion of the police which were at one time reserved exclusively for the consideration of the Bench.

It is further provided that the Turkish Solicitor-General may of his own volition institute proceedings against the police whenever he may think this course desirable. It is not made clear to what cause this departure is to be attributed, unless it be that there have been numerous complaints of late in the Press with respect to "third degree" methods exercised against persons under detention in Turkish police cells.

Cat's Meat as an Article of Diet.

At a time when the Turkish newspapers are daily lamenting the steady rise in the price of butcher's meat, it is at the least disconcerting to hear Constantinople's leading Veterinary Surgeon—and a "Professeur" to boot—proclaiming in the local Press that the population of the old Turkish capital does not consume sufficient cat's meat. From the careful manner with which the learned professor marshals his facts as to respective calories and the determined manner in which he drives home his arguments, one is inevitably led to the conclusion that he must have carefully digested the proceedings of the Pickwick Club and that, like Mr. Sam Weller, he must at some-time have scraped up an acquaintance with the hot-pie-man, who, when fruit was out of season and cats were in, was able to attribute his success among his "consommateurs" to the gentle art of seasoning.

The Turkish papers, at all events, have not taken up the suggestion with any degree of enthusiasm, classifying cats with such other undesirable articles of the daily "menu" as hares and pigeons which should be *tabu* to all good Muslims.

Cypriot Immigrants in Turkey.

An interesting parallel may be drawn between the clamour for "Enosis" or "union with Mother Greece," which constitutes the battle-cry of an appreciable section of the Cypriot townsmen and a "Petition of Right" which Muslim Cypriot immigrants in Turkey have lately submitted to the Minister of the Interior. The principal complaint of the immigrants—by no means a novel one in this country—is that the settlers have not yet received from the Land Registry officials the farmlands to which they consider themselves entitled, the cultivation of which would allow them to raise their crops. A more serious source of trouble, however—and one, also, by no means new in the annals of migratory movements into this country—is that the climate of Anamour, where many of these immigrants have been dumped, has proved deleterious to the health of the Cypriot husbandmen and their families. The localities of Kyllindria and Anamour, which lie opposite Cyprus on the Southern Anatolian coast and which abound in olive groves, have by no means an enviable climatic reputation, but one is led to suspect that the decision to install a considerable body of these immigrants in those regions may have been dictated to some extent by the desire to settle them under conditions approximating as nearly as possible to those to which they had been accustomed in their own homesteads in Cyprus.

Greco-Turkish Negotiations.

It is much to be regretted that the breakdown in the negotiations between Greece and Turkey should have led with so little loss of time to the adoption of retaliatory fiscal measures which are scarcely likely to benefit either party. The Turkish Cabinet have decreed the immediate application of the maximum tariff against all goods of Greek origin entering Turkey, until October next, when the new Turkish Customs tariff, which the Greek Press decries as "protectionist in the extreme," enters into force. The Greek Government have retaliated by ordering the application to all Turkish produce of their maxi-

mum tariff, which practically comes to the same thing. "But," adds the *Messenger d' Athènes*, a Greek paper which circulates in Turkish official quarters, "when it is recalled that Greek exports to Turkey total 19 million drachmæ, whereas Turkish exports to Greece do not fall far short in value of 260 million drachmæ, it is not difficult to foretell who eventually will be the loser by these tactics." "There is nothing for it," retort the Turkish papers, "but to place an embargo on Greek shipping and render the Turkish tariff prohibitive by increasing it twentyfold, if need be."

Sofia, August 25.

Disastrous Floods.

The almost tropical heat which has prevailed during the greater part of the month of August was followed on the 23rd and the 24th by a series of torrential rain-storms which swept the whole of central and western Bulgaria, resulting in disastrous floods as well as a momentary interruption in railway, telegraphic and telephonic communications between the capital and the principal provincial towns. The floods were particularly destructive in the towns of Trn, on the Serbo-Bulgarian frontier and especially in the plain of Radomir to the south-west of Sofia, where the two villages, Dolna-Dikania and Gorna-Dikania, were almost wiped out. A hundred houses in these two localities were destroyed, 30 peasants (women and children) were drowned, and all the cattle belonging to the population, its crops and cereals were carried away by the rush of water.

The Serbo-Bulgarian Dispute.

As was anticipated, the Yugoslav Government has not replied to the Note of August 9, by which the Bulgarian Government notified Yugoslavia of its assent to the resumption of direct negotiations between the two countries for the discussion of the two Yugoslav demands regarding the establishment of a prohibited zone along the whole of the Serbo-Bulgarian frontier and the liquidation of the bi-lateral property on that same frontier, on condition that the arrangements elaborated by the famous Pirot conference were ratified by Yugoslavia in the same way as Bulgaria has done.

This deliberate delay has convinced Bulgaria that the direct negotiations which she was advised by the Great Powers to make would give no results, and that she can expect nothing from the Serbs, who definitely do not wish to ratify the Pirot agreements, seeking to gain time by avoiding an immediate conflict which would compromise the candidature of Yugoslavia for the Presidency of the League of Nations at its next session, and in obviating, at the same time, an international discussion at Geneva on the causes and consequences of the Serbo-Bulgarian dispute. M. Bouroff has also informed Belgrade that he hopes to receive a reply to this Note before his departure for Geneva. The reply from Belgrade not being forthcoming, the Bulgarian Government has begun seriously to consider the bringing of the whole dispute before the League of Nations, which would then have to inquire into the intolerable situation existing on the Serbo-Bulgarian frontier.

However, in the presence of the threatening attitude of the Yugoslav dictatorship, which declares *urbi et orbi*

that it would consider recourse to the League of Nations as an unfriendly act on the part of Bulgaria, it is very probable that the Bulgarian Government will not take direct action with the League of Nations and that it will be represented there by some friendly Power, such as Italy or Great Britain. Belgium is also mentioned, that country showing a keen interest in the Serbo-Bulgarian dispute.

In view of the intimate relations existing between Yugoslavia and France, efforts will possibly be made to induce France to intervene at the same time as Great Britain and Italy, in order to obtain the collective initiative of the three Great Powers for the international settlement, after inquiry, of this dispute.

As the affair presents certain very delicate aspects on which the general international situation depends, M. Liapcheff, President of the Council, has gone to Varna, where the Minister for Foreign Affairs, M. Bouroff, is spending the summer season, in order to examine with him the different possibilities to which the procedure at Geneva lends itself. King Boris, who is spending the summer in his château at Euxinograd, near Varna, has joined the two Ministers. The discussion thus assumes the nature of an exceptional consultation in which M. Molloff, Minister of Finance, and co-delegate with M. Bouroff to the League of Nations, is also participating. They have laid down the course to be followed by the Bulgarian delegation to Geneva in regard to both deliberations within the League of Nations and those which concern future negotiations with the representatives of Bulgaria's neighbours.

Pourparlers with Roumania and Greece.

These neighbours are, in particular, Greece and Roumania. The prospect of soliciting the intervention of the League of Nations in the Serbo-Bulgarian dispute imposes on the Bulgarian Government the necessity of bringing to an end the negotiations which she entered into with the two countries for the settlement of pending questions.

To this end M. Bouroff has just summoned to Varna the Bulgarian Minister at Bucharest, M. Pomenoff, who has furnished him with a detailed account of the conversations which he has recently had with the General Secretary of the Roumanian Ministry for Foreign Affairs, M. Gafenco, on the subject of the terms of the ceasing of sequestration of Bulgarian property in Roumania and in general on the subject of the improvement of Roumanian-Bulgarian relations, which have again of late been threatened by the anti-Bulgarian excesses of the Koutzo-Wallachian colonists in the Dobruja, excesses which have evoked protests throughout Bulgaria.

It is known that the Roumanian Government is at last in favour of raising the sequestration without insisting on the payment of any particular indemnity by the Bulgarian Government. It would, however, like to obtain economic compensations by the establishment of a régime in favour of the entry of the principal articles imported by Roumania into Bulgaria, to wit, wood, petroleum and salt, which would necessitate the conclusion at an early date of a Roumanian-Bulgarian commercial treaty.

On the other hand, M. Bouroff received some days ago at Varna a visit from the Greek Minister, M. Dendramis, who discussed at length the unsatisfactory state of the Greco-Bulgarian negotiations which were begun more than eight months ago and which had made no progress. M. Dendramis submitted a project for the distribution of the questions under discussion, some of which can be settled immediately by direct conversations, while others call for a more prolonged examination. A third group, he was of opinion, would need to be brought to arbitration, these latter questions being regarded from different angles by Bulgaria and Greece. It would seem that the *démarche* of M. Dendramis has met with complete success, as M. Bouroff has promised to study his proposition and to submit it immediately to the Cabinet, in order to clear up the situation before his imminent departure for Geneva.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 15.

Indian Finance.

Sir George Schuster, the Finance Member, has been to Calcutta, and has been addressed, one might almost say lectured, by Mr. Faizulla Gangjee, the President of the Indian Chamber of Commerce. The report appeared in my newspaper under the heading, "India Cannot Bear New Taxation." I was reminded by that, now a year and a half ago, I remarked that the present political movement in India might split on two rocks, the relation of the Indian States to British India and the question of finance. If several new provinces are to be carved out of the old, Sind one of them, the political government of India will cost so much more. If the Provinces are to be left with a larger share than under the Meston Settlement of the revenues collected in the Provinces, there will be so much less for the Government of India. If Sir A. K. Ghuznavi's proposal that ten crores of rupees should be set aside for the education of the Muslims is given effect to, there will be ten crores to find for other things.

Mr. Gangjee's Points.

There would be point in entering in some detail into the points of Mr. Faizulla Gangjee's address to the Finance Member. He began with a reference to the cumbersome Banking Enquiry; he is more hopeful of it than some are. He passed to the "deep morass of insolvency" into which he sees Bombay as sinking, and deprecated the Government's making further investigations, when, in his view, what is needed is "adequate and immediate relief," without, however, very clearly indicating along what lines it should be sought. He passed to the foreshadowing, in the Finance Member's Budget speech, of new taxation next year, saying it just must not be thought of. "The taxable capacity of the country," he said, "has reached a limit beyond which it is impossible to go." The alternative to new taxation is retrenchment. Let there be retrenchment, said Mr. Gangjee. But what is a Finance Member to do? There is a Royal Commission on Agriculture: it recommends large expenditure on research: the official world as a whole inclines a favourable ear. There is a Fletcher Committee to consider and report on the impoverishing of the country by disease. It recommends large expenditure on medical research: the official world as a whole inclines a ready ear. And so on. Where is there money for new Provinces? What is a greater share of the Provincial revenue, if left in the Provinces, to be replaced by? The new expenditure on research is alone more than could be covered by retrenchment under other heads. The only hope for India that one can dream of is that it be found possible to do with half the present army.

Constitutional Questions.

There was some word in my last letter of universal adult suffrage. Recently the Governor of Burma was speaking of India as a democracy. He meant a political democracy. To my mind, one has only to be drawn up in a railway station alongside a pilgrim train, or to watch a Holi or Muharram crowd, to realise that it is insensate to think that India could ever be a safe political democracy. She has always been in a large measure a social democracy; her people of all classes—one cannot say of all creeds—have ever been ready to mix socially. If you are visiting an Indian nobleman, and are sitting conversing with him on any open terrace, the probability is that half a dozen ragged villagers will be within sight. I was taken the other day by three Indian friends to call on two others. While we were having tea a little girl, with an attractive face, watched us from another room, or from only just inside the room in which we were. She stood there, holding back the curtain. "Who is she?" I asked my hostess, being interested. "Oh, the

daughter of one of the servants," was the reply. None of them would have spoken to her, but none of them had any objection to her having her share of what was to be seen and heard. India is to that extent socially democratic already; but India as a political democracy is to me a thing unthinkable. The mass of the people are as children, and one cannot think of them ever ceasing to be so.

Land Revenue Policy.

A sign of the times, a welcome one, is that a body has been formed, called the Bombay Presidency Land League, with the object of safeguarding the rights and interests of the agriculturists, and in particular of securing that all the revision settlements since 1920 are overhauled. A later report says that considerable progress has been made with the preliminary work. At question time recently, in the Bombay Council, the Revenue Secretary stated that at the recent conference of the Revenue Members of the Provincial Governments, held in Simla under the presidency of Lord Irwin, it was decided that the Government of India should issue a Resolution on the land revenue policy, after consulting the local Governments. The Bombay Government had already been consulted, but the Government of India had called for the local Government's views on further points. What sounds anomalous, is that the Bombay Government—so the Secretary said—had no authority to place before the Legislative Council the report furnished by it to the Government of India, even if it might think it expedient to do so.

Mr. Gandhi Confers.

Not a little interest was aroused by the report on Monday that the day before Mr. Gandhi had had interviews in Bombay with Mr. Jinnah in the morning, and with the Ali brothers in the afternoon. Mrs. Sarojini Naidu, who had returned to India from America and England to be distressed by the unhappy divisions in her native land, had had some share in bringing Mr. Gandhi and Mr. Jinnah together. What these two leaders and Mr. Gandhi and the Ali brothers said to one another has not been disclosed. Mr. Gandhi afterwards was in a good humour, at all events. A pressman tried to get out of him "whose fate had been decided." Said Mr. Gandhi thereupon: "We decided the fate of nobody, not even of ourselves. All I am going to decide is the fate of a few mangoes, as you will see if you stay." Nothing but good can come of the leaders doing everything possible to agree to a policy.

The Punjab Government's Memorandum.

Some indication that one's doubts of India's ever being a safe political democracy are shared in high quarters is afforded by a passage in the Punjab Government's memorandum on the constitutional question. It reads: "Our feeling is that whatever form of government may eventually be found to be most suitable to Indian conditions, it is unlikely to be evolved until she has passed through the stage of government by representative institutions. It is only after an experience of the working of those institutions, and of the light thrown by them on the nature of the social conditions which eventually determine the form of government best suited to any national unit, that final development can be achieved." Men think and write such things. Somewhere, on the anvil of Time, may be forging that instrument of government known as an Autocrat, another Akbar. Who knows?

Intimidation.

I may conclude this week's letter, written in conditions of extreme physical discomfort, caused by the damp heat, with the bare word that the Bombay Legislative Council is debating a Bill to make intimidation a cognisable offence in times of emergency. It has been found, says the statement of objects and reasons, that intimidation has been very commonly practised in times of excitement in Bombay City and its neighbourhood.

ROYAL COMMISSION ON LABOUR IN INDIA.

In lieu of the customary questionnaire a comprehensive schedule of some 146 subjects, "which appear likely to engage the Commissioners' attention in the course of this inquiry" was issued last week by the Royal Commission on Labour in India. The Chairman, Mr. J. H. Whitley, late Speaker of the House of Commons, and six of the twelve members who are now in Europe (Sir Alexander Murray, Sir Victor Sassoon, Mr. Joshi, Miss Beryl M. Le Poer Power, Mr. John Cliff, and Mr. A. G. Clow), are sailing for India by the Narkunda, leaving Marseilles in September. During the course of its first winter tour, the Commission, which will assemble at Karachi on October 13, expects to visit all the principal capitals, returning to this country about the middle of April.

The terms of reference, published some months ago, are : "To inquire into and report on the existing conditions of labour in industrial undertakings and plantations in British India, on the health, efficiency and standard of living of the workers, and on the relations between employers and employed and to make recommendations." A note is now added explaining that : "'Industrial undertaking' for the purpose of the Commission is interpreted as in Article 1 of the Washington Hours Convention."

The schedule, which, it is stated, is not intended to be exhaustive, is divided under eighteen headings—namely, recruitment, with particular reference to Assam; staff organisation, including relations between management and workers; housing; health; welfare work, other than health and housing, but including education; education; safety; workmen's compensation, with regard especially to the working of the present Act; hours of labour in factories, mines, railways and other establishments respectively; special questions relating to (a) women, young adults and children; (b) seamen and workers in inland navigation under the same sub-divisions; wages, including indebtedness and leave; industrial efficiency of industrial workers; trade unions and combinations; industrial disputes; law of master and servant; administrative questions; and intelligence.

Twelve of the headings relate to the employment of women, young adults, and children. In this connexion it is expected that the Commission will co-opt Indian women for local inquiries. The only woman on the Commission, which consists of 12 members, is Miss Beryl M. le Poer Power, of the Ministry of Labour. Another special branch of inquiry relates to seamen and workers in inland navigation. It may be expected that for special inquiries the assistance of assessors will be sought, representing, when possible, both employing and employed interests. Such a plan will be facilitated by the fact that some of the most important industries are mainly concentrated in one province or at least in one part of India.

Under the general head of wages 16 subjects are scheduled, including the changes in recent years; amounts sent to villages; extent and effect of payments through contractors, or headmen; the advisability and possibility of the statutory establishment of minimum wages; the extent of standardisation; indebtedness; bonus and profit-sharing

schemes; and desirability of a fair wages clause in public contracts. The Commission will inquire into trade combinations, the nature of trade union activities and the working of the Act for the registration of trade unions passed in 1926. It will consider the Trade Disputes Act; the extent of strikes and lock-outs; conciliation and arbitration machinery; and the attitude of the Government towards trade combinations and in connexion with industrial disputes.

The industrial efficiency of workers is a main head covering a wide field. It includes comparative changes in the efficiency of Indian workers in recent years, and their efficiency as compared with that of foreign workers. The extent to which comparisons are affected by such factors as efficiency of plant and management, physique, education, standards of living, and climate will be considered; also the effect on production of changes in working conditions, expenditure on health and sanitation, dietary, and alcohol and drugs. A highly important investigation will relate to the migratory habits of the workers. Inquiry will be made into the law of master and servant, and as to the extent to which the Employers' and Workmen's Disputes Act has been used.

Under the head of administration there are ten subsidiary inquiries. Two of the most notable are the effect of differences in law or administration in Indian States or British India, and the acquaintance of workpeople with factory legislation. In this branch also the whole question of factory and mines inspection will be considered. The final main head is that of intelligence, under which the Commission will consider the possibility of improvement in statistics and future developments necessary.

It is intimated that the Commission will welcome evidence on any matter falling within the very wide scope of the inquiry, whether included in the schedule or not. Memoranda of evidence should be sent as soon as possible, and not later than September 21, to the Joint Secretary to the Commission, c/o Department of Industries and Labour, Simla, but written evidence from witnesses in Europe, if ready for communication by September 14, can be sent to the Joint Secretary to the Commission, India Office.

POWERS OF THE PRESIDENT OF THE LEGISLATIVE ASSEMBLY.

The decision of the Governor-General in Council, with the sanction of the Secretary of State in Council, on the question of the amendment of the Rules of the Legislative Assembly, foreshadowed in Lord Irwin's address at the joint session of both Houses of the Central Legislature in April last, has been published. The announcement was made recently in a notification in the *Gazette of India* authorising the insertion after Rule 17 of the following additional rule, namely:—

"Notwithstanding anything contained in Rule 15 or Rule 17, the President shall not have or exercise any power to prevent or delay the making or the discussion of any motion relating to a Bill made by the member in

EGYPT invites you to break your journey, see Cairo, travel along the Nile and visit Luxor and Aswan for the antiquities. Or— from Cairo to Jerusalem and through Palestine. Everything arranged by the American Express—before you leave England.

Services for Travellers to India

SERVICES that smooth the path and take the trouble out of travel. Your steamship passages booked at no extra cost. A uniformed man to meet you at Bombay or Calcutta. charge of the Bill, or refuse to put or delay the putting of a question on any such motion, unless such power is expressly conferred upon him by, or such motion or the discussion or the putting of such questions, as the case may be, is expressly prohibited or directly precluded by any provision of the Government of India Act, these rules or standing orders."

It will be recalled that on April 11, three days after the bomb outrage, Mr. V. J. Patel, President of the Legislative Assembly, ruled that the further discussion of the Public Safety Bill would be out of order as, in view of the impending trials at Meerut, matters which were *sub judice* must inevitably come under discussion. The following day, in the speech above mentioned, Lord Irwin announced that the Government of India were unable to acquiesce in the ruling, and that action would be taken to render any repetition of this incident impossible.

The result of such a ruling, Lord Irwin explained, was twofold. In the first place it propounded an interpretation of the rules which he was satisfied was not in conformity with their intention. Secondly, the practical effect of the ruling, as it stood, was to debar the Government from asking the Legislature to give it the additional powers of which it conceived itself to stand in need, and to make it impossible for either Chamber of the Legislature to record any decision upon the Government's proposals, or to form its own judgment upon the question whether or not it could usefully conduct its debate on those proposals within the rules or orders.

The Viceroy then proceeded to state clearly the position of himself and his Government on both the foregoing issues. The Government, he said, entertained no doubt as to the intention of the rules in question, but recognised that the only appropriate person to interpret within either House the rules under which it worked was the President of that House himself. If, therefore, the latter's interpretation of the rules gave rise, as on the occasion mentioned, to a situation in which the Government, for grave reasons, was unable to acquiesce, the only effective remedy was "to secure by due authority such amendment of the rules as may be necessary to prevent any recurrence in future of a similar interruption in normal legislative procedure." After intimating that the Government intended to follow that course without delay, Lord Irwin, in order to avoid misunderstanding, added that, "the broad purpose of the amendment in the rules which we propose to seek will be to secure that the progress of legislation which it is within the power of the Indian Legislature to pass, shall not be prevented by the President of either House, except in virtue of express powers to do so conferred upon him by the Rules and Standing orders."

It will be seen that the new Rule follows closely the Government's intentions as expressed in the foregoing extract from Lord Irwin's speech. It will be discussed by the Legislative Assembly this week, and, at the time of writing, its approval by a majority is anticipated, although the Swarajists will protest.

INDIAN NOTES.

(Continued from page 243)

with only one dissentient vote. And now the Provincial Committee, which sat with the Simon Committee, has reported in favour of immediate separation. This Committee holds that Burma's connexion with India is arbitrary and unnatural; and that her financial and economic interests have been seriously jeopardised by her political subservience to India. Immediate separation is considered by the Committee to be the first step towards the attainment by Burma of full responsible government. In a memorandum for the Statutory Commission the Government of Burma also favours separation, characterising it as the dominant political issue in Burma at the

present time. The Government deals with the financial aspects of the question, and likewise the constitutional issues, expressing the opinion that separation would greatly simplify Burma's constitutional problem. There is much to be said in favour of separation. Burma is not a part of India, nor are the Burmese people Indians. On the contrary the Burman differs from the Indian in religion, race, standards of living, and in most other things. He believes that his country would develop more rapidly as a separate unit than it will ever do as an Indian province. And he points to Ceylon and the Straits Settlements as instances of colonies which, since their separation from India, have greatly prospered. On the other hand it has to be admitted that there are arguments in favour of the continued inclusion of Burma in the Indian Empire. There is, of course, the problem of defence to be considered; and, as was pointed out by a correspondent in this journal some months ago, the tariff question may be of importance. Much that Burma produces is also produced in India; and she buys more or less the same classes of goods that India takes. It may be, therefore, to her advantage to be within the large area enclosed by the Indian tariff.

Public Health in India.

The need for a greatly enlarged scale of expenditure on measures calculated to improve the public health in India was strongly urged by Mr. G. Bransby Williams in an address which he delivered recently in Calcutta. Mr. Bransby Williams was formerly Sanitary Engineer to the Government of Bengal, and he is well acquainted with his subject. He was indisputably right in maintaining that the amount of money spent on public health work is ridiculously small. No real advance can be made unless and until there is a large increase in the expenditure on sanitation, water supply, anti-malarial measures, and measures designed to check the spread of epidemic disease. Even Calcutta itself is, Mr. Bransby Williams declared, becoming more unhealthy; and he quoted the death rate in support of this contention. It is true that in Calcutta the death rate fluctuates a good deal as it does in most other parts of Bengal. But it showed a steady increase from 1923, when it stood at 28.3 per thousand, to 1926—the latest year for which statistics are available—when it was 34.7 per thousand. In 1917 it was only 23.83, although in the immediately succeeding years it went much higher. Admittedly a great deal has already been done to improve Calcutta by the elimination of large slum areas, and the opening up of new suburbs. But there is an immense amount of essential work still remaining to be done. The drainage problem is becoming, if it has not already become, a menace to the city, as the outfall has been silting up for many years. Then, as Mr. Bransby Williams pointed out, there is Howrah, which is really an extension of Calcutta on the opposite bank of the river Hooghly. The improvement of Howrah—like the reconstruction of the Howrah Bridge—is one of Calcutta's most urgent and pressing needs. But nothing is done; there is endless discussion, but it seems to be impossible to overcome the inertia of the people and the authorities. Want of money is always given as the reason for the continuance of inaction. Any increase in taxation for any purpose is scouted; and every scheme that is put forward is discussed and considered and reported upon indefinitely—and there it rests.

Dr. Drummond Shiels, Parliamentary Under-Secretary of State for India, visited the Royal Military College, Sandhurst, on August 31, and met the Indian cadets who are in residence there. After seeing them on morning parade he had personal conversation with them and saw their quarters. All the cadets, Indian and British, are treated alike and live under the same conditions. Dr. Shiels was received by Major-General Girdwood, Commandant of the College, who said he was well pleased with the general standard of the Indian cadets, amongst whom had been some of the most popular members of the College.

PERSONAL AND GENERAL

TO-DAY

September 5, 1929 (New Style).

August 23, 1929 (Old Style).

Rabia I, 30, 1348 A.H., of the Muslim Calendar.

Ab 30, 5689, of the Jewish Calendar.

Sir Chimanlal Setalvad arrived last week at the Hotel Metropole.

General Sir Charles and Lady Harington will leave London to-day for India.

Lord Sinha is expected to return to London from the Continent about September 7.

Mirza Issa Khan Sadig, Director of Public Education in Persia, left London last week for Paris on his return to Teheran.

Yusuf Beg Ghanima, Minister of Finance in the outgoing Iraqi Cabinet, arrived in London on September 1, for a short stay.

Arbat Keyhosrow Shahrokh, deputy of the Zoroastrians in the Persian Majliss, left Teheran recently for a ten weeks' stay in Europe.

M. Foroughi, Representative at Angora, and M. Alla, Representative at Paris, are the Persian representatives at the Council of the League of Nations which met yesterday (September 4).

Mirza Mehdi Khan Esfandiari (Nassiros-Saltaneh), Governor-General of Kerman, has been appointed Governor-General of Khorasan—the post formerly occupied by H.E. Saiyid Hasan Taqizadeh, Persian Minister in London. The new Governor-General of Kerman is Mirza Abolghassem Khan Pirnia.

Sir Edmund Wyldbore-Smith, a Director of the Suez Canal Company, and Vice-President of the Wagon-Lits Company, was received by the French Ambassador at the Embassy on August 30, when he handed Sir Edmund the insignia of Commander of the Legion of Honour, conferred upon him by the French President.

Sir Percy Loraine, the newly-appointed High Commissioner for Egypt, left London on August 27 for Cairo to take up his new duties. At Victoria Station to see him off were Lady Loraine, Sesostris Sidarouss Bey, Hamza Bey, the Egyptian Chargé d'Affaires, M. Radi Abou-Seif Radi, and representatives from the Foreign Office.

Prince Vassili of Russia, Prince and Princess V. Galitzine, Mrs. Clare Sheridan, Lord Douro, Lord and Lady Manton, the Hungarian Minister, Sir Ian and Lady Hamilton, Sir Basil and Lady Blackett and Miss Arbuthnot have been staying at Blair Drummond with Sir Kay and Lady Muir for the opening of the shooting season.

We regret to record the death, from heart failure, at Deanston House, Doune, Perthshire, on August 28, of Margaret, widow of Sir John Muir, Bart., and mother of Sir Alexander Kay Muir, Bart., of Blair Drummond, Perthshire. The Dowager Lady Muir was in her 89th year.

The King has been pleased to approve the appointment of the Hon. Patrick William Maule Ramsay, C.M.G., a Counsellor in his Majesty's Diplomatic Service, to be his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Athens in succession to Sir Percy Loraine, who has been appointed High Commissioner of Egypt. The second son of the 13th Earl of Dalhousie, Mr. Ramsay entered the Diplomatic Service in 1904, and has served, among other places, in Constantinople and Madrid, where he has been Counsellor since 1928.

H.E. SESOSTRIS SIDARO USS BEY, C.V.O.

After a stay of nearly five years in London, during the greater part of which he has been Egyptian Chargé d'Affaires, H.E. Sesostris Sidarouss Bey left on September 3 for Athens, to take up his new post as Egyptian Minister to the Greek Government. At the same time he is accredited to the Yugoslav Government, and will spend part of each year in Belgrade. On his way to the Balkans Sidarouss Bey will break his journey at Geneva, in order to meet the Yugoslav and Greek Foreign Ministers, who are attending the present session of the Council of the League of Nations.

At Victoria Station last Tuesday a numerous company of friends had gathered to bid farewell to Sidarouss Bey. Among those present were: H.E. Monsieur Caelomanos, the Greek Minister, Mr. John Murray, representing the Foreign Office, Mr. P. M. Tottenham, Abdul Malek Hamza Bey, Egyptian Chargé d'Affaires, Hassanein Bey, Chamberlain to King Fuad, the Staff of the Egyptian Legation and many members of the Egyptian community in London.

Sesostris Sidarouss Bey will be greatly missed in the diplomatic and social world of London, where his unaffected geniality, his hospitality, and kindly nature have made him a very popular personality.

EDUCATION IN PERSIA.

[At the Adult Education Conference, held in Cambridge last week, Mirza Issa Khan Sadig, Director of Public Education in the Persian Ministry of Education, read a paper on Education in Persia. We are privileged to publish it herewith.—ED.]

I am happy to have been appointed by the Ministry of Education of my country to bring you their heartfelt greetings and their best wishes for your success. I must thank the World Association for Adult Education for the initiative they have taken in organising this Conference, which will, I earnestly hope, have all the fruitful effects we expect from it. I must also thank the University of Cambridge for the gracious hospitality it has offered to the Conference. This University is well known throughout the world for the propagation of knowledge and light, and no wonder that it has accepted the Conference as guests. Personally, I am most grateful to it for the time I have spent in it as student and as Assistant to the most deeply regretted lover of Persia, the late Professor Edward Granville Browne, whose dear name is always alive in Persian hearts. I could not find a better occasion to express the most profound gratitude and to pay the highest tribute of the Persian nation to that great scholar and Orientalist, who occupied for about forty years the Chair of Persian in this University, during which time he published scores of books and pamphlets on Persia, of which the most important is his monumental work called, "Literary History of Persia."

Now I must say that the participation of a country like mine in such a Conference as this is most useful, if not necessary; for Persia, just recently awakened, has done a great deal in the domain of modern education and, being in a special position, she may be allowed to say what she has done and, at the same time, to learn what the other nations have accomplished. In the last few years Persia, a country of ten million inhabitants situated between the East and the West, has created, besides the 2,139 old schools and 309 old religious colleges which existed from time immemorial, 1,133 new schools organised on the Western model for boys and girls. She is sending each year more than 200 students to the Western Universities, and at the present moment we have more than 750 students in Europe, of whom half have scholarships from the Government.

But what she has done and obtained from Adult Education is tremendous. Wishing on the one hand to introduce

reforms and to create European institutions on a vast plan, and lacking, on the other hand, the technical men needed for such purpose, the only means to which Persia could have recourse—and that is the special position of Persia—was the organisation of special evening classes for the categories of men required.

Desirous of creating modern elementary schools and of raising the standard of the knowledge of her present teachers, she has opened in different centres evening Normal schools, where hundreds of men were, and are, trained for the art of teaching.

Feeling the necessity of establishing Courts of Justice, Registry Offices and Register's Bureaux in all the towns, she has organised evening classes in Teheran to teach to the officials and men of sufficient culture, selected by examination, the essential principles of law, after which they pass an examination and in case they were successful practise for a while in the capital and then are sent to the provinces.

Again, when in 1925 the compulsory military service law was voted by the National Assembly and carried into effect, a great number of illiterates were enrolled, and the War Office, wishing to educate their minds at the same time as they drilled their bodies, created, where it has been possible, special classes to teach them to write and read.

I should not like to take up your time in speaking of the adult courses created to form assistant sub-engineers for the keeping of the numerous roads newly constructed all over Persia, nor of evening classes organised for the need of commerce, but I should like to make it clear that the method which we have adopted to train adults for the speedy organisation of European institutions in an ancient and civilised country has been the most effective, and to our mind the only one possible.

Now my communication would not be complete if I did not tell you of a special kind of Adult Education which has always existed, and which is proper to Persia. In the old religious colleges which I mentioned just now, and which are quite similar to those of Cambridge and Oxford, live, side by side with students, men of different liberal functions such as teachers, scribes, notaries, clergymen, lawyers, who follow certain courses to perfect themselves. This sort of Adult Education has existed from very ancient times, and these men in taking advanced lessons at the same time as working for their livelihood, carry out only the recommendation of the Prophet of Islam, who has said "Study the sciences from the cradle to the grave."

From what has been stated, you see that the efforts in the domain of adult education have been chiefly exerted towards higher and university education. And while the great majority of the village population and 30 per cent. of the town inhabitants are illiterate, and ask us by hundreds of letters and applications to open classes for them, you may wonder why we have directed all our efforts towards higher education of selected people. The reason is quite clear: we think that for a country that desires to adopt a part of the Western civilisation, the part which is in harmony with its own culture and traditions, the most vital problem is to have highly educated men at the head of all its public services: these men, in organising the new services well, will lead the people to the path of welfare and will become the centres of manifestation of light which will illuminate all that is around them.

Thinking so, we spend the funds we get for three purposes: (1) The high education of selected men in the country; (2) The sending of selected students to the Western Universities; and (3) The creation of modern elementary schools for the men of the future.

You may ask me now why private enterprise has not opened adult classes, as is the case in this country. The answer is that the Persians are somewhat the French of the East, and as the eminent French delegate, M. Roger, said for his country, I must say for Persia, that *étatisme* exists there in all strength. The State intervenes

in all the aspects and phases of the life of the nation, and the nation on the whole expects everything to be done by the State. In the case of Adult Education, in particular, private initiative has been hardly encouraged, not only because it is not in conformity with the principle of *étatisme*, but because, I regret to say, we have revealed seditions, political and social propaganda, all ill-omened to the country, in some of the adult classes created by private enterprise.

In giving you this information I do not want to say that no steps have been taken for the education of illiterates: besides the education given by the preachers in the mosques, reading rooms, libraries, adult classes have been founded by enlightened men, and the Ministry of Education subsidises some of these institutions. By my assertion I wanted to emphasise that no systematic measure of a general character has been taken. But such a measure is to be taken soon, as in the Bill presented to the Parliament for the collection of new education rates for creating modern schools in the villages an Amendment was voted to the effect that the Ministry of Education shall open adult classes in the villages and small towns, and I hope that, according to the limits imposed by our means and resources, we shall be able to begin a new era towards the decrease, and perhaps the abolition, of illiteracy in the towns and villages.

IRAQIS AND PALESTINE.

We have received the following telegram from Baghdad, dated September 1, and bearing the signatures, Jaafar Abu Timman, Al Hashimi, Muzahim Pachachi, and Mahmoud Ramiz:—"Iraq people indignant over wrongs inflicted upon Palestine Arabs, protesting against Balfour Declaration and Mandatory system, and holding them responsible for all mischief."

AN IRAQI'S PARTING.

[Before he left London a few days ago, Shaikh Kadhim Al Dujaily wrote the following lines.—Ed.]

TO MY LONDON FRIENDS.

Oh, my friends, my misfortune is verily great,
And beyond all description my woeful state.
For from you and your country, alas! I must part,
Though this parting indeed is a thing that I hate.
To Baghdad from your London the distance is great,
And one thing alone can my sorrow abate.
'Tis the picture of you in my memory enshrined,
That, recalling your goodness, will soften my fate.

CORRECTIONS.

Our last issue, of August 29, contained some unfortunate misprints. In the article on "The Wailing Wall," line six from bottom, page 228, should read, "and to transfer the property to the Jews (who alone [not also] regarded the Wall as a sacred site." And the reference to the "Tomb of the Rock" should, of course, be to the "Dome of the Rock."

In the article on "The Sixteenth Zionist Congress" a line is missing from the bottom of the first column (page 227). The words "for the ensuing period. In addition £1,000,000 is to be," should have been inserted.

Negotiations are proceeding at Teheran for a permanent treaty between Norway and Persia, the present temporary treaty expiring on September 10.

It was reported last week that vessels arriving in Turkey from Philippeville, Algeria, would be required to undergo medical examination, three cases of plague having occurred in that city.

As the result of an aeroplane owned by the Ukrainian Airways Company falling into the sea near Sochi, Georgia, three passengers were killed, including Fabrizio, the assistant commander of the Caucasian Army.

The Soviet Government has officially expressed its regret at the action of the local authorities in Azerbaijan in publicly flogging peasants. In the neighbourhood of Baku, it is stated, peasants have been so terrorized that they "even endeavour to buy arms quietly to deliver them to the punitive detachments of the militia, and thereby escape flogging."

Book Review

BALKAN FLORA.

"*THE PLANT-LIFE OF THE BALKAN PENINSULA: A Phytogeographical Study.*" By W. R. Turrill, M.Sc. (Lond.) F.L.S. (Oxford: Clarendon Press. 30s. net.)

At first sight a super-royal octavo volume of five hundred pages, well packed with polysyllabic italicized words, dealing with plant geography in the Balkans, might be thought to be of interest to the specialist only; but Mr. Turrill, who is Assistant in the Herbarium and Lecturer in Botany at the Royal Botanic Gardens, Kew, has done much more than produce a work of real value to botanists. Many of his chapters have a far wider interest, and provide fascinating reading not only for those with a personal interest in South-Eastern Europe, but also for all who feel drawn to probe into the relations between vegetation and man. In the author's own words, he has taken the whole Balkan Peninsula as forming a geobotanical unit, and has made it his aim to consider every aspect of the spermatophytic flora and vegetation that could throw light on the composition, origin, relationships, distribution and successional changes of the plant-covering of the area. This task has entailed a study of the geology, soils and climate of the Peninsula, and the classification, with reference to different regions, sixteen different habitats, and different altitudinal zones, of 126 families with 6,530 accepted species. The flora of the Balkan Peninsula is, as, incidentally, the layman who has wandered about the Peninsula might have been led to expect, richer than that of any other area of equal size in Europe. Not only is it prominent for the quantity of species, but the number (1,754) of "endemics" (species whose known distribution is entirely within the boundaries of the Balkan Peninsula) is likewise unique, and amongst these are many relicts of the Tertiary flora. Mr. Turrill points out the close connexion, from a floristic point of view, between the Balkan Peninsula and Asia Minor, and breaks new ground in analysing the relations of the Balkan flora to that of the neighbouring regions of Europe, Asia and Africa and establishing the main lines of plant migration to and from the Peninsula. A particularly interesting chapter is devoted to "The Influence of Man," in which the author deals with the varied human activities that have proved destructive of vegetation. On this subject the author summarizes his conclusions as follows:—

"Man has influenced the natural flora of the Balkan Peninsula from very early historic or even pre-historic times, chiefly in a destructive manner. This has been accomplished at the expense of the high woody vegetation, and has led to a great extension of brushwood communities and those of stony and rocky ground. This has resulted in the expansion, both in species, numbers and in distribution, of many genera suited to such habitats, and a corresponding reduction in the abundance of woodland plants. By draining marshes the marsh and aquatic vegetation has been reduced. New habitats have been provided by agriculture and by the more or less permanent occupation of sites for habitation. Species new to the flora have been introduced by commercial and military activities, and some have spread far and wide."

It is not without interest to learn from the author's preface that his service with the British Salonika Forces was responsible in the first instance for his association with the Balkan Peninsula. He spent most of the year 1917 in Greek Macedonia, and three visits since the War have enabled him to prosecute his studies, to the thoroughness and effectiveness of which this book bears abundant witness.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

British Manufacturers and Indian Tenders.

As manufacturers interested in Indian Government tenders are no doubt aware, the existing system of purchases of India's requirements through the Indian Stores Department in London is shortly to be replaced by purchases direct from Simla or Delhi as the case may be. This means for one thing that all quotations will henceforth have to be in rupees instead of sterling. That, of course, is a small matter, but the difference in the conditions implied in this change is of the greatest significance from the point of view of our manufacturers. It is possible to tender in London direct; it will not be so in regard to India, and only those firms who either have a branch establishment there or are represented in the country will be able to compete for tenders once the change is introduced. It is understood that the new rules for the purchase of stores by Departments of the Central Government, such as the State Railways, and by the minor local Governments will be issued shortly and will come into force one year after their publication. The object in view in this delay of twelve months is to allow those interested to make the necessary preparations for the change. As is well known, the requirements for Government commodities are, broadly speaking, standardised, and only on rare occasions undergo any particular modifications. There was an occasion a couple of years back, it is true, when the requirements for a certain commodity were suddenly altered, and traders were left with large quantities of goods on their hands. But, as I have indicated, that was an exceptional case, and the position in the future will be that manufacturers here will have the various specifications which interest them, and on receipt of a cable from their representative will issue instructions as to tendering. If they are unsuccessful, they will be in a position to have advice as to their prospects on a subsequent occasion. Naturally manufacturers ought to lose no time in making arrangements for representation in India, and it might be well for those who have not yet had experience of dealing direct with officials in India, many of whom have an outlook somewhat different from that of the officials with whom they have hitherto been brought in touch, to have the benefit of the experience which should be at their disposal from old-established British firms in India who know the country and can meet the officials there on common ground.

Roumania's Economic Recovery.

The Roumanian Government under Dr. Maniu deserves full credit for the courageous way in which it is grappling with the problem of placing the country's finances and general economic position on a sound basis. It has a long and difficult furrow to hoe, and its task is not simplified by the existence of a disgruntled Opposition, whose hostility becomes more and more embittered as it watches its hold on the country's economic life gradually being loosened. Fortunately for Roumania, the steps taken to restore the national credit included the appointment of foreign experts as technical advisers to the National Bank of Roumania, and the country has the assurance that the financial policy of the Government is endorsed by disinterested opinion and is no longer in danger of being subordinated to party or personal interests. Without this guarantee it must have proved difficult for the nation to

rise superior to the strain placed upon it. Last year saw one of the worst harvests that Roumania has had for many years. In the early months of this year, just when the State finances were beginning to feel the full effects of that misfortune, the country experienced a long spell of inclement weather, and a serious drop occurred in the revenue. The threatened deficit, however, had to be met; the Government was compelled to adopt a drastic policy, and the country, to its credit, responded well. All duties were increased by at least ten per cent.; taxes were revised, an energetic appeal was made for the payment of arrears, and various economies were introduced. By these means the revenues were brought up to the estimates. In the meantime a thorough overhauling of the financial machinery of the State was initiated, and a more effective control of public expenditure introduced. This year's harvest is well above the average, and it is estimated that the maize crop—an important factor in the purchasing power of the peasantry—will be worth more than double what it was in 1928. The country is not yet out of the wood; but, with its self-respect fully restored, it can face the future with confidence.

Yugoslavia's Shipping.

The various orders placed in Great Britain for new ships for Yugoslavia in recent years have provided a very plain indication of the efforts which are being made to develop that country's mercantile marine. Whatever the facilities which may be available for trade by means of the Yugoslav Free Zone at Salonika, it is only natural that Yugoslavia's attention should be concentrated on the development of her own sea board, and her railway policy has been, and is, directed with that aim in view. According to figures which have just been published, the total tonnage of Yugoslavia's mercantile marine is 302,910, which, of course, excludes recent construction. The number of steamers is 163, of a total tonnage of 170,816; sailing ships number 10,882 of 128,352 tons; while there are 98 sailing boats with notors, their tonnage being 2,824, and also 220 tugs and motor boats of a total tonnage of 928. The principal ports of origin of the steamers are three, Shushak being first with 49, Dubrovnik second with 47, and Split third with 42. It is an interesting indication of the steady development of Yugoslavia's sea-borne trade that since 1923 there has been a marked increase each year in the number of calls made by vessels at the various Yugoslav ports. For 1923 the total was 43,231, for 1924 55,014, for 1925 62,461, for 1926 69,772, for 1927 70,984, and for 1928 84,980. Trade during those years has fluctuated, but if 1926 be omitted (in which year the trade underwent a remarkable increase), then the trend has been steadily upwards, and it is evident that Yugoslavia's policy of port development is in process of justifying itself.

Greek Sterling Loans.

A very satisfactory position is revealed by the figures of the Greek assigned revenues for the first half of the current year. While the total of new revenues for the

Old-Established Company in India, having Direct Connection in London, is prepared to act as Makers' Representative in Tendering against Government Requirements, when Revised System of Purchasing becomes operative.—Particulars from Box 777, The Near East Ltd., 170, Strand, W.C.2.

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms. The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfer on all its Branches, at the exchange of the day.

The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.

Power of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.

The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — SOFIA — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-

growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

period amounted to 423,953,976 drachmæ, a decline of 20,853,270 drachmæ, the yield of the old revenues was 1,623,203,568 drachmæ, an increase of 34,080,963 drachmæ. On this basis the security available for that period for the 7 per cent. Refugee Loan of 1924 is £3,988,024, for the 6 per cent. Stabilisation Loan of 1928 £3,223,852, and for the 6 per cent. Public Works Loan of 1928 £2,717,981. The services of these loans require respectively £461,250, £342,327, and £132,860, so that they are covered more than eight, nine and twenty times respectively. As regards the Public Works it must be pointed out that only a small part of the authorised amount has so far been issued.

Greece and Turkey.

The threatened tariff war between Turkey and Greece will not materialise after all, if the latest indications are confirmed. With the breakdown of the negotiations between the two Governments regarding the exchange of populations, it was announced with a loud flare of trumpets in the Turkish Press that the maximum tariff would at once be imposed on all goods of Greek origin, as a reminder that Turkey was not to be trifled with. Without waiting for any official confirmation of this threat, the Greek Government immediately imposed its own maximum tariff on Turkish goods. It was then that Angora realised that the export of Greek goods to Turkey amounted annually to some £50,000, while Turkish goods to the value of £700,000 were exported to Greece. The Turkish representative in Athens was instructed to explain that there had been a misunderstanding on the part of the Greek Government, as any change in the Customs tariff was a general measure resulting from Turkey's recovery of her fiscal freedom under the Treaty of Lausanne and was not specifically directed against Greece. He proposed that a temporary *modus vivendi* should be established on the lines of the convention between Turkey and Great Britain, until such time as a commercial treaty could be arranged between the two countries.

The Turkish Tariff.

The new Turkish Customs Tariff continues to excite the liveliest interest in business circles here concerned with the Turkish market. A doubt has been raised whether the Turks will actually bring in the Tariff on October 1, which is the appointed date, but the general view is that they will do so. Criticism, it may be pointed out, is directed not only against the increases in duties, but also against the way in which the new Tariff has been drawn up, which is going to lead to many absurdities in practice. I find, by the way, that I probably underestimated the increases, which are said to range from 100 per cent. to seven or eight times that amount on the previous rates. One example will serve to show the nature of the classification. Brass bedsteads and painted bedsteads are classified separately, and the duty on the latter article, the cost of which may be a mere bagatelle, will be four times that on the former. Why this should be so is a question that only the authors of the new tariff are capable of answering.

A Political Move.

The view is widely held among traders that the new Tariff is neither more nor less than a political gesture. It is believed that the object Angora has in view is to have a weapon which will enable it to make a series of commercial agreements with the countries with which it has trade relations. Thus in the case of Great Britain Turkey might bargain for a reduction in the duty on carpets in return for equivalent concessions. The weak point of this from Turkey's point of view is that she has not much to bargain with in the shape of commodities. It is also very certain that, so far as public opinion in Turkey counts for anything, it will be found, as soon as the effects of the new Tariff are appreciated, to be strongly in favour of the modification of duties which must add to the cost of commodities and lower the standard of living.

Coal Competition in the Near East.

To judge by recent developments, the outlook for British coal in the Greek market appears most unpromising. As elsewhere, the predominant factor is the price, and the question of quality carries little weight against that consideration, which, of course, reacts to the detriment of British trade. The Athens Gas Works Company, which formerly used Durham coal, has recently been in the market for its supplies, amounting to 10,000 tons, for the third quarter of the year, and, as on the previous occasions this year, the contract has been given to one of our two rivals in the Near East coal trade. This time it was Turkey: on the two previous occasions Russia was successful, while before that it was also Turkey. Neither Turkish nor Russian coal even approaches to the quality of the British product, and the fact that this particular order goes now to one now to the other may possibly reflect the shortcomings of each in turn. The serious aspect of the matter from the point of view of the British coal trade is that on the last occasion the successful tender was approximately 35 per cent. below the ruling prices for British coal. While that condition prevails, it is hopeless to look for success in this outlet.

COMMENTATOR.

THE PALESTINE RAILWAYS.

The announcement made in *Modern Transport* that Colonel R. B. W. Holmes, General Manager and Chief Engineer of the Palestine Railways, is shortly to resign his post owing to ill-health will be received with much regret by all those who during the last nine years have had experience of the efficiency and courtesy that have characterised the running of the Palestine railway system. Colonel Holmes was appointed Director of Railway Traffic to the Egyptian Expeditionary Force, and in March 1920 became General Manager of the Palestine Military Railways. As in the case of the Egyptian State Railways, the efficient administration of the line that connects Kantara, on the Suez Canal, with Jerusalem and Haifa has meant much to the thousands of Palestine's annual visitors, as well as to the inhabitants of that country.

Cables and Wireless, Ltd., announce that the transfer books of the 54 per cent. cumulative preference stock of this company will be closed from September 16 to 30 inclusive, for the preparation of warrants for the second instalment of the dividend for the half-year ended June 30, payable on September 30.

H.M. Representative at Durazzo reports that various amendments have been made to the Albanian Customs Tariff, resulting, *inter alia*, in reductions of duty on animal hides, cotton yarn and thread, wool yarn, silk and rayon yarn, iron or steel wire, paraffin wax and stearine.

DEVELOPMENTS AT CONSTANTZA.

The following details regarding developments at the port of Constantza are given in the report of Mr. R. J. E. Humphreys on Roumania:—

No detailed report of the working of the port of Constantza during 1928 has yet been issued. A local newspaper has reported, however, that the year ended with a deficit of 40 million lei, and that 50 million lei was expended on new construction, supplies and maintenance. A two-storey warehouse opposite berths 6 and 7, 160 metres long and 20 metres wide, is in process of construction and one half is already occupied. A corrugated iron hangar, 40 metres by 45, has been constructed in front of berth 16 for storage of hides, skins, etc. Four electric three-ton cranes were ordered from a Czechoslovakian firm in 1928 and an order for goods-lifting apparatus for the new two-storey warehouse was placed with an Austrian firm.

A second pipeline for fuel oil has been laid down, and ships can now bunker at berths 37, 38 and A in the petrol basin, and load fuel oil at berths B and C, two ships at the same time. It is hoped to extend this pipeline to serve berths D and E in the course of the next two months, thus making five berths for fuel oil inside the petrol basin. It is also proposed to construct during the present year two pipelines (for lubricating oil and cylinder oil) of 10 inches and 6 inches diameter. Two new pumps will be installed to serve these pipes and will be driven by a Diesel motor of 150 H.P. Three new oil storage reservoirs each of 5,000 cubic metres capacity and three of 3,000 cubic metres capacity have been constructed. A fresh-water pipe to supply vessels in the petrol basin is also in course of construction. The order for one new tug has been placed in Italy. More tugs are really required, as the two at present in commission are of little use.

It has been proposed to widen the entrance to the petrol basin, but the scheme seems to have been abandoned on the ground that the removal of one end of the quay would seriously weaken the remainder of the structure. Reports are current that the port is rapidly becoming inadequate to accommodate the increasing amount of shipping. Several minor collisions occurred during 1928. At present, however, there appears to be no prospect of any additional construction being undertaken in the near future. Apart from improvements in the State controlled oil export installations, three Roumanian oil companies are collaborating in laying down with private capital an 8 inch pipeline for lubricating and refined oils and a 6 inch pipeline for cylinder oil and distilled black oils. These two lines, which are to serve berths A, B and C should be completed by May or June of this year.

The first official forecast of the Indian cotton acreage for 1929-30 shows an area of 15,885,000 acres as against 15,196,000 acres at the same time last season.

It is announced that the Roumanian Minister of Finance has arranged a loan of 1,000,000,000 lei (£1,230,000) with a Dutch firm for the purpose of financing the movement of this year's crops.

Redpath, Brown and Co., Ltd., Edinburgh, have obtained a contract for the steelwork required in the construction of the new locomotive workshops of the Egyptian State Railways at Aba Zaabal.

An American census of motor vehicles gives the following number of inhabitants in different countries of the Near and Middle East per motor vehicle: Aden 113, Cyprus 173, Palestine 207, Greece 350, Syria 541, Egypt 507, Roumania 600, Hijaz 773, Iraq 1,011, Yugoslavia 1,074, Turkey 1,516, Persia 1,068, Bulgaria 2,174, Albania 2,219, India 2,548, Sudan 3,086, Abyssinia 22,545, Afghanistan 23,106, Yaman 71,428, Asir 75,000.

The United States have one motor vehicle to every 4.67 persons in the country.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Surgical Instruments, Etc.—The Prisons Administration, Ministry of the Interior, Cairo, invites tenders for the supply and delivery of surgical instruments and medical supplies. November 9. (D.O.T.)

Scientific Instruments and Clocks.—The Physical Department, Ministry of Public Works, Cairo, invites tenders for the supply and delivery of scientific instruments and clocks. September 30. (D.O.T.)

Steel Furniture.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of steel furniture required for the year 1929-1930. October 7.

TURKEY.

Girders, Etc.—The Administration Générale des Chemins de fer et Ports de l'Etat invites tenders, for the supply of approximately 180 metric tons of girders, 3 tons of bolts and 7 tons of round bars. It is stipulated that the materials shall be manufactured in mild steel complying with German specifications. September 4. (D.O.T.)

Electric Bakehouse.—The Municipality of Smyrna invites tenders for the construction and equipment of a modern electric bakehouse. According to statements in articles which have appeared on the subject in the local Press the municipal authorities anticipate that the total cost of the building and installation will be between £150,000 and £160,000. The latest date for the receipt of tenders has not yet been announced officially, but the Acting British Consul-General at Smyrna is informed that an announcement on this point will be made shortly, and that closing date will, in all probability, be about the middle of September. (D.O.T.)

YUGOSLAVIA.

Leather Belting.—The Acting British Vice-Consul at Skoplye (Ushub), Yugoslavia, reports that a local dealer in motor car accessories desires to be placed in touch with United Kingdom exporters of leather belting for motors and mills. Firms desirous of offering belting of British manufacture can obtain further particulars of this call for tenders upon application to the Department of Overseas Trade, 35, Old Queen Street, London, S.W.1. Reference number B.X. 5639 should be quoted.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.S. Castalia for Bombay (Birkenhead, September 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.S. Stockwell for Calcutta (Birkenhead, September 12); s.s. Mahseer for Calcutta (Birkenhead, September 19).

Bibby Line.—S.S. Oxfordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, September 18).

British India Line.—S.S. Manora for Colombo, Madras, and Calcutta (London, September 7); s.s. Hatimura for Bombay (London, September 7); s.s. Mulbera for Colombo, Madras and Calcutta (London, September 21); s.s. Warfield for Bombay (London, September 21).

Cunard Line.—A steamer for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, Corfu, and Gruz if sufficient inducement (Liverpool, September 28), and in Swansea, October 1; s.s. Bothnia for Gibraltar, Patras, Piræus, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza; also at Volo if sufficient inducement.

Johnston Line.—S.S. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz and Braila (Liverpool, September 7); s.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz and Braila (Liverpool, October 5).

P. and O. Line.—S.S. Novara for Calcutta (London, September 13); s.s. Kaisar-i-Hind for Bombay (London, September 13).

Prince Line.—S.S. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus (London, September 11; s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, September 14).

Ellerman and Papayanni Lines.—S.S. Maronian for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, September 7, Liverpool, September 12; s.s. Roumelian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 14, Swansea, September 14; s.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, September 14, Swansea, September 19; s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, September 19; s.s. Egyptian for Gibraltar*, Algiers*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 28, Swansea, September 28. *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, September 3.

Dealings on the London Stock Exchange have been slightly larger this week, but the volume of business is still restricted. Fears of dearer money, however, have not checked activity in several industrials, and in the gilt-edged sections have been partly off-set by satisfaction at the Hague settlement, which also naturally encouraged dealings in European bonds. Investment sections generally, nevertheless, closed the week dull, although the steady revival in Home Rails, discussed below, continued, North-Eastern attracting chief attention. In the industrial sections, merger rumours, since confirmed, were responsible for activity in margarine issues and in Levers, and in the tobacco group, the British-American Tobacco Co.'s large capital increase assisting the latter. While in monetary circles an early rise in the Bank Rate is regarded as unavoidable, its effects have been largely discounted in the stock markets where the technical position remains strong.

The Hague Settlement.

General satisfaction is naturally felt in the City that the statesmen at The Hague ultimately reached an agreement conceding the British demand, when at one time prospects of a favourable ending to the Conference appeared slight. Mr. Snowden's firm stand has received unexpectedly widespread support in almost all circles, not because of the size of the concessions asked of this country, but because it is realised that while a great step forward was taken by the Young Plan in removing the Reparations problem from the sphere of political controversy, its provisions are by no means certain to stand for their full term, and it was wise to make it clear once and for all that Britain is not prepared to shoulder the whole burden of any future sacrifices that may be called for. At the same time, it must be admitted that Mr. Snowden's methods raised grave fear of the complete breakdown of the Conference, necessarily retarding the progress of European economic recovery. They have, too, had the effect of isolating this country, at any rate temporarily. It is to be hoped that the bitter feelings aroused

will be healed by time, and that the process of financial co-operation between the nations which the monetary history of this summer has shown to be sorely needed will continue.

Revival of Rails.

Recently there has been a quiet revival of interest in British railway stocks, which, if it should later become more general, would cause a considerable appreciation in this class of security. The outstanding events in railway affairs this year have been, first, the considerable and extensive operating economies effected, and, secondly, the very successful way in which motor transport competition is being converted into what will, it is hoped, prove profitable co-operation. While the bulk of the economy re-arrangements have now been completed they are mostly of a permanent nature, and further, if smaller, economies may still be expected. The railway companies have now bought up or have entered into working agreement with a great number of the leading country motor-bus services, and if negotiations now proceeding are successful, practically the whole of the country will be covered. Meanwhile, despite the drag of comparatively low passenger fare receipts, total receipts, including goods and coal, have steadily improved compared with last year. Some uncertainty is caused by the unanimous application of the railway unions to share in these benefits by cancelling the $2\frac{1}{2}$ per cent. wage reduction agreed to about a year ago, but there are good reasons for believing that the matter will be settled peacefully and satisfactorily to both sides. Special attention is being given to L.N.E.R. preferred ordinary, especially in view of a rise of £412,000 in the company's gross receipts in the last eight weeks, compared with the same period last year. If this stock should receive a 2 per cent. dividend, the yield would be £6 10s. per cent. Great Western ordinary are also in quiet demand, and if last year's dividend of 5 per cent. should be raised to 6 per cent. the yield would be almost £7 per cent.

Oil Prospects.

Rumours from America of an output restriction agreement among operators in the new Oklahoma oilfields recently led to a spurt in the oil share market, which has been maintained despite subsequent figures showing an exceptional rise in American oil output. The outlook is, however, as uncertain as ever, and the recent history of oil output co-operation is not encouraging. Meanwhile recent figures have shown that at the half-year America had enough oil in stock to supply the whole world for six months. At present, despite these factors, the oil share market for the moment keeps up a firm showing. In view of the statistical position, and the difficulties of output co-operation among producers, investors would be very well advised to confine their attention to the few leading and well-established oil companies out of the fifty or more whose shares are quoted on the Stock Exchange. That Anglo-Persian, in which the principal shareholder is the British Government, is one of the soundest companies is indicated by the yield of £3 per cent. on its ordinary shares, which last year received a $12\frac{1}{2}$ per cent. dividend. The second cumulative preference, however, can be bought to yield £6 per cent. Burmah Oil ordinaries yield £5 per cent., and the 8 per cent. cumulative preference £6 per cent., while Shell Transport and Trading ordinary give a return of £5 10s. per cent.

A ploughing competition is to be held near Belgrade during the first half of October.

The submarine Proteus, which has been built in France for the Greek Government, has finished her trials at Brest, and delivery was taken of it on August 31 by the Greek Navy. The vessel has a displacement of 780 tons on the surface and 960 tons submerged. She is 220½ ft. long, and has a speed of 14 knots on the surface and 19.6 knots submerged. She has two Diesel-Sulzer engines, in addition to an electric motor. Her crew consists of 41 hands.

THE YUGOSLAV MARKET FOR TRACTORS.

The market for tractors in Yugoslavia, while rather limited at present, offers a fair outlook for the future, (says the American Consul at Belgrade, Mr. W. Percy George, in a recent report). The agrarian reform, undertaken soon after the foundation of the new Kingdom, resulted in the expropriation of the large estates, splitting up the vast holdings, so that at present few large tracts are individually held, except in the timber regions. This fact, together with the poor crops in 1925 and 1926, had a general depressing effect on the prosperity of the farm population, but during the past two years crops have been good, and there has been a growing tendency to translate crop prosperity into better farming conditions by the purchase of better farming equipment.

There are two general types of tractors in use in Yugoslavia, each differing only in ignition. Most of those in use are equipped with magneto ignition, this being the type found on American tractors. The other type of ignition, the glow-head, is found on the German makes. Tractors equipped with glow-head ignition have the advantage of being able to burn lower grade fuels than those using the magneto.

Wheel tractors of the 10-20 horse-power type are almost exclusively used, because the rather small acreage of the Yugoslav farms does not warrant the use of heavier types of tractors found on the larger farms in other countries. Most of the tractors brought into the country are destined for agriculture, with the exception of a few which are used in lumbering operations, thereby precluding the use of heavy or tracklaying tractors.

Tractors equipped for the consumption of low-grade fuel are especially favoured in Yugoslavia because the cost of petrol is excessive. The cheaper grades of tractors also find a ready market, as price and cost of upkeep are the two principal considerations in the expansion of trade. Mechanical features, such as the number of cylinders, transmission drive, fan drive, and the cooling system, make little difference to the Yugoslav buyer. His main consideration, beside the cost and upkeep, is the useful power effectiveness of the tractor. Little attention is paid to the horse-power "rating" of a machine. If a tractor is able to do the required work at the right cost, it is acceptable.

Yugoslav statistics show that on January 1, 1923, there were 625 tractor units in use in the country, exclusive of 126 steam and motor ploughs. Although later statistics are not available as to the number of tractors in use at present, it appears from estimates of the trade that about 1,100 tractors were imported into the country during the period from 1925 to 1928, inclusive. It is believed that the greatest number of these tractors, both those in use in 1923 and those imported since 1925, are of American origin. However, according to United States export figures, only 192 tractors were shipped to Yugoslavia since 1923, so it is likely that most of the American tractors in use entered the country through the United Kingdom, Germany, France, or other adjacent countries.

In 1925 tractor sales were easy, but since that time two poor crop years have changed the situation. Long credits and facilities for payment are asked, which are frequently beyond the resources of the dealers to allow. Credits for tractors sold in Yugoslavia are seldom under 24 months and usually run up to 36 months. Dealers are seldom able to accept such credit terms and accordingly seek easy payment terms or local bank credits for themselves. Yugo-

slav banks offer scant relief because of their extortionate interest rates, which often reach 24 per cent. Open credits are out of the question, and trade acceptances, unless over guaranteed, are not taken by the banks for discount. Therefore, as cash must be had to meet manufacturers' terms, farm mortgages must be resorted to.

It is believed that Yugoslav dealers will be chiefly interested in tractors with small light engines of medium power (7-12 or 14-18 horse-power), with well-rated effective power, at fairly low prices. Tractors are desired for general farm purposes, including field work as well as threshing. There is also a demand for crawler tractors with low consumption of low-grade fuel, and with a speed of not less than 4 or 5 miles per hour in high gear. These machines should be capable of doing work on hilly ground as well as on sandy and boggy soil.

THE INDIAN MARKET.

The Department of Overseas Trade (35 Old Queen Street, London, S.W.1) has drawn attention to the facilities and assistance which H.M.'s Trade Commissioners in India are in a position to give to British manufacturers, or their representatives, visiting that market. The Commissioners are Major R. W. Clarke at Bombay, and Mr. W. D. Montgomery Clarke at Calcutta. They are particularly anxious to meet visitors from the United Kingdom, as with their organisation they are in an excellent position to render considerable assistance either to principals undertaking a special mission of investigation, or to commercial representatives developing the sale of British goods in India. The Department will be pleased to provide letters of introduction to the Commissioners.

If, on the other hand, information is wanted prior to the departure of the principal, or representative, the Indian section of the Department will be glad to discuss the matter fully, with a view to the rendering of such assistance as may be possible, not only as regards general market conditions, but also, if desired, on such points as itinerary, outfit, etc.

H.M.'s Senior Trade Commissioner for India (Mr. T. M. Ainscough, C.B.E.), who is now on leave in the United Kingdom, will be on duty in London and available for interviews with British firms from September 23. Mr. Ainscough will also be making a tour of some of the chief industrial centres in the United Kingdom, in order to consult with and advise United Kingdom firms in connexion with their trade with India.

A Cairo message states that the Egyptian State Railways are inviting tenders for 165,000 tons of coal. The adjudication will be made on December 3.

The National Bank of India has declared an ad interim dividend for the half year ended June 30 last at the rate of 20 per cent. per annum, payable September 14, free of tax.

In accordance with a Law recently enacted in Iraq a foreign judgment may be executed in Iraq by the order of an Iraq court. Any person desiring to execute a foreign judgment must bring action in the Court of First Instance claiming the issue of an order for execution. The application must be accompanied by an authenticated copy of the foreign judgment and the reasons therefor. A regulation has been issued applying the Law to the judgments of the Courts of the United Kingdom. It is necessary for firms in this country to appoint local advocates for the purpose of applying in Iraq for an order for the execution of a judgment obtained here.

(By Our Engineering Correspondent)

Road Improvement.

The Minister of Transport writes to say that he has just received a deputation from the Roads Improvement Association. This, which was introduced by Sir Edward Iliffe, included Col. Crampton and Messrs. Rhys Jeffreys, William Haigh, George Mitchell and Wallace Riche. The deputation represented to the Minister the importance of providing for a comprehensive national programme for the modernisation of the existing road system, as a means not only of meeting the constant development of traffic by road, but also to provide useful employment. The fact that assistance from the Road Fund could be depended upon over a period of years would in itself act as a stimulus to local authorities. On points of detail, attention was drawn to the large amount of work which could be provided in the elimination of dangerous corners and bends, and in the improvement of road junctions, generally. The Minister says that in his reply to the deputation he explained the broad lines of the policy which he had adopted, and was following in the matter of road improvement and development, and pointed out that in many respects it was in harmony with the views which the deputation had expressed. He said that he had issued, earlier in the year, a circular to the larger highway authorities inviting them to submit to him for his consideration, programmes of work on Class I and Class II roads, covering a period of about five years. In addition, he had laid proposals for an extension of the programme of trunk roads reconstruction, so as to deal with a further 550 miles of trunk roads at a total cost of about £9,500,000. He had instructed his officers to give every assistance to local authorities in the preparation of their plans, and there is, he says, no reason why any well considered, carefully thought out, and useful scheme should be held up for lack of assistance from the Road Fund.

That something is to be done of real value, in connexion with road work, is evident, and engineers all over the country are preparing for a general increase of activity in stone getting and breaking, concrete mixing, and tar boiling plants, while steel re-inforcement makers anticipate some considerable increase in trade activity. To mention only a few directions in which it is likely that big schemes will be put in hand, the Wallasey district is to become what the journalist would probably describe as a hive of activity, so far as road making is concerned. A very big scheme has been prepared and approved, and is ready for putting in hand. Big road work is to be done at Morton, Wallasey Village, and New Brighton, and early next year a new road is to be cut from Wallasey to Leasowe, other roads in the vicinity are to be widened and improved, and when these are properly under way, a new road is to be cut across the garden city area to the borough boundary and part of the Birkenhead-Hoylake road is to be remade. Plans have been submitted for a new road from Queensferry Road to the Denbigh Road, so as to by-pass Mold and the putting of some of these schemes in hand will give the engineers concerned an opportunity to sit down and think out routes, etc., for more new roads.

Naturally, there are snags and pitfalls in this road-making business which must be avoided. The larger view of highway location must embrace the arrangement of highway routes so as to permit the use, by through traffic, of roads that will enable that traffic to reach its ultimate destination without the necessity of pursuing the ways in and out of centres of populations that are provided for and likely to be congested by local traffic. It may at first be desirable to visualise the nature of this through traffic. It will be composed of two main classes, private and commercial. The former may be sub-divided

into pleasure and business, but seldom will it be necessary to make that sub-division for the purposes in hand. For all passenger traffic the advantages of by-passing congested areas will lie in the avoidance of danger, the enjoyment of better scenery and the satisfaction of saving time. Some of these advantages are more apparent than real, but that does not and need not trouble the motorist. If these seem to be enjoyed the matter of distance and grades is of little or no consequence.

To the commercial vehicle traffic, by-passes, if they seem to offer relief from congestion, with its delays and dangers, will also appeal if excessive distance and heavy grades are not the price that must be paid. The traffic to be by-passed should be again regarded, so far as a consideration of the route to be adopted is concerned, as divisible another way into at least two parts. One is that where origin and destination are located within a comparatively short radius from the congested centre. Such a fraction will call for a by-pass quite close to the congested area.

A second fraction would be that traffic coming from a considerable distance and headed for a destination at a corresponding distance from and beyond the centre. Such traffic could most readily use a by-pass such a maximum distance out from the centre as would not, in effect, destroy the directness of the main route for this traffic. Other fractions may be conceived, intermediate between the two mentioned, though circumstances will for the present have to decide how many of these fractions shall be provided against and, indeed, whether or not any such fractional consideration shall be attempted.

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to
the Secretary

WESTMINSTER BANK
LIMITED

HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

Low Temperature Carbonisation.

Characteristic of the new scientific methods now being adopted for raw coal is the "K. S. G." low temperature carbonisation plant at New Jersey, U.S.A., which has now started up in full running. It is the largest installation ever set at work, having a throughput of 520 to 720 tons of bituminous coal dust and smalls per 24 hours. The plant is operated by International Combustion Engineering Corporation, who, along with Coal Oil Extraction Ltd., of London, control the "K. S. G." process, and the plant is supplying on long contract, a minimum of 3,000,000 cubic feet of town gas per 24 hours, 535 B.Th.U. per cubic foot, to the Public Service Electric and Gas Company of New Jersey, with normally 4,000,000 cubic feet.

In this case eight standard retorts are included, constructed by the Bethlehem Steel Corporation of the usual design, being a long rotary, slightly inclined, mechanically continuous, externally heated steel cylinder, 72 ft. long and 10 ft. diameter, having an inner cylinder, 85 ft. long and 5 ft. 6 in. diameter, which carries the load. The speed is very slow, one revolution in 90 seconds, with drive by means of suitable gearing, and the complete weight of the finished steel retort is about 160 tons, the outer drum being made in three sections, the two end sections $\frac{3}{4}$ in. thick and the middle section 1 in. thick, with all the seams hammer-welded under watergas heating annealed. Also each seam is re-inforced by means of outer steel bands 2 ft. wide and 13-16 in. thick, rivetted and welded, and the inner drum is on the same lines, but much heavier made of 1 3-16 in. plate.

The small coal enters the retort at one end and travels along the inner cylinder during 1 to 1½ hours, being raised to a temperature of 400 to 570 degrees F. (205 to 300 degrees C.) Then the charge falls out through small apertures into the outer cylinder, which at this point is the hottest zone, about 925 to 1025 degrees F. (495 to 550 degrees C.), while at the same time highly super-heated steam at 850 to 850 degrees F. is blown through the charge to the extent of about 100 to 200 lb. per ton of coal. As a result of this very sudden rise in temperature, combined with steaming, the plastic material in the case of coking coal does not expand unduly, because of the rapidity of carbonisation, giving, therefore, a dense hard, smokeless fuel in mechanically continuous operation. The low temperature carbonisation is completed in another 1 to 1½ hours' travel in the outer cylinder, the temperature slowly declining to about 800 to 900 degrees F. (430 to 485 degrees C.).

Also a certain amount of the low temperature fuel dust and breeze, not over 10 per cent., is blended with the raw coal to prevent the plastic charge sticking, while for heating the setting, producer gas is burnt in a small fire-brick combustion chamber, and the resulting flames and hot gases at 2370 to 3095 degrees F. (1300 to 1700 degrees C.) are diluted not with air, but with about 50 per cent. of the total combustion gases recirculated to give approximately 1100 to 1290 degrees F. (600 to 700 degrees C.) passed round the retort. In this way corrosion and deterioration of the steel cylinder is minimised since no oxygen is present, and all the mixed gases and vapours evolved by the carbonisation pass through a dust extractor, while the hot smokeless fuel is quenched, not by water or steam, but with the aid of cold gas.

The installation at New Jersey includes a large water gas equipment, which normally is used to supply blue water gas, this being mixed with the rich low temperature carbonisation gas to give the minimum of 3,000,000 cubic

feet per 24 hours, 525 B.Th.U. per cubic foot, but usually 4,000,000 cubic feet, as stated. In emergency, however, the water gas plant can be operated with a carburetting installation, using heavy oil and producing the desired amount of town gas direct, independently of the low temperature carbonisation.

There is being used in this installation highly bituminous gas coal dust and smalls, and the average yield per ton is about 3,900 cubic feet of very rich gas (800 B.Th.U. per cubic foot), 5 gallons crude light oil, 30 to 33 gallons tar, and 14½ cwt. (75 per cent.) solid smokeless fuel with 12 per cent. volatile matter. This corresponds, therefore, on maximum operation to an output per 24 hours from the complete plant of 2,500,000 cubic feet rich gas, 2,500 gallons crude oil, 19,000 to 21,000 gallons tar, and 470 tons solid smokeless fuel, and the detailed results of this installation will be awaited with great interest.

COMPANY NOTES AND REPORTS.

EASTERN AND GENERAL SYNDICATE.

The report of the Eastern and General Syndicate covering the period to December 31, 1928, states that the geological expedition referred to in the directors' last report made a thorough examination of the Syndicate's oil concession covering the Bahrein Islands, with encouraging results. Negotiations are in progress for the completion or ratification of certain agreements covering the Bahrein Islands and other oil concessions in Arabia, upon which geological work will also be undertaken. The group associated with the Syndicate in its oil interests holds options from the Syndicate upon all these properties, and in the event of such options being exercised the Syndicate would receive a sum of cash for each property taken up and would retain an interest in the properties in the form of a royalty upon oil won.

The Syndicate is without funds, and money has been advanced from time to time by directors in order to protect its interests in Arabia and to enable the above-mentioned negotiations to be carried on. The directors therefore recommend that 40,000 of the unissued ordinary shares of 5s. each be converted into 40,000 preference shares, to be offered to shareholders at par *pro rata* to existing holdings, any balance of preference shares not taken up by shareholders to be available for subscription otherwise, at the directors' discretion. Meeting, 19, St. Swithin's Lane, E.C., September 6, at noon.

The Bucharest International Wireless Exhibition was opened on September 1, and will continue until September 20.

H.E. Sir Abdul Hamid Suliman Pasha, Minister of Communications, who has been on leave in Europe, sailed for Egypt on August 29.

The first anniversary of the proclamation of the monarchy and of the accession of King Zogu I. was celebrated throughout Albania on September 1.

Three aeroplanes of the Turkish Air Force flew last week from Eskişehir to Smyrna to take part in the victory celebrations. When about to land one crashed, and its two pilots were killed.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 28:—

Egyptian Futures.

Sakel Contract.—During the sessions immediately following our last report very little alteration in values has occurred, trading throughout this period being confined to unimportant transactions without any particular features of interest developing. Over the week-end, cables from Egypt reporting damage to the crops began to be circulated; this evidently had the combined effect of forcing short covering and encouraging speculative support, as a progressive rise has since been recorded in Alexandria. The upward movement has so far only enlisted a moderate amount of support as far as our own contract is concerned, as conservative sources in Egypt, whilst admitting that the crop is backward, do not so far confirm that any material damage has yet taken place. As a result, the local market has again lost ground in comparison with ruling values in Alexandria, the November/November options now showing Liverpool at 36 points discount, quite apart from the necessary shipping charges. A slight improvement in the trade demand has been noticeable during the past few days; there is not, however, the slightest disposition on the part of spinners to anticipate the course of values, and it appears probable that the present general policy of covering only immediate requirements will be continued until the yarn demand furnishes the necessary encouragement. With the Sakel crop now passing through its most critical stage, periodical scares will probably be experienced during the course of the next few weeks; this being the case, we consider that any operations on the "short" side are inadvisable; rather we would prefer to advise taking advantage of any set-backs to enter into conservative purchases with the idea of being content to secure a moderate profit on any upward swing.

Uppers Contract.—A decided change in sentiment has taken place in this market during the past week, due principally to less favourable crop advices and fears of damage through floods; in addition, it is stated in certain quarters that the ginning yield of early lots is well below last year's high standard. The effect of the above reports has resulted in a fair amount of "short" covering which has only been practicable at consistent appreciation in values, the advance on the week amounting to 40 to 45 points for near and 45 to 38 points for distant positions. Only a moderate amount of trade support has been in evidence, and the trade generally are awaiting further developments before entering into new crop commitments. Our premium over the American contract has widened sharply during the past few days. Reports of the American staple crop are rather conflicting, and should the less satisfactory of these be confirmed later, prevailing ideas of Upper Egyptian values will have to be revised.

Egyptian Spot.

A fairly steady business has been transacted in this department during the past week, but it must be confessed that so far the generally anticipated activity that was to follow the reopening of the mills has not as yet materialised. During the past few days values have stiffened on less promising crop reports.

Sakels have only been in moderate request, the inferior qualities and cotton ranging in value from 50 to 150 on forming the bulk of the business. The top grades have been neglected.

Uppers still constitute the mainstay of the reported sales, with the demand continuing to concentrate on the medium qualities. The basis tends to stiffen, and good stapled lots are becoming increasingly difficult to pick up.

Pilion has only been dealt in occasionally, but full premiums have been paid for high grade staple lots.

Nahda and White have received little attention from buyers.

Sudan Sakel continues in fair request without change in basis.

Tokar Sakel continues neglected.

C.i.f. business has expanded slightly for near shipments; very little interest and few contracts have been put through in new crop cotton. Forwardings to the trade last week amount to 3,589 bales Egyptian and 1,381 bales Sudan. Estimated sales for the week 2,100 bales Egyptian and 400 bales Sudan Sakel. Quotations of Sakel are advanced 35 to 55 points, and those of Upper and Pilion 37 and 40 points respectively. F.G.F. Sakel to-day 17.05d. F.G.F. Upper to-day 11.50d. F.G.F. Pilion to-day 12.60d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended August 22, state:—

Since our last report the futures market has been quiet, although fluctuations have been irregular; closing prices to-day were at about the same levels as last week. The week's summary of movements is as follows:—Sakellaridis: November, 32.05 dollars, unchanged; January, 32.45 dollars, unchanged; March, 32.90 dollars, 0.03 dollars down. Ashmouni: October, 20.52 dollars, 0.06 dollars up; December, 20.99 dollars, 0.07 dollars up; February, 21.42 dollars, 0.06 dollars up; April, 21.95 dollars, 0.20 dollars up; June, 22.23 dollars, 0.04 dollars up.

Sakel business effected this week has not been of the same volume as during the last few weeks, although each session has seen rather marked fluctuations in prices. The resumption of work in Lancashire on Monday last affected our market favourably, but the absence

of any revival in the demand as a result of this resumption of work upset the calculations of our operators. The trade has taken but little interest in the market, and the undecided tone of New York is causing local operators to hesitate before taking a decided view of the future course of prices.

News from up-country on the whole continues to indicate satisfactory conditions. It is true the crop is backward, but, for the time being at least, the anxiety shown by the bull element has no justification. The Government offered for sale on Wednesday last 993 bales Sakel, of which 195 bales found buyers. The Sakel/Uppers Straddle (Nov./Oct.) this week stands at 1,153 points against 1,159 points last week and 1,328 points at this time last year.

Uppers.—Nothing special to report; this market has continued to follow New York closely. Some hedging, against fixations of up-country purchases, has been noted, but, being of only moderate volume, it was easily absorbed by the purchases of the trade. Prospects are for rather quiet markets in the near future.

The Ashmouni/American Straddle (Oct./Oct.) this week stands at 222 points against 233 points last week and 442 points at this time last year.

The week's receipts amount to 404 kantars against exports, 60,749 kantars; the stock in Alexandria stands at 1,379,474 kantars.

Spot.—During the past week, in spite of a slight improvement in the demand, there has been no great improvement shown in the estimate Sakellaridis 1,760 bales, Ashmouni and Zagora 1,320 bales, actual business done. Of the week's total sales of 3,400 bales we Pilion 300 bales, and White 20 bales.

Sakellaridis.—Here the demand has moved down on to the grades Good Fair/Fully Good Fair and below, and cotton has been taken up regardless of staple. Cotton around Fully Good Fair with decent staple is now not on offer; the better grades have been neglected. Premiums are unchanged.

Ashmouni and Zagora.—Here the demand still remains for cotton grading Fully Good Fair up to Good. There has been a small inquiry for Good Fair/Fully Good Fair. Good premiums have been paid but offerings were of cotton of very poor quality.

Pilion.—There has been a moderate demand for good staple Pilion at last week's premiums.

Other Varieties have been almost entirely neglected, with the exception of a small demand for White.

Crop, 1929.—Reports on the progress of the crop continue to be satisfactory. In Lower Egypt the temperature during the past week has been about normal and the humidity has not been excessive. Boll shedding due to "Nadua" and damage caused by the pink boll

THE LIVERPOOL COTTON EXCHANGE.

Liverpool Cotton Association

LIVERPOOL

The Greatest Spot Cotton Market in the World

MEMBERS OF THIS ASSOCIATION
OFFER FACILITIES FOR THE SALE,
PURCHASE AND FINANCE OF
EVERY GROWTH OF COTTON.

The World follows Liverpool Cotton Quotations daily.

GROWERS AND SHIPPERS SHOULD
SEND THEIR COTTON TO LIVERPOOL.

All information may be obtained from the Secretary

the purchasing power of the public, are factors which restrict any activity beyond actual requirements. Sales proved difficult to effect, and comprise: Amalias 42s., Patras 45s. to 46s., Gulf 46s. to 47s., Smalls 42s. to 44s., and Vostizza 49s. to 55s. A few sales of new crop Pyrgos are reported at 35s. 9d. down to 35s. c.i.f. September shipment. Quotations: Pyrgos 41s. 6d., Amalias and Patras 42s. to 43s., Gulf 42s. to 47s., Vostizza 49s. to 55s.

Sultanas.

Smyrna.—We finish the season with bare boards and stock practically exhausted. New crop promises well, and is of good quality. Not much interest has been taken in forward business of the new crop, the trade feeling that there is apparently no urgent need to anticipate the season's requirements. A little of good average quality was disposed of at 26s. to 27s. c.i.f. September shipment.

Cretans.—Fine quality on overland samples met a moderate inquiry for early shipment on the basis of 52s. to 65s. c.i.f.

Figs.

Genuines.—New crop have been sold at 22s. 6d. c.i.f. September, and 21s. 9d. c.i.f. October shipment.

The Egyptian Minister of Communications has under consideration a scheme for a direct railway line between Suez and Cairo.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended August 10 amounted to £E8,302, making the total from April 1 £E104,306 as against £E91,147 for the corresponding period of the previous year.

Notes of the Week.

Palestine and the Inquiry.

The announcement by the Colonial Office last week that a Commission of Inquiry into the immediate causes which led to the recent outbreak in Palestine is being appointed was made in a form which appears to have dissatisfied many observers. Jewish opinion, which is, of course, admirably, or, at any rate, very thoroughly, organised, had expressed the hope that the Commission should not only be presided over by a non-official, but should also comprehend the whole situation in Palestine, including, most notably, the conduct and the attitude of the Palestine Administration towards the establishment of a "Jewish National Home." That hope has been rudely shattered. What Arabs, whose propaganda is far less well organised than that of the Jews, think of the Commission is not yet discernible. Other less directly interested circles seemed to believe it desirable that the whole policy of His Majesty's Government in Palestine should be considered: it was widely thought that fresh light should be thrown on the question whether or not the establishment in Palestine of a "Jewish National Home" was really practicable. But, as we pointed out last week, there was never any possibility of this: it could be taken for granted from the first that no fundamental alteration in the British Mandate would be considered. The lines of what is called "major policy" have been irrevocably laid down. The significant passage, however, in the announcement of the formation of a Commission of Inquiry lies in these words: "When its (the Commission's) Report has been received it will be a matter of earnest consideration by His Majesty's Government along what lines within the terms of the Mandate future policy in Palestine should be directed." These words may refer either to the progress of the Arabs towards self-government, or to the establishment of a "Jewish National Home," or to both. Of the former it would not be profitable to write at this moment, but in regard to the latter, it is well to remember that hitherto the only restrictions (other than those imposed by the Mandate itself) upon the "upbuilding" of a "Jewish National Home" have been economic restrictions. Whether to these restrictions, arising from the limited

absorbent power of the Holy Land, there may be added political restrictions, arising from the hostility of the Arabs and the consequent necessity for retaining a British garrison in Palestine, remains to be seen. Another incalculable element in the situation derives from the attitude of the Jews themselves. Will there be on the part of Zionists and of non-Zionists a more determined desire to send and to subsidise immigrants, and will such immigrants increasingly wish to flow into Palestine? Two opposite opinions on this vital question are freely heard. All that can safely be said at the moment is that Zionists appear to have seized this critical occasion, not as an excuse for relinquishing effort, but rather as a spur to compelling the Mandatory Power to further measures in their favour.

Imperfect News Services.

A minor point, but one that is of importance to the general public, is the fact that so much of the "news" that has been cabled from Palestine during the disturbances has been untrustworthy. To select but a few "stories" which have since been exploded or at least modified:—Heavy fighting reported north of Beisan was but an unimportant skirmish with a few *Badawin*; a severe engagement by Beersheba, in which British troops suffered many casualties, did not take place at all; of the mutilations and other usual horrors, which the Jews attributed to the Arabs, the British doctors could find no trace; and who ever in history heard of an Arab's putting poison into coffee? Some of these fancies can be treated at their proper value at once by the informed reader, but others are much more plausible, and, therefore, alarming. A special obligation rests on the non-party sources of information in Palestine, for the effect of falsehoods upon world opinion is very much greater than that of their subsequent denial. It is quite obvious that all the enemies of Great Britain are looking with glee upon the situation in Palestine and are making capital out of it. Nor is this *Schadenfreude* confined to the Mandatory Power's enemies; among her friends also is visible an inward joy that things have run to this pitch in the Holy Land. All the more reason, therefore, for letting the truth and truth alone be emitted from Palestine.

The Position of the Arabs.

The military situation in Palestine appears to be tranquil—the result of very considerable efficiency and tact upon the part of the military authorities—and, if present appearances are not deceptive, now is the time when the real needs of friendship with the majority of the population in Palestine may be sown anew. It is inevitable, one supposes, that any journal which at this juncture would appeal for fair play for the Arabs will be dubbed pro-Arab. But the label pro-this or pro-that is an indiscriminating sign, and we must let those who would be bill-stickers indulge their wasteful fancies. So to control the present situation as not vitally to offend the Arab people—and, deny the possibility of the realisation of the Pan-Arab dream how you will, you cannot deny the fact that everywhere the vivid sympathy of Arabs is with their co-religionists in Palestine—is a capital British interest, and it is precisely in Imperial interests that we would counsel that the broadest possible view be taken of this outbreak in Palestine. Of the Jews we would say the same as of the Arabs but for the self-evident fact that they already have in abundance the ear of the Government: whatever action the Mandatory Power may take in the Holy Land, it will not be performed in ignorance of the Jewish aspect of the case. It will be the immediate task of Sir Walter Shaw and of his three Parliamentary colleagues to penetrate through the mass of exaggeration on either side, and it is to be hoped that their Report will not only satisfy the domestic position, but will also be recognised by impartial observers abroad as a model of fair British judgment. For, we repeat, the problem is a problem that far transcends our domestic worries; by the manner in which extrication is effected from this Arab-Jewish conflict in Palestine the statesmanship of the British Government, the recent success of which in other matters has been loudly acclaimed, may well be judged. The order of events, then, is, first, the re-establishment of order—which we trust has now been virtually accomplished; next, the report upon the causes of the outbreak, including an opinion on whether or not it was preconcerted; and thirdly, the steps taken by the Mandatory physician, consequent upon the diagnosis of the specialist Commission, to heal the wound. For it must never be forgotten that Great Britain's prime duty in Palestine is now to heal the breach between Arab and Jew, not to emphasise antagonism between the two races whom, presumably, it still hopes one day to fuse into a single whole.

Comments Helpful and Unhelpful.

He who came to this critical problem of Palestine with no special knowledge, and relied upon advice offered him in the Press or by public speakers, would surely feel not a little puzzled. He would learn from the Prime Minister, for instance, that this outbreak was in no wise due to racial conflict between Arab and Jew—a remark that was quite meaningless, unless it referred to the undoubted fact that Jews co-operate admirably with and are perfectly tolerated by Arabs in communities where they have no special pretensions; he would learn from Mr. Ittamar Ben-Avi, Editor of the *Palestine Weekly*, that the whole trouble has sprung from the anti-Jewishness of various officials of the Palestine Administration—Mr. Luke, Mr. Richmond, Mr. Mills, Mr. Keith-Roach, and so on ("Let the London Government know that no peace will ever be possible in Jerusalem so long as 'Richmond and Company' are within its bounds"); he would learn from the Arab Executive that the High Commissioner and his subordinates are biased in favour of Zionism; or he would learn from the *Jewish Chronicle* that the outbreak might have been due ("I by no means for my part reject its possibility") to a "deep-laid plot on the part of some of the Government officials whereby England shall, while yet staying in Palestine, have an excuse for dropping the promise of helping in the formation of the Jewish National Home." If such an observer, however, had some knowledge of the Palestinian situation, he might be tempted to

summarise such comments as these in three sentences; that ignorance of the real situation in the Holy Land exists in an alarming degree in certain high quarters; that the Jews are implacably opposed to, and are resolved to get rid of, certain highly placed officials in the Palestine Administration; and that the Arabs have a considerable distrust in the justice of the British Government, believing it to be prejudiced by contact with Zionists. In spite of the last two conclusions, however, we would venture upon the speculation that there will be no resignations from the Palestine Administration. . . . As for the attempt made to represent the whole Arab outbreak as anti-British rather than anti-Jewish, it is so childish as not to be worth consideration. It is disproved by the casualty lists alone.

What Provoked the Arabs?

In a revealing letter to *The Times* last week, Mr. Vladimir Jabotinsky, the gifted Revisionist leader, explained his own position towards the establishment in Palestine of a "Jewish National Home," in dissenting from the statement made by the Jerusalem Correspondent of *The Times* that "the present outbreak is also due to the open demands of Jabotinsky and the Revisionists far more than the Mandate demanded." Now we do not intend here to discuss what provoked the Arabs to the actions which have been witnessed in Palestine, but a disclaimer must be made against Mr. Jabotinsky's charge, in the letter referred to, that THE NEAR EAST AND INDIA saw in the solemnities attending the enlargement of the Jewish Agency "a provocation of the Arabs." If by this Mr. Jabotinsky infers that we connected the enlargement of the Jewish Agency with the probable shedding of blood in Palestine, he is entirely mistaken. Does he mean anything else? To state that the extension of the Jewish Agency would not be regarded by the Arabs with blind and unheeding eyes was, we should have thought, an obviously safe prophecy. Consider the position. Owing to an economic crisis in Palestine and to constantly dwindling funds at the disposal of Zionist authorities, the Arabs are led to suppose that their original fears of Jewish predominance are illusory. But redouble the Jewish effort, collect a million pounds sterling annually for Jewish work in Palestine, and instantly the old fear must begin to haunt the Arab. But Mr. Jabotinsky will look in vain in our columns for the expression of any opposition, in the interests of the Arabs, to the Extended Jewish Agency. That enlargement was, in the circumstances, probably an inevitable development; but must it not in itself have instigated a redoubling of effort on the part of the Arabs? The point is so patent that one cannot easily understand the Revisionist leader's resenting its expression. To judge by certain of the letters published since the outbreak in Palestine in the Jewish interest, the Zionist movement may well pray to be saved from some of its friends.

The Hague and the Balkans.

British satisfaction with the results of The Hague Conference has its counterpart in the Balkans, where both Yugoslavia and Greece are well pleased with the outcome of the deliberations. For Greece the principle has been laid down that she shall receive in reparations the sums required to meet her actual War debts, whereas under the Young Plan there promised to be a substantial deficiency. At the same time she will be given the funds required to defray the awards of the Arbitral Tribunal for War losses incurred by Greek nationals. Yugoslavia has also improved upon the Young Plan; she retains her original percentage of reparations, and the proportion of the conditional payments due to her from Germany is considerably reduced.

An Aegean Bogy.

Ever since it was announced, with the inevitable flourish of trumpets, that the reconditioning of the Yavouz (ex-Goeben) was nearing completion, the Turkish and the Greek Press have done their best to work up a big naval

scare in each country. With the Yavouz able once more to ride the high seas—an exploit of which it has not apparently been capable since the Armistice—the Turkish Press saw the Republic definitely established as mistress of the Ægean, and indiscreetly allowed itself to contemplate the ease with which the islands belonging to Greece that are near the Asia Minor coast might be recovered. The eagerness with which these lucubrations were seized upon in Greece as a normal preliminary to a declaration of war by Turkey must have rejoiced the souls of many armament firms in different countries, but was not without its embarrassment for the Greek Government. In deference to popular clamour the possibility of making use of the Salamis, the unfortunate battleship, ordered by Greece before the War, which has remained ever since in the German yard where it was built, because the Greeks had no use for it and could not pay for it, was re-considered, and a Greek mission has been visiting the Vulcan works to decide whether the ship could be profitably brought up to date at a cost that Greece could meet. The Greek Government, however, has already agreed upon a naval programme suited to Greek requirements, and a vessel that calls for a complement of over a thousand men, it may be supposed, has no part in that programme, even if Greece were anxious to spend some three millions of pounds in bringing the Salamis up to date. M. Venizelos's personal authority has, accordingly, been enlisted to damp down the excitement of the Greek Press, which threatens to blaze forth whenever the Turkish Government frowns afresh. Greece, it is to be hoped, will not allow her economic and financial rehabilitation to be stultified by war scares regarding Turkey. It is fair to the Turkish Government to say that it has shown no disposition of late to lend itself to any policies of adventure, but, on the contrary, has displayed a lively appreciation of the advantages of peace. If, however, madness should seize Angora, and Greece become the victim of a war of aggression, she would probably find whole-hearted reliance on the League of Nations a cheaper and more effective safeguard than indulgence in a rivalry with Turkey in naval armaments.

Greece's British-Trained Police.

The practice of borrowing military and naval missions from the Great Powers has been widely adopted by smaller States, but Greece broke new ground when, in 1918, she engaged a British Police Mission, under Sir Frederick Halliday, to train a Greek police force for the chief towns. The experiment has been completely successful, and the only possible rival in South-Eastern Europe to the Greek policeman was for a period his Turkish colleague in Constantinople during the Allied occupation. The latter has now "passed," and the Greek force responsible for the policing of Athens, the Piræus, Patras and Corfu stands alone for general efficiency in the Balkan Peninsula. With the return to power of M. Venizelos the rivalry that had been allowed, quite unnecessarily, to grow up between the police and the gendarmerie, and which had even been fostered under the dictatorship of General Pangalos, has been removed. The two forces have their clearly defined spheres, and the possibility of overlapping will now be more effectually obviated by the decision to extend the jurisdiction of the police to the immediate neighbourhood of Athens, including Old Phaleron, Maroussi and Kephissia. Greece can be said to be the only country in the Balkans where the British conception of the policeman as the friend, guardian and guide of the public, as well as a deterrent to evil-doers, has taken root.

INDIAN NOTES.

The Coastal Traffic Reservation Bill.

The Associated Chambers of Commerce of India and Ceylon have once more drawn attention to the danger of economic discrimination against non-Indian mercantile and industrial interests. When giving evidence before

the Statutory Commission, the Chambers strongly pressed for the insertion in the new Indian Constitution of safeguards against this possible risk to British interests. And they are wise to bring the matter forward again now, seeing that the Commission is understood to be approaching the final stages of its inquiry. Moreover, the Coastal Traffic Reservation Bill, to which reference has been previously made in THE NEAR EAST AND INDIA, has recently advanced a stage further in the Indian Legislature. This measure is a striking example of the class of legislation against which the Chambers ask for protection. It is open to the gravest objections in principle; and, although it has now been revised and amended by a large Select Committee of the Assembly, these objections have not been removed, nor even lessened. One objectionable feature of the Bill is that it discriminates between the citizens of the various parts of the British Empire in respect of the coastal traffic of India. Another is that it contemplates expropriation, in that it seeks to restrict the traffic to Indian-controlled vessels after it has been in operation for five years. The existing European controlled shipping companies are to be eliminated at the end of that period; and none but Indian-controlled vessels are to engage in the traffic thereafter. As is indicated in another column, the Chambers have sent copies of the amended Bill to Members of Parliament and to the leading commercial and industrial bodies in this country. There is, they say, every indication that it will be passed by the Assembly, for it is enthusiastically supported by the extreme Nationalists, while the Moderates will hesitate to oppose any measure which claims to promote national aspirations. The Bill will convince any unbiased person that the danger which the Associated Chambers apprehend is a real danger, and that it is one against which protection should be afforded. It is to be hoped, therefore, that the action which they have taken will be strongly supported, and we notice with satisfaction in this connexion that the Liverpool Chamber of Commerce has already moved in that direction.

Development of the Indian Salt Industry.

About seventy per cent. of the very large quantity of salt consumed in India is manufactured in the country, the remaining thirty per cent. being imported. The areas which depend chiefly on the imported article are Bengal, Bihar, Assam, and a large part of Burma. The people of these territories like fine white crushed salt, and they do not take readily to the Bombay or Madras variety. The question of so developing the Indian industry as to supply their requirements has been talked about for a long time.

EGYPT'S CHOICE.

If Nahas Pasha's speech on the last day of August before a mass meeting of his followers represents the Wafd's considered attitude towards the proposals for an Anglo-Egyptian treaty, it is to be feared that Egypt stands confronted with a difficult situation. By refusing to discuss the proffered terms until they are presented before Parliament, the Wafdist leader announced in effect that, with the Wafd, party considerations come first and will not be subordinated to any potential good of the country. The studied silence with which the proposals have been met, in contrast with the immediate denunciation that greeted the Sarwat Treaty of 1927, shows that the Wafd is unable to take serious exception to the new terms. If, however, it declares its acceptance of the proposed treaty, it fears that its endorsement will redound to the credit of Mahmoud Pasha, who negotiated it with the British Government, and will weaken its own position in the country. It contends, therefore, that the Egyptian people should pass no judgment on the proposed terms, but should leave it to an elected Parliament to say whether the terms shall be accepted or rejected. The full significance of this claim deserves to be understood. Before Parliament can meet, there must be elections, and elections pre-suppose that the suffrages of the electorate will be invited on one or more definite issues. It would be thought that the most vital issue before the country at the present time was the proposed settlement of Anglo-Egyptian relations. It is inconceivable that this issue should be awaiting the judgment of the Egyptian people, and yet should not be submitted to them at a general election. Elections held under such conditions could not fail to be a farce; but it may be worth while considering how the farce will play into the hands of the Wafd. It is a matter of common notoriety that, until Mahmoud Pasha was appointed Prime Minister a little more than a year ago, and suspended the Constitution, the great bulk of the Egyptian electorate had been dragooned or bemused into support of the Wafd. Nine-tenths of the Egyptian electorate neither reads nor writes; if that section is told by someone, arrogating to himself sufficient authority, to shout "Saad," it shouts "Saad"; if told with equal assurance to shout "Mahmoud," it will no less vociferously acclaim the latter. Under the prestige of Zaghloul Pasha the Wafd was able to convert itself from the Committee that its name implies to a well-organised party, capable in such a country as Egypt of sweeping any general election by the mere force of its name, whether it went through the pretence of submitting any issue to the electorate or not. Although the Wafd's influence has been in abeyance for a year, the Egyptian people retains its characteristics, and the Wafd is free to resume its former practices. Not content, however, with its advantages, it stipulates that its political opponents, who have never sought to rival its methods of political organisation, shall not submit to the electorate their trump card—the proposed settlement of the Anglo-Egyptian question. The Wafd is to be free to subject the present Administration to every form of mis-

representation, on the lines of Nahas Pasha's speech at the Wafd meeting, but the Government of Mahmoud Pasha is not to be allowed to use the most telling argument in its defence.

If a general election should be held on the lines laid down by the Wafd, there can be little doubt as to the subsequent course of events in Egypt. For reasons already stated, the Wafd would be returned with an overwhelming majority. It is more than probable that it will be afraid to reject the proposed treaty summarily, and after impassioned debates and attempts at modification, the terms will be accepted under protest. Thereafter the Wafd remains in power, and the consequences have to be considered. Its past record suggests that, even if it signed the treaty with Great Britain, it would resume its agitation for better terms, and Egypt would soon be back again where it was in the spring of 1928. Apart from this baiting of Great Britain, the Wafd has no clearly defined policy: it stands for no recognised principles of government for the introduction of which it claims that Egypt is ripe; it has not even troubled to elaborate an administrative programme. Political power in countries new to constitutional practice is apt to be sought by most politicians for the sake of office. The Wafd, it is to be feared, is the paladin of this doctrine in Egypt. With it office takes the form of a reward for political services, without regard to the administrative capacity of the recipient. Government under such conditions is bound to be inefficient, if it is not also corrupt. In a country such as Egypt, with a considerable foreign population, apart, altogether, from the special relationship with Great Britain, an incompetent Government sooner or later must lead to international trouble, and the peculiar circumstances of Egypt's position should be sufficiently well-known to make even the most unpatriotic of its citizens hesitate before they deliberately expose their country to this fate, with the almost certain withdrawal of all the advantages that it has now gained for itself.

A dispassionate view of the situation suggests that the Wafd needs to be saved from itself, just as much as Egypt from the Wafd. A return to power at this stage must almost inevitably sweep the Wafdist off their feet and commit them to countless follies that the better amongst them know that they will be able to avoid in time. Already some of the wiser heads that sympathised at first with the bold stand for Egyptian rights have left the Party in disgust at policy and tactics that are divorced from all intelligence or common sense. The process was being continued, but will now have been arrested by the prospect of office which the Wafd holds out before its followers. How then is Egypt to obtain the required popular sanction of the proposed treaty with Great Britain without plunging back into the vortex from which she was rescued only last year? One method that may be suggested is the Referendum, adjusted, as it must needs be, to the capacity of largely illiterate people. If a verdict in favour of the treaty were reached by means of a Referendum, no subsequent Parliament would be likely to take upon itself to reverse that judgment. The present truce in party politics could thus be continued, and Egypt would have the full period of three years prescribed for her in which to familiarize herself with the fundamentals of self-government and to bring home to her people that the essence of constitutionalism is government in the interests of the people as a whole and not in the interests of a few office-seekers. It is to be hoped that the present Egyptian Government will be left to make its choice of methods of implementing the treaty proposals, free from outside pressure. If there is reason to believe that the return of the Wafd to power must inevitably plunge Egypt once more into the chaos from which Mahmoud Pasha rescued her in June, 1928, no steps should be taken which render such a return possible. For a year now the country has undergone the very necessary experience of self-discipline, and Nahas Pasha is responsible for making it evident to the world at large that the process has not yet been continued long enough.

'The Near and Middle East

From Our Own Correspondents.

Alexandria, August 30.

The Premier's Speech.

The long-awaited speech by Mahmoud Pasha was delivered in the presence of a highly enthusiastic audience of about twelve thousand last Saturday. In some ways it was a disappointment, but in others it was a revelation. Those who expected a definite statement of the Prime Minister's intentions with regard to the coming election, went empty away. That is not surprising, for Mahmoud Pasha had been in the country just over twenty-four hours, and the matter is of such gravity as to need the most complete study, both by the Prime Minister and by his colleagues. In other respects, however, the speech was so much above what one has been led to expect from an Egyptian statesman, that it furnished additional proof, in the estimation of many observers, that Mahmoud Pasha is the first real statesman Egypt has yet produced. Absolutely free from any self-praise, party appeal or abuse of opponents, the speech was a clear and comprehensive explanation of the proposals. It made an honest and sincere appeal to the nation to study the question solely in the light of the nation's best interests, and it concluded with a remarkable gesture of friendship towards the Wafd. It would have been so easy for Mahmoud Pasha, the leader of the smaller party, to have come back and boasted that he had succeeded in obtaining for Egypt proposals which the Opposition has been vainly striving for during the last ten years. It would, perhaps, have been a legitimate boast, and one which most Englishmen could easily forgive, for the attitude of the Wafd has become intolerable. By his scrupulous avoidance of anything calculated to stir up bad feeling or to gain any personal triumph, Mahmoud Pasha has added to the conviction, which is steadily gaining ground, that the interests of Great Britain in Egypt could be considered reasonably safe as long as he is at the head of the Government.

The Wafd's Attitude.

The Wafd, on the other hand, have once more exhibited the cloven hoof, and their attitude since Mahmoud Pasha's speech has proved that whatever the rest of Egypt may be prepared to do for the good of their country, the Wafd will do nothing but make inflammatory party speeches, and attack, with the utmost bitterness, those who are endeavouring to solve a very difficult problem. It is a strange commentary on the cries of the Wafd emissaries in London that Mahmoud Pasha was a ruthless dictator and had even suppressed the Opposition Press, that *Al Balagh*, the Wafd organ, had been attacking the Prime Minister, daily, in terms which would be quite sufficient to bring about the paper's immediate suppression in any country but Egypt.

The Wafd have obtained permission to hold a meeting

to-morrow in a large open space by the house of the late Zaghloul Pasha, and Nahas Pasha will then address his party. It is certain, however, that nothing will be said about the actual proposals, for at a private meeting of the Wafdist Parliamentary Committee explicit instructions were given that the proposals were on no condition to be discussed by members of the Wafd, even among themselves. Nahas Pasha will presumably repeat his previous speeches, i.e., that nothing must be done until the Wafd is back in power, and also repeat his former attacks on Mahmoud Pasha.

The gravity of the present situation cannot be too deeply emphasised. Unless the electoral law is modified, and there is a feeling that such an action would not meet with the approval of the Labour Government, the Wafd must be returned once again. That the Labour Government may have been taken in by the plausible representatives of the Wafd in London would not be surprising, but that some of the Labour Party are still, especially the members of the I.L.P., determined that the Wafd must be put back into power, because such an action would coincide with their democratic principles, is incomprehensible. Any one who has lived for any length of time in Egypt would tell them what the Wafd are: that they are a body of professional politicians who have consistently exhibited, and are still exhibiting, bitterly anti-British tendencies: that they are entirely unscrupulous and have gained their large following by wild promises and boastful speeches about how they will turn the hated English out of Egypt. They have retained their hold because the fellah is philosophical, and if he repeatedly fails to see any signs of the Wafd's promises maturing, he uses the traditional Egyptian words *Malcesh Bukra*, and continues to till his land, until such time as one of the Wafd leaders comes along and tells him that he must join in some kind of a demonstration—which he does, blindly.

A High Nile.

The river this year is higher than it has been for very many seasons, and some fears have been expressed by the authorities that serious damage may be done to the river banks. All precautions are being taken, however, and the Minister of Public Works has recalled from leave all engineers and technical officials, so that their services may be utilised in this connexion, and he has also re-engaged temporarily about twenty officials who had retired on pension. He himself has proceeded up river on a launch and is directing damming operations. The river has badly overflowed its banks in Tanta Province and over 500 feddans of cotton fields are inundated. It was thought at one time that three villages in the neighbourhood would also be flooded, but strenuous efforts have saved them. It is a long time since there have been no complaints about the lack of water for irrigation, and everybody, except the officials recalled from leave, is happy.

ABYSSINIA.

Addis Ababa, August 15.

A Social Summary.

In view of the unavoidably long time that has elapsed since the last letter from Addis Ababa it may be permissible to summarise the chief social news during the interval.

On June 21, the new British Minister, Sir Sidney Barton, arrived from China to take up his duties. Lady Barton, accompanied by two daughters, is expected to arrive here at the end of August. M. Janssen has also arrived to take up his appointment as Belgian Minister.

A Thanksgiving Service for King George's recovery

¹Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Rumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

was held at the English Church on July 7. It was attended by the British Minister, and, including the Legation Staff, there were present in all thirty-two British subjects, by no means a bad muster for this small community.

The great ecclesiastical event for Abyssinia has been the arrival of the new Abuna, Aha Kyrillos, who was duly enthroned at Gorgis Church by King Tafari and four Abyssinian Bishops.

Addis Ababa has received a visit from the French Navy in the persons of officers and men of the cruiser *Dusquesne*, who were entertained by the French Minister and by officials of the Abyssinian Government.

Railway Matters.

On the night of July 25-26 a railway bridge at kilometre 64 from Dire Dowa was washed or blown away, to the serious disorganisation of both passenger and goods traffic. The Railway Company pleads *force majeure* and accepts no responsibility for the carriage of goods across the break, leaving it to traders to organise their own transport to and from the nearest stations, which are, incidentally, seven kilometres apart. Fortunately, it is the quietest period of the year, when the volume of goods traffic is small, but it is inconceivable that the Railway Company should not itself have made arrangements. It is expected that goods traffic will be resumed within a month, but this is an optimistic view, for material is short.

Railway freight rates are again being increased as from October 1, the excuse being that owing to the decline in the value of the dollar the rate in francs must be increased. The general foreign view is that the rates are quite high enough, and that it is shortsighted policy to increase them, as this only makes it more difficult for Abyssinian produce to compete against produce from other parts of the world. Instead of trade being fostered, it is bled at every turn.

Rains are with us now in earnest, and the express train between here and Jibouti has been suspended owing to the risk involved in the possibility of some part of the lines being washed away.

Abyssinia's Representatives Abroad.

Abyssinian Ministers have left for their respective posts in London, Paris, Berlin and Rome. It must be presumed that the Abyssinian Government is convinced of the necessity for these appointments, but it is difficult for many who are well versed in Abyssinian affairs not to wonder whether the money spent on these Legations could not be employed to much greater advantage, as far as the nation is concerned, in the construction of roads and the general improvement of communications as well as in some attempt at sanitation in the capital and principal towns.

Aviation in Abyssinia.

The Government has ordered aeroplanes from France and Germany, and their arrival by air from Jibouti is expected at any time in the immediate future. It would seem as if the omission of any order for British machines was due to failure to push British interests in the matter adequately—surely in the circumstances a cause for special regret.

Passports.

Passport regulations are being enforced to a point that it cannot be easy to justify. If a resident of Addis Ababa leaves by train for Modjo, a few hours' journey, he is expected to carry his passport with him and to produce it on his return to Addis Ababa, notwithstanding the fact that he has not left Abyssinia. If passports are examined at the Frontier Station, there should be no need for troubling passengers at Addis Ababa. Also, if passports are required to be handed over for endorsement, a receipt for the passport by a responsible official—not an irresponsible and illiterate *zebaniah*—should be given. It is understood that the Legations are moving in the matter in order to have these regulations altered.

CYPRUS.

Nicosia, August 21.

The Delegation to London.

It has appeared likely that the project of a Greek delegation to London would be shipwrecked owing to some differences of opinion among leaders. On the other hand, there has been strong insistence on the part of the Press and many persons, that it should be carried out. It has been contended that, if only delegates chosen by the members of Council were to go, there would be danger lest an impression might be created in London that they did not represent Cypriot Greek feeling as a whole, but only that of a party or clique. After further consultation with the Archbishop, it has been decided that the memorial should be forwarded to the Governor, Sir Ronald Storrs—whose support is asked for—for transmission; and that the question of the deputation, as before constituted, to seek an interview should be again discussed. It matters but little, of course, how the document is to reach the Colonial Office, as it can only meet with the same reception that has been so often given to previous petitions. It has been decided that a final meeting shall be held on August 22, at which the Abbot of Kykkou Monastery, as well as the Holy Synod, will meet the members of Council, and arrive at decisions regarding the mission.

It would be strange if there were not some lukewarmness on the part of some persons of leading, seeing how emphatic have been the replies of the Secretaries of State. It might be added that the present moment is particularly inopportune, since any loosening of the bonds between the Empire and Egypt would increase the importance of the island. It is no doubt the accession to power of the Labour Party that inspires these fresh hopes.

A Martyr's Memorial.

Much interest is taken by the Greek community in the arrangements for a mausoleum to be placed in the precincts of the Phaneromeni Church at Nicosia, to the memory of Greek Cypriots who were slain, or fell, in the rising and war of 1821. It is to be constructed of Pentelic marble from Athens, at a cost of £1,000 including freight to Cyprus, and the work has already been taken in hand. In a memorial to be erected, at Athens, to the memory of unknown soldiers, towards the construction of which cubic blocks of stone are to be contributed by various Greek communities in foreign parts, it is proposed that Cyprus should take part. The Greeks may send blocks of compact limestone, or Cyprus "marble," from the Kyrenia district, or of alabaster, of which there is at least one quarry in the island.

The Greek Centenary Celebrations.

Steps are also being taken to determine how best Greeks of Cyprus may participate in the Hellenic National Centenary Celebration of Greek Independence next year at Athens. It is understood that Mr. N. K. Laniti, M.L.C., a leading Greek of Limassol, is in consultation at Athens with the central organising committees, and with the Cyprus Archbishop, who will in due course issue communications on the subject.

Ex-King Husain.

The ex-King Husain has expressed through the Greek Press his sincere thanks to the people of Cyprus for their universally kind expression of condolence on the loss of his wife. His sons, Abdullah, Amir of Trans-Jordan, and the Amir Ali, who came to Limassol to bid farewell to Sir Ronald Storrs, returned together to Amman.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

PALESTINE: AN INQUIRY.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Events in Palestine should recall England to her moral destiny, which has been somewhat in abeyance since the Treaty of Versailles.

The great community of Palestine Arabs, by a series of unprecedented and fundamental injustices, have been driven to a desperation which may well shock the civilised world. For this the policy of "Divide and Rule" is mainly responsible.

We may well ask what has driven a great and gifted people to so terrible an extremity. Although they represent the large majority of the people of Palestine, they are unrepresented in the Administration of their country; their economic rights are not safeguarded; 30,000 of their energetic sons, temporarily absent from Palestine, have been deprived of Palestinian Nationality which is freely acquired by Russian and European Jews.

Add to this: the tampering with the *status quo* declared inviolable by the British Government and the League of Nations, and the raising at the Zionist Congress of the Wailing Wall as a political issue, and the formation of a powerful Jewish Agency, described as a great diplomatic machine entrusted by the League of Nations to all Jewry for the upbuilding of Palestine and with access to the British Government—and you have a series of events that might well inspire not only Arab but also world anxiety.

When the Arab appeals for his rights in Jerusalem he is told the decision is at the Colonial Office, and when his rights are contested here it is said the decision is with the Palestine Government. Strong groups of British members of both Houses of Parliament, realising the treatment of the Arabs, have made continuous and strong efforts since 1922 to redress the Arab wrongs.

The Arabs' inalienable rights are being suppressed, and they do not know where justice is to be looked for, nor whether in the future they are to be ruled by the League of Nations or by the Jewish Agency or by both.

The National League now calls for a drastic English inquiry in full daylight into the Arab grievances. It appeals to all Churches of every denomination and organised bodies throughout the British Empire, to see fair play to this people, taught to believe in our sense of justice, to call for the ceasing of bombing of innocent villages by a Labour Government, one of whose *raison d'être* is the rights of small nationalities. The Arabs are our national Allies in the Middle East, and surely a wave of moral indignation will rise through the civilised world and the cry go out "remedy the injustice." Since David slew Goliath, the truth may still slay the Dragon of a spurious Internationalism, which is what the Arab really fears.—I am, etc.,

MARGARET MILNE FARQUHARSON.

The National League, St. James's Street, London, S.W.1., August 31.

The Turkish Government has approved the appointment of M. Polychroniades as Greek Minister in Angora.

NEWS IN BRIEF.

Two cases of plague were reported last week at the Piræus.

The Athens police last week arrested three members of the editorial staff of a newspaper called *Communist Youth*.

A permanent treaty of friendship between Persia and Italy was signed in Teheran on September 5.

The Roumanian Government is negotiating with a French firm for the purchase of 100 new aeroplanes for the Air Force.

Lord Melchett intends to visit Palestine at an early opportunity to study the situation.

M. Demetrovitch, a supporter of the Pribitchevitch group, has been appointed Minister of Trade in Yugoslavia in succession to M. Mazhuranitch, who recently resigned.

The King of Yugoslavia on September 3 signed a decree putting into force the Traffic in Opium Convention, signed under the auspices of the League of Nations at Geneva in 1925.

By order of the Turkish Government the newspaper *Politia*, which is published in Greece, is not allowed to be brought into Turkey on account of its anti-Turkish pronouncements.

"Journey's End" is being played at the Kotopouli Theatre in Athens with success in a Greek translation by Mr. George Syriotes, the London Correspondent of the *Eleutheron Béma*.

The trial by court-martial began at the beginning of the month in Bucharest of 47 persons charged with being implicated in a conspiracy against the Roumanian Government and Constitution earlier this year.

The delegations to the Congress of the Federation of Inter-Allied Ex-Servicemen (F.I.D.A.C.), which have been meeting in Belgrade at the Great Hall of the University, were received at the Royal Palace by King Alexander.

The party of French ex-Servicemen who saw service on the Salonika front in the French armies fighting in that theatre of war, and who went on a pilgrimage to the battlefields, left Belgrade on September 3.

Prince Firooz Mirza, the former Minister of Finance in the Persian Government, who was arrested in June on suspicion of treasonable conduct in connexion with the revolt in Fars, has been released, but has not been reinstated in office.

The Chief Justice of Palestine, Mr. M. F. J. McDonnell, the Attorney-General, Mr. Bentwich, and the Commandant of Police, Mr. A. S. Mavrogordato, returned at the end of last week to Jerusalem from leave.

Signor Mussolini sent a telegram last week to King Zogu of Albania on the occasion of the anniversary of His Majesty's accession to the throne. In acknowledging Signor Mussolini's greetings, King Zogu referred to the "indissolubility of the link" which binds together the two allied and friendly nations.

A new law dealing with debtors entered into force in Turkey on September 4. Whereas before persons who failed to pay their debts regularly were imprisoned, under the new law offences of this description may not be punished with imprisonment. All those serving sentences for debt have been released.

Sir Robert Hamilton, Liberal M.P. for Orkney and Shetland, has been invited by the Government to join the Palestine Commission of Inquiry. The Commission will consist of Sir Walter Shaw, Chairman, and three M.P.s, selected one from each of the three political parties.

It was originally stated from Jerusalem that Mr. Harold Wiener, the Jewish scholar who was shot dead by an Arab on August 23, had bequeathed £10,000 to Muslim institutions. It is now learned, however, that neither in Mr. Wiener's will nor in a codicil dated January, 1927, is there any bequest to any Muslim institution.

As a means of cutting Budget expenses the Roumanian Ministry of War is reported to be drafting a Bill reducing the period of service with the colours from two to one year. It has also issued an order that in future the word "war" is on no account to be employed in connexion with the Ministry, which will be called the Ministry for the Army.

The death occurred, after a long illness, at Zagreb on September 3, at the age of 72, of M. Hinkovitch, a well-known Croatian writer and politician. After the formation of the kingdom of the Serbs, Croats, and Slovenes, M. Hinkovitch took up politics and joined the ranks of the Opposition. During his illness last spring King Alexander showed a personal interest in his condition and sent him money in view of his reduced circumstances. M. Hinkovitch was exiled under the Austro-Hungarian régime, and lived for some time in London.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 22.

The Congress Presidentship.

The Congress and Lahore have provided a not very edifying spectacle. The heading in my newspaper was, "Uproar at a Congress Meeting." There does seem to have been some roaring; there were lions present. First, at a meeting of the Provincial Congress Committee, Mr. Gandhi's name was recommended for the presidentship of the Congress next year by nineteen votes against fifteen, the indication being that the opposition was strong. The young lions have felt their strength, and are out to use it. The meeting of the Provincial Committee was followed by a meeting of the Reception Committee. "At the outset," one report reads, "there were uproarious scenes, which indicated that the election of the Reception Committee would follow party lines." The Congress is not one party, but at least two; two undisciplined parties caring less and less for discipline. How loosely men in India may belong to their parties this shows. It is an open secret that many Congress members of the Councils, while quite prepared to resign their seats on a signal given, have privately made up their minds to stand again immediately for election under some other ticket. A party will have adherents, as long as it "pays" men to belong to it; that is, if belonging to it ensures election to a Council. If it does not ensure that, farewell to it. You might think that such a fact as that the Congress party secured an easy majority of the contested seats in Bengal at the last election, proves Bengal to be Congress-minded politically. It does not; it only proves that in Bengal most people think that the Congress party is the one it "pays" to belong to.

Mr. Gandhi Says "No."

At the meeting of the Reception Committee, when the uproar had subsided, when they had done quarrelling as to whom should be allowed to vote; when it had been decided that those might vote who had paid their subscriptions, if only at the last moment, and had signed the form long enough before the meeting for the ink to be dry, Mr. Gandhi was then proposed for the presidentship. His name had been recommended by ten Provincial Committees, Mr. Vallabhai Patel's by five, Mr. Jawaharlal Nehru's by three, and Mr. Kelkar's by one. No one present opposed, and the President declared Mr. Gandhi elected. Then followed another interval of uproar. Mr. Gandhi has since telegraphed, regretting his inability to accept the presidentship. He has not been well. His doctor is of opinion that he is not suffering from any disease, but that his enthusiasm for dietetic experiments has caused inflammation of the intestines. One hopes he will be guided in future by men who understand the working of the human digestion better. The Congress—will it suffer itself to be guided, and has the guide—it is to be Mr. Jawaharlal Nehru probably—any wisdom in him? The enthusiasm of the Congress for other than dietetic experiments, independence and the rest, has led to very serious inflammation of what may be thought of as its intestines.

The Gandhi-Jinnah Meeting.

The meeting between Mr. Gandhi and Mr. Jinnah, of which I wrote last week, called forth an interesting statement from Moulvi Muhammad Yakub, the Deputy President of the Assembly. He said: "I fully appreciate Mrs. Naidu's and Mahatma Gandhi's solicitude to bring about a settlement between the two great communities in India, which brought about the Mahatmaji's interview with Mr. Jinnah, whose genuine nationalistic tendencies and earnestness make him prominently suitable (words, all of those, used with only half a sense of what they mean) to be approached to open negotiations. But Mr. Kelkar's recent statement on the point makes one feel rather pessimistic and hopeless as to the success of the effort. It is

obvious that the Hindu Mahasabha, and no other individual or organisation in the country, including the Indian National Congress, is, nowadays, in a position to represent the general Hindu point of view and enter into negotiations on their behalf. It must be said to the credit of Mr. Kelkar that he has so plainly and unequivocally explained the Mahasabha attitude on the subject, which, to put it in a nutshell, is that even the slightest alteration, addition to, or modification of, the Nehru Report, as it now stands, cannot be tolerated by that body."

The Communal Problem.

I have quoted Lord Irwin on the communal problem; I have written about it myself. Here is another opinion that of *Liberty*: "We are perfectly aware that there is much uphill work to be done, and that there are extremists on both sides who will refuse to be easily dislodged from their position. The recent meeting of a section of Muhammadans under the presidency of Suleman Haji Qassam Mitha, where the most extravagant demands were made on behalf of the Muslim community, leads us to suspect that the forces of blind and unpatriotic communalism have not yet quite exhausted themselves, and that perhaps there will always be a small but vocal minority of communalists who, even for the sake of national freedom, will not be able to outgrow their narrow and perverted ideas. That adequate safeguards should be provided in any constitution for the protection of Muslim religion, culture, personal laws and education, every true nationalist will admit only too gladly, but when in the name of communal rights attempts are made to introduce communal domination and a division of India on communal lines, every nationalist will feel that to agree to these demands even for the sake of unity is to strike at the roots of nationalism itself."

The Indian States.

I have repeatedly called attention to the way that in India publicists will say things that they know and all the world knows are not true, but are only what people wish to heaven was true. Pandit Motilal Nehru recently addressed a long open letter to the Muslim community. He made a statement in it of that kind I refer to. No door was closed, he said. You might have believed it. The Deputy President, who knows, and who for the moment has no reason to wish to be seen to know—this is what he says: "... no door that, according to Pandit Motilal, was not closed, is as a matter of fact *not* locked and sealed." Another statement of the kind is this one, taken from the columns of *The Hindu*: "The ideal of a United States of India must appeal as much to the Indian Princes as to British Indian politicians." All the world knows that the fact is that the ideal does not appeal to the Princes one jot, not a jot. What could make it appeal to them? Why should they want their capitals filled with muddled-thinking, rubbish-speaking British Indian politicians? If you rope in a number of new Provinces, there would be so many more Councils, and so a better chance of your being elected to one of them.

Jute Mill Strikes.

It is devoutly to be hoped that the sad years of strikes in the Bombay textile industry are not destined to be followed by as long and as distracted a dispute in the Bengal Jute industry. At the end of last week 240,000 workers were reported to be out on strike. Then a provisional settlement was reached, and the mills were all to resume work on Monday. Many did, or all did; but some had to close down again in a day or two, and others closed down that were not in the beginning among those affected. It has been difficult to keep pace with events or, if the names of the mills are not familiar names, to remember which mills were still working and which not, on any particular day.

Miscellaneous News.

The news of the bursting of the Shyok dam—a glacier thrust across a tributary of the Indus—will have

been cabled to your side, with the report of the safety of the Attock bridge, for which there had been fears. The fuller accounts, not yet to hand, will be worth reading. Attention may also be called to a monograph on the inscriptions of the later Western Chalukyas, published by the Nizam's Government. The author is Mr. C. Krishnama Charlu, Assistant Superintendent for Epigraphy, Southern Circle, Madras. It has matter of great interest, especially for students of ancient Indian education. To pass to present-day education, much interest has been aroused by two new appointments at Aligarh University; those of Mr. Syed Ross Masood as Vice-Chancellor and Mr. A. E. Horne as Pro-Vice-Chancellor. Mr. Horne is laying down his present post, the Principalship of Patna College. He is not expected to find his new post a bed of roses. It is to be hoped that the public concerned will not render unavailing his and Mr. Ross Masood's efforts to make Aligarh University an institution more worthy of its great founder.

RACIAL DISCRIMINATION IN INDIAN TRADE.

At the last annual general meeting of the Associated Chambers of Commerce of Indian and Ceylon, it was unanimously resolved that "this Association claims on grounds alike of India's interests and of common justice that the Indian legislatures should not, by legislation or taxation indicating discrimination of a racial or communal character, imperil the existence or development of, or otherwise cause prejudice to, any commercial or industrial interests in India." The most striking practical example of the danger apprehended in this resolution is the Coastal Traffic Reservation Bill, to which attention has been directed on more than one occasion recently in THE NEAR EAST AND INDIA. The Bill is now before the Indian Legislature and has been recently scrutinised and amended by a Select Committee of that body. Similar Bills have been under consideration in previous years but were not proceeded with. The present Bill, though in some respects an improvement upon its predecessors, retains undiminished the objectionable principle of racial discrimination. In one of its clauses there is, in effect, a proposal to take over in five years an industry which has been built up on generations of experience by the greatest sea-faring nation in the world.

Seeing that, with the approaching conclusion of the work of the Statutory Commission, Indian affairs are likely to be very much to the front in the near future, the Associated Chambers have taken further action in this important question. They have addressed a letter to all Members of Parliament, to the leading Chambers of Commerce, the Federation of British Industries, the Chamber of Shipping, the London Stock Exchange, Lloyds and other important public bodies in this country. In the course of their letter the Chambers remark: "As His Excellency the Viceroy observed in his inaugural address at the meeting of the Associated Chambers, to which allusion has already been made, the ambition that India should have her own mercantile marine and that the ships of that mercantile marine should be officered as well as manned by Indians is not an unworthy ambition.

The problem, as His Excellency saw it, was whether India could be helped to realise this ambition without resort to methods of confiscation. British and Indian capital have often co-operated in the past for India's commercial and industrial advancement, and there is no reason why they should not do so in the future. But at present the aim seems to be to supplant British effort rather than to supplement it. Now that the extremest forms of nationalism are likely to have greater rein the interests of India and Great Britain alike demand certain constitutional safeguards or the economic structure of both countries will be seriously imperilled. This Association has endeavoured to impress on Sir John Simon and his colleagues the necessity of providing such safeguards in

the future Constitution, and, at Sir John's invitation, it has forwarded to the Statutory Commission certain draft clauses illustrating what is required.

It must not be thought that the members of this Association are unsympathetic to Indian economic aspirations; on the contrary they recognise that constitutional advance must be accompanied by an increasing control of the industrial development of the country and to this end they are in favour of Indians taking a predominant part in directing new industries. They are also not opposed to Indians being afforded increasing opportunities of participating in existing industries which have been built up by European enterprise. But schemes such as that contemplated by the Coastal Traffic Reservation Bill, which amount to wholesale expropriation of established interests can do nothing but alienate the sympathies of India's well-wishers, doing irreparable harm to the credit of the country and depriving it of the British capital, initiative and technical experience, which will probably prove indispensable factors in India's industrial development for many years to come.

It is with the object of making clear the dangers to both India and England of nationalism unrestrained and the necessity of providing adequate safeguards, that this circular has been written. This Association does not believe that Indian and British interests are irreconcilable; on the contrary, it holds that the trade and prosperity of the two countries are and must be interdependent. That trade is not merely a matter of capitalistic interests—ultimately it means the prosperity and happiness of the working man, Indian and English alike. It can be furthered by mutual help but endangered by racial antipathies. It should not be beyond the power of British and Indian statesmanship to evolve a working arrangement, which, while satisfying legitimate Indian aspirations, shall protect British interests from the unjust attacks of the extremist politicians."

THE VICEROY AND THE PRESIDENT OF THE ASSEMBLY.

As was anticipated in the THE NEAR EAST AND INDIA last week, nothing came of the Swarajist resolution protesting against the enactment of the new rule with reference to the powers of the President of the Legislative Assembly. At the re-opening of the Assembly on September 2, Mr. Patel, the President, made a statement on the subject. He had interpreted Lord Irwin's speech of April 12 as an unconstitutional criticism of, and censure on, his ruling with reference to the Public Safety Bill. And this view he had put forward in a letter to the Viceroy, which letter, together with Lord Irwin's reply, he read to the Assembly. Lord Irwin made it abundantly clear in his reply that it was no part of his intention, either to criticise the President's ruling or to censure it; and he regretted that his words should have been so interpreted. He agreed that within the House it is the President, subject to the House itself in established form, who is the sole and final authority in all matters relating to order. After reading the letters Mr. Patel said he was convinced that it was not the wish of the Viceroy to establish a precedent derogatory to the dignity of the

Old-Established Company in India, having Direct Connection in London, is prepared to act as Makers' Representative in Tendering against Government Requirements, when Revised System of Purchasing becomes operative.—Particulars from Box 777, The Near East Ltd., 170, Strand, W.C.2.

Assembly, and that he regarded the incident as closed. On September 3, the Swarajist resolution was brought forward, and during the debate the Law Member intimated that the Government were prepared to promise that, in future, except in an emergency, they would approach the Assembly for its opinion before enacting a rule or an amendment to the rules. This undertaking the mover of the resolution accepted, and withdrew his motion. After a statement made by the President it would surely have been ridiculous to have passed a resolution one clause of which referred to "the part played by His Excellency, Lord Irwin, in the enactment of this rule" as highly reprehensible. Moreover, it must have been realised by the members, certainly by the non-Swarajists, that the Government of India have the power to amend the rules. For according to the provisions of the Government of India Act of 1919, rules governing the procedure of the Assembly are to be framed by the Governor General in Council and approved by the Secretary of State in Council.

THE FOREIGN TRADE OF BENGAL.

Unlike most Indian official returns the annual Report on the Maritime Trade of Bengal is always published promptly. It appears in June or July of each year, and it relates to the year ending on the last day of March immediately preceding. In accordance with this commendable practice the report for the year ended March 31, 1929, has now been issued, and, as is customary, it presents a concise statistical account of the external trade of the Presidency during the twelve months. It records a year of steady progress, but one not entirely free from difficulty. The total value of the foreign trade compared very favourably with that of any one of the few years immediately preceding. It exceeded Rs.237½ crores—exports aggregating about Rs.146 crores, and imports being over Rs.91½ crores.

As regards imports the trade in cotton piece goods was disappointing, as both quantity and value declined. And, what is more, there is said to be some reason to believe that the methods which were adopted to tide over a period of difficulty have resulted in the permanent relinquishment of some part of the piece-goods trade of Calcutta in favour of Karachi. Sugar was imported during the year on a record scale, in consequence of a fall in price brought about by over-production. And an outstanding feature of the year was the importation of very large quantities of Australian and Canadian wheat, the value of the imports of grain going up to Rs.517 lakhs as compared with only Rs. 44 lakhs in the preceding year. The wheat was required to make good a deficiency in the wheat crop of Northern India.

As regards exports, jute was prosperous, tea did moderately well, and lac put up a record. The value of the raw and manufactured jute exported from Calcutta was Rs.87½ crores; and it is stated in the report that the local jute mills made profits amounting to Rs.7½ crores. Jute manufactured goods represented no less than 41.5 per cent., and raw jute 22.47 per cent. of the total exports of merchandise from Calcutta. These figures are convincing evidence of the enormous importance of the jute trade to Bengal. Tea comes next to jute, but it is on a much more modest scale. It represented 12.22 per cent. of the total, and the value of the Calcutta exports was about Rs.16½ crores. Although, as it is mentioned above, tea did moderately well, the year was the least satisfactory for the trade since 1921-22. The total production was in excess of that of 1927; and the average price per pound in the Calcutta auctions was lower than in any one of the four preceding years. The demand for lac was exceptionally heavy. Not only was the raw material—stick and seed lac—exported in increasing quantities, but the exports of shellac and button lac were the highest on record in respect of both quantity and value. The aggregate value of all the lac ex-

ported was close upon Rs.8½ crores, the equivalent of 6.19 per cent. of the total exports of merchandise of all descriptions.

The report shows that trade with the British Possessions and Dependencies improved considerably during the year. The value of the imports rose from Rs.4½ crores to Rs.9½ crores, a development which appears to have been largely due to the Canadian and Australian wheat purchases, to which reference has been already made. Exports increased from Rs. 19 1-10 crores to Rs.19½ crores. Australia took a record number of jute bags, and Canada more jute cloth and tea than in the preceding year. Trade with the United Kingdom suffered a reduction to some extent. Imports fell from Rs.47½ crores to Rs. 44½ crores and exports from Rs.33½ crores to Rs.26½ crores. The largest drop, so far as regards imports, was in cotton piece-goods; and the fall in the price of teas was responsible for the greater part of the decline in exports. After the British Empire, the United States are the biggest buyers of Indian products; and last year was no exception to this rule. The value of the exports to the United States was Rs.3,196 lakhs, while the imports amounted to only Rs.527 lakhs. Germany came next, taking exports worth Rs.1,122 lakhs, and sending imports to the extent of Rs.413 lakhs.

[At 1s. 6d. per rupee a lakh of rupees is equivalent to £7,500 and a crore of rupees to £750,000.]

INDIAN NOTES.

(Continued from page 267)

And it was carefully investigated by the Indian Taxation Inquiry Committee, of 1924-25, who expressed the opinion that it was desirable to make India self-supporting in the matter of salt supply. This was really only another way of saying that the consuming market of Bengal ought to be captured by salt of Indian manufacture. The Committee examined the transport and other difficulties against which Indian salt has to contend in its competition with the imported article; and they also considered the feasibility of manufacturing in India salt of the quality required in Bengal. It seemed to them that the problem was one which might be examined by the Tariff Board, and they made a recommendation to that effect. The Government of India did not act upon this recommendation at the time. The Inquiry Committee had made a number of other proposals concerning salt, and these, together with the recommendation, were remitted by the Government to the Central Board of Revenue. After an inquiry the Board reported that there was no *prima facie* case for a reference to the Tariff Board; and this decision the Government accepted. But the Legislative Assembly then intervened, some of the members expressing a strong opinion in favour of a Tariff Board investigation. In view of this the Government went into the matter again, and the Finance Member visited Karachi—the chief manufacturing centre—to examine certain new developments. As a result the Government of India have now directed the Tariff Board to undertake an inquiry. The Board will consider whether it is desirable in the national interest that steps should be taken to encourage the production in India of salt suitable for consumption in those markets which are now supplied from abroad, and, if so, what measures should be taken to that end. This is a satisfactory outcome of the matter, as it is certainly desirable that India should supply her own salt requirements. Presumably there is now a reasonable prospect of the manufacture at Karachi of the quality consumed in Bengal; and if this new industry can be developed without any sensible increase of price to the consumers it will be all to the good.

Indian Food Products.

The appeal which the High Commissioner for India made the other day for the extended use of Indian products in this country will be, we hope, productive of good

results. India being essentially an agricultural country, her exports consist chiefly of raw materials, food products, and partly manufactured goods. The more of these goods that she can sell, the greater will be the quantity of manufactured goods that she will be able to buy. Nowadays, as Sir Atul Chatterjee pointed out, Great Britain's share of the import trade of India is less than it used to be; and if the United Kingdom bought more Indian produce there would be a better chance of getting the percentages back to their previous level. He mentioned rice in particular, and we agree that the merits of Indian rice ought to be more widely known here. One third—close upon 80 million acres—of the cultivated area of British India, including Burma, is devoted to rice. India is responsible for half the rice produced in the world and, given a larger demand, she could grow still more. It is remarkable that notwithstanding the efforts which are being made to promote Empire trade, Great Britain is to-day buying a smaller quantity of Indian rice than she formerly bought. India does not supply more than one third of the total quantity consumed in this country, although she could easily supply the whole demand if encouraged to do so. The High Commissioner was probably right when he expressed his belief that this unsatisfactory state of things is due mainly to ignorance. It is not a question of quality, for Indian rice is as good as any in the world. This is not, however, so well known as it ought to be; and we hope, therefore, that the Empire Marketing Board will persist in their efforts to popularise the Indian grain. Sir Atul Chatterjee referred also to tea and coffee as Indian products of which larger quantities might be bought by Great Britain. We entirely agree, although as regards tea, the consumption here is already high. But there does not appear to us to be any reason why India should not get her full share, as an Empire product, of any further development. For this reason we observed with regret a few months ago that the Indian tea industry had been unsuccessful in its efforts to have the provisions of the Merchandise Marks Act of 1926 put into operation as regards foreign teas. For in respect of tea, as in respect of other products, the consumer ought to be placed in possession of such information as will enable him to decide for himself whether he will buy Empire grown, or foreign tea or any blend of the two. This information, which is now withheld from him, would have been at his disposal, if the marking order asked for by the Indian industry had been granted.

Proposed Bengal Waterways.

A few weeks ago we mentioned a proposal which had been put forward in Calcutta, that the Government of India should institute a comprehensive inquiry into the problem of the conservation and development of the waterways of India. The idea underlying the proposal was that the care of the waterways should be transferred from the local Governments to the Central Government. As we pointed out at the time, there is much to be said in favour of this transfer, as the existing system of control by the local Governments has not been successful. In fact, the condition of some of the Bengal rivers is deplorable. The attitude of the Government of India

towards the proposed change of policy is not yet known. But in the meantime it is satisfactory to see that the Government of Bengal have decided upon a forward move. For many years past it has been urged by commercial interests in Bengal that there should be established by Government a Waterways Trust to exercise control over the great river systems of Bengal, Assam, Bihar, and Orissa, and the United Provinces. The difficulties created by the absence of any common system of conservancy, and by the fact that the several local Governments may hold divergent views regarding river control, have always been apparent. And it was suggested, in order to remedy these difficulties, that a unified organisation should be constituted. According to recent telegraphic reports it would now seem that some such body as that indicated is at last to be formed. For it is stated that the Government of Bengal has decided to establish a whole-time Waterways Board with statutory powers more or less in line with those exercised by the Board of Trustees for the improvement of Calcutta. It is reported that the Board will include representatives of the three provinces, namely, Bengal, Bihar and Orissa, and Assam; and that it will be charged with the supervision of the twenty thousand miles of large rivers in the Gangetic Delta. In the absence of details it is, of course, impossible to consider the scheme fully; but if it really contemplates the formation of a Waterways Trust armed with full powers, it should be welcomed by all interests. It is certainly not a hasty step, seeing that a Trust was proposed as far back as 1917. Moreover, it has been admitted for a long time that some of the principal waterways are progressively deteriorating. If this deterioration cannot be arrested it may prove to be a serious matter for the provinces, and in particular for Calcutta.

THE INDIAN AIR MAIL.

The Imperial Airways liner *City of Jerusalem* crashed in flames on the night of September 6 while bringing mails to India. The accident, which occurred near the landing stage at Jask, in Persia, involved the loss of three lives—those of Captain A. E. Woodbridge, the pilot, of Mr. V. G. Bell, a passenger, and of Mr. J. Court, spare mechanic. Mr. H. C. Amor, mechanic, and Mr. H. Bourne, wireless operator, were injured. The cause of the fire is stated to have been a short-circuiting of the wing tip electric light, which was, as usual, illuminated during the night landing. Captain Woodbridge had a fine record during the War (he brought down Richtofen) and afterwards did splendid service in the East. Mr. Bell, who was in charge of the Forestry Department in the Malay States, served with the R.A.C. during the War in France, Palestine, and Egypt.

The Postmaster-General announces that in order to allow of the posting in London, up to the latest possible moment, of letters for the Indian air mail, arrangements have been made for late correspondence to be accepted, as from the mail to be dispatched next Saturday, at the post office, Charles Street, Haymarket, up to 9.25 a.m. on Saturdays. The letters must be handed in at the counter, and only unregistered articles can be accepted. No special charge beyond the ordinary postage and air fees (see the Air Mail leaflet obtainable at any post office, will at present be made on correspondence posted under this arrangement.

Mr. Isaac Hutchinson Humphrys, of Saxted House, Emsworth, Hants, author, formerly Assistant Accountant-General at the India Office, who died on June 28, left estate of the gross value of £1,169, with net personality £1,058.

EGYPT invites you to break your journey, see Cairo, travel along the Nile and visit Luxor and Aswan for the antiquities. Or—from Cairo to Jerusalem and through Palestine. Everything arranged by the American Express—before you leave England.

Services for Travellers to India

SERVICES that smooth the path and take the trouble out of travel. Your steamship passages booked at no extra cost. A uniformed man to meet you at Bombay or Calcutta. Book Reviews

BYZANTIUM.

"**THE BYZANTINE ACHIEVEMENT A.D. 320-1453.**" By Robert Byron. Illustrated. (London: George Routledge and Sons, Ltd. 15s. net.)

"**THE EMPEROR ROMANUS LECAPENUS AND HIS REIGN.**" By Steven Runciman (Cambridge University Press 16s. net.)

Mr. Byron has clearly very strong ideas on the iniquity of the Treaty of Lausanne, and especially on the atrocious crime which has come to be called euphemistically "the transfer of populations." Accordingly he proposed to himself a history of the Eastern Mediterranean between the years 1919 and 1923. But, on looking deeper into the matter, he soon realised how impossible it was to understand contemporary history in these parts and its consequences without careful inquiry into the past. To this he tells us that he devoted two years of study (these must have been laborious years, but they have been well spent), and this brilliant book is the result. We trust that it will ere long be followed by the work originally intended.

Mr. Byron's theme is, shortly, that Byzantine civilisation was unique and that its value to the world is beyond computation. Its destruction was a real catastrophe, but it has never really died, and it is for the modern world to realise what it was and to build on it rather than on the inferior Roman and Western civilisations which have so far led us astray.

He postulates three essentials in true civilisation. The first is "the stable element, the universal confidence in the social organism to maintain itself and its government, and to modify itself to external and internal necessity." The second is "that composite element in human activity, the quest of transcendental values and their collateral ethics." "Other than the Byzantines," he says, "there was never a people who, during a thousand years of unaltered existence, consecrated their lives with a like conscience to the joint rendering to Cæsar and God of each his things." The third element is "the cultural, product of the scientific and artistic impulse generated by a corporate intellectual activity.

The stable, the transcendental, the cultural: *genii* of civilisation. Each has existed without the others. Hellas had Culture, Judah a Soul, Renaissance Europe both. The United States of America now enjoys the blessings of Stability. But it is the fusion of the three that constitutes a civilisation, the vitality of which will vary inversely with the deficiency in any one of them. We in Europe, sponsors of a civilisation which posterity will term the most momentous phenomenon in history, are conscious of the necessity to hold the balance between them, if less certain of the ability. And it is at this point that the relevance of civilisation's analysis in connexion with the Eastern Mediterranean becomes clear. Only once, during the whole history of our continent and all the people that have contributed to our present, has this balance been discovered: and once discovered maintained for nine centuries: to contend against the agony of dissolution for another two. This was behind the walls, and within the sphere, of Constantinople.

The reader will see what a vast and entrancing territory is being explored by Mr. Byron. Without claim to original research, but building on the sure foundation of careful study, he elaborates his theme through some three hundred pages of deeply interesting and convincing narrative and reasoning. Not the least delightful of these pages are those which treat of El Greco and give us a fresh and unusual view of this great painter's genius in relation to the history of the Byzantine Empire from which he sprang.

Our author is a good hater. Among his worst aversions are Gibbon, classical scholars and Rome with everything, ecclesiastical and otherwise, for which she stood and stands. So-called Philhellenes come in too for their share of the lash, and we wish we could spare space to quote Mr. Byron on that subject. His command of English is a useful weapon in his hands, though there is an unfortunate tendency to something a little too like Sitwellian idiosyncracies. But this is a small matter, and can well be pardoned in a man who is young enough to dedicate his book to celebrate the silver wedding of his parents which took place last year.

We must not omit to add that the illustrations have been chosen with the greatest care, and, like the book itself, have been excellently produced.

Mr. Runciman's book is, as its sub-title implies, a careful and scholarly "Study of tenth-century Byzantium." It deals with the reign of a usurper whose line had no continuation, an Emperor who did much to restore the health of the Byzantine Empire, but has been undeservedly belittled by Gibbon and other historians. Mr. Runciman does much to make the collection of dry chronicles, which he has collected from all kinds of sources, live, though the task of making an interesting consecutive narrative out of the intricacies of the Armenian maze has proved too much even for him. What will strike readers of *THE NEAR EAST AND INDIA* as especially interesting is the fact that the definite attachment of the Croat Church to Rome and its loss to Byzantium occurred during Romanus's reign. It is startling to find in this book the first beginnings of the difficulties with which King Alexander of Yugoslavia is now struggling. The reign of Tsar Simeon of Bulgaria is treated at considerable length and the causes of the fall of his Empire are made very clear, while the account of the Croats, Serbs, Dalmatians, Bulgarians and the various tribes of the Steppes bordering Romanus's Empire or having dealings with it will interest readers. The book is altogether a valuable contribution towards the correct reading of an important and little understood epoch of Byzantine history, to which end its excellent maps also contribute.

C. S-W.

THE PERSIAN SHORE OF THE CASPIAN.

"**MAZANDARAN AND ASTARABAD.**" By H. L. Rabino (*Gibb Memorial Series*) (London: Luzac, 25s. net.)

It is not easy to do justice within the compass of a brief review at once to the writer and to the prospective reader of this book. To say that it is indispensable to all students of the area with which it deals, that it contains much information not to be found elsewhere, and that it is encyclopædic within the limits which the author has set for himself, is to do the barest justice to its contents. These limits on the other hand have not permitted Mr. Rabino to do justice to himself, for they are somewhat narrow: owing to his official position, he explains, he has felt himself "debarred from touching upon any subject that savoured of politics."

We learn, with keen sympathy, from the Preface, of the loss of valuable notes on agriculture and kindred subjects "in the sack of Anzali," but the circumstances in which the Vice-Consul's papers were "sacked" and by whom, are left to the imagination of future generations of readers.

Of Russian interests in Mazandaran we hear little or nothing: the existence of Russian Consuls may be deduced from acts of vandalism of which they have occasionally been guilty (p. 102): the rest is silence.

Nor are modern historical and economic developments adequately dealt with: the dry bones of the dusty valley of history are enshrined in these pages in abundance, but Mr. Rabino has done nothing to make them live, and little to arrange them in such a manner that a future

SERBO-CROATIAN SELF-TAUGHT

Cuvier may reconstruct for us a more vivid presentation of life and manners in a province which is none the less typically Persian because it is climatically and geographically unlike any other part of the Persian Empire.

The map is good, but the transliteration of names is different from that of the text, and is not that of the R.G.S. A work such as this, which is admittedly intended to appeal primarily to students, should be provided with an ampler bibliography: we miss, to mention only a few, references to the Russian authorities such as Bakulin, Bartold, Benderev, Berezin, Bessonov, and Blaremburg; German writers such as Buhsé; and French sources such as Blochet, Bouvat, Ferrand, and Khanikoff, whilst among general sources the special articles in the encyclopædia of Islam deserve mention—and study by the author.

There are sixteen pages of notes, many of much interest and value, some of which deserve to have been embodied in the narrative of which they are an integral part.

MORE INDIAN MEMORIES.

"INDIA—STEMMOTHER." By Sir Claude Hill. (Edinburgh: William Blackwood and Sons Ltd. 12s. 6d. net.)

Sir Claude Hill has chosen an unhappy title for his book, for India has, as he quite frankly states, been a good mother to him. Indeed her affection followed him even when they parted, for after tasting most of the good things of Indian office, Sir Claude succeeded to distinguished positions in Europe, and is now Governor of the Isle of Man.

From an officer of such varied experience and with such various opportunities of seeing things from a height we had expected a book of more than usual value. But he takes his duties of silence on matters officially known to him so seriously that he debars himself from writing of or discussing numerous subjects on which we should particularly have liked to hear his views. And, to be quite frank, what he left himself to write about was hardly worth giving to the public. This is a pity, for, without any real indiscretion, he could have given us something to be grateful for. As it is, the book is a sad contrast with those on the same lines by Sir Walter Lawrence and Sir Evan Maconochie.

Even on the burning question of the future of the Government of India we find very little enlightenment, though we are grateful to him for pointing out clearly the great danger that may arise from ignoring the fact that what is expedient for one Province in India may be utterly inexpedient for others.

"ANSCHLUSS."

"SELF-DETERMINATION FOR AUSTRIA." By F. F. G. Kleinwaechter. With four Sketch Maps. (London: George Allen and Unwin Ltd. 3s. 6d. net.)

Of all the Succession States of the Austro-Hungarian realm there is no doubt that the Republic of Austria has suffered most from the shock of amputation. Indeed, it was long in doubt whether the patient would survive or not. It is natural that the dark years the country has come through should have led to thoughts of how life and health were to be maintained. Again, it is natural that many should have felt that the only hope lay in

union with the big German brother. Even when things were worse, this remedy by no means commended itself to all. There were many who wondered whether the offered panacea would not turn out to be poison. And, as things have gradually improved and the future no longer seems to be hopelessly black, what enthusiasm for union with the German Reich there was tends to disappear. It is probably kept alive to-day more because it is a forbidden proposition than because it is really desired. There are good reasons for this prohibition, though our author seems to know of only one, *viz.*, the unwillingness of the French to see six and a half million Germans added to the Reich. Czechoslovakia has no desire to see itself in the pincer-grip of German territory, nor does Roumania like this aspect of the case any better. Yugoslavia and Italy have no desire to see the German frontier pushed up to theirs, and it is certain that the opposition of these four countries to a union between Austria and Germany, is, and will remain, at least as uncompromising as that of France.

At the same time, there is another side to the question, and we had hoped to find it clearly and logically put by Dr. Kleinwaechter, who is obviously writing a manifesto for the Pan-German Party for consumption abroad, especially in the United States. We regret that the Party did not select a better advocate. A mixture of rhetoric, sentimentality and indignation; neglect to state and meet the views of the opposite side; a harping on irrelevant matters and the begging of the question whether Austria really desires this union or not make the little book most disappointing.

FINAL SIGMA IN GREEK.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Your Reviewer in his very courteous notice, contained in your issue of August 22, of the Schweich Lectures for 1926 ("Palestine in General History") asks whether the disuse of final *sigma* in Greek transliterations is a misprint. It is not, and I am glad to know that several distinguished scholars support me in discarding it. Final *sigma* only became general in the middle of the 15th century, about the same time as the invention of printing, though no doubt isolated instances can be found from the 14th century onward, but (I think) earlier.

I do not see why we should be for ever bound to the fashion of a very decadent period of Greek handwriting, when we have so many examples from earlier and more artistic ages.—I am, etc.,

PERSONAL AND GENERAL

TO-DAY

September 12, 1929 (New Style).
 August 30, 1929 (Old Style).
 Rabia II, 7, 1348 A.H., of the Muslim Calendar.
 Ellul 7, 5689, of the Jewish Calendar.

Crown Prince Peter of Yugoslavia celebrated his sixth birthday on September 6.

Dr. Jal Dastur C. Pavry returned to London from the Continent on September 2.

The Rancee of Pudokota left Claridge's Hotel last week for the Continent.

M. Grégoire Constantinesco, First Secretary to the Roumanian Legation in London, has returned to London from leave in Roumania.

The Bishop of Lahore sailed in the P. and O. s.s. Macedonia from Tilbury on September 6 on his return to Bishopsbourne, Lahore.

Sir Archibald and Lady Weigall and Miss Priscilla Weigall are spending a holiday at Le Touquet, and will be away until the middle of September.

Captain Demetrius Papalexopoulos, Naval and Air Attaché to the Greek Legation, left London on September 3 for Paris, on leave.

Sir Jamsetjee Jejeebhoy, having completed his cure at Harrogate, left last week with his suite for the Solent to see the Schneider Trophy Race.

H.E. Hohvannes Khan Mossaed, the predecessor as Persian Minister in London of H.E. Saiyid Hasan Taqizadeh, has been appointed Persian Minister in Tokyo.

Hikmet Delvina, Albanian Minister of Justice, left Tirana on September 4, for a short visit to France and England.

Professor P. E. Newberry has been appointed Professor of Ancient Egyptian History in the Faculty of Letters of the Egyptian University on a three years' contract.

Lady Chetwode has arranged to leave England early in October on her return to India, and will join the P. and O. s.s. Rawalpindi, which will sail from Tilbury on October 4.

The Hon. Sir Francis Lindley was received in audience of the King at Sandringham on September 7, and kissed hands upon his appointment as His Majesty's Ambassador Extraordinary and Plenipotentiary at Lisbon.

Prince Mirza Reza Khan (Arfa ed-Dowleh), Persian Minister in Scandinavia and formerly first Persian representative at the League of Nations, has left Teheran for Monaco, where he has a residence.

Mr. Alfred Short, Under-Secretary at the Home Office, arrived at Port Said on September 5 en route for Cairo, where he joined Mr. W. R. Smith, of the Board of Trade, and Mr. Hayes, Controller of the Household. The party proceeded from Egypt and Palestine.

We regret to record the death of Sir James W. Headlam Morley, who until his retirement last year was Historical Adviser to the Foreign Office. It will be remembered that Mr. Headlam Morley paid a visit to Palestine about two years ago, to study the possibilities of educational development there.

M. Kitabji Khan has been nominated representative of the Persian Government for the conference on international law which is to meet at The Hague on December 4.

Among those arriving on August 30 at Marseilles from Bombay in the Naldera were the Maharaja of Tikari, the Hon. Mr. Justice T. S. Macpherson, and the Hon. Mr. Justice A. W. Wort.

The King has given authority for Mr. Leonard Nicholas Robinson, C.B.E., M.D., President of the Egyptian Medical Commission in Paris, to wear the Insignia of the Third Class of the Order of the Nile, conferred on him by the King of Egypt in recognition of valuable services.

General Sir Charles and Lady Harington left London on September 5 to join the P. and O. s.s. Viceroy of India at Marseilles for Bombay. Lieutenant-General Sir Cyril and Lady Deverell, Sir Charles Alston, and Lady Stuart Williams are among the passengers.

The Hon. Cecil Campbell returned to Alexandria from leave at the end of last month and is now acting Financial Adviser to the Egyptian Government during the absence on leave of Mr. Frank Watson. During the recent absence of both Mr. Watson and Mr. Campbell, Mr. Mellor acted as Financial Adviser.

Nagadras Makonnen, the first Abyssinian Minister in London, will shortly take over the duties of his new post. Although still under forty years of age, Nagadras Makonnen has held office in Abyssinia as a Provincial Governor, a Counsellor of State and Minister of Commerce. He will have as Secretary of Legation George Heroui, son of the Director-General of Foreign Affairs, who has recently completed his education at Cambridge, and as Attaché Ato Tadla, formerly of the English Department of the Abyssinian Ministry of Foreign Affairs.

The King has approved the appointment of Mr. Charles Michael Palaret, C.M.G., a Counsellor in his Majesty's Diplomatic Service, to be his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Bucharest. Mr. Palaret succeeds Sir Robert Greg, who had been Minister to Roumania since May, 1926, and who will succeed the late Mr. Harry Farnall as British Commissioner on the Council of the Egyptian Public Debt. Mr. C. M. Palaret entered the diplomatic service in 1905, and has served, among other places, in Athens. He was attached to the Peace Delegation in Paris in 1918-19, and served in the Foreign Office from 1926 to 1928, when he was transferred to Rome.

EARTHQUAKES IN PERSIA.

BY AN OCCASIONAL CORRESPONDENT.

Persia is as a whole less liable than Europe but more than most Asiatic countries to catastrophic earthquakes, but the references thereto in printed literature are few, and peculiarly difficult to discover, as few, if any, indexes to books on Persia so much as mention the word.

Watson (p. 190) remarks that earthquakes are "very frequent in most parts of Persia." Allemagne (13) classes them with plagues and famines as Acts of God, to which the country is specially liable.

Khurasan. Hamdallah Mustaufi refers to a cypress at the village of Kishmar near Tarshiz (100 miles S. of Nishapur) "such was its power that earthquakes which frequently devastated all the surrounding districts never did any harm in Kishmar." This was in A.H. 247 (A.D. 861).

Nassiri Khusrau (A.D. 1340) states that Nishapur was completely destroyed by an earthquake in the reign of Abaqa Khan (A.D. 1267). Wajid ud Din Zangi Fariwandi rebuilt it in A.H. 669 (A.D. 1270). A similar catastrophe overwhelmed the town in A.H. 808 (A.D. 1405), when most of the inhabitants were buried in the ruins.

Rukn-ud Din Khoi (quoted by Barbier de Meynard—p. 132) in his edition of Yaqut's "Mujam ul Baldan," relates that at this time there resided in the city a learned astrologer of Shiraz called Abu Tahir, who foretold that the said earthquake should happen upon the sun's entrance into Scorpio in the year A.H. 235 (A.D. 849), and should overthrow the whole city. To which, when he found the people would give no credit, he went and was importunate with the Governor to force the people out of the city. The Governor . . . did all he could . . . but could not persuade above one-half of the people to stir, which fell out to their destruction, for the earthquake happened at exactly the hour mentioned in the prediction, to the overwhelming of 40,000 persons.

Le Strange quotes Hamdallah Mustawfi and Ibn Batutah in reference to (A.D. 1208) and A.H. 679 (A.D. 1280) and Yate refers to one in A.D. 1267.

Kuchan in the same province suffered severely in 1852, when 2,000 persons lost their lives, and again in 1871, 1893 (Nov. 17) and 1895, after which the town was abandoned. (Allemagne III 67).

The year 1830, says Watson (p. 257) "was marked in Persia by the occurrence of a series of shocks of earthquakes. In the month of April the town of Demavend suffered severely; not less than 500 persons are said to have been buried in the ruins."

Morier writes ("Second Journey Through Persia," 1818, p. 355), "Very severe earthquakes are sometimes felt at Demavend. We had a strong shock whilst residing there in June (1811) and nine years ago (viz., in 1802) they were, so violent and repeated that many villages in Mazandaran were totally destroyed."

The towns of Semnan and Damghan likewise suffered great injury: in all 70 towns and villages are said to have been destroyed. Damghan was destroyed by an earthquake in A.H. 242 (A.D. 856) (Fraser p. 314).

Azarbaijan.—Of disastrous earthquakes in the Tabriz neighbourhood we have ample evidence.

Le Strange refers to earthquakes which destroyed Tabriz in A.H. 244 (A.D. 858) and A.H. 434 (A.D. 1042) when 40,000 of the inhabitants perished.

Mustaufi (p. 79), writing in A.D. 1340 with regard to the earthquake of A.D. 1042, refers to a prophecy that the City would not again be laid in ruins by an earthquake and adds "up to the present date during the 300 years that have elapsed since this prediction, this prophecy has been proved to be perfectly true, for though the City has many times been visited by earthquakes, these have caused no great ruin."

In the Spring of 1721, however, Tabriz was destroyed by an earthquake, wherein 80,000 souls perished. To quote Father Krusinski (Du Cerceau's translation) "what

most frightened Isfahan was a phenomenon that appeared there in the air during the summer of 1721. The clouds being at that time very thick, the sun appeared through them of a blood colour, which lasted for two months."

Malcolm in his "History of Persia" gives the date as A.H. 1134 (A.D. 1721) and says that the City was completely destroyed, 100,000 people losing their lives.

Morier ("First Journey," 112, p. 276) writes as follows of Tabriz in 1810: ". . . Close to the walls near the Teheran gate is the complete ruin of a mosque . . . built about 600 years ago . . . destroyed by an earthquake within thirty years."

"The inhabitants complain . . . of frequent and violent earthquakes, which they attribute to the volcanoes in the district which throw out smoke but no flame. The smoke is so mephitical that it kills immediately a dog or fowl placed over it. The danger of earthquakes has taught the inhabitants of Tabriz to build their houses generally as low as possible and to employ more wood than brick and plaster in their construction. For the same reason the bazaars have only wooden roofs, and are not arched. . . . Yet I am told that in earthquakes the domed buildings have invariably stood, where others, the strongest walls, have been rent asunder."

Sir H. J. Brydges, writing in 1834, states (p. 306): "Between the camp and Bosmech, we passed over ground which some years before had been rent by a succession of earthquakes in the most extraordinary manner, and on the left hand of the road, I was shown a mountain riven at that time from top to bottom. This terrible calamity took place in the year 1774."

Of Tasuj (N.W. of Tabriz) Morier ("First Journey," p. 297) writes in 1810. "It appears once to have been a large place but it is now reduced, by earthquakes, to the denomination of a village. There are remains of domed bazaars and mosques spread in every part of the place."

Qazwin was described in 1810 by Morier ("First Journey," p. 254) as "almost one mass of ruins. An earthquake within no distant period threw down the buildings . . . and made cracks in almost every wall. A large mosque, built by the Abbasids, has been rent in many places in its thick walls and totally ruined."

Chardin, who visited Tabriz in April, 1672 (p. 382), writes as follows of Qasvin: "The History of Qasvin makes mention of two other fatal disasters that befell it, occasioned by earthquakes. The first in the year A.H. 460 (A.D. 1067) that overturned all the walls and a third of the buildings, and the second, which did not so much mischief as the first in the year A.H. 562 (A.D. 1169)."

Chardin, in his description of the Coronation of King Solyman III (p. 127 of App. to "Travels"), writes as follows: "Towards the end of 1667 arrived sad tidings at Isfahan from the provinces adjoining to the Caspian Sea that at Shirwan (the capital city of a province of the same name, and which makes a part of Armenia the greater, near Tiflis, the capital city of Georgia), an earthquake has overturned the greatest part of that city and ruined four villages near adjoining, and that above 30,000 Persians had perished in the ruins. That in another city called Shamaki in the province of the same name, another earthquake has occasioned the loss of 20,000 persons and swallowed up three-quarters of the city—which two accidents had reduced those two provinces to utter desolation."

Isfahan.—Hamdallah Mustaufi (A.D. 1340) states in reference to this city that "earthquakes very seldom occur here."

Turning now to South Persia we find though local tradition and the testimony of living men states that earthquakes are of by no means infrequent occurrence, there is little reference thereto in current literature. It is a notable fact that of all the massive bridges built from Sasanian times onwards, often of great beauty, solidity and strength, not a single one remains. The site of some of them precludes the possibility of their being carried away by the most abnormal floods, and the appearance of the ruins in certain cases, notably those across

the Kashgan in the Khurramabad plain and in the mouth of the gorge above its confluence with the Said Marreh River suggests seismic movement rather than the operation of decay and neglect, though the latter was doubtless a powerful feature.

Curzon, Vol. II (p. 219) states that local tradition favours the theory that the colossal statue of Shapur in the Kazrun Valley was thrown down by an earthquake. The steady diminution in the number of pillars noted as standing at Persepolis by successive travellers, suggests that earthquakes have been frequent but not excessively severe. The construction of the pillars is so massive as almost to preclude destruction by any other agency. Up to 1670 there were at least 19 pillars standing. In 1677 Fryer saw 18; the number thereafter recorded is uniformly 17, till Franklin in 1787 reports 15, which figure is repeated till De Bode in 1841 reports 13. This figure is likewise recorded by subsequent travellers till 1881, when Stack gives the number as 12. Mr. G. M. Lees has drawn attention to the fact that as a result of earthquakes the topmost stones of certain pillars have been rotated some 30 to 40 degrees, and displaced from their original position, lie askew, and overhanging the edge of the parent pillar.

Wills (p. 260) describes in great detail a great earthquake at Shiraz in the Sixties, which caused great loss of life, and he mentions that slight earthquakes were very frequent in the neighbourhood during his residence there. The tradition still remains and the light wooden structures in the gardens are still known as earthquake houses (*silzileh khaneh*).

Sawyer (p. 3 and 73) refers to the southern slopes of Shuturun Kuh in the Bakhtiari country as being deserted in 1889 owing to frequent earthquakes.

There were several shocks of earthquake in Fars in 1890 and at Jahrum some thirty lives were lost. Kamarij Khisht and Fasa were also visited by several shocks, but no great damage was done. Towards the end of February 1894, Shiraz and the neighbourhood were visited by an earthquake which caused some injury to life and property. (Administration Reports Persian Gulf Residency).

Sykes makes no reference to earthquakes in his books on Persia, but Le Strange (p. 307) states that the Kubbat-i-Sabz at Kirman was completely ruined by an earthquake in 1896.

Sistan.—Mustaufi (p. 193) refers to a gold mine in Sistan which was laid in ruins by an earthquake in the time of the later Ghaznawids, and became choked so that its very position was hid from sight.

Persian Gulf.

Earthquakes are frequent and sometimes severe in the Persian Gulf Proper, especially towards the lower end upon the Persian side. In 1865 an earthquake levelled the villages of Darveh Asuh, near Mugam, with the ground; and its remarkable effects were witnessed by Dr. Colvill of the Bushehr Residency.

In August, 1880, an earthquake was said to have destroyed some houses and caused about 120 deaths in Bastak.

On October 16, 1883, a severe shock was experienced at Kangun, 'Asalu and Tahiri and in their neighbourhood, where much damage was done, and tremors continued until the 24th; this shock was felt also at Bushire.

In 1884 a somewhat serious earthquake occurred and was felt most severely on Qishm Island; the shocks continued for several days, the most violent being on May 20, when a number of villages were partially destroyed; and 132 deaths were said to have been occasioned. Many of the inhabitants left the island and there was much distress, in consequence of which the annual revenue was remitted; and the Shah of Persia subscribed 1,400 Tumans for the relief of the destitute and the repair of mosques. Shocks were experienced at Lingeh also, but did no damage there; and in June one was observed at Ras-al-Khaimah on the Arabian side of the Gulf.

By far the most severe earthquake of recent times in the Persian Gulf area was one which, on the night of January 11, 1897, laid Qishm town in ruins; only two mosques and three or four other buildings were left standing, and over 1,600 bodies were said to have been afterwards recovered from the ruins. There was some loss of life, on this occasion, on the island of Larak; and vibrations were felt as far to the west as Lingeh.

In June, 1902, Kishm and Bandar 'Abbas were affected by seismic disturbances, which began on June 9 and lasted for several days, and as usual the damage was greater at Jishm town than elsewhere.

In 1905 shocks were experienced on Hanjam Island on April 25 and on Qishm Island on April 27; and at the same time there were movements in the neighbourhood of Bandar Abbas which caused landslips and the collapse of houses at the Ginau mountain and 'Isin village.

Recent Shocks.

Two severe earthquake shocks occurred in Nebandan and Siestan districts on March 12 and 13, 1928, and on August 22, 1928, a severe earthquake occurred which affected Sabzawar, Nishapur and Shirwan, some ten persons being killed.

A very severe earthquake occurred on May 2, 1929; 12 distinct shocks were felt within twenty-four hours at widely separated points in the province of Khurasan, running from Bandargaz to Kalat on the frontier between Persia and Russian Turkistan. The towns of Shirwan, Bujnurd and Jajarm were severely damaged, and it is clear from reports received from Moscow that much damage was done across the frontier in the district of Askhabad, telegraphic reports from Moscow stating that 1,000 persons were killed. The earthquake shocks penetrated far into the interior of Persia and it was stated in the *Daily Telegraph* of May 6, 1929, that a cleft three yards wide was opened between the towns of Khaki and Bagham, to the east of the Teheran Isfahan road, the cleft extending to a distance of 18 miles. The towns of Kuchan and Rubat also suffered severely, huge fissures in the ground being opened up, one being, according to a report in *The Times* of May 9, 24 miles long and 9 feet wide. The total casualties were subsequently given in an official report from a Government Inspector at Kuchan as 3,253 persons killed, 1,121 injured, 83 villages destroyed and 6,542 cattle killed.

It is interesting to note that the Governor-General of Khurasan, at the time of these severe shocks was Saiyid Hasan Taqizadeh, now Persian Minister in London. The efficiency of the measures taken by him to relieve the vast amount of suffering and distress caused by these earthquakes elicited many tributes of appreciation from the sufferers and from foreign observers, and is perhaps the most encouraging feature in a sad story.

THE WEEK AT HOME

London, Tuesday Morning.

England in General.

All good things come to end, and the respite which "Alter Ego" has enjoyed from daily watching the affairs of England unfold themselves is now finished. What are one's first impressions of happenings during the interval? Unquestionably things that are chiefly occupying conversation are the increased prestige of the Labour Government, owing to the conduct of its leaders abroad; the September heat-wave; the victory of England in the Schneider Trophy; the flouting of the Communists at the Trade Union Congress, and the relations of the *Daily Herald* with a capitalist organisation; and the victory of Notts in the County Championship, together with the merits of the South African team.

No doubt things of greater moment than most of these have happened since last this feature appeared in THE NEAR EAST AND INDIA. Their omission must be put down to the holiday feeling.

The Labour Government.

It appears to be generally agreed that the prestige of the Labour Government at the moment is very high. Fervid Tories and passionate Liberals joined in the acclamation given to the Chancellor of the Exchequer, whose very brusqueness in standing out for what was considered here the just claims of England was deemed a virtue. Undoubtedly Mr. Snowden has chosen a psychological moment for manifesting the traditional British obstinacy: he is on a very high pedestal. That he will remain there is alike a widely-entertained hope and fear.

Nor should Mr. Henderson's services be overlooked. It is no disparagement to the Foreign Secretary to say that his conduct so far has been a revelation to those who imagined either that he was a vainglorious noodle or that he would be content merely to obey the Prime Minister's orders in foreign policy.

The enemies of the Labour Party, indeed, are wondering whether the success of Messrs. Snowden and Henderson is entirely to the liking of all the heads of the Party, so conspicuous has been the part they have played. But that problem is their affair; suffice it to say that, were the Labour Party to go to the country to-morrow, their chances of sweeping the country would be very bright.

The Trade Union Congress.

Another factor which seems to have confirmed the position of the Labour Party is the conduct of the Trade

Union Congress last week at Belfast. There the fact was proved anew that the British working man is a fellow not only of moderation but also of ideas.

Mr. Ben Tillett's speech on the part which the Empire should play in the economic future of the world greatly heartened the increasing number of Britons who have succeeded in freeing themselves from fiscal shibboleths; Communism received such a smack in the face as, one would imagine, would set up a permanent tingling in the cheeks of the very few but determined members of the movement in England; and the whole problem of co-operation in industry was discussed in a spirit that was at once frank and cautious, that is, eminently helpful.

On the whole it may certainly be said that Trade Unionists added to their own laurels last week and consequently to those of the existing Government, which may well be feeling now that the stars in their courses are fighting for it.

The Heat Wave.

This sudden and prolonged heat wave in September caught us unawares, and those few who have professed complete enjoyment of it have been perspiringly scowled at by the majority of us. Many of the days have been of that intolerable humid heat which makes rags even of those who are accustomed to Oriental suns; nor have the nights brought rest.

Naturally a new demand has gone up for more rational garments—among the males, that is, for the females know well how to adapt themselves to these oppressive changes of temperature. Again has the iniquity, the senselessness, of the collar been impressed upon us conventional ones; the sight of men struggling in a stiff collar, under a bowler hat, and in dark clothes, to get the coolth that their sisters take, so to speak, in their stride, was truly ludicrous.

That a change will come in men's attire during hot weather is, I think, certain. But not yet. What rubbish! it is to suggest—as is everywhere suggested at election times—that women are conservative by nature! Just consider how much their dress has changed since the War, whereas man's garments are identical to the last button.

Cricket.

In "torrents of sunshine" (the immortal phrase of E. V. Lucas, and beloved of all cricketers) the cricket season comes to an end. It has been a wonderful year, with just that balance between bat and ball that makes the game vital even to the non-participant. Runs have flown one day, and the next, wickets have fallen *en masse*: which is exactly what it should be.

Given the season—mainly hard wickets—Notts have certainly been the best team. They had little youth (except Larwood and Voce) to serve them, but batsmen and bowlers who knew their art before the Great War was thought of—and the distinction between pre-War and post-War batsmen is a real one—upheld the eleven most gallantly. In the field they were slow—naturally, for age withers speed; but, taken all in all, they were a safe and not too unenterprising a side.

Enterprise, of course, was found in plenty in southern and western teams, and nobody could see Sussex or Gloucestershire play without wishing that the renowned efficiency of the North for once would fail to tell. These two sides, I think, provided the finest cricket of the year.

One does not forget the South Africans, however. Certainly nothing in the whole season was as good as the visitors' fielding, which was marvellous in its speed, accuracy and unflaggingness. Nothing thrills at cricket like brilliance in fielding; that is largely why South Africa won the hearts of all Englishmen watching them. In a few years' time they will indeed, as I think "Plum" Warner said, be making the Kangaroo jump and twisting the Lion's tail.

And now farewell, King Willow! Back to your green baize covering you must go, until the sun lights next spring on new-mown grass.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Progress in Abyssinia.

The pending arrival in London of an Abyssinian Minister to the Court of St. James' serves as a reminder that Abyssinia is beginning to take seriously the new status that membership of the League of Nations gives the country in the world scheme. Almost simultaneously the first aeroplane has arrived at Addis Ababa, as a further proof that the old exclusiveness of the Abyssinians is gradually yielding to the onward march of progress. In this connexion we may be allowed to echo the regret expressed by our Addis Ababa Correspondent that British enterprise did not also secure, with French and German firms, a share in the order given for aircraft. If success attends any efforts to open up the country by means of the aeroplane, it should mean much for the establishment of closer touch between the Sudan and Abyssinia. Addis Ababa lies about equidistant—some 350 miles as the crow flies—from Jibouti, its present port in French Somaliland, from Zeila, a port of British Somaliland, and from Assab, the Italian port in Eritrea, where free port facilities have recently been granted by Italy to the Abyssinian Government in return for a concession for the construction of a motor highway from Assab *via* Dessia to Addis Ababa. The latter is, again, less than 500 miles in a straight line from Kassala in the Sudan, with Lake Tana almost exactly half-way between the two towns. In view of the practical non-existence of roads in Abyssinia, and of the necessarily long time that must elapse, owing to shortage of funds, before any adequate system of roads can be constructed, it is evident that there are great possibilities in regard to air service for commercial purposes, if the Government could be persuaded to approach the subject seriously and scientifically. Abyssinia, however, will not be modernized in a day. It is fortunate in having an enlightened ruler on the throne in the person of King Tafari; but no one is more conscious than he is of the limitations imposed upon him by the general state of backwardness of the country and of the extreme conservatism of the people, and to force the pace in bringing Abyssinia into line with modern States would inevitably shipwreck the policy of gradual progress to which he is committed.

The Problem of Communications.

King Tafari has made a satisfactory start in devoting special attention to the question of Abyssinia's communications. At the present time the country is entirely dependent for its communications with the outside world on the single line of railway that connects the capital with the French port of Jibouti in the Gulf of Aden. The limitations of this line are well exemplified by the reference to it made in the letter that we publish on another page from our Addis Ababa Correspondent. A bridge was destroyed by bad weather, and more than a month is required to repair the breach. In the meantime the Railway Company accepts no responsibility for the maintenance of through communication, and individual traders are left to make their own arrangements for transport over the four and a half miles between the two stations on either side of the broken bridge. Again the incidence of the rainy season suffices to cause the cancellation of the express train, until the weather improves. A further handicap on the development of Abyssinia is imposed by the abnormally high freight rates imposed by the Railway as a result of the lack of competition. Under such conditions developments in the opening up of road

communications with the coast are likely to play an important part in the economic progress of the country. The agreement with Italy provides for the construction by Italian interests of the section within Eritrea of the road linking Addis Ababa with Assab, and it is hoped that the Abyssinian Government will place in the same hands the order for the construction of the Abyssinian section, in order to obviate any delay in the completion of of the whole roadway. Equally important is the concession given to a British-Indian firm, having its headquarters at Jibouti and branches in Abyssinia and British Somaliland, to build motor roads linking the latter territory with the Harar province of Abyssinia. The programme provides for roads from Zeila *via* Buramo to Jigjiga, from Berbera *via* Hargeisa to Jigjiga, and from Jigjiga to Aisha, on the existing railway line, and to Harar, the capital of the province. It is not forgotten that the Ethiopian Motor Transport Company which is registered in Cyprus, has obtained a concession to build a road from Gambela to Buré, and thence on to Gore and other places in Abyssinia. This, clearly, is a good beginning; but judicious recourse to aeroplane services is calculated to exercise a useful moral effect on the people, while not obviating the necessity for roads.

The Port of Salonika.

When Salonika belonged to Turkey a concession was given to a French (Franco-Greek) Company for the management of the port; and Greece, on obtaining possession of this portion of Macedonia, confirmed the Company in its concession. Since that date, however, the situation in Salonika has undergone important changes. In the first place, the trade of the port has declined, and the concession is probably no longer as lucrative as it was once. The Company, in any case, has had an excuse for delaying works for the improvement of the port. On the other hand, the establishment of a Free Zone and the necessity of reviving the trade of Salonika have made the Greek Government the more anxious to do everything possible to increase the facilities of the port. Four years ago negotiations were opened with the French Company with a view to arranging for the termination of the concession, but a settlement regarding the amount of compensation to be paid in respect of the unexpired period

Reserve of Strength

EVEN with the modern high power cars, driving, under certain conditions, entails a considerable amount of fortitude. This will certainly be so if your car is not equipped with tyres made to withstand fierce acceleration, rapid de-clutching, hard braking, and, above all, poor unmade roads. The 'Fort' Dunlop tyre is produced to meet these conditions, where an extra reserve of strength is not only a safeguard but a necessity.

of the concession has proved difficult to reach. Last week, however, it was announced that the protracted negotiations had been concluded, and an agreement reached for the transfer of the management of the port to the Greek Government. In the past there has been a tendency for the Piræus to regard Salonika as a potential rival and to exercise what influence it could to prevent any expenditure on the northern port which might be earmarked for itself. To-day, it may be hoped, different views prevail. There is room in Greece for the two ports, the more so as Salonika's future must be dependent largely on its transit trade; but with the establishment of an autonomous Administration for Macedonia Salonika may be expected to see to it that its rights are not ignored, and, with the management of the port in its own hands, the Administration can be relied upon to keep trade and traffic facilities fully abreast of commercial requirements.

Port Problems.

Greece cannot expect to be exempt from the problems that confront all port authorities. It is the duty of the latter not only to be entirely up to date, but also, as far as possible, to forestall the future. By this means only can trade be attracted and, once secured, be retained. Even when due allowance is made for the chronic shortage of funds that hampers so many countries in the Near East, it has long been apparent that this elementary fact has not been properly appreciated by many countries. The chaotic conditions that were allowed to exist year in, year out at the Piræus must have materially affected Greek revenues; and only recently has that port seriously given itself up to setting its house in order. Now, indeed, the Greek Government is credited with the intention of undertaking works on a big scale that will revolutionise Athens' seaport. In the case of Salonika the Government has also rightly decided that the town could never forge ahead satisfactorily with the inadequate facilities with which under the French company the port was equipped, and has now taken the control into its own hands. The Turkish Government, it is to be hoped, is beginning to realise that its treatment or neglect of Constantinople has prejudiced the country as a whole by driving trade away; but years may well elapse before lost ground is made up. One of the difficulties confronting all States constitutionally young is to inculcate into its politicians, especially those of the professional café-haunting type, the conception of the country as a whole, the welfare and progress of which is bound up with the well-being of as many activities as possible.

The Turkish Tariff.

Although the new Turkish tariff is due to come into force on October 1, British goods, as well as those of certain other countries, will remain for the present subject to existing duties. By an exchange of Notes, dated July 2, 1929, between the British and Turkish Governments provision was made to this end. The *modus vivendi* remains in force for a minimum period of six months, and

at the close of this period is terminable at any time, subject to three months' notice. April 2, 1930, is, therefore, the earliest date at which British goods can be subjected to the new tariff, unless a treaty of commerce between the two countries makes other provision. In the meantime application of the new tariff to the goods of such countries as are not protected by conventions or commercial treaties will give Turkey an opportunity to check its general utility, and, possibly, to correct any mistakes in details that may be discovered. From an article published on another page dealing with the working results of a number of Turkish companies in 1928 may be deduced one of the reasons, other than the desire for additional revenue, that has prompted the Turkish Government to adopt a policy of protecting home industries. The Turks' preliminary ventures into company business have not been generally successful. No doubt, they must buy their experience, as others have; but it is a matter for regret that they should have been pushed, as it were, by the Government into the mistaken idea that successful business is not as much an exact science as other professions and does not call for special knowledge and training. Even the regulation compelling foreign firms to employ a certain percentage of Turks on their staffs does not seem to have been introduced so much from a desire to educate Turks in business methods as from a resolve to deflect the profits of foreign firms as far as possible into Turkish hands—a very different matter.

Weights and Measures in Greece.

An official announcement to the effect that the Greek Ministry of National Economy is carefully studying the question of the substitution of the metric system for the weights and measures actually in use affords a good illustration of the wide gap that often separates theory and practice in the East. The metric system was officially introduced into Greece in 1898. It was made compulsory in 1922, but a decree was issued under the Pangalos régime on March 3, 1926, which again made it compulsory throughout Greece from April 1 of that year. As the event proved, the Dictator's good intentions were treated as a *poisson d'Avril*, and the Greeks still clung to their oke and piques, even if they did homage to the law by exhibiting kilogram weights and metre measures. To-day the oke and the pique retain their ascendancy, and a practical Government points out that the Budget has made no provision for the expenditure entailed in a general and immediate change, and so the country must be left to conform to the metric system gradually, or, in other words, in its own good time.

COMMENTATOR.

In spite of the dengue epidemic, floods and other exceptional conditions the Greek Budget for 1928-29 showed a surplus of 300,000,000 drachmæ (£800,000). The revenue for the first four months of the current financial year exceeds that of the corresponding period of 1928 by 200,000,000 drachmæ, and the estimates by the same amount.

EGYPTIAN STATE RAILWAYS

A pleasure trip to Egypt, the Land of Eternal Sunshine, is now within the reach of nearly everybody.

Combined Steamship, Railway, Sleeping, Restaurant and Pullman Car Tickets, from Marseilles to Assuan and return, including accommodation at the Leading Hotels, are available from 1st November, 1929, to 31st January 1930, as under :—

1st Class throughout.	}	A. 10 days sea-passage & 18 days stay in Egypt...L. Stg.: 72.10.
		B. 10 days sea-passage & 25 days stay in Egypt...L. Stg.: 81.10.
<i>A Supplement of L. Stg. 5 will be charged for November departures.</i>		

COMMERCIAL COMPANIES IN TURKEY.

An official report on the present state of commercial companies in Turkey has recently been published by Remzi Bey, Director of the Companies Department in the Ministry of Economy and Commissioner of Companies in Constantinople. According to this Memorandum the Ottoman Bank was the first joint-stock company to be founded in Turkey, in 1863. It was formed with a capital of £10,000,000 sterling, half of which was paid up. By the terms of the concession the Ottoman Government conferred upon the Bank the right to issue paper money, and it was also granted a form of control over the State Budget. The Treaty of Lausanne has, however, abolished these stipulations. The second company to be formed with Turkish capital was the Shirket-i Hairieh, whose boats ply on the Bosphorus.

During the 45 years from 1863 to 1908, the date of the proclamation of Turkey's independence, three companies, with a capital of £T695,000, and four others, with a capital of 344,895,000 frs. were established. With the exception of the Shirket-i Hairieh the capital of these companies was derived from foreign sources. From 1908 to 1914 thirty-nine joint-stock companies, with a capital of £T2,535,000, and one company, with a capital of £1,000,000, were formed. Since the Great War, up to the formation of the National Government, in 1920, fifty-nine joint-stock companies, with a total capital of £T12,488,000 were established.

From that time to 1928 167 companies with a total capital of £T82,209,000, one with a capital of 3,750,000 frs. and another with a capital of 8,000,000 Swiss frs. were founded. In other words, considerable impetus was given to the formation of new companies by the establishment of the new Republican régime. Thus the number of companies, of all descriptions, formed during a short period of seven years exceeded the total of the previous sixty years. Whether this sudden burst of company promotion was altogether healthy is another question, for very soon a portion of the new companies found themselves in difficult circumstances and the economic crisis has hit them severely.

According to statistics on the position of the various companies during the year 1927-28, there were in 1928 sixty-two industrial firms, 61 of which had a combined capital of £T16,423,499, and one with 8,000,000 Swiss frs. Of these companies, 26, representing a capital of £T9,141,499 and one of 8,000,000 Swiss frs., realised a profit of £T1,730,833 and 742,584 Swiss francs. The other companies, with a total capital of £T7,282,000, closed their accounts for 1928 with losses.

Among the industrial firms 14, with a capital of £T1,675,000, are engaged in the textile industry and have suffered losses. Two sugar factories which are worked by two joint-stock companies have been in existence for two years. One of these factories was established in Alpöllu, in Thrace, the other at Ushak, in Anatolia. The latter has closed its books with rather heavy losses. The production from these two factories is insufficient for Turkey's needs.

In order to favour local products, a new protectionist Customs tariff will shortly come into force. An association, known as the Association for the Protection of National Products, has been formed with the intention of protecting the country's products against foreign competition. It is to be hoped that in a short time the national industry, and especially the textile industry, will show signs of improvement. There are at present in Turkey 14 companies possessing spinning mills, for textiles, yarn and cloth. Among them only five, with a capital of £T2,150,000, realised in 1928 a profit of £T105,492. The others suffered losses. The silk factories at Brussa have a brilliant future. The knitting and stocking industries are making steady progress.

Turkey's trade has not yet sufficiently developed for the products of the present industrial establishments to satisfy the country's needs.

Turkish commercial shipping companies number 11, with a capital of £T3,460,000, four of which are engaged in the loading and unloading of merchandise. These companies have on the whole realised profits. Four transport and navigation companies, with a capital of £T235,000, have been wound up.

Mining and coal companies generally experienced losses in 1928 in comparison with preceding years. Among these companies the Eregli Coal Company, with a capital of £T15,000,000, realised profits amounting to £T9,067,780. The others met with losses. The Balıa Karaidin Mining Company, with a capital of 40,000,000 frs., which works several manganese mines, has suffered a loss of £T137,127. As a set-off to these losses this company is contemplating a large increase in its capital.

Agricultural and forestry companies number seven, with a capital of £T2,225,000. With the exception of three, these experienced losses on their working in 1928.

The position in regard to the various other commercial companies is as follows:—In 1928 among 41 companies, representing a capital of £T10,198,000, twenty realised a profit of £T502,304; seventeen with a capital of £T4,000,000 made losses, eleven with a capital of £T1,635,000 are winding up, and 4 have been re-constructed.

Local financial establishments number 40, of which 31, with a total capital of £T34,547,000 and 30,000,000 frs., have realised profits amounting to £T2,704,363 and 2,220,000 frs. A Bank, with a capital of £T1,500,000, has been obliged to go into liquidation. Two others have discontinued operations, and another has closed its accounts with losses.

Several commercial companies are in a state of liquidation. Since the new commercial code has come into force limited liability companies and co-operative societies have been formed and the number tends to increase. In 1927 nine limited liability companies with a capital of £T610,000, and in 1928 seventeen were established. There are at present 26 limited liability companies in Turkey.

Public utility companies, e.g., railways, electricity, telephone, water, etc., number 16. The most important are the Constantinople Tramways, with a capital of 27,000,000 Swiss frs., Constantinople Electricity Company with a capital of 35,000,000 Swiss frs., the Constantinople Dock Company with a capital of 23,000,000 frs., the Anatolian Railways with a capital of £T11,000,000, and the Smyrna-Kassaba Railway with a capital of 16,000,000 frs. The majority of these companies have realised profits, which, in the case of the Electricity Companies, amount to 1,888,642 frs. Seven other public utility companies are in process of formation.

To sum up, it may be stated that in 1928 172 companies, with a capital of £T91,140,499, three companies with a capital of 40,000,000 Swiss francs, and six others with a capital of 139,395,000 frs. were operating in Turkey. Among these companies, 93, representing a capital of £T46,377,499, three of 80,000,000 Swiss frs., and three of 78,000,000 frs. have realised respectively £T7,293,641, 3,496,712 Swiss frs., and 3,843,400 frs.

ROUMANIAN OIL.

The production of crude oil in Roumania for July amounted to 430,262 tons, as compared with 383,341 tons in June and with 361,538 tons in July, 1928. The Prahova district showed an increase of nearly 30,000 tons over the figures of a year ago (317,868 tons, as compared with 258,962 tons).

The total quantity of petroleum products exported from Roumania during June amounted to 247,557 tons, a decrease of 19,607 tons as compared with the exports during May, but an increase of 35,525 tons over the exports of June, 1928.

The total quantity of crude oil treated at Roumanian refineries during the first six months of the current year amounted to 2,157,952 tons, as compared with 1,904,116 tons for the corresponding period of 1928. During the half-year, 1,368,698 tons of oil products were exported, 751,500 tons were consumed in Roumania, and 560,310 tons were retained in stock.

Motors and Motoring.

(By Our Motoring Correspondent)

Road Dangers.

In view of the fact that road accidents directly attributable to motor vehicles are causing the death of, on an average, 100 persons per week on British roads, and in view of the further fact that careful motorists are being blamed, indiscriminately, by the general public for the misdoings of a small army of motor hooligans aided, unwittingly, by a smaller body of inexperienced drivers, it is high time that the motorists of the country put their house in order. If this appalling death-roll, this ceaseless succession of accident after accident is not stemmed, there is no doubt that public opinion will force unwilling authorities to act and we shall all suffer, we road-users, for the stupidity, criminal negligence and self-conceit of a crowd of newcomers to the road. Of the three causes mentioned, perhaps stupidity is the most prevalent; there are literally thousands of motorists on the road who are stupid in the extreme, and probably self-conceit comes next as a prolific cause of accident. There are very many thousands of motorists, a large proportion of them quite inexperienced, who are convinced that they know all there is to be known about driving; who are quite convinced that they look at their best when at a steering-wheel and who are absolutely obsessed with the idea that everyone they pass on the road is saying, "Just look at that fellow who has just passed! What nerve! What consummate skill! What a perfect command of his machine! What amazing speed! What a wonderful car!" As a matter of fact, nine times out of ten, they are saying something that has as its American equivalent: "Well, there's one born every minute!"

Whether the authorities will be able to deal with the criminally-negligent driver remains to be seen. They have not dealt with him so far and possibly never may. The inexperienced driver learns by degrees; the stupid either improves or is killed off, and the novice becomes more skilled. But it has occurred to me that something might be done by the Ministry of Transport that would have an immediately beneficial effect; something that could be put in operation almost immediately and to which no one, I think, could take exception.

We have already on the road two types of number plates. We have the white letters on a black ground signifying private ownership and we have the white on a red ground to show that a car is being driven by a trade house, either during repair or on trial. We could very easily supplement these by a third type bearing, say, white numbers on a bright blue ground. The special significance of this would be "Beginner."

Whenever anyone applied for registration numbers for a car or motor cycle, he would be given one of these white on blue plates unless he could show—with due regard to the truth—that he had owned and driven a vehicle of

similar kind before for at least six months. This white on blue plate would have to be shown on his car, in the usual number-plate position, for, say, six months before he could have it changed for an ordinary white on black plate.

The immediate advantage of this should be apparent. In the first place every other road-user would recognise the driver of a car so marked as a novice and would act accordingly when overtaking or passing him. Even lady drivers would take care to pass any car so marked with more than usual care and the driver himself would have more self-confidence during his initiation, in that he would know that every other driver would show him consideration. Indeed, he would have to show consideration or run the risk, if he crowded such a car too closely, of being pulled up for dangerous driving. Then again, all temptation to show off, that most deadly temptation that inevitably attacks the novice as soon as he knows his clutch pedal from his foot brake, would be removed and, further, if such a temptation did assail a driver, and break down his natural diffidence to such an extent that he let his car out "hell for leather" in the time-honoured beginner's way, any policeman, or anyone else for that matter, could get a conviction for dangerous driving. Let me commend this idea to the notice both of the police and the Ministry of Transport.

As for the other gentry, the negligent and the road-hog, I'm sorry to say it, but there is only one thing to be done and that is to put motor cycle police on the road. The sooner it is done, the better. As one who has driven on British roads since the days of the first Benz car—and some of my readers will know how long ago that is—I say deliberately that, although I wrote against the idea when it was first mooted in these columns and elsewhere, having faith in the good sense of motorists as a class, I am now firmly convinced that nothing will bring some motorists to their senses but drastic treatment, and that, as a means to that end, our roads should be patrolled by police, mounted on powerful motor cycles, with power to serve summonses on the spot, as is done in the United States, and that the institution of motor-cycle police should be accompanied with a rigorous enforcement of the 20-mile speed limit in certain areas.

Garages.

The question has been asked as to the kind of floor covering most suitable for private garages, and by that I take it is meant the kind of floor, for hardly anyone I know covers his garage floors with either carpet or lino: even Austin sevens are used to roughing it by now. So taking the question in its amended form, one can use vitreous tiling, cement, rubber, marble—this is specially

recommended to those who want a really smart finish to match the Morris Minor—hard woods, cork, oxychloride cement and asphaltic composition. Tests have been made on these various substances and it has been shown that under normal conditions vitreous tiling, hard wood and cement were immune from indentation, whilst asphaltic composition had a tendency to cut up slightly after long use. Heat was shown not to affect marble, tiles or hard wood, but did affect asphalt, cork, and, to an almost inappreciable extent, oxychloride cement. Personally, I should ignore all tests, dig out the floor well, ram in a good thickness of hard core—taking care that when I ordered hard core I was supplied with old bricks, stones and broken cement and not with cinders and old tins—and on the top of that I should put about five inches of concrete made with three parts of clean sand and three parts of broken stone to each part of cement, and then, when that was almost dry, run half an inch of fine cement, made of one part of cement to three parts of clean sand, over the whole. When that was thoroughly dry and ready for use, which would be in about three weeks time, if ordinary cement were used, but in less than a week if rapid-hardening cement was employed, I should have a floor that would stand up to anything, be unaffected by heat, oil, petrol, weight of car or anything else and last my lifetime and two or three generations after!

By the way, it is an advantage to have what are technically called "coved" or rounded corners and edges when laying a garage floor. That means, having rounded corners and rounded edges to the skirtings, so that there are no angles or nooks to harbour dirt. A proprietary flooring about which I have heard some nice things is that of the British Magnesite Flooring Company, who make a material called Magbestic. This differs from other jointless compositions for flooring in that it has an intermediate system of reinforcement in the form of wire-netting laid between two coats of the material. The reinforcement becomes an integral part of the flooring, and after the top coat of the Magbestic composition has been laid, a finishing coat of the desired colour is applied. The wire network is laid on an underlay, and covered with an overlay, under the finishing coat, to make a perfect job. It is possible, of course, where small cars are concerned, to do without the reinforcement, but if heavy duty is likely, then have the reinforcement by all means.

Free Maintenance.

A little humour is a wholesome thing; the gift of humour is perhaps the most precious that can be bestowed upon us, and, although it is not so funny as George Robey or the American attitude towards foreign debts, a little episode that has occurred recently in Glasgow may cause a smile. It appears that a certain motor agent is very enthusiastic towards Talbot cars; he is agent for Talbots and, like every user of a Talbot, he feels there is no car like it. So he used to advertise to say that, if buyers bought a Talbot car from him, he would give free maintenance service for one year.

Left at that, the offer mattered little, surely. It was just a bit of advertising business at which the public might smile and which would be appreciated by the purchasers of Talbot cars. But that was all there was to it; it had not reached the level of fine advertising. Well, this gentleman's competitors felt that he had stolen a march on some of them; that he was not quite playing the game and that such tactics ought to be stopped. They would, surely, have been well advised had they left the matter alone, but they did not think so. They objected to

this method of advertising and objected pretty strongly. By so doing they gave our friend the Talbot-lover an opportunity at which he promptly jumped. He published an announcement in the *Glasgow Herald* to the effect that owing to the pressure of competitors he was reluctantly compelled to revise the terms of his free offer, but he would keep in condition any newly bought new Talbot for £2 for a year, thus driving home his offer, getting a grand opportunity of a telling advert., and, incidentally, convicting his competitors, in the eyes of the public, of having showed chagrin, not to say annoyance at his philanthropy.

THE MOTOR IN PERSIA.

In a report on motors in Persia, the American Consul at Teheran, Mr. Augustin W. Ferrin, points out that since the end of the War, when the era of the motor in Persia may be said to have commenced, there has been a consistent increase in the annual registrations. The estimated total of motor vehicles on January 1 last was 5,763, of which 3,862 were cars, 1,139 were lorries, 692 were motorcycles, and 70 were motor buses. In view of the existing conditions in Persia, Mr. Ferrin points out that the number of motor cars is notable, and it is interesting to note that practically all the motor cars now running in Persia have been imported in the past five years. The report continues:—

Roads are still poor, but much progress in highway construction was made in 1928 under the able direction of Colonel Alfred F. Morris, an American engineer employed by the Imperial Persian Government. The work is now under a Persian official of the Ministry of Public Works. The pacification of Persia during the past five years by Riza Shah Pahlavi, reducing the tribes to tax-paying submission and making travel safer than it has been for centuries, has improved economic conditions considerably, and the recent rapid introduction of various social reforms has converted many of the wealthy conservatives, at least partially, to western ways. Now that Bakhtiari chiefs and Arabistan sheiks are wearing European apparel in place of robes and turbans, their "sales resistance" to the motor car is visibly vanishing.

Camels and donkeys continue to dispute the right of way with the motor lorry (and may continue to do so for some time) for freight carriage where time is not a consideration. It is estimated that actual carrying charges of the caravan are about half those of motor lorries, but this advantage is partly neutralised by high interest rates on commercial loans. The time saved by lorries over camels, which travel only 25 miles in 24 hours, counts when the merchant is paying the bank 12 per cent. or more for accommodation. Consequently, even commodities not obviously "fast freight" are increasingly carried by motor vehicles. Petrol, particularly, has become a lorry traffic, though long strings of camels with a load of six 4-gallon iron cans of petrol or kerosene on each side of each animal's hump are still seen.

Motor buses, as such, are used chiefly in Teheran, where a Danish company operates 18 big Berliets in intramural and suburban service, with very keen competition from owner-operators of small buses and lorries converted into buses. This competition has reduced fares to ruinous rates, and now both the Danish company and the "jitneys" are threatened by a projected, but, so far, rather nebulous, electric tramway. The horse-drawn street cars and cabs are a diminishing factor. Outside of Teheran the bus is generally a lorry fitted with longitudinal wooden benches, used chiefly for travel between towns and almost always loaded to the limit or beyond, baggage and sometimes even passengers being piled up on the roof. Fares are low to attract the lower classes, but overcrowding seems to make the service profitable. Many of these inter-urban public vehicles are driven by Armenian owners.

Persians are notoriously fond of moving about, walking

MICA AND ALL ELECTRICAL INSULATING MATERIALS

Contractors to the British, American, French and Italian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

long distances, if necessary, rather than staying at home, and a means of travel at once expeditious and economical is bound to have increasing patronage. The ingrained passion for pilgrimage has greatly aided the progress of the passenger lorry. Now that pilgrims, for political reasons, are prohibited from going to Kerbala, which is in Iraq, they must, if possible, visit Meshed or at least Kum, and it is cheaper for them to do so in well-packed cars than by the protracted, if more picturesque, process of caravaning. Travelling by motor enables the Teheranis to worship at Meshed on 10 days' absence from business instead of two months as in the old way.

Persians in the larger cities have been prepared for the motor-cycle by much practice with ordinary bicycles, of which approximately 4,000 were registered in Teheran as at December 31, 1928. The ambition of every Persian bicycle rider is to have a self-propelled machine, but only a few are financially able to achieve it. The "push-bike" is still the vehicle of the proletariat. Military officers, at present in the ascendant, seem to be the best motor-cycle buyers, both personally and officially. Though horses still are much used in the army, the motor-cycle is proving its practicability as a mount for military messengers, and the young officers appear to prefer it to the Arab stallion for pleasure purposes.

Persia has not yet adopted taxicabs, perhaps because there are too many places in the cities where a car cannot go. Automobiles may be hired by the day or half day for travel between cities, but within the walls the 4-wheeled horse-drawn carriages remain the popular short-distance vehicles.

ADEN'S GROWING IMPORTANCE.
